Another great disaster has befallen our city. The long-dreaded event of the breaking up of the ice, which for two months gorged the Mississippi and all its tributary streams, has come at last, and brought with it a destruction of our marine interests far transcending any thing that was anticipated. Twenty hours since our levee was crowded with steamers—now not a perfect hull remains. All have been swept down that lay opposite the central part of the city—crushed into a common ruin by the overwhelming masses of accumulated ice. Broken cables, chains with their links drawn to threads, a few shattered spars, alone remain to tell the story of stately vessels that were justly esteemed the pride of the Western waters.

At a few moments after 2 o'clock on yesterday the alarm was given that the gorge had commenced to break, and slowly, at first, and majestically, the floating fields began to move; then, gathering force and rushing in upon the boats, it lifted some out upon the bank, while thirteen others were carried down below and stranded upon the bars, where they were rapidly cut into ribbons. A few of them that drifted into the bend of the river, although strained in every timber, fortunately escaped further damage. For some time the ice continued to float off, but after a few hours again gorged, causing additional destruction to those steamers that still lay on the shore. Anxious suspense then ensued. The Mississippi was raging rapidly, and it was well known that the next break-up would be even more terrific than the preceding one.

At 7¾ o'clock, the tolling of the bells and the confused shouts that burst upon the stillness of the night, told that the ice was again in motion. Ten vessels, including among them two wharf boats that had been sheltered from the first violence, were torn from their fastenings, hurled one upon another, and sent crashing and drifting along the front of the levee. The scene was truly appalling to those who were merely spectators, while the heroic exertions of the commanders and officers who stood to their decks amid the falling of timbers and the sinking of vessels, doing all that men could do to save them, was a thrilling exhibition of most true courage in the moment of extreme peril.

A dark night and a beating rain that ensued added dismalness and dreariness to the occasion, and left those who might struggle with the elements almost a hopeless task before them. The additional boats that were thus wrested from the shore, and jammed amid the heaped up flakes that hurried them along, met a like fate with the steamers that had been carried off in the afternoon.

The Republicn Address.—The Address to the People of the United States, adopted by the National Convention of Republicans recently held at Pittsburg, makes nearly seven columns in the daily papers. The following are the leading points in it:—

"It claims the right of trial by jury; urges devotion to the Constitution; goes into a general history of the aggressions of slavery; defends the free State men of Kansas against the charge of disobedience to law; denies that the Constitution recognizes property in man; denies that Congress has any power to authorize slavery to spread over free territory; and closes with disclaiming any intention to interfere with slavery in the States."

SUMMARY.

In the middle of last August, (says a correspondent of the *Independent*,) about six miles below Hannibal, Mo., four men, standing on the river bank, saw a horseman emerging from the timber. As soon as he saw the men, he came to a halt; they made toward him; behind him and on either side was the land of bondage; before him was the Mississippi and the Illinois shore; with one desperate plunge of his spur in the side of the animal, the horse and rider were in the Mississippi struggling with its current. I am happy to say both horse and rider landed on the opposite shore, no man daring to follow. The river at the place of crossing is one mile wide.

A bill relative to the Pacific Railroad has been introduced into the United States Senate by a Senator from Mississippi, the prominent feature being the submission of the question of route to public competition. Bidders, if we understand the telegraphic abstract, are to include the designation of track among the other conditions of their tenders. Government, as in all the various projects, is to give whatever public land is required, and to pay handsomely beside for the transportation of mails and the military. This scheme is referred to the Committee upon the subject.

Col. Fremont's Mariposas estate contains upwards of seventy square miles, situated about two hundred and fifty miles from San Francisco. Palmer, Cook & Co., the California bankers, own one undivided half of the tract, and the Colonel the other, which many persons believe makes him the richest man in the world. He bought this immense gold region in 1846, for $3000, and was laughed at for the recklessness of his investment. It has already yielded some thirty-five millions of dollars, and its resources, both mineral and agricultural, are said to be inexhaustible.

Samuel Williams, a colored man, recently sold his farm near Clearspring, Md., containing near 200 acres, for $7000, to John Pearl. The Hagerstown *Mail* says: "Williams was a slave at 40 years of age, bought himself, has raised twenty-five children, four of whom he bought and manumitted. He is now in his 71st year, and a stout, tall and intelligent old man. He is in independent circumstances. Most of his children are in the West, and the rest of them all desire to go to the same country; so the old man has consented, although fond of this country, to 'pull up stakes,' and follow them."

The Rhode Island Legislature has passed a law by which a married woman may devise by will any lands, tenements, or hereditaments, held in her own right, in fee simple, fee tail, or for the life of any other person, or for any other term than her own life. The only restriction imposed is a provision that such last will or testament shall not impair the rights of the husband upon the death of the wife as tenant by courtesy.

The Virginia Legislature is considering several bills designed to prevent the escape of fugitive slaves. In the course of the debate on Tuesday, it was stated that the people of Norfolk have lost slave property to the value of $50,000 within the last twelve months. One of the bills provides for the inspection of vessels, to see that no fugitive is on board—steam-packets paying the officer $5 for each inspection; other vessels, $10.

Miss Andrews, who went from Syracuse to Norfolk, last summer, to aid in taking care of the sick during the prevalence of the yellow fever, is about to be married to a gentleman of wealth and fortune in the last-named place. These good Samaritans somehow have their reward, and they deserve to.

The Nebraska City News says that a land fever is raging there. Claims of one hundred and sixty acres, within two and a-half miles of that city, are selling at from $500 to $800. For one farm joining the city on the west, the owner has been offered $6000 in gold, which was refused.

At a recent meeting of the Academy of Science at Paris, M. Flourens, speaking of the power of chloroform, remarked that its use in the field hospitals of the army doubled the strength and power of the surgeons, as they are more masters of their action when operating on an inert mass, and are no longer disturbed by the cries or movements of the patient. In the Crimea, chloroform was employed, he stated, more than 25,000 times, and always with success.

The Louisville *Courier*, of the 28th ult., says: A correspondent, writing from Lexington, under yesterday's date, advises us of the failure of Captain Cassius M. Clay. His assignees are his brother Brutus J. Clay and M. C. Johnson, Esq., of Lexington. For several years past Mr. Clay has been a large speculator in hogs, and to the recent heavy decline in hog product, we presume may be attributed his unfortunate failure.

During a recent rain storm at Cape Breton, an avalanche of snow, impelled by a large body of water, overwhelmed the dwelling house of a Mr. Campbell, about thirty miles from Sydney, destroying the house and burying in the ruins Mr. Campbell, his wife, mother, three children, and two young girls. One of the children was rescued. The avalanche occurred in the night. A barn was also overwhelmed, and eighteen head of cattle killed.

Mr. Archer and Mr. Carlton, both of King and Queen county, Virginia, were found near their own houses frozen, one of them leaning against the draw-bars, which he had evidently attempted in vain to get over. A stout negro man was seen standing erect in the field, not far from a house, so long as to excite curiosity, and it was found, on examination, that he, too, was frozen to death! The winter in Virginia has been terrible.

Ship Asterian, Capt. Gay, from New Orleans, arrived at Liverpool on the 16th ult. On overhauling the ship, the customs searchers found a mulatto girl concealed in the boatswain's bunk, where she had been secreted during the voyage, unknown to any one on board, excepting the boatswain. A reward of $500 was offered at New Orleans for the girl's apprehension. She is now at Liverpool.

A gentleman in New York, who has been planning to coöperate liberally with the Kansas Emigrant Aid Company, was called upon a few days since to help a subscription for sending some military supplies to the settlers in Kansas; having no money on hand to be conveniently spared, he sold a diamond pin for $500, and gave the proceeds for the defense of freedom.

Among the Boston Banks, a bag, supposed to contain $5,000 in gold coin, has been circulated in the settlement of the daily exchanges. This bag, on a recent examination, was found to contain its weight in —— copper instead of gold. When the substitution of the baser metal was made is not known, nor is it yet determined on what Bank the loss is to fall.

In the Assembly of New York, last week, Mr. Ferdon reported a bill to regulate the sale of potatoes as follows: "In all sales of potatoes, sixty pounds shall be considered one bushel, and one hundred and fifty pounds one barrel, and in all transactions or contracts for the sale of potatoes hereafter made, the delivery thereof shall be by weight as aforesaid, unless a special contract be made otherwise."

In the latest accounts, we see it stated that a large detachment of the British fleet is expected at Havana, and every one is on the qui vive to welcome them. The Terrible, the Daring, Available, and Powerful, are already there, and are exchanging salutes with the Spanish war vessels in the harbor. Rumor says their destination is Nicaragua, to pay a visit to Col. Walker.

Much excitement was occasioned in New Orleans, by the discovery that Colonel Garland, the City Treasurer, is a defaulter to the extent of $200,000. Mr. Garland attempted to escape on board an outward bound schooner, but was caught at the Balize and brought back to the city. The Treasury Office is closed in consequence of the defalcation.

The report that the Rev. Dr. Bushnell was going to Kansas with the New Haven company of emigrants, is not correct. Mr. B. says that such was not his intention—that the scenes there were not calculated to promote the health of an invalid. He expects to sail for California, in pursuit of health, on the fifth of March.

Gold to the amount of $158 was found around the waist of Mary Flynn, a pauper who died in the Pittsburg almshouse. Two physicians were detected in an attempt to dig her out of the grave, but escaped, leaving their horse and sleigh behind them, with a buffalo skin marked with one of their names.

The Territorial Legislature of Minnesota, finding a population of nearly 70,000 souls, are taking measures to call a convention to organize a State government. It is probable that both Oregon and Minnesota will knock at the door for admission to the Union next winter.

The ship Lapwing arrived at Newport, recently, from a thirty months' whaling cruise, being her first voyage. The Lapwing has taken during the voyage 2100 barrels of sperm oil, 575 barrels of whale oil, and 3500 pounds of whalebone, worth at present prices about $135,000.

A human body, tied up in a bag, was taken from the water near New York on the 8th inst., supposed to be the body of Capt. Palmer, of the schooner Eudora Imogene, which vessel was scuttled in Long Island Sound, by a negro, last fall.

On Monday night, March 3d, Hon. Edward Everett delivered a discourse at the Academy of Music, New York, on Character and Times of Washington. The house was crowded, and the lecture was of a superior order.

Hon. Geo. M. Dallas sailed for England on the 1st inst., to take the place of Mr. Buchanan, as United States Minister at the Court of St. James.

Fifty shipwrecked seamen, belonging to the ships Alaco and Calcutta, and the brig Neptune, lost on the Bahama Islands, have arrived at Norfolk, Va.

The insurance on the steamer Pacific and cargo, now out over forty days, is over $2,000,000, half in this country and half in Europe.

The whole number of Land Warrants issued under the act of March 3, 1855, is now 100,853.

A fire and explosion, at St. Martinsville, Ala., recently, caused the loss of several lives and property worth about $200,000.

The Detroit Tribune says that at the railroad collision which occurred on the Michigan Southern Railroad near Hillsdale, a fortnight since, seventy three registered money letters were destroyed by the fire that consumed the baggage car. Some of the letters contained as much as $500.

The Supreme Court of Indiana has decided in the case of Craft vs. the State Bank of Indiana, that the 28th and 29th days of February, in leap year, are to be counted as one day, and a note falling due on the 28th cannot be protested for non-payment till after banking hours on the 29th.

Bark Proteus, of Shelburne, N. S., Capt Harding, from Liverpool to Jamaica, with a general cargo, struck on the Blackwater bank, coast of Ireland, Feb. 12, and went to pieces; master and 11 men saved, and 1 drowned. The mate got adrift in a boat, and has not since been heard of.

A bill has passed the Senate of Virginia, appropriating $1,000 a year, for five years, to enable the State Historical Society to procure from England manuscript copies of documents and letters, relative to the early history of the Old Dominion.

Mr. Calhoun, surveyor general of Kansas, furnishes the Secretary of State with an estimate of the resident population of the territory. He says about 6000 votes are claimed to have been given for Reeder and Whitfield, and there are about five residents to each voter.

During the present session of the Alabama Legislature, says the Selma Sentinel, there have been about one hundred cases of divorce granted. During the last session of the same body, there was about the same number granted.

In the United States there are 64 tunnels, the longest of which is about one mile. England has 48 canal tunnels of an aggregate length of 40 miles, the longest being over 3 miles. She has 79 railroad tunnels, with an aggregate length of 52 miles.

The Louisville Courier says: A gang of upwards of forty negroes, from Fayette county, bound for a southern clime, came down on the cars yesterday morning. Their owners preferred putting them in their pockets rather then let the Abolitionists run them off.

Three thousand five hundred dollars were offered for one share of the New York Tribune. This would make the one hundred shares, into which that establishment was divided a few years ago, worth $350,000. The par value of each share is $1000.

By estimate, there are more than 1300 insane persons in the State of Maine. Less than one-ninth of these are in the hospital, though it is capable of accommodating 250. The influence of religious worship in the chapel is decidedly beneficial.

The beautiful and elaborate maps and diagrams used by Dr. Baird, in illustrating his lectures on Europe, were executed by Patrick H. Reason, a colored artist of New York city.

A memorial has been introduced into the Minnesota Legislature, desiring Congress to divide that Territory on the line of 45° 10', from St. Croix to the Missouri River.

New York Markets—March 10, 1856.

Ashes—Pots $6, Pearls 7 75 a 8 00.

Flour and Meal—Flour, 7 00 a 7 25 for common to good State, and Michigan, 7 62 a 8 12 for good to superfine Ohio, 8 75 a 10 75 for extra Genesee. Rye Flour 4 00 a 6 00. Corn Meal 3 50 for Jersey.

Grain—Wheat, 1 69 a 1 75 for common to prime Southern Red, 1 85 for common white. Rye 1 12 a 1 13. Barley 1 18 a 1 29. Oats 35 a 40c. for Jersey, 39 a 41c. for State. Corn, 69 a 70c. for Western mixed. White Beans 1 87 a 2 50 per bushel.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

The Decimal System.

We find in a late number of the *Independent*, the following synopsis of Prof. Felton's Plan for the extension of the Decimal System in the United States to weight, measure, and number:—

The first principle is, *to place the commercial tables of weight and measure in unison with the decimal scale of notation.* To effect this, these Tables are superseded by graduated Scales, where each term is *ten* times greater than its next inferior; thus:

SCALE OF WEIGHT.	SCALE OF MEASURE.
10 Grains=1 Scruple.	10 Grains=1 Scruple.
10 Scruples=1 Dram.	10 Scruples=1 Dram.
10 Drams=1 Ounce.	10 Drams=1 Gill.
10 Ounces=1 POUND (S.)	10 Gills=1 PINT.
10 Pounds=1 Stone.	10 Pints=1 GALLON (S.)
10 Stones=1 HUNDRED wt.	10 Gallons=1 ANKER.
10 Hundred wt.=1 Ton.	10 Ankers=1 Tun.

The Standards of weight and measure now established by law, will undergo *no change, either in name or quantity.*

Every Scale is derived from *one of these Standards,* of which it is the leading unit.

These Standards are:

I. The United States Pound, avoirdupois.

II. The United States Yard, and the Foot derived from the yard.

III. The United States Acre, also derived from the yard.

IV. The State Gallon of New York, derived from the State Bushel.

The Standards are distinguished by the letter (S.) The invariable quantities are printed in small capital letters.

One Scale of Weight, of which the Pound is the Standard, is designed for all purposes of weight. One Scale of Measure, of which the Gallon is the Standard, for all purposes of measure.

On the Decimal Principle two properties are worthy of notice.

I. The number of figures used to express any quantity, shows the number of each denomination contained in that quantity. Thus, 4567 ounces may be read, 4 cwt., 5 stones, 6 lbs, 7 oz.; or, 45 stones, 6 lbs, 7 oz.; or, 456 lbs, 7 oz.

II. The price of any one denomination on a scale being known, the prices of all the others are known. Thus: Tea at 5 cents per ounce, is 5 dimes (or 50 cts.) per pound, $5 per stone, 5 eagles (or $50) per cwt., and 50 eagles (or $500) per ton; 5 cents per ounce is also 5 mills per dram.

Almost all fluids in common use—as milk, ale, wine, beer, oil of all kinds, (except unrefined fish oil)—are all but exactly equal in weight with distilled water; the Gallon weighs ten pounds. This coincidence of Weight and Measure is productive of many advantages; and among these, the quantity of any fluid may be ascertained in many cases with greater convenience and accuracy by weight than by guaging.

In the valuation of most Liquids, both weight and measure will also correspond with price.

To begin with the ultimate unit, if any fluid be 2 mills per grain in Weight, it will be the same in Measure also; thus:

Weight.		*Price.*		*Measure.*
Grain	=	2 mills	=	Grain.
Scruple	=	2 cents	=	Sciuple.
Dram	=	2 dimes	=	Dram.
Ounce	=	2 dollars	=	Gill.
Pound	=	2 eagles	=	Pint.
Stone	=	20 eagles	=	Gallon.
Cwt.	=	200 eagles	=	Anker.
Ton.	=	2000 eagles	=	Tun.

This may be an extreme case; but take another: Wine at 4 dimes per pint is also 4 dimes per lb.; $4 per gallon and $4 per stone; 4 eagles or $40 per anker and 4 eagles or $40 per cwt.; and $40 eagles per ton, both Weight and Measure.

So, if the price of one term on either scale be known, not only is the price of every other known, but its *weight and measure also.*

The upper part of the scale, representing the Grain as the 10,000th part of a pound, instead of the 7,000th as at present, will be more suitable for those who operate upon substances in minute particles; while the three upper terms, describing weight and measure by the same name, will be convenient for apothecaries.

Scale for Dry Measure.
10 Pints=1 Gallon (S.)
10 Gallons=1 Bushel.
This Gallon equals the present Half Peck in content, and answers to the Stone of 10 lbs.
Scale for Cloth.
10 Points=1 Nail.
10 Nails=1 Yard (S.)
Scale of Length.
10 Seconds=1 Inch.
10 Inches=1 Foot.
10 Feet=1 Rod.

Scale for Land.
10 Links=1 Staff.
10 Staves=1 Reed.
10 Reeds=1 Plat.
10 Plats=1 Chain.
10 Chains=1 Acre (S.)
Scale of Number.
10 Units=1 Decade.
10 Decades=1 Hundred.
10 Hundreds=1 Thous.
10 Thousands=1 Myriad.
10 Myriads=1 Plum.
10 Plums=1 Million.

Superficial and cubic measure naturally flow out of the Scale of Length.

All the advantages explained under the scales of Weight and Liquid Measure will equally apply to every Scale in the Decimal System.

Dry Measure is fast giving way to the more equitable mode of estimation by weight, and, it is believed, will soon be confined to rough commodities, such as oysters and the like.

The retaining of *old names,* when applied to *new quantities,* has been advanced as an objection. At first sight it may appear such, but the nature of the subject admits of no other arrangement. This objection will be examined in a separate article. In fact, this is only a synopsis. To be perfectly understood, each Scale requires a separate chapter.

But the grand question is, Can this system be established without creating a vast amount of confusion? Certainly, it may be, without risk of even *temporary confusion.* Now, please to observe, that *every Scale has its invariable Standard, and not only these Standards, but many other Denominations also, will remain the same as at present, both in price and quantity.* These important landmarks will not be moved; they will serve as regulators of value, both to buyers and sellers, during the period of transition.

The Pound and the Hundred weight; the Pint and the Gallon; the Yard and the Foot; the Link, the Chain, and the Acre; the Square of 100 feet, and all the terms on the Scale of Number, will remain unchanged. Nor will it be imperative to reject convenient Fractions, for while the Pound and the Yard will remain the same in name, quantity, and price, it follows that the half pound and the quarter pound, and the half yard and the quarter, will remain the same also.

Let us take the case of a dealer in cloth, on the first day of the new system. Cloth at $8 per yard, will be $8 per yard still; and of course $4 per half yard and $2 per quarter. But the nail? The new nail being one-tenth of a yard, will be one-tenth of the price of a yard; and as the yard is $8, the new nail will be 8 dimes; and if half the new nail be required, it will be 4 dimes, or 40 cents. Neither the buyer nor the seller need trouble themselves about the relative length of the new and the old nail. Each new division on every Scale is exactly the tenth of its next superior, and its value is seen on the decimal scale of the currency.

Take another example: The article of tea, now at 7 dimes per pound, will be 7 cents per ounce; 7 mills per dram, and $7 per stone; $70 per cwt., and $700 or 70 eagles per ton; while the half pound and quarter pound will remain as at present.

Again, wine at $4 per gallon will be still the same, and the pint 4 dimes; the gill 4 cents; the anker $40, and the tun $400. The half gallon will remain unchanged, and the quarter gallon may still be called a quart, but it will no longer represent 2 pints, but 2½ pints of the new system. Bottled wine is frequently so'd in dozens, for which the Decade on the Scale of Number will be found a convenient substitute. The Scale of Number will also be found useful where articles are sold by the thousand—such as bricks, tiles, boards, etc. The relative value of any quantity, from the top to the bottom of the scale, that is, from a unit to the million, may be seen at a glance.

Indeed, so far from creating confusion, no system can be better calculated to remove the confusion already existing. Every one, on the Decimal System, will entertain a more correct conception of value as combined with quantity than at present; and when it is once fairly established, the wonder will be, how we could so long have endured the present cumbrous and unwieldly process of transacting the affairs of the market, the store, and the counting-room.

Among the many advantages consequent upon the establishment of this system, the improvement it will produce in Education is certainly not the least. By annihilating the compound forms of the first four Rules of Arithmetic with Reduction, Practice, and a host of others, together with the whole department of Vulgar Fractions, the commercial part of the science will be wonderfully changed for the better. It will also pave the way for the introduction of sweeping improvements in the mathematical department also, from which we are now completely shut out; improvements, both mechanical and intellectual, of which very few can even form an idea, the result of which will be to elevate the character of the science, and render it as remarkable for elegance as it now is for utility.

However, the most intelligible point here is the immense saving of time and labor it will effect during the important period of youth. Not only days and months but even years will be saved, that may be devoted to other studies. The time also saved by clerks and calculators in commercial matters, is not unworthy of attention But all the advantages arising from the Decimal System cannot be enumerated, much less will they admit of a separate exposition. The importance of the subject entitles this plan for its introduction, to an impartial examination. It has been for many years before the public; it has been reviewed, analyzed, and freely commented upon, but it has never been condemned. Since its first appearance, some of its minor parts have been improved; but its principles are founded on the basis of scientific truth, and therefore are susceptible of no improvement. The *labor limæ et mora* of Horace, has not been spared, and if it be not near perfection, it is not from the want of application on the part of the originator.

Giant Redwood.

Dr. F. Winslow, an American traveler, communicated a graphic description of this tree to the California *Farmer,* which is introduced here, together with interesting remarks from the *Country Gentleman:*—

"The Great Tree, (thus he distinguishes the Sequoia gigantea,) is peculiar to the Sierra Nevada, and grows no where else on the globe. I may even add, as far as my information extends, that it is entirely confined to a narrow basin of 200 acres at most, of which the soil is silicious and strewn with blocks of Lignite. This basin is very damp, and retains here and there pools of water; some of the largest of the trees extend their roots directly into the stagnant water, or into the brooks. There are more than a hundred which may be considered as having reached the extreme limits of growth which the species can attain. One of our countrymen, Mr. Blake, measured one, of which the trunk, immediately above the root, was 94 feet in circumference. Another, which had fallen from old age, or had been uprooted by a tempest, was lying near it, of which the length from the roots to the top of branches was 450 feet. A great portion of this monster still exists, and, according to Mr. Lapham, the proprietor of the locality, (and who has undoubtedly appropriated to himself all trees by right of occupation,) at 350 feet from the roots the trunk measured 10 feet in diameter. By its fall, this tree has overthrown another not less colossal, since at the origin of the roots it is 40 feet in diameter. This one, which appeared to me one of the greatest wonders of the forest, and compared with which man is but an inperceptible pigmy, has been hollowed, by means of fire, throughout a considerable portion of its length, so as to form an immense wooden tube of a single piece. Its size may be imagined when it is known that one of my companions, two years ago, rode on horseback in the interior of this tree for a distance of 200 feet, without any inconvenience. My companion and myself have frequently entered this tunnel and progressed some sixty paces, but have been arrested before reaching the end by masses of wood which had fallen from the ceiling. Near these overthrown giants others still are standing, not inferior to them in size, and of which the height astonishes the beholder. I can mention three particularly, which, entirely isolated, grow near each other so systematically as to appear to have been planted purposely to produce the effect. A fourth is remarkable in having, between 50 and 100 feet from the ground, its trunk divided into three enormous branches of the same size and nearly parallel, extending to a distance of more than 300 feet. Others are distinguished by the straightness of their trunk, comparatively as delicate and erect as that of a pine tree, and which are not less than 350 feet in height. At some distance may be seen a species of knoll rising from the surface of the ground, and which is merely a half-developed knot, the last remains of one of these monsters, which have fallen centuries ago and are now buried under the soil.

"I am informed by Mr. Lapham, that the wood of one of these trees is remarkable for its very slow decomposition. When freshly cut, the fibre is white; but it soon becomes reddish, and by long exposure to the air acquires a color nearly as dark as Mahogany. Its consistence is rather feeble, nearly resembling the pine or cedar, but the bark covering it differs materially from the latter. It is excessively thick near the foot of the tree, sensibly elastic on pressure, and is readily divided into a mass of fibres closely resembling those constituting the husk of the cocoa-nut, but much finer. About this portion of the trunk it is split in every direction by deep cracks, but at the elevation of 100 or 180 feet, it is almost smooth, and not more than two inches in thickness. At this point the bark is removed from the living tree for exportation. (How can such a sacrilege be tolerated!) A hotel has been built along side of the "Great Tree," the bark of which was exhibited last year at San Francisco, and, on its overturned trunk a sort of ladies' pavilion has been erected, which serves as an elegant promenade. In order to fell it, the trunk was bored, by means of a very long and powerful augur, with many holes very near to each other and arranged circularly; but even when almost detached from its bases its immense mass resisted all efforts to overthrow it. Four days subsequently it was blown down by the wind. It shook the earth when it fell, and made for itself a deep furrow in the ground, in which it lies, at this moment, half buried."

The *Country Gentleman* adds:—

"Now, to read simply of a tree four hundred and fifty feet high, we are struck with large figures, but we can hardly appreciate the height without some comparison. Such a one as that through which the horseback journey was performed, would stretch across a field of twenty-seven rods wide; if standing in the Niagara chasm at Suspension Bridge, it would tower two hundred feet above the top of the bridge; if placed in Broadway, New York, at the head of Wall Street, it would overtop Trinity steeple by one hundred and sixty feet, and would be two hundred and thirty feet higher than Bunker Hill monument, Boston; or two hundred and seventy above Washington monument, Baltimore. If cut up for fuel, it would made at least three thousand cords, or as much as would be yielded by sixty acres of good woodland. If sawed into two inch boards, it would yield about three million feet, and furnish enough three inch plank for thirty miles of plank road. This will do for the product of one little seed, less in size than a grain of wheat.

By counting the annual rings, it appears that some of the oldest specimens have attained the age of three thousand years. If this computation is correct, and we see no reason to doubt it, they must have been as large as our best forest trees in New York, in the times of Homer and the prophet Elijah; and venerable and towering giants during the Carthagenian wars. In other words, "the Roman Empire has begun and ended" since they commenced growing. We hope the small plantation which comprises their whole number, will not share the fate of the world-renowned cedars of Lebanon on their native mountains, now reduced to a dozen in number, but that they will be protected and preserved, and only those that fall by old age be removed for exhibition. It would of course be idle to talk of transporting such a monster to this part of the country, weighing as it does some five thousand tons, and a portion of its shell only may be secured as a fragment of such a specimen in natural history."

The Pilot Fish.

There are few things more singular than the connection which exists between the shark and the pilot fish. The shark, as is well known, is one of the most voracious monsters which are found in the depths of the ocean. He is always hungry, and by no means fastidious in his selection of food. Nothing comes amiss to him—a young dolphin or a bonita, a piece of salt pork or a bullock's hide; a leg of a human being or a red-hot shot, are all swallowed with equal avidity, although they may not all equally agree with his digestive organs. The shark is also an ugly looking rascal, with his dark grey rhinoceros hide, his round mouth awkwardly situated beneath his chin, and his frightful rows of long and sharp teeth. The pilot fish, on the other hand, is one of the most beautiful species of the finny tribe. It is from six to twelve inches in length, and is a remarkably well-proportioned fish, something of a dandy in its appearance—wearing at all times a beautiful mottled dress—amiable in its deportment, so far as has yet been discovered, and most delicious eating. Apicius himself would have swallowed a well-cooked pilot fish, with infinite gusto, especially after having been for some weeks on a short allowance of salt provisions. Indeed, there is nothing of an unpleasant character connected with the appearance or habits of the pilot fish, unless his mysterious and intimate connection with the shark may be considered suspicious. "A man may be known by the company he keeps," is an old proverb—how far it may relate to fishes we are unable to say.

It is well known that sharks are frequently, (not always,) attended by one or more of these pilots. We have seen as many as six, of different sizes, accompanying one of these sea monsters, and between the whole party there seemed to exist the most perfect understanding. Indeed, the connection between the shark and the pilot fish is precisely of the nature of the connection fabulously reported to exist between the lion and the jackall. The pilot fish is literally the shark's provider—there is abundant reason to believe, that though sore pressed by hunger, the shark will never prey on his defenseless friend. The pilot fish seems attentive to the wants of its master, or protector, and is constantly on the look-out to cater to his appetite.

We recollect that once in the tropical seas, a large shark was seen astern of the ship. An event of this kind, which temporarily dispels the monotony attendant on a long passage, usually proves of great interest to the whole ship's company. There being no shark hook on board, a bowline was immediately prepared, and a large piece of beef, attached to a piece of rope, thrown over the stern. The shark remained at a respectable distance, as if suspecting mischief—but in a few minutes two pilot fishes left his side, and swam gently towards the stern of the ship. They were evidently attracted by the beef, which they passed round more than once, smelling it, and apparently eyeing it attentively—they then returned with an increased pace towards their voracious friend, and *appeared* to communicate the result of their investigations. A whispering colloquy, which continued a short time, evidently followed—when the shark, probably convinced that a *bonne bouche* was awaiting him, hesitated no longer, but made a dash at the beef, was caught in the bowline, and, notwithstanding his desperate struggles, was ingloriously captured! [Portfolio.

Traveling in Russia.

Correspondence of the Ohio State Journal.

ST. PETERSBURG, RUSSIA, July 6, 1855.

The railroad east of Berlin extends to Konigsberg, a distance of about 350 miles, which is made in 21 hours. As you approach this latter place the scenery becomes more varied and picturesque. Beautiful villas peep out from the midst of groves of pine and towering poplar, whilst far in the distance, buildings occupying more commanding positions, of loftier mien, and mosque domes, raise their proud forms—an occasional glimpse of the blue waves of the Baltic adds to the diversity and beauty of the view.

Konigsberg contains near 60,000 inhabitants, and is now so strongly fortified that a second Bennington might meet with serious difficulty before successfully storming its ramparts. Much of the trade that was heretofore carried on through the Russian Baltic ports is at present transacted here. Hemp is the chief article of export, whilst large quantities of cotton, sugar and other necessities of life are received in return and transported upon wagons to all parts of the interior of Russia. One of the two only remaining castles, built by the old Teutonic Knights, who, some five or six centuries ago, were the lordly owners of the Southern Baltic shore, is here to be seen—its high walls and lofty keep retaining all their original majesty and grandeur. It is now used for public offices, a suit of rooms being reserved for the King when he visits his loyal subjects of this favorite province. There too is to be seen the humble cottage in which Kant lived, and wove his metaphysical threads of thought into a web of transcendental nonsense. Near by is his favorite promenade, where his material body sought aid and exercise by moving to and fro, whilst the nobler part of his being, bursting from its prison home of clay, wandered far into the regions of the great unknown. In honor of him it is now called the philosopher's walk.

Leaving Konigsberg in the morning, I reached the Prussian frontier early the following morning. The ride in a comfortable mallepost, over the beautiful roads of which Russia is so justly proud, was any thing but disagreeable. A striped pole, large as a giant's fishing rod, swung over the road, marks the boundary line. Near this is the police or government station, to which you are driven, and quietly alighting, must submit not only your baggage and passport, but also your object in visiting his Majesty's dominions, to a rigid examination. All newspapers, and even scraps of printed matter, are destroyed, and should you be in possession of any books, they are taken, and after being neatly packed and sealed, are given in your care to be carried to St. Petersburg, they requiring you to sign an obligation to deliver them upon your arrival to the Censor, by whom they are examined, and if of a proper character returned to their owner. Should any, however, happen to be upon the prohibited list, such are retained until you are ready to leave the country, or sent to any point designated beyond the boundary.

The Governor of the station is a kind gentlemanly man, making the exactions required by law in a courteous manner. Upon learning the object of my visit, he greeted me warmly, and appeared deeply grateful for the sympathy extended towards Russia by Americans. At the first station after passing the boundary line, our comfortable Prussian mallepost returned, and then, for the first time, we were able to experience the luxury of what they call extra post in Russia. This consists of a seat in a telega, or open wagon, with imaginary springs; the body is usually filled with straw, upon which you throw yourself and calmly enjoy the delightful movements of a rapid pace over a rough road. Post stations are from twelve to twenty versts apart, a verst being equal to two-thirds of an English mile. At each of these the horses and telega are changed, paying for the former at the rate of 2½ kopeks (1¾ cents) per verst each, and taking as many as you choose. The horses are usually driven abreast and harnessed with ropes.

At Mariampol we struck the great road leading from Warsaw to St. Petersburg. This was built by the Emperor Nicholas in 1845, to facilitate travel between the two capitals. Formerly it was one of the best roads in the world, but is now much cut up by the heavy freight wagons and transports. We continued to travel in the telega until we reached Kowno upon the banks of the Nieman, which will be recollected as the stream in the middle of which Alexander I, and Napoleon met on a raft in June, 1807, and concluded an armistice which led soon afterwards to the treaty of Tilsit. Up to this place our route lay through Russian Poland. Barren heaths, and beggars, thick as boulders on her plains, were the chief objects of attraction. Those who in the wildest moments have ever dreamed of Polish independence should visit the country and witness not only the barrenness of her plains and the gradual decay of her villages, but also the barrenness of her people in all those qualities that ennoble man.

The day of Polish nationality "has clean gone for ever," and withdraw all opposition by the three powers between whom she is divided, and I much doubt if she, at the present time, possesses intrinsic merit sufficient to enable her to erect a new national temple from the ruins of the old.

At Kowno, tired of the Telega, we procured a private conveyance, which, with the exception of a cover was but little more comfortable. Diligences run between Warsaw and St. Petersburg, but we happened about an hour too late, and would have been obliged to wait two days for another.

In order to travel by post in your own conveyance, a padasoshna, or order to the various station keepers for horses, has to be obtained. In addition to this, toll, or a road tax, has to be paid for each horse, the proceeds of which are expended in repairs upon the road. From Kowno to St. Petersburg, a distance of about seven hundred versts, we traveled day and night, stopping only long enough at the different stations to change horses. The station houses are built and owned by government, and in their exterior are neat, but within mostly dirty and devoid of stomachic luxuries. Immense pine forests skirt the road for miles in many places, and the scenery is usually tame and uninteresting. Nine days after leaving Berlin we reached St. Petersburg, weary in minds and, with limbs half dislocated from the fatigues of the journey. Right heartily did we greet the spangled domes and gilded spires of the city of the Czar, sparkling in the evening sun.

We found comfortable quarters at the Hotel de Russie, which in regard to daily necessary expense is about on a par with the first class New York hotels. We have found quite a large number of Americans, the most prominent of whom are Gen. James, United States Senator from Rhode Island, and the three gentlemen comprising the military commission sent out by our government to examine the fortifications of this and other countries. They speak favorably of their reception here and the facilities afforded them for examining the various military works of government. A day or two since they visited Cronstadt and were highly delighted with the works of defense which have for so long a time been keeping the proud fleet of the allies at bay. The news of the storming of Sevastopol on the 18th of June, and the fatal repulse of the allies, was of course gratifying to all here. The tidings of Lord Raglan's death have just reached the city, and I am pleased to say no disgusting expressions of gratification mark the event. Christian England and enlightened France might learn a lesson from the manner in which the dispensations of Providence are received in Russia.

Sagacity of the Arctic Bear.

On one occasion, a bear was seen to swim cautiously to a rough piece of ice, on which two female walruses were lying asleep with their cubs. The wild animal crept up some hummocks behind the party, and with the help of his fore feet loosened a large block of ice; this, with the help of his nose and paws, he rolled and carried till immediately over the heads of the sleepers, when he let it fall on one of the animals, which was instantly killed. The other walrus, with its cubs, rolled into the water; but the younger one of the stricken animals remained with its dam; upon these helpless creatures the bear now leaped down, and thus completed the destruction of the two animals, which it would not have ventured to attack openly.

The stratagems practiced in taking seals are much less to be admired. These creatures are remarkably timid, and for that reason always lie back to back or sleep on the very edge of the pieces of floating ice, so that on the slightest alarm they can by one roll tumble themselves into their favorite element. They are exceedingly restless, constantly moving their heads from side to side, and sleeping by very short naps. As with all wild creatures, they turn their head to the direction of the wind, as if expecting danger from that quarter. The bear, on seeing his intended prey, gets quietly into the water and swims till he is leeward of him, from whence, by frequent short dives, he silently makes his approach, and so arranges his distance that at his last dive he comes up to the spot where the seal is lying. If the poor animal attempts to escape, by rolling into the water, he falls into the bear's clutches; if, on the contrary, he lies still, his destroyer makes a powerful spring, kills him on the ice, and devours him at his leisure.

The Prairie Dog.

In Capt. Marcy's Exploration of the Red River of Louisiana are given some interesting facts about that singular animal, the prairie dog. He says, "Passing through these dog villages, the little animals are seen in countless numbers, sitting at the entrance of their subterranean dwellings, presenting much the appearance of stumps of small trees; and so incessant is the clatter of their barking, that it requires but little effort of the imagination to fancy one's self surrounded by the busy hum of a city."

The immense number of animals in some of these towns, may be conjectured from the large space they sometimes cover. Capt. Marcy passed one of these towns twenty-five miles in length, and supposing it to be as large in other directions it would embrace an area of six hundred and twenty-five square miles, or eight hundred and ninety-six thousand acres. Estimating the holes at twenty yards apart, the usual distance, and each dwelling occupied by four or five dogs, the whole population of this tract would be in round numbers, forty millions of dogs!

The food of these animals consists principally of a coarse, wiry grass, which grows in abundance on elevated plains, often many miles from any water, which does not seem necessary to their existence. About the last of October the prairie dog carefully closes all the passages to his habitation, and turns in for a long nap. He keeps housed until the warm days of spring, when he removes the obstructions in front of his door, and emerges full of life, fun and frolic. The rattle-snake is often an inmate of their dwellings, and sometimes preys on them when hungry.

GULF STREAM.—Prof. Bache, in his lecture upon the Gulf Stream, among other curious facts, stated that the Coast Survey had found that the bottom of the Atlantic ocean was traversed by a range of mountains similar to the chain some distance back from the coast, and that the Gulf stream pursued its way over the tops of these, and had an evident connexion with them. In the gorges of these ranges they found bands of cold water evidently from the polar regions. As far south as latitude 29 degrees the register indicated, at great depth, water at only two degrees above the freezing point. These polar streams seemed to be pursuing a course from northeast to southwest; and in a directly contrary direction to the bands of warm water which form the main feature of the Gulf Stream. How far this knowledge of the bands of cold water might be made available to commerce he would not pretend to say.

LESSONS FOR THOSE WHO LIKE THEM.—Be not always speaking of yourself. Be not forward. Listen when spoken to. Avoid odd sayings and vulgarisms. Be choice in your compliments. Command your temper and countenance. Never acknowledge an enemy, or see an affront, if you can help it. Doubt him who swears to the truth of a thing. Dare to be singular in a right cause, and be not ashamed to refuse. Never appear to be in a hurry. Neglect not an old acquaintance. Make no one in company feel his inferiority.

More than 100 men and 40 sloops, belonging to Havre de Grace, Md., are employed annually through the proper season in supplying the market with wild ducks.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1. 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill,* but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that *almost every* purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and by their stimulant action on the circulatory system renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than anything which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

THE DEATH OF MRS. MINOR.

To the Editors of the Sabbath Recorder:—

The enclosed letters from our missionaries in Palestine to Mr. C. A. Minor, have been transmitted by him to me for perusal, with permission to publish at my discretion. In view of the interest so generally felt in the scenes which are transpiring in that Holy Land, I deem it my duty, with your permission, to lay them before your readers. T. B. B.

Letter of Mr. Jones.

JAFFA, Palestine, Nov. 8, 1855.

Mr. C. A. Minor, New York:

VERY DEAR BROTHER,—I wrote you a brief note in the summer, and sent it, I think, by the girls, Lydia and Emma. You may have wondered at the long silence of friends in this country, but that has not been occasioned by want of interest or affection for you. You may have had some anxious suspense for the unusual delay in communications from your mother; circumstances have also occasioned that. Trials are the common lot of all, and happy are those who are prepared to bear them as Christians, yea, to welcome them as God's means of using us, and trying us, and even of fitting us for heaven. I ever feel to weep with those who weep, and to mourn with those who mourn, and especially to do all in my power to render as light as possible the burden of the living. But grief fills my heart, not for myself only, but for *you*, dear brother. As others will doubtless do, so I feel that I must bear to you the solemn and painful intelligence that your dearly beloved mother is no more. She died on the 6th inst., at 10 A. M., happy in the Lord, and fully conscious of her dissolution. Bear up, my brother; you believe in God; believe also in Jesus Christ. Look to Him, and He will comfort you. Your loss is irreparable in this world, but in the world to come you will find that eternal life and its joys and services outweigh all the agony of this vale of tears. Therefore, while you weep, you may rejoice to know that her end was peace; her mind clear and calm to the last. She requested several to write you, and among them myself. I had rather have been excused from being the bearer of so painful tidings, but duty and affection require it.

Self and family arrived home from Jerusalem after an absence of three months, on the 4th of September. The next day I visited your mother, and found her sitting up, but not well. The next, the 6th, Mrs. Jones and self visited her and found her in bed, as also John and Rosa; both J. and R. were down with the ague. Mrs. J. nursed them as well as she could for the day. I visited them the day following, and on Sabbath self and wife went again. Mrs. Jones then remained till the 10th; then came home, returned and spent three days and nights to the 17th. From this time onward Miss Almira Dickson remained with your mother, and cared for her most tenderly for ten days or more. I cannot say whether it was all one time, or at two different times. Miss D. did her best, and Mrs. Minor always spoke of her care in the highest terms. Up to the 30th Sept., I visited your mother almost daily, and frequently Mrs. J. accompanying me in order to aid your mother what she could.

At the time she made her will, Sept. 13, I was sent for early in the morning. Miss Dickson had been called in the night to write at your mother's dictation. The article was well written, but as she concluded to add to it, I copied it and took it to the Consul's for signature, and copied on to his book his evidence, &c. From the 1st to the 6th of Oct., self and wife, or one of us, visited sister Minor daily. When Mrs. J. went, she started in the morning and remained through the day, and returned in the evening, generally after dark. * * * *

The morning of the 4th, Mrs. Jones accompanied me to see your mother. She rode out in much pain; one hand was useless. Of course she could not assist in lifting, but could sit by her side and fan, &c., with one hand. We remained through the day. We were alarmed to see how rapidly she had failed. She was in great agony most of the time. From my journal I copy the following:

4th—Morning. Wife and self went to sister Minor's and spent the day. Mrs. M. is very sick. She experiences great agony of body. Her spirit is quiet. Much of the time she prays. Then again her exclamations are, "Blessed Jesus, come quickly. Hid with Christ in God. I wonder if these pains will continue to the end. How long will it be before I die? I thought last night would be my last." Then, as the sun went down, she proposed that we return; she told us she thought she would not live till morning.

5th. Mrs. Jones spent the day at sister Minor's. She is still in the same distressing agony. She knew us, and appeared to be fully conscious of every thing. The day before, she was anxious that those of us present should eat; advised that the table be removed out door, under the awning. I remarked at table, that she was literally strong in death. We were all astonished at the same expression of her eye, the strength of her voice, and her appreciation of all things around her. To-day, the 5th, she is still strong, though weak—very weak. Still she will by the strength of her will rally a great deal of power. But how she suffers! The disease is of a very putrid kind. She looked up to Mrs. Jones and said, "O! don't you pity me. Mr. and Mrs. Saunders are so very kind." It is very distressing to behold her agony.

The 6th, at noon, Bro. Dickson called and informed us that sister M. died at 10 A. M. We were anxious to go out early in the morning. We wanted to be with her in her last moments, but in consequence of aiding the widow lady before mentioned to start for Jerusalem, we were prevented. We went as soon as we could. Found indeed that death had visited the house. O! it was a solemn time. The remains were neatly laid out—the features quite natural. Bro. John told me, as he will tell you, that a little while before she died, she called your name and his. She said to sister S., "Come and stay with me; lay your warm hand upon my bosom—I want to feel it, for death is cold—I am going," &c. I should say, that from our first visit to her on arriving from Jerusalem, she had constantly affirmed her conviction that she should not recover. About the 23d or 24th of September we requested her to consent to send for a French physician, from Damascus, who was then in Jaffa waiting the steamer. But she refused, saying that medicine would do her no good. Frequent were the kind inquiries made after her welfare on the part of the Arabs, Jews, and others, who knew her. At one time, a week or so before her death, while I was with her, she spoke of death: "The fear of death has been taken from me since 1843. I do sometimes fear the last physical struggle, but I know in whom I have believed. I would like to live for the work's sake. It seems hard to leave it; but thy will, O Father, be done." I began to talk to her of the land of everlasting deliverance from all the sins and evils we are subject to here. She interrupted me, saying, "I love to hear you, but I am too weak to bear it. Your words go all through me." Brother and sister Saunders were with her for a week or more previous to her death, and for the last three or four days, they were there all of the time. They labored hard, and did all they could. Sister M. often spoke of them as being excellent nurses, and as meriting her heartiest thanks. It will be a great comfort to hear that they were with your dear mother in her last moments, and that they labored so faithfully and kindly in relieving and smoothing the rugged pathway to the gates of death. Rosa, the colored girl, worked hard, and was very faithful. She went beyond our expectations, being constantly on her feet through the day, and constantly attending to calls enough certainly to bewilder and wear out. Yet she endured all remarkably well. Her attention and willingness show that she is deserving the kind regards of those she is serving during her minority.

Sister Dickson has been prevented from visiting your mother by distressing chills and fever. Almira so far recovered as to visit her again several times previous to her death, and sit by her side. Bro. Dickson visited her, I believe, on first-day morning before she expired. But it is duty to speak of Brother John. *From first to last*, he has been as attentive and as kind as any natural son could well be. He was the constant nurse in the most unpleasant part of the care needed. He stood over her, watched her, waited upon her, lifted and moved her, and in short anticipated every want of hers, with a solicitude, and tenderness, and aptness, that surpasses all praise. He is worthy your highest esteem, if for nothing more than for this. All of us here award to him our respect and love for his unremitting care and labor for your dear mother, but especially from the time of his return from Beirut, for his indefatigable labor to care for her. Words are too feeble to express the devotion, judgment, and attention, of that young brother during the last eight or nine days of her life. He is not proud, and I hope and trust that what may be said to his honor will be received by him in all humility. I heard that just after the trying moment, when the gate of death had been passed, he kneeled beside the lifeless remains, and said in broken accents, "You were not my mother to bring me into the world, but *you are my mother* because you brought me to Jesus." I can conceive of nothing more touching than that. "O," said he to me, "my heart is almost broken." But he is now more calm, and I trust will ever prove worthy of the cause he serves. He is certainly deserving, is trustworthy, &c.

I may also add, that Bro. Steinbeck is worthy your confidence as an associate in your benevolent work. His honesty and wisdom in the management of business are not to be doubted. May the Lord grant him all grace, and make him abundantly useful in his calling.

Mrs. J. and self watched during the night succeeding the demise. At about 3 P. M. the following day (yesterday) there were assembled, in that same room she built a little more than a year ago, our little colony, (excepting Mrs. Dickson,) Miss Williams, the American Consul, Cavasse, brother-in-law, another Armenian, Rabbi Levi, several Jewish laborers, and some Arabs at the door. The coffin, very neatly made by Bro. Dickson and his son Henry, was placed on a table. I introduced the services by having Mr. H. read the 23d Psalm in Arabic. Then I read a part of the 5th of 1st Corinthians—prayed—chose my text from Mark 14: 8, "She hath done all she could," and from Rom. 8: 18, "The sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." A brief exposition of these verses, a hasty review of her labors, persecutions and sufferings, and a tribute to departed worth, was all that time would allow me to do. It was a place of weeping. We then sung the 23d Psalm in English. Your mother loved this psalm very much.

Before writing more, I will here state, that in the morning an Arab, a former watchman of the garden, called. I took him in to see the dead. He lifted up his hands, and began to weep and pray—"*God is great.*" It broke me all down. Arab women called, and when shown the corpse, they wept profusely. These all, as well as others, were constantly saying, "The Signora is gone. Who will now give us medicine?" It was to me heart-rending to see this primitive people express their sorrow for their loss. They all said she is happy now, but what shall we do? Again I was overcome; past afflictions of my own came up. I told our people that these were showing the good deeds of a second Dorcas.

The religious exercise being ended, we proceeded to the resting place on Mount Hope. The bearers were brethren Saunders and Dickson, and Henry, Frederic S., Mr. ——, Janissary to Lieut. Lynch, and some of the Jewish laborers. Consul Murad, Cavasse and self walked in front of the bier; the assembly followed in good order in the rear. The grave was dug in shell-rock. It is in a commanding place, and near to where Emma, Lydia, John, and sister M. read and prayed just before the girls left for the States. After burying the dead from our sight, I made a remark or two, repeated a few passages of scripture touching the resurrection, and pronounced the benediction in Arabic and English. Thus we separated, not knowing who of us will be called next. Oh! my God, prepare us all for the summons. WM. M. JONES.

Letter of Mrs. Jones.

JAFFA, Palestine, Nov. 11, 1855.

DEAR BROTHER,—Although personally unknown to you, I feel that the strong tie of Christian love and sympathy binds me to you—especially on account of the strong love and respect I have borne to your mother ever since my personal acquaintance with her. My visits to her since my arrival in this country have been as frequent as my occupations would permit, and I often remarked to my husband, that I never visited her without feeling my mind more and more drawn to God and the suffering poor. While in Jerusalem, we enjoyed a short visit from her, which was particularly *precious* to us, and on our return to Jaffa, I hastened to her as soon as I could, when, to my surprise and sorrow, I found her on the bed, as also John and Rosa. I offered to stay all night; but she said, "No—John can give me what I need to-night." In the morning, Sabbath, I went out before breakfast, and remained three days; at the end of which I left her sitting up quite convalescent; also John up and able to do what was necessary. I remained at home, I think, two days, as we had a month's washing to do; after which I went to her, and to my deep sorrow found her again on the bed with a fever. She thought her relapse was brought on by a draft of wind coming upon her while sleeping. It not being convenient to remain at that time, and Miss Almira Dickson having expressed to me her readiness to go to her, they sent immediately for her. She arrived before I left, and remained three days, when I went and took her place for three days; after which Miss D. was with your mother for eight or ten days; left her better, went home for a day, and was taken sick. She remarked to me, "I could hardly bear to be sick, for I wanted so much to be with Mrs. Minor." Your mother spoke very kindly of her attention to her. During this time I only saw Mrs. M. occasionally, as I had company staying with me, and no servant. After this I was with her daily for about two weeks, with one or two exceptions. When I entered, she would frequently exclaim, "There is that angel of mercy again." When I bathed her she would say, "You darling, no one ever did it so nicely." And when I combed her hair, (which I did every day,) she would say, "Oh, how soothing! If it were not for you I would lose my hair. If I do not get well, you will cut off my back hair and send it to Albert, and tell him *all*." She requested me to arrange her front hair as she usually wore it—telling me every thing that she wanted to wear in the narrow house. She spoke often of you, and said, "I would be glad to live to see my boy again; but I must not think of it; it will kill me. He is all that I can wish except his health."

From the first, at times, she seemed to think she would recover, and at other times she would talk about where she would live while building on her new place. I think the last time she talked to me of it she thought she might come into the rooms formerly occupied by Miss Williams, in the house with us.

There seemed many ups and downs in her disease, of which John will write you the particulars better than I can from memory. The cares of watching with her, and the duties of my family, I am sorry to say, prevented me from keeping a journal, which I would have done at all events if I had known the end from the beginning. I had not the least idea but that she would recover until the time that I was taken down with the erysipelas in my hand and arm, which kept me from her for two weeks. I began to be alarmed as soon as I heard that the dysentery continued. While I was with her, her mind was as clear as in health; consequently I consulted with her (reading to her from our medical works) as to what remedies she should take; but, as is sometimes the case in that disease, the remedies would at first appear to give relief, and afterwards seem useless. During the hemerrhoids, we used astringents externally and emollient clysters, through which means she seemed to recover from that phase of the disease, and gained a good appetite. We did not doubt but that, with proper care, she would soon be able to come to our house, which she had said she would do as soon as in a condition to be moved. It was at this time that John, through her urgent request, went to Beirut, expecting I would be with her daily until he returned. But alas! the next day I was prostrated upon a bed of suffering, which kept Mr. Jones with me, and absent from her, for six days, the latter part of which time she was waited upon by Mr. Saunders, who with his wife ceased not to give every attention to her while she needed anything at their hands—a minute account of which they will no doubt write you.

At the end of two weeks of suffering, I again made an effort to see her. When I entered, I found her much wasted; she looked deathly; but she embraced me most tenderly, saying, "My dear sister, you have come in time to see me die." My hand was still useless, but I sat by her most of the day. She suffered great pain at times, between which she would talk a little. She said to me, "Tell Albert that I want him to come and continue this work." Once she said to me, "You can't help me; you would if you could." Frequently she would say, "Jesus, let me come; my righteousness is filthy rags; in *thee I trust*," and many similar expressions.

In the evening she said to me, "Now, dear, go home and rest; you are not well"—saying, "Good-bye for this world." I replied, that I would come early in the morning—that she might still be living. This seemed to give her pain.

In the morning I returned and found her little changed. I remained through the day; in the evening I thought there were some signs of death being near; but as I could not watch, and we had an afflicted widow at our house, who was going to Jerusalem next day, I left without saying anything to her, as I did not wish to pain her. Even that day she prescribed for my hand. Such was her consideration for every one around her. I saw her no more in life.

The next day I found her hair and person arranged just as she had told me weeks before. She had often spoken of John. "I know you and brother Jones will comfort him; he has been as a son to me." Words cannot express the anxiety he felt for her from the first moment of her sickness. No son could have shown more sympathy, tenderness, affection, and attention to every want, than he did, performing *every office* with delight; and in short, she would not have him away from her. No one could take his place.

I might say much more, but time fails. It is impossible to tell how much we shall all miss her; we can only pray that her example may lead us to greater devotion to the cause of God. My dear brother, words will fail to comfort you; but the Holy Spirit is able to support and comfort you. Surely, the remembrance of her godly example and pious instructions—the fact that she has given her life for the glory of God, and the hope of ere long meeting her glorified spirit in heaven, is enough to comfort you in this deep trial. God bless you and support you.

ELIZABETH P. JONES.

Letter of Mrs. Saunders.

PALESTINE, Jaffa, Nov. 12, 1855.

MY VERY DEAR CHRISTIAN FRIEND,—It is with deep emotion, and with heart-felt sorrow, that I announce to you our painful bereavement, which I very well know will fall upon your heart with overwhelming weight. May our Heavenly Father give you strength to bear it. Your dear mother closed her eyes upon the fleeting scenes of earth, to open them in a brighter and better world, on the 6th of November, ten minutes before 10 o'clock, A. M. Her death was such as we might expect; it was peaceful, glorious, and triumphant. It has been my inestimable privilege to watch beside her during the last week of her life. There has been something exceedingly beautiful and deeply interesting in her conversation. It seemed as though the light of heaven had been sent to brighten her upward pathway. It is impossible for me to convey, even to you, who know her conversation so well, a clear conception of the glowing eloquence, the beauty of expression, and the deep pathos, when she spoke to me, a few days before her death, of the course which she had taken in relation to this work, and the evidence which she has continually had, and still felt, in her own soul, of God's approval, and her bright hope of heaven. She felt to the last moment an unshaken confidence in the final success of this mission. I saw that your worthy mother was gradually declining for some time previous to her sickness. She was taken sick about the first of September—first with chills and fever—then inflammation of the stomach and intermittent fever—the last two weeks dysentery. During her sickness her physical sufferings have been very severe and almost without intermission. In this she glorified God, as in every thing else, by her patience and entire submission to his divine will. At the commencement of your mother's illness, I was unable to be with her, as dear sister Williams was then with us, and very sick. At times we despaired even of her life; yet God, in his infinite wisdom and tender mercy, has seen fit to bless our humble efforts, and she is now recovering. A few days after your mother was taken sick, we went to see her, and told her that it was our wish to remove her to our home, that we might nurse her. She thanked me in the most kind and tender manner, and said, "You have sister Williams now with you, and she is very sick; if you can save her, you will do a good work; this is enough for you at present." As soon as I could leave, we went again to see her. I found her still sinking. We then earnestly entreated her to be removed to our house, as I could not leave then to take care of her, sister W. still having critical symptoms. She replied, "I have not strength to be removed now; all the medicines which I have taken have failed to help me, and I think my time has come to die." After this, as often as I could leave, I went and passed a day with her, which I always found to be a blessing to my own soul. When the dysentery set in, her life ebbed away so rapidly that she told me she had not one ray of hope of her recovery, and she was longing to depart and be with Christ. I have particulars which I have not time to tell you now; I can only give you these of her last moments.

One hour before she died, she called for me. I went immediately to her, she looked up to me, with a calm sweet smile, while her whole countenance beamed with love, and said, "My dear precious sister, I am now going home; lay your hand upon me, for death is cold; let me feel your warm hand, for it comforts me." I took her right hand, and laid my other hand upon her forehead. I then repeated a portion of her favorite psalm: "Yea, though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me." She said, "What a mercy that God has granted to me my reason to the last!" She then pressed my hand and said, "God bless and reward thee for administering relief and comfort to this worthless body, and consolation to its departing soul." She then said in a clear voice, "Albert, my blessed child, my devoted Albert!" She then made a short prayer; I could only understand these words, "Lord Jesus, receive my spirit." Her last words were, "Dear sister, will you go with me?" Not a momentary spasm disturbed her placid peace—not a muscle contracted—her breath grew softer and fainter, until it faded away upon the air, and her redeemed spirit took its flight upward, to its final rest in God's glorious kingdom!

I closed her eyes and composed her limbs. The scene which then ensued was most affecting. John S., bowing by the side of her bed, broke out into fresh lamentation, saying, "You are my mother; you did not give me birth, but you *did* bring me to Jesus!" Rosa and the poor Jews stood without, bewailing and mourning for her. After I had laid her out, the poor Arabs and Jews came in to mourn and weep together, and look once more on the face which had so often cheered their lowly hovels when upon her errands of mercy. The funeral was at her house on Fourth-day, Nov. 7th, at 3 o'clock P. M. When we had looked our last farewell upon the loved remains, she was borne to her own sweet spot—*Mount Hope*—where her dust will rest until Jesus shall come to make up his jewels. My dear friend, it is my humble prayer that this heavy affliction may be sanctified to you. I trust the molding impress of your sainted mother's hand is still upon you, and may you, like her, bow meekly to the will of God.

Affectionately yours, MARTHA SAUNDERS.

From the New York Examiner.

LAYMEN AND THE SOCIETIES.

Several articles have lately appeared in the *Examiner*, illustrating the importance of giving to Christian laymen a larger share in the management of the Benevolent Societies. Most of these articles were written by laymen, and laymen, too, who may be regarded as speaking for others as well as themselves. They have spoken, not because they wish the additional control to pass into their own hands, but because they believe it to be poor economy to cast the administration of the Societies so generally upon ministers, while there is a much greater number of laymen in the churches, who have the ability and the heart to perform the labor. A more equal distribution of labor and responsibility, it is said, would increase the strength and efficiency of laymen, and relieve pastors of burdens which they cannot carry without damage to the higher and holier ministry to which they have been called.

These views, in our opinion, have so much force, that we should be glad to see two-thirds or three-fourths of the Managers of all our benevolent institutions composed of laymen. We believe the interests of the Societies, of the pastors, and of the churches, would be promoted thereby. Every person conversant with the operations of these Societies, knows that their administration is almost wholly a *business*, or semi-secular administration, and the pastor whose aid is the most coveted, as a Manager, is he who is understood to possess the somewhat rare combination of good "business abilities" and an elevated rank as a pastor—the latter being determined by his power to move men, and the pecuniary resources of the men whom he has to move. City pastors of this stamp are not unfrequently connected with from five to ten different Boards—every one of which makes a perceptible draft on their time and their strength, even when no "special emergencies" claim extra meetings, and awaken earnest controversies.

We are not able to see the necessity of so tasking the "business abilities" of pastors, when the same thing is to be found in greater perfection among hundreds of Christian laymen. If they are less intelligent, in the sphere and operations of benevolent enterprise, than pastors, it is simply because their opportunities for knowing have been less favorable. Lay upon them the responsibility of shaping and conducting their administration, and they would soon become as "well posted" in Missionary, Bible, Education, and Tract Societies, as they are in stocks and merchandise; and the knowledge and discipline thus acquired would serve to make them the most valuable members of the churches.

But the churches would gain a more substantial good from the change. Their pastors would be relieved of cares which often prove incompatible with complete preparation for the pulpit, and the most faithful discharge of pastoral duties. It is useless for any man to shut his eyes upon the fact, that the common schools and academies and colleges of our country, are filling the pews of our churches with hearers who demand and WILL HAVE preaching that bears the marks of severe and protracted study—instructive, strong, earnest preaching—such as no man ever did or ever will give a people, from Sabbath to Sabbath, without patient and painstaking preparation. Multitudes of the best young men, trained in the best schools of our villages, are drawn to the great cities to seek distinction and a fortune; and any evangelical denomination that would retain them within its fold, must have spiritual and intellectual POWER in the pulpit. Gothic architecture, quartette singing, and stained windows, will not do it. So long as all these, and more too, can be had elsewhere, *with* the highest exhibitions of pulpit attractiveness and strength, it requires large credulity to suppose that intelligent and aspiring young men will consent to substitute a sort of gilded common-place for genuine pulpit power. No; that which they cannot find in one congregation they will seek in another, and the denomination that ventures to tolerate imbecility in the pulpits of large cities, will assuredly count up their nett losses by hundreds and by thousands. It is, therefore, with inexpressible pain that we see so many city pastors laden with the care of executive trusts, the tendency of which cannot be otherwise than to entail feebleness on their pulpit preparations. It is like attempting to give strength to an outpost, and throwing wide open a citadel.

The churches would not be the only gainers by assigning the chief share of the administration of the Societies to laymen. The change would be for the good of the Societies themselves. It would introduce into their Boards a larger element of business *experience*, and, perhaps, a more unflinching regard to the economical expenditure of money. Questions of organization and administration, concerning which there may be wide differences of opinion, would be more likely to be considered in the light of a practical common sense, and the conclusions reached would be more certain of being based on the absolute merits of a case. No true pastor can be indifferent to the feelings or opinions of his church, and it can seldom be advisable to place him in circumstances where he must, even in appearance, disregard their views, or fail firmly to meet the emergencies which may arise in the many-sided administration of a great benevolent institution.

From such considerations as these, we are prepared to welcome the coming of the time when more laymen and fewer ministers shall have the direction of our Missionary, Educational, and Publication Societies. The Managers of the American Bible Society are all laymen, the Prudential Committee of the American Board of Commissioners has seven laymen and two ministers, and the Executive Committee of the American Tract Society ten laymen and six ministers—the ministers constituting the Publishing Committee. These institutions have become great by the blessing of God on a *lay* administration; and we do not believe that the executive ability of Baptist laymen would prove unequal to the successful administration of all our denominational Societies.

SERMONS FOR THE TIMES.

Hosea vii. 8—"Ephraim is a cake not turned."

That is, says Matthew Henry, "Burnt on one side and dough on the other, and good for nothing on either side;" i. e., says John Gill, "Neither fish nor flesh;" "A motley mixture," says Thomas Scott, "of idolatry and the worship of God." Ephraim was made up of contrarieties and inconsistencies. The same characteristics distinguish many now. They may be divided into four classes.

1. *Those whose good purposes are seldom fulfilled.* They purpose to train up their children in the way they should go, and let them have their own way. They purpose to do a great deal of good with their property; measurably to be their own executors and almoners, and thus enjoy the luxury of their beneficence; at all events to make their wills so that the cause of Christ shall be greatly promoted by their large liberality; but they do neither. They accumulate and hold their property—except some pitiful donations doled out as they part with their teeth, and die, leaving their estates to breed quarrels among a tribe of hungry heirs. Excellent their purposes, but execrable their execution. They live to make good purposes; and die to find, and lament that they have done nothing more. What are they but cakes unturned?

2. *Those whose judgment and conduct rarely agree.* It is their deliberate judgment, that a large amount of property given to children, is almost invariably a curse, instead of a blessing; and yet they will pile the dollars on those children till they take away all motives to personal effort, make them mere drones in a full hive, render them either reckless spendthrifts, or wretched misers, nearly useless while they live, unwept and unmissed when they die.

"Whom none can love, whom none can thank;
Creation's blot, creation's blank."

Others there are whose judgment is convinced that the use of alcoholic drinks, or tobacco, is injurious to their digestive organs, their nervous system, and general health; and injurious to others so far as their character gives currency to their example; and yet they will take their glass, and chew or puff away, with the simple and oft repeated confession, it is a bad practice. Unturned cakes are they.

3. *Those who are too conscientious to do right.* One man stays away from the polls lest his vote should be cast in the minority, and he cannot bear to be numbered with the ignoble few. Another drinks wine on extra occasions, because he is too conscientious to be singular in declining it. Another is too conscientious to pay his debts, lest he should so drain his purse, that he shall not always have at hand the very convenient change. Another will not attend church where John Baptist discourses to the adulterous Herod; where Nathan thunders in the ears of the murderous David, Thou art the man. Go to such a church! Not he; his consequence forbids it, lest his nice sense of propriety, or the finer feelings of his purse, be disturbed. "Burnt on one side and dough on the other," surely are all such.

4. *A numerous class are those whose profession and practice are contradictory.* "They profess that they know God, but in works they deny him." Some of them are seen in the theater, or opera house, and their presence is quoted as an endorsement both of the acts there performed, and the immoralities which invariably cluster about such places. They pray not to be led into temptation, and the very next evening are at a fashionable party, tasting the intoxicating cup, and tripping in the giddy dance. Fashions! None are more fashionable than they; and they seem tenfold more anxious about the cut of a garment, or the shape of a hat, than about the soundness of their creed. Others there are who care neither for plays, parties, nor fashions; they are too religious to mind such things; their whole souls, six days in the week, and how much of the seventh it is not our province to tell, are absorbed in worldly gain. The preface and appendix to their creed is, *who will show us any worldly good?* Both of these classes heavenward bound! the former carrying too much sail; the other too much ballast, and both, by their works, denying Him whom they profess to love. We do them no injustice in calling them, also, cakes not turned. [N. Y. Evangelist.

DEVOTION.—Nothing is more striking in the lives of such men as Augustine and Calvin, and Edwards and Bellamy, the master theologians of the church, and of such choice missionary spirits as Henry Martyn and David Brainerd, and of such earnest preachers and pastors as Whitfield, Wesley, and Payson, than the fact that God filled up their whole souls. They seem to be utterly lost for words to pour forth their adoration and love, and the intensity of their desire for his honor and glory.

Diligence, the hand-maid of Providence, is the parent of intelligence, and the noble dispenser of excellence; all arts and sciences are at her command; she crowns all her sons and lovers with riches and honor.

The Sabbath Recorder.

New York, March 20, 1856.

British Correspondent—JAMES A. BEGG.

Our Accounts.—The twelfth volume of the Sabbath Recorder is more than three-quarters completed. Bills to the end of the volume have been sent to those who owe the establishment, so that no one need be in doubt as to the state of his account. All of these bills ought to be paid before the volume closes. It has been proposed to make out a list of dues at the end of the volume, and print it with the next Annual Report of the Publishing Society, so that the members may estimate for themselves the value of those unpaid accounts which so seriously embarrass our operations. It is desirable that the list should be as short as possible.

MORAL GOVERNMENT AS AFFECTED BY CHRIST'S MEDIATION—NO. 3.

Should it be objected to the view presented in our last article, that it does not hold good with respect to the heathen, they being ignorant of the Gospel; we reply, that there is as great a modification of the moral government exercised over the heathen, as there is of that which is exercised over those who have always lived in the light of Revelation. The heathen are, therefore, brought under the trial of a *new test* of their disposition with respect to God's service, as well as those who are instructed out of the Bible. For though the heathen are ignorant of the Gospel, they are also ignorant of the Law. If their moral character is not tested by the Gospel, neither is it tested by the Law. Of the Law as revealed through Moses and the Prophets they are as ignorant as they are of the Gospel which is revealed in the New Testament.

Nevertheless, there is, in the condition of the heathen, ample room for the modification of which we are treating. Though ignorant of revealed law, they "shew the work of the Law written in their hearts, their conscience also bearing witness, and their thoughts the mean while accusing or else excusing one another." (Rom. 2: 15.) They have the knowledge of duty as indicated to them by the works of Nature; and if Nature reveals to them any thing of Gospel grace, they have also the knowledge of that.

But does Nature publish the Gospel? That it sets forth the *plan* by which sinners find favor with God, is not, and will not be, pretended. Nature gives no intimation of "God manifest in the flesh;" it says nothing about Jesus Christ dying for our sins, rising from the dead, and making intercession for us. It tells not *how* God can be just, and yet justify the ungodly. And though a heathen agonize with the inquiry, "Wherewith shall I come before the Lord, and bow myself before the high God?" (Mic. 6: 6,) he finds nothing in all the works of nature to furnish a satisfactory answer. The details of the plan of salvation are certainly hid from him who has no other guide but the Book of Nature.

But whether the *fact* that God is *appeasable* is not intimated to the heathen, is another question. It must be owned, however, that this question cannot be so satisfactorily answered as to dissipate all doubt. The Apostle says, that God "left not himself without witness, in that he did good, and gave us rain from heaven, and fruitful seasons, filling our hearts with food and gladness." (Acts 14: 17.) By this kindness the Almighty taught the heathen, not only his existence as the Creator of all things, but his constant presence and care for the creatures of his hand. For "as a friend, in sending us frequent presents, expresses his remembrance of us and affection to us, though he neither speak nor write, so all the gifts of the divine bounty which are scattered abroad on every side, are so many witnesses sent to attest the divine care and goodness; and they speak it in very sensible language to the heart, though not to the ear."

Now, as all these evidences of divine goodness are given, not only to men, but to *sinful* men, the inference from them is, that there is some way, or manner, (though not yet revealed,) by which the Creator can hold intercourse with, and bless, his erring creatures. For since these marks of his care are bestowed, notwithstanding they have been forfeited by sin, what is more rational than the conclusion, that God does not desire the death of the wicked, but that he turn from his ways and live?

This view of the subject includes, not only the creation, but also what is called *providence*, as testifying the goodness of God. We cannot well separate them, for the providence of God is as widely extended as his creative works. Indeed, the one argues the other by necessary implication.

But, on the other hand, the forces of nature are often employed in such a way as to render it doubtful whether God can be reconciled to sinners upon any terms. The earthquake swallowing up armies of living beings, the volcano overwhelming whole cities with its eruptions, the tornado sweeping its destructive blast over fruitful lands, the sea quenching the fire of human life in its angry foam, the pestilence walking into crowded cities to lay waste and devour, together with innumerable other fearful visitations, proclaim that there is wrath with God, with as much distinctness as his more kindly visitations proclaim his goodness. So that the fact of God's willingness to be propitiated is veiled in so much darkness, that a revelation from heaven is needed to dissipate all doubt.

But notwithstanding this uncertainty, it is clear that the providence of God towards the heathen is not what it would have been, had the mediation of Christ not interposed. We who have revelation to guide us know it, whether the heathen themselves do or not. And inasmuch as his providence *is* modified, to such an extent that, instead of destroying them for their wickedness, he bears long with them, and gives them the fruits of the earth for their comfort and gladness, it is clear that this manner of dealing with them is a *test* of their moral character, over and above what is implied in the law discovered to them by the creative works of the Almighty antecedently to any such experience of his providential goodness.

The sum of what we have said on this head is, that the heathen do, in the *providence* of God, receive the knowledge of the great elementary principle, (the universal goodness of the Almighty,) in which the Gospel is founded, as really and substantially as they do, in what is "written in their hearts" by his *creative power*, receive the knowledge of the great and elementary principle of the Law.

T. B. B.

EDUCATION—DENOMINATIONAL.

That the parent is greatly responsible for the education of the child is felt by all who have deeply studied the relation of parent and child. The State is in duty bound to provide for the citizen an education which will enable him to discharge the primary duties of citizenship. It is likewise the duty of the church to so educate her sons and daughters as to enable them best to accomplish their mission as Christians. These propositions have come to be regarded as almost axiomatic.

If this be so, then it follows as a legitimate sequence, that it is the especial duty of each branch of the Christian church, of the great Christian family, to educate, in the higher and more central principles, at least, her own children. *How and where shall our youth be educated?*—has often been and should ever be a question of deep solicitude to all denominations. There may be certain literary advantages in favor of other than denominational culture, but all of the more religious considerations are in favor of such an education. Some of these higher considerations are the following:

Each denomination sustains to its members the relation of spiritual parentage. It is her duty to exercise such an influence over her youthful members throughout their preparatory training, as shall tend most effectually to prepare them to meet properly and efficiently the great duties of life. The young are to be trained for the world and for heaven—not only directed, but encouraged, assisted. It is not enough that they have the path of duty pointed out to them It must not only be said to them, "Here is the way of life—walk ye in it;" but they must be taken by the hand and helped onward.

These children of the church need to sit under a common "roof tree," and there learn their common lessons, and together prepare for action. In order that they may be bound together by the indissoluble ties of the common faith of a Christian brotherhood, it is necessary for them to have a common home, where they can meet for culture and for counsel over their mutual interests—over the interests of the world—where they can sing, and pray, and weep together over the interests of religion. They need, while thus being trained, the frequent visits, counsels, and encouragement of the guides and leaders in Israel. They also need to be where they can spend their vacations and short respits from study among their own churches, or else be sent by them on agencies or missionary tours. By being thus situated, they would not be, as is too frequently the case, with many, on completing their education, without acquaintance, and knowing not as much, perhaps, about the history and operations of their own as of other denominations. They would be acquainted with the denomination, and the denomination would be acquainted with them, and know about what station they were best fitted to occupy; hence would not be compelled, as is too frequently the case, to experiment so much, in order to ascertain the appropriate sphere of its members.

If the denomination neglects to exercise this parental solicitude and protection, then will she continue to behold her youth scattered like sheep without a shepherd—her children wandering, the church scarcely knowing where. Thus scattered—with but little or no acquaintance with each other—without any central rallying point, save a common religious belief—without knowledge or sympathy concerning denominational enterprises—how could any thing bespeaking union, strength, or concert of action, be expected from them? Not only this—is it surprising that the want of a common instruction and sympathy should so frequently lead to indifference and finally desertion of the denomination? The truth is, that the young are more easily swerved by persuasion and kindness than led by abstract truth; hence, when they meet with kind and hearty receptions—when they are presented with bright prospects of usefulness—offered station, preferment, and honor, and entreated to accept of such offers, it is not strange, if they should frequently yield to the temptation. This will occur with especial frequency, where denominational influences are not cordial, bracing and invigorating. The struggle between conscience and the temptation thus presented to the young and ardent, will often be long and severe, and if conscience prevails, it will often be after many tears and prayers.

This thrusting the young out to contend single-handed with errors in high places, before they are prepared for it, reminds one of the ancient gladiatorial contests. If they fall in the contest, and give up their former belief, how often is it said, "Thumbs back—let them go—they are too nerveless and fickle minded to be of any worth to us." This, too, without giving them that previous preparatory training which was granted to gladiatorial combatants. Is not such a course more like those nations where the father looks coolly on, and sees his son perish, rather than help him; but if he gains the victory alone, lavishes unnumbered favors upon him?

How much better and nobler is that system, which protects, encourages, and assists. Various denominations have tried both the collecting and the scattering systems, and those denominations which have and are still exerting the most influence and power in the world, have taken the most pains to establish denominational Institutions. They have given their tens and their hundreds of thousands for this purpose. They find that by this system, their youth, as a mass, are better educated. Their ministers are so educated as better to advance the interests of the denomination, of the church, and of the world. Their missionary enterprises thrive better; more men are furnished for foreign fields. In short, all of the important aggressive and progressive movements of a denomination are promoted by a denominational system of education.

If such systems work well in other denominations, why would they not in our own? They would. If we mean to advance; if we wish to educate our youth in a way that will best promote the interests of the denomination; if we wish to raise up and send forth missionaries; if we wish to hold up the Sabbath to the world in a manner that will claim its observance; if we wish to exert a commanding influence—we must have literary and theological institutions. *

THE AMERICAN BOARD.

Concluded from last week.

Rev. Mr. Fairbanks was next called to the stand. He had been a missionary on the Mahratta Mission nine years. He said that preaching the Gospel is the great work of missionaries. They do this by means of Schools and the Press. The inquiry is, How can we do most? They change till they can do most—try English Schools, the Press, Tracts, &c. Deprecates sudden changes. There is a great lack of men and means, and with this lack they do the best they can, and accommodate themselves to circumstances. Their last change was to devote themselves to preaching the Gospel for the conversion of souls, and use schools to train converts, and not heathen minds to oppose their work. Would do more if they had the means. In that country, the missionary women can preach the Gospel all the time in the villages. Preaching is the best expenditure of our strength. The difficulty is in the mind of the Hindoo. His vernacular must be used to instruct him. Let the School and the Press alone, and attend to the language, and in one year one can preach the Gospel to the natives. The natives generally will not seek the English language; a few only will seek it, for the advantage gained thereby. There have been few conversions. The reason is, we have not labored for conversions. The cross of Christ converts, and not general education. We must teach the natives that they are sinners, and how they may be saved. We must teach, print, and translate the Bible to some extent; but we must keep up preaching. The feeling in the Mahratta Mission is gaining toward preaching only. The best educated natives get the best employment and best pay. Since the change, there has been constant progress in the new direction. The missionaries were not influenced by the Deputation. They were unanimous, with the exception of one opposed and one non-committal. The plan was adopted by the united counsel of the Deputation and the missionaries. In the final vote, each in order gave his opinion. The Deputation gave the impression, that the change was in the line of feeling of the Board and the churches in this country. The London Missionary Society pursues the same course. After the Bombay School began, there were only Mr. Brown and himself on the Mission; Brown had charge of the School, and he of the missionary labors. Would like the School still, if we could have it. Concurred in the change, because we had not the men to conduct it, and also do the work of the Mission. There were one hundred and seventy-five young men in the School at Bombay when it closed. The average number of hearers in the meetings in the villages is one hundred. The change in his mind with regard to the High School in Bombay commenced while the Deputation was in India. Since that time this conviction of the propriety of the change has increased. The School was abandoned first from necessity, because there was no one to go on with it; afterwards, and during his journey home, he became convinced of the propriety of the change.

The Rev. Dr. Allen was the next speaker on the stand. He went to India in 1827, and returned in 1853. The first five or six years he spent in Bombay, he was chiefly engaged in itinerant preaching. He traveled considerably over India, and spent some time in Madras and Ceylon. He was not engaged in teaching, but in preaching, and general missionary labors. Had charge of the printing office nine years, and was also engaged in the revision of the Scriptures, &c. He thought there was no material in the vernacular of India for education. They have no system of Geography, or Cosmogony, or other sciences. The changes proposed were great. Without the system of education adopted by the Missions, no suitable Christian teachers can be prepared. We might as well expect qualified preachers from the common schools of this country, as from the native schools of India. Occasionally a good teacher or preacher may be had without this education. The European Missionary Societies have five-sixths of the missionary force in India. They all adopt the system of teaching as essential to their success. This Board has one eleventh of the mission force. Schools are necessary to open the way for the spread of the Gospel. There cannot be much done without them. Heathenism is to be overthrown by education, by raising up a competent native agency of the highest kind. This is increasing more lately than before, led by the Free Church of Scotland. A better class of preachers are thus secured They teach nothing but English, except to candidates for the ministry, who are taught Greek and Latin. He would have schools where the unconverted could be educated. When their school was abolished, they lost those that were sent to the schools of the Church of Scotland and the Church of England. Of the six hundred and fifty educated at the Batticotta Seminary, three hundred and fifty have been converted. One hundred and twenty of these are in the employ of the Mission, as preachers, catechists, teachers, and in other missionary labor. In Dr. Duff's school, in Calcutta, of thirteen hundred men who entered to prepare for office, and money-making, and other temporal interests, one hundred and fifty have been converted. Government scholars might become good translators, if they had the material for education in their language, and also some might do for teachers in higher classes. Their language must be Christianized to be right for the conversion of the heathen. Christianizing the people will Christianize the language. It is more difficult to translate the Scriptures than other works. Translating the Bible will tend to purify the language. A comparison shows that all missionaries rate education higher than the Board. The educating by others is a sufficient reason why the Board should educate. The creation of an educated native agency is the great work of missions. Being asked if he considered the report of the Deputation as the opposite extreme to the views of Dr. Duff, he said that it differed from the practice of all other Societies. The Church Missionary Society has 3000 pupils; the English 4000; and other societies large numbers. From a comparison with them he thought——the audience can judge for themselves.

The English language is used in the courts in the provinces of Bombay, &c. Elsewhere the language of the district is used. There are Government and private schools, where the English language is taught, and where the natives will learn it.

Rev. Mr. Poor, son of Dr. Poor, who labored many years in Ceylon, next took the stand. He reviewed in a lengthy and impressive argument the Report of the Deputation. He took the position, and maintained it with much force, that the new order of things in the limiting and suspension of the schools, and the teaching of the English language, was not in accordance with the wish of the missionaries, but a necessity forced upon them. His views were in agreement with those given by Drs. Winslow and Allen, and in opposition to the Deputation.

Dr. Bacon read a lengthy letter from a missionary who took substantially the same view of the subject. The opposition to the Report was very strong and decided.

The Deputation reviewed the opposition at considerable length, and sought to defend themselves and their Report. Several members of the Board also debated the matter at issue with a good deal of zeal. The Report of the Deputation, and the discussion thereon, failed to harmonize the views of the members of the Board. The difference was manifestly greater at the close than at the commencement of the session. A resolution, and the only one of importance acted upon, was adopted, referring the whole subject to a committee, consisting of Rev. Drs. Beman, Hopkins, Riddle, Smith, Palmer, Fowler, Taylor, Bacon, Gov. Fairbanks, Hon. L. Child, H. Holden, and Judge Jessup. There were eighty corporate members and one hundred and fifty honorary members present.

To us, as a people just commencing in the work of Foreign Missions, this subject is of very great importance. The brief report that I have given of this meeting, from minutes taken at the time, will give a general idea of the subjects under consideration. Unless the wisest councils prevail, very much mischief to missions will follow. The missionaries are almost unanimous in the opinion that teaching schools, and teaching the English language, is indispensable to the success of missionary labors. May our own Board be guided by Divine wisdom in all their plans and labors for the conversion of pagan sinners.

J. B.

Female Tract Society.—The Female Branch of the New York City Tract Society held its regular monthly meeting at the Tract House, on Monday, March 10th. The collections for the month amounted to $517 25. The meeting was addressed by the Rev. O. Eastman, who also read letters from agents and colporters of the Parent Society. A few days before the meeting, two gifts of *one thousand dollars* each, one from a Baptist, and the other from a Congregationalist, had been received. One of the gentlemen accompanied his check with the remark, that he had formed a resolution to devote henceforth the profits of his business mainly to religious benevolent objects. An account was given of an old lady, who had reached four score years, who contributed to the Society one hundred dollars received for *knitting chair tidies* within a few months past. A letter was read from South Carolina, in which it was stated that every mountainous district in the State is about to be explored by colporters. [Independent.

SABBATH PUBLICATIONS IN CHINA.

Wanted immediately—Ten Life Members of the Missionary Society, at twenty-five dollars each, to enable our missionaries in China to print and circulate Sabbath Documents. Read what Bro. Carpenter writes, under date of Shanghae, Dec. 6, 1855:—

"Now what shall I say about books? We are doing, and have been for a long time, next to nothing in that line, while others are flooding the country with their publications. It is really painful to be obliged to be a spectator to the trampling down of the law of God, by good men, without the power of unfurling the banner of truth. Almanacs are in great demand among all classes of the Chinese. I think it might be of immense advantage to the cause we love, if we could have the means of scattering through the neighboring cities and villages only one-tenth part as many Sabbath Almanacs as there are Sunday Almanacs scattered. It would cost something to print them, and something more to hire boats to go and scatter them. I am not sure but Mr. Black's perpetual Almanac might form the proper basis for one."

Send on immediately your names, with the money, or get it if you have not got it on hand, for "the Kings business requires haste." Borrow it, or make a donation party for it; only let us have it forthwith.

J. Bailey, Cor. Sec.

MINNESOTA LANDS.

Milton, Rock Co., Wis., March 4, 1856.

To the Editors of the Sabbath Recorder:—

I have been requested by a number of brethren, to say to those brethren scattered over the denomination who desire to avail themselves of the benefits of claiming good land, that there are a number of us intending to go into Minnesota in the spring, choose our locations, make our claims, build our houses. Some of the young men expect to stay and fence and break the land, while the remainder come back for our families. We expect to start about the tenth of May. If any of our brethren want to go with us, they should inform us immediately, and we will give timely notice. Minnesota is noted for the fertility of its soil, its excellent water privileges, its beautiful timber and rolling prairies. I spent some four weeks in traveling through the territory the past season. It is as beautiful and healthy a country as I ever saw. We expect that some twenty-five or thirty will meet in this place to start for our new homes.

John W. Ayars.

Donation Visits.—We hear of two or three Donation Visits recently made to pastors of Seventh-day Baptist Churches. One was to Eld. Thomas B. Brown, of Genesee, N. Y., which came off on the afternoon and evening of Feb. 19th—a very pleasant gathering, which produced the happiest social effects, and conferred a pecuniary benefit upon the pastor of about one hundred and seventy-five dollars. Another was to Eld. Wm. B. Maxson, of Leonardsville, N. Y., the pecuniary results of which were about the same as that at Genesee, and the social features of which we have heard highly commended. Such "Visits," when properly conducted, often lead to pleasant and profitable intimacies between the families of pastors and those who, except for these occasions, would keep at a distance.

Dress in the Olden Time.—It is well to be reminded occasionally of the simplicity and economy of the early days of our Republic. A writer in *Putnam* for February says of the time of Washington:—

"Clothing was very expensive; and though made a matter of more consequence than now, as marking the distinctions of rank, still so sedulously maintained, it was often difficult for persons of much pretension to keep up the outward appearance of gentility. For this reason, all apparel was preserved with much care. I have seen specimens of mending, piecing, and darning, in garments belonging to good old families, which would have commanded a premium from some of our modern industrial societies. The raiment purchased for a young woman's bridal was worn by her in old age; and young girls of the household were glad to assume the faded relics of a grandmother's wardrobe. Rich dresses, in those days, were considered of sufficient importance to be mentioned in wills, and left as an inheritance to relatives or friends."

Rum-drinking around Westerly, R. I.—The following paragraphs from the *Westerly Echo and Pawcatuck Advertiser* indicate that rum-selling and excessive rum-drinking are rather expensive luxuries in that vicinity:—

"Wm. S. Berry was arraigned before Justice Sheffield, of this village, (Stonington side of the river,) on Tuesday last, on charge of being intoxicated. He confessed his guilt, and was fined $20 and costs, amounting to about $25, which he paid.

"Silas Beverly was brought before Justice Knight, of this town, yesterday, on charge of being a common seller of intoxicating liquors, in violation of the law. He was adjudged guilty, and fined $20 and costs, and ten days imprisonment. He appealed.

"Harvey C. Richmond and Charles H. Card, were also, at the same time, charged with selling intoxicating liquors in violation of the law. They were adjudged guilty, and ordered to pay a fine of $20 and costs, and to be imprisoned ten days. They left in charge of officers Olney and Collins, this morning, for Kingston Jail."

Wisconsin on Kansas.—An anonymous letter from Milton, Wis., gives the following expression of enthusiasm in the cause of freedom in Kansas:—

"There was a meeting at Milton, Wisconsin, Feb. 29th, to see what was to be done in regard to Kansas. After debating the subject some time, there was a committee appointed to go to Milwaukee, to attend a meeting there which comes off March 6. This State will probably send one thousand men, well armed with Sharp's rifles, to Kansas. Wisconsin will not back out in that cause, but will send three thousand men to Kansas if they are needed."

RELIGIOUS INTELLIGENCE.

The Baptist Missionary Society has a dark prospect before it, if we may judge from the following language of a late number of the Baptist *Record*: "*Thirty-one thousand dollars deficiency. A debt of forty-five thousand dollars in prospect!* Such are the startling utterances of the Board of Managers of our Missionary Society, in a recent circular to the ministry of the Church. They state that the missionary contributions of the Church for 1855 were thirty-one thousand dollars less than for 1854. In consequence of this deficiency, the treasury will be overdrawn prior to the first of March, to the amount of forty-five thousand dollars."

At the late Concert of Prayer for Colleges in Boston, Rev. Mr. Tarbox, Secretary of the American Education Society, noticed a change, interesting in connection with this meeting, as being that a less number than years ago of students are in preparation for the Christian ministry. Formerly one-half of these students used to prepare for the ministry; now only about one-sixth are studying with that end in view. This is seen more particularly in the theological seminaries, in which there has been a material decline of students. We cannot as yet, he said, discover any change for the better.

The Rev. Robert Alexander, an agent of the American Bible Society, Texas, has, during the past year, traveled more than four thousand miles, organized seventeen auxiliary societies and eleven Bible committees; has visited nineteen auxiliary societies, *properly* organized; has preached one hundred and fifty sermons; raised in cash, $3,694 97, and in subscriptions, $1,600; and has sent into the interior of the State copies of the Scriptures to the value of $4,675 50.

Rev. Cortlandt Van Rensselaer, D. D., Secretary of the Presbyterian Board of Education, says the New York *Observer*, is one of the most useful, as well as extraordinary men in the church. A man of independent means, and having a right to do with his own as he wills, he employs the income of his office in promoting the cause of Christian education in his own way.

Mr. Peter Cooper has applied to the legislature of New York for an act of incorporation of a Board of Control of suitable persons to whom he proposes to convey the grand and costly edifice which he is building, in the square directly south of the American Bible House, New York City, by the name of "The Union for the Advancement of Science." It is said that Mr. Cooper intends to add a liberal pecuniary endowment, and that the institution will have some of the features of a college or university, with a provision for lectures, and for the cultivation of the fine arts.

Several of the States have laws on their statute books making it a penal offense to teach a slave to read even the word of God. The laws on the subject, owing to the power of enlightened Christian sentiment, are mostly a dead letter, and should be repealed. Many have been of the opinion, that the statutes of Tennessee make it criminal to teach the slave to read; but it seems they have labored under a wrong impression.

The chaplain of the House of Representatives, the venerable Daniel Waldo, of Onondaga Co., in the 97th year of his age, has arrived at Washington, and entered upon the duties of his office, by offering the opening prayer in the House, on Monday, March 3d, which duty he is said to have performed in a very appropriate and solemn manner.

The new church organization formed from the Collegiate Dutch Church worshiping in Ninth-street, having elected a consistory, under the name of the "Central Reformed Protestant Dutch Church," have unanimously called the Rev. Abraham B. Van Zandt, of Petersburg, Va., (formerly of Newburgh,) to become their pastor, and there is reason to believe he will accept the invitation.

The New England Emigrant Aid Company at Boston have issued the fifth edition of their "Information to Kansas Immigrants," 12mo., pp. 54, which they will forward to any person by mail on application to Thomas H. Webb, M. D., their Secretary.

Rev. Dr. Dowling has accepted the call of the Berean Baptist Church, corner of Bedford and Downing Streets, New York, and will enter upon his duties the first Sunday in April.

A Curious Case.—We find in a late number of the *Independent* the following curious case:—

A case of insurance on slaves was decided recently in the Supreme Court at New Orleans, which carries the doctrine of chattelization to the extreme. Hunter & Co. shipped fourteen slaves from Richmond to New Orleans, which were insured at the office of the Mutual Insurance Company in New York, "against loss by drowning in consequence of the stranding, shipwreck, or otherwise, of the vessel, the assurers being warranted against all other risks." The vessel stranded, and a portion of the lading was thrown overboard to save the rest, and a general average of loss made on the effects saved, *including the slaves.* Hunter & Co. sued the Insurance Company for this loss, which was resisted on the ground that the slaves were only insured against drowning, and as they were not drowned, the Company was not liable; but the Court decided the other way, on the ground that he who participates in the benefit should divide the burden of the sacrifice. The presumption is that, had the goods not been thrown overboard, the cargo, including the slaves, would have been lost.

Important to New York Liquor Dealers.—A case has been recently decided in Rhode Island of considerable interest to those engaged in the liquor traffic. A person residing in Rhode Island bought liquors in New York to the amount of some $500 to $600, and failed to pay for them. An action was commenced against the purchaser, and in reply he pleaded that the 17th section of the Maine law ordains that "no action of any kind shall be had or maintained in any court in this State for the recovery, or possession of intoxicating liquors or the value thereof, except such as are sold, purchased or held in accordance with the provisions of this act;" averring that the notes in suit were given for liquors purchased in New York, and denying the right of the Court to entertain the suit. The question was argued in the Court of Common Pleas, and the Judge sustained the plea of the respondent. The *Journal* says the case will be carried up to the Supreme Court.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MARCH 10.

In the Senate, an exciting debate occurred in connection with the consideration of the bill for increasing the armaments and munitions of war, and for the manufacture and alteration of small arms, in which our relations with Great Britain were discussed by Messrs. Seward, Cass, Hale, Crittenden, and others.

In the House of Representatives, the consideration of the application of the Committee on Elections for power to send for persons and papers in the Kansas contested election case, occupied most of the day.

THIRD-DAY, MARCH 11.

In the Senate, the Naval Committee made application to be empowered to send for persons and papers to enable them to investigate complaints against the action of the Naval Retiring Board. The matter was laid aside for the consideration of the bill to appropriate $3,000,000 for arms, munitions, &c.

In the House, a bill was introduced to enable the States bordering on the Ohio to improve the navigation of that river. It was referred to a Select Committee. A discussion of Kansas affairs occupied the rest of the day.

FOURTH-DAY, MARCH 12.

In the Senate, Mr. Douglas, Chairman of the Committee on Territories, made a report on Kansas affairs. He reviews the history of the introduction and progress of Slavery in this country, and the constitutional relations it assumes. He says new States have the right to come in with any domestic laws and institutions not conflicting with the Federal Constitution. This principle, he says, was embodied in the Kansas-Nebraska bill. He goes on to condemn the action of the Emigrant Aid Societies (of the North,) and denies that the illegal votes said to have been cast at the Whitfield election nullify that election, or that the removal of the seat of government vitiated the acts of the Legislature. The report denounces the Topeka Convention, and closes with a plain threat of bringing forward the bayonets and bullets of the Federal Government if necessary to support order (*i. e.* Slavery) in Kansas. Mr. Collamer, from the same Committee, followed with a minority report, affirming the right of the North, or of any section of people opposed to Slavery, to take all lawful measure for its restriction. He depicted clearly the fraudulent nature of the Whitfield election, and asserted the justice of the movement of the cheated and oppressed Free State voters to secure a proper hearing in the Territory and at Washington. Mr. Sumner followed in a brief but pungent speech, vindicating the Emigrant Aid Societies from the majority report. Mr. Douglas replied rather sharply, threatening terrors of war upon the Free-State men who should dare to disobey the internal code now in force in Kansas. Mr. Seward retorted, claiming that the backers of the Border Ruffians had Congress to consult, and, in less than a year, the people to settle with. He said Kansas would soon be at the capitol with a free Constitution, and he should then demand her admission as a Free State. The reports were ordered to be printed, and the Senate adjourned.

In the House, Mr. Whitney introduced a bill establishing a uniform rule of naturalization, and repealing the present laws. Mr. Herbert introduced a bill providing for an overland mail from some point on the Mississippi River to San Francisco. The House then resumed the consideration of the resolution asking that the Committee on Elections may be empowered to send for persons and papers in the Kansas case. Speeches were made by Mr. Trafton of Massachusetts in favor, by Mr. Davis of Maryland against, and by Mr. Wakeman of New York in favor of the power.

FIFTH-DAY, MARCH 13.

In the Senate, after the presentation of various resolutions, Mr. Brown concluded his speech in vindication of the conduct of the Administration relative to the Clayton-Bulwer Treaty and the enlistment question, bearing severely on the want of faith of the British Government. Mr. Mallory agreed with the views expressed by Mr. Brown. The Senate passed the bill to amend the act establishing the Court of Claims; also, the bill to authorize two Judges to hold Court as a quorum.

In the House, a bill to refund duties on railroad iron was referred. The House then resumed the consideration of the report of the Committee on Elections. Mr. Purviance spoke in favor of sending for persons and papers in the Kansas case, arguing that the House had a Constitutional right to go beyond the record. Mr. Taylor said there was no contestant for the Delegate's seat, and Gov. Reeder had no right to be heard. Mr. Todd insisted that the validity of the laws of Kansas should be investigated. Mr. Washburn, the Chairman of the Committee on Elections, gave notice that he should call for a vote on the resolution to-morrow. Mr. Harris of Illinois made a violent Pro-Slavery speech. Mr. Letcher also spoke against Mr. Reeder.

SIXTH-DAY, MARCH 14.

In the Senate, there was a sharp personal debate between Mr. Douglas and Mr. Trumbull of Illinois and Mr. Crittenden of Kentucky. Mr. Douglas led off in an attack upon Mr. Trumbull, whom he charged with having been elected by a miserable set of Abolitionists and Know Nothings. The answers, though more courteous, were not less severe than the attack. Adjourned till Second-day.

In the House, Mr. Washburn of Maine spoke in favor of the resolution empowering the Committee on Elections to send for persons and papers in the Kansas case. At the close of his remarks he moved the previous question on the resolution, but on a call of the Yeas and Nays the House refused to sustain the call. Adjourned till Second day.

The "Resolute" at New London.—The "Resolute," one of the few vessels dispatched in 1852 in search of Sir John Franklin, which was brought, a few weeks since into New London (Conn.) by a whaling ship that found her abandoned at sea, still remains in New London, in possession of the Custom-House officers, who received her in charge there. Our reporter paid her a second visit on Friday last. Some pains have been taken to make her interior more presentable. A great many visitors daily board her, not a few of whom avail themselves of the opportunity to test the quality of liquors found upon her and still remaining on board. Some unscrupulously curious visitors, too, have borne away as relics many handsome pieces of her splendid dinner service. Some of the most valuable books from her library (one of the choicest nautical libraries, by the way, ever put on board ship) have been stolen. For these reasons, the parties having the vessel in charge cannot be as polite they would to those whom they do not know. The "Resolute" will be retained in New London till orders as to her disposition are received from the English Government. Unless some orders are received soon, she will be abandoned, according to rules governing such cases, to the parties finding her, for salvage. She is valued at $75,000, or thereabout. [N. Y. Times.

European News.

European news to March 1st was received in New York on the 12th, by the steamer Arabia and the telegraph from Halifax.

There are no tidings from the missing steamship Pacific. There are some confused rumors of ship's furniture seen at sea, but they amount to nothing.

The excitement in regard to the American difficulty appeared to be wholly extinct.

Three meetings of the Peace Conference had been held in Paris, but nothing of the preceedings had been suffered to transpire. Rumors, favorable and otherwise, were circulated in abundance, and at the close of the week considerable alarm was created by a report that Russia had started objections which would cause the Conference to break up. It was, however, regarded as a mere stock-jobbing ruse, and a general impression prevailed that matters were progressing favorably. The opinion increases, that immediately after peace is proclaimed, a general European Congress will meet to readjust the balance of power.

Active preparations for a continuance of the war prevailed on all sides. An armistice until the end of March had been officially announced, and was made known to the Crimean armies. It is not to affect the existing blockade of Russian ports.

The Sultan's decree in favor of Christians had been read in the presence of Turkish dignitaries at Constantinople.

3,000 Russians are employed day and night in constructing a triple row of piles across the Gulf of Finland, twelve miles across, and six miles from Cronstadt, with but few openings, behind which is a steam fleet of 18 ships, 14 corvetts, and 70 gunboats.

California News.

The Steamer Northern Light, from San Juan, arrived at New York on the 13th inst., with two weeks later news from the Pacific coast.

In San Francisco, on the morning of Feb. 15th, a violent shock of an earthquake was felt. The people were aroused from their sleep and hundreds rushed frantically into the streets in their night clothes. The shock lasted about twenty-five seconds, and was proceded by a rumbling sound like distant thunder. No material damage was done to property. The fire-wall fell from one brick store, the plastering was more or less cracked in a good many buildings, and in some instances slight fissures are created in brick walls. A great many timid people were terribly frightened for a time, but they were soon led to believe that there was no danger. It was the most severe shock of which we have any account in San Francisco.

The last mail brought the news of the explosion of the steamer Belle, on the Sacramento river, on the morning of the 5th ult., but without any of the particulars. About thirty lives were lost.

Accidents in the mining region have been quite common. Caving in of embankments, burying from one to six or eight persons at a time, have been of frequent, almost of daily occurrence.

On the 12th of Feb., a sorrowful casualty occurred; two women and two children, while riding with some others in a carriage by the margin of a small lake near San Francisco city, were drowned by the overturning of the carriage in the water.

The Indian troubles in Oregon and Washington still continue, and new volunteer companies are being raised. It appears that the Governor of Oregon has already issued $4,000,000 in scrip to defray the expenses of calling out volunteer soldiers to fight the Indians. This war promises to prove a very expensive affair to the General Government.

The schooner Page arrived at San Francisco from Japan on the 14th Feb. She brought news of a violent earthquake which took place at Jeddo on the 11th of November, and destroyed 100,000 houses and 30,000 people. This may be an exaggerated account, although it was obtained at Simoda from the Dutch interpreter.

Sad Calamity on the Delaware River.

On the evening after the Sabbath, March 15th, a fearful calamity occurred on the Delaware River near Philadelphia. One of the Camden and Philadelphia ferry-boats took fire when in the middle of the stream; the flames spread with great rapidity; the boat became unmanageable; the passengers, about one hundred in number, panic stricken, leaped into the water to escape death by burning; many of them were picked up, but about thirty were drowned. The following account of the matter is furnished by Wm. F. Agnew, one of the passengers:—

I am in the employ of Messrs. Burns & Piers, proprietors of the Philadelphia Local Express, and reside in Camden. Returning home from business on Saturday evening, I took the steamboat New Jersey at 8½ o'clock from Walnut street wharf, and was an eye witness of the most serious disaster that has ever happened on the Delaware. When the boat started she attempted to reach Camden by way of the channel which divides Windmill island, but finding the eastern end much blocked with ice, she was backed out and headed up the stream with the view to circumnavigate the island. When opposite Market street, I observed flames bursting out around the smoke stack, and raised the cry of "fire." An unusually large number of passengers were on board, many of them women and children. The fire originated in the fireroom during the absence of the fireman, and spread with fearful rapidity. It soon wrapped the entire after part of the boat in flames and drove the passengers forward. The strong ebb tide setting up the river convinced me it was impossible to run the boat aground upon the northern part of the island, and I was glad to see the pilot head for the Philadelphia shore. The captain at this time was in the pilot house giving orders. I was upon the bow of the boat, in the midst of a wild heart-rending scene of terror. A crowd of at least one hundred persons, including twenty or twenty-five ladies, were clustered together in the smallest possible space to avoid the intense heat of the flames—some clinging to the guards, others frantically endeavoring to wrench loose the stanchions which were yet free from the devouring element, while some stood horror stricken, gazing upon the fast approaching flames behind, or the icy current before them. There was nothing on board save a bench or two that could be made available as a float or life-preserver. As the volume of the flames increased, it caught the dresses of the women, whose shrieks for assistance were appalling. Not until their clothing was burnt from their persons did the passengers seem willing to seek a chance of safety in the bosom of the other element. One by one, sometimes five or six at a time, they made the fearful leap from the burning deck. The boat had been forced to a distance of not more than ten feet from the wharf, when the pilot house fell—the government of the helm was lost, and the vessel sheered off again into the river. Some on the upper deck, however, had a chance to leap ashore; others fell short, and were crushed by the paddle wheels. Every hope of running into the wharves was now dashed, and I turned to Mr. Muschamp, late a conductor on the Camden and Amboy Railroad, and asked him if he could swim. He replied that he could not. I advised him to take a bench which was near him, and jump overboard with me. The engine was still going, and I took care to jump clear of the wheels. I believe my friend followed me, but fear he did not take the like precaution. I swam about one hundred yards, when I providentially reached the bow of a clipper ship, and was rescued by the promptness of those on board.

SUMMARY.

On a recent Friday evening, four notorious pickpockets planned a descent upon the congregation of Rev. Dr. Alexander, in Fifth Avenue, New York. They selected their game from convenient points of observation, and after the services were begun, walked singly up the aisle, with light step, and crowded themselves each into the head of a different pew, with an air of freedom, as though they were merely occupying their own proper places, where they sat devoutly waiting, until the services were over, to begin their thefts in the rush and press coming out. A policeman, however, who had suspected their design, entered the church with three companions, and when the congregation was dismissed, the rascals were caught, and after being exposed to the shaming gaze of the crowd, were hurried off as they deserved.

Barnum's villa at Bridgeport cost $150,000, and is mortgaged for $125,000, probably all that it is worth. Anybody levying on it, is liable to have it set off to him on appraisal. We apprehend creditors will not meddle with it. Barnum's East Bridgeport property is mortgaged for $185,000. Is any one disposed to lift that sum? The mortgage on Barnum's real estate, recorded in New York, amounts to $179,000. His confidential debts are stated at $100,000. His museum is in the possession of Greenwood & Butler; his claims against the Jerome Co., nominally $500,000, will not realize $100,000.

A bill has passed the Virginia Legislature, providing that free negroes, migrating to, or voluntarily entering that State, without authority of law, are to forfeit their freedom. Hotel keepers employing free negroes of another State, shall be liable to a fine of $50. The emancipation of slaves shall be null and void, unless $150 be provided for the removal of each slave from the State, within twelve months. Free negro convicts, at the expiration of their term of imprisonment in the Penitentiary, are to leave the State within thirty days, or forfeit their freedom.

The directors of the Troy and Greenfield Railroad, which is to pass through Hoosac Mountain by a tunnel four miles long and eight hundred feet below the summit, have applied to the Legislature of Massachusetts to subscribe $150,000 to the stock, on the ground that it is a matter of common interest to the whole State to lessen the cost of reaching the Hudson from Boston one-third. The subject has been referred to a very able committee, of seven senators and thirteen representatives, or one from each county.

Notwithstanding the very severe weather, the prospects of a good crop of peaches are reported as being quite equal to the most sanguine calculations. The New Jersey New Brunswicker says that the cold weather has not hurt the buds any yet, except in those orchards situated in low, wet grounds. There the buds are somewhat injured, though not so badly as they are some years. If the buds are not blasted with cold winds and wet weather in April and May, the peaches will probably be very plentiful.

The London Standard of Feb. 21 says: "The daughter of the late Mr. Samuel Blackwell, of Bristol, has just completed her medical studies in Paris, and obtained a diploma to practice as a physician. She has a sister who pursued her studies also in Paris, who is acting in a similar capacity in New York, under the title of Dr. Elizabeth Blackwell. The lady who has just obtained this honorable distinction is Dr. Emily Blackwell. Her studies have been principally directed to the diseases of women and children."

The Supreme Court of Tennessee decided at last term that the hirer of a slave was not authorized to re-hire him without the assent of the owner, and if he did so, and the negro died or was injured, the hirer might be sued by the owner and recovered against for the whole value of the slave. They also decided that a negro hired in that State could not, without the assent of the owner, be removed from the State or even from the county where he was hired, and if he was so, it would be a conversion.

The Cincinnati Gazette has been shown a private letter from Mr. C. M. Clay with reference to his failure, noticed a few days since. Mr. Clay says his creditors have allowed him to go on, and he will be able to pay all his debts and have a handsome estate left. He did not lose a dollar this season in the pork trade.

The Free-State Legislature of Kansas organized at Topeka on the 4th inst., and Gov. Robinson's Message, was read. He states that secret instructions have been sent to the United States Marshall for the arrest of the members of the Legislature. If this arrest is made, no resistance will be offered until revolution shall be the only means of relief. The Legislature had adjourned to Lawrence, and Gov. Shannon was on his way there to watch them.

The Boston and Providence Railroad Company, it is stated, owns a large tract of woodland in Virginia, from which it procures its fuel, and the agents of the Company hire slaves and slave drivers, and buy whips and thongs as disciplinary aids in carrying on the operations. The Boston Herald asserts that the State of Massachusetts has a stock interest in the railroad, and hence participates in the hire and punishment of these slaves.

A farmer near Galt, C. W., who had eight hundred bushels of wheat, for which he had been offered the high prices of last season, but chose to keep it, in the hope of getting more, hung himself last week. Another farmer near London, had three years crop on hand, which he had refused to sell at the extreme rates of last fall. He is now insane, his reason giving way at the prospect of having to sell at a greatly reduced price.

One of the largest stock transactions was made in New York a few days since which we have ever noticed in this market. One party sold privately to another, in one lot, 15,000 shares Reading and 8,000 shares Erie. The entire sale amounted to about $1,200,000. The Erie was sold at 58, and the Reading at about 91. The Reading all belonged to one party.

On Saturday morning, March 8, the steamer E. Howard came in collision, near Troy, Ia., with the steamer Henry Lewis, from Cincinnati for New Orleans. The latter boat sunk. The Howard was but slightly damaged. All the cabin passengers of the Lewis were saved through her hurricane deck, but twenty of the hands and deck passengers were drowned.

The Express Train from Norfolk, Monday, March 10, for Weldon, went through a curve in the bridge near Marnaretville, killing Messrs. Adams & Co.'s Express Messenger, Mr. Dougherty, Mail Agent, and Charles Neal, a boy. The Engineer and several of the passengers were severely injured. The train, after the accident, took fire and was entirely destroyed.

Gov. Chase, of Ohio, has issued his official requisition, calling on the Governor of Kentucky to deliver up, according to the constitution, the four persons under indictment for murder, who were flagitiously rescued from the custody of the Sheriff of Cincinnati, by the Judge and Marshal of the United States, on the pretext that they were fugitives from slavery.

The General Assembly of Virginia has passed a resolution requesting the representatives of that State in Congress "to secure the passage of a bill making full compensation to all owners whose slaves have or may hereafter escape into any of the non-slaveholding States of this Union, and withheld from those to whom such service or labor may be due."

A singular fossil was discovered some time since in Pompey, Onondaga County, N. Y., in the shape of the profile of a man's head and shoulders, perfectly formed, with mouth, nose, eyes, &c. It is described as "about the size of a peck measure," the lower part of limestone, and the upper portion of some other stone rather darker in hue.

The Rochester Daily Union is informed by a gentleman from Sandusky, that the people of Canada come to that city in sleighs across the ice, among the islands at the upper end of Lake Erie. An ice bridge at this point has not been known since 1837, and then it was not so strong as at present.

The Judiciary Committee in the Pennsylvania Legislature have negatived the bill for a change of venue from Delaware county to Philadelphia in the case of Williamson vs. Kane. It is said that the Legislature is not disposed to interfere with this important case.

A dispatch dated Montreal, Thursday, March 6, 1856, says:—Two engines and a snow-plow ran off the track on the Grand Trunk Railroad yesterday afternoon, near Stauns, twenty miles above Montreal. One man was killed and two others badly injured.

The New York Legislature, March 6th, made choice of Messrs. George W. Clinton of Buffalo, and Robert Kelley of New York, as Regents of the University, in place of Jabez D. Hammond, deceased, and Philip S. Van Rensselaer, resigned.

A Member of the North Carolina Legislature made a decidedly good "hit" a short time ago. A bill was pending which imposed a fine for selling liquor to free negroes, to which he objected, on the ground that "such a law would make them more decent than the whites."

No tidings have yet reached us in regard to the Pacific. We confess that the prospect is gloomy, although there are many who yet believe in her safety. The underwriters, we think, would now willingly pay 50 per cent. to have her safety guaranteed.

The anniversary of the Bible Revision Association will be held at Louisville, Ky., on Thursday, April 10. Ample provisions are to be made for the accommodation of the delegates and members from a distance. Eminent speakers from various States will be present.

The Kansas Aid Society in New York advise Western emigrants going to Kansas by no means to think of taking the journey by land across Iowa and Nebraska, but to go down to St. Louis by rail or boat, and then by boat up the Missouri.

The fire department of Cincinnati have a locomotive steam boiler with which all frozen hydrants, water pipes, hose and other things can be immediately thawed. There is a flexible tube attached to the boiler to convey the steam to the point to be operated upon.

The movements towards Kansas among the free yeomanry of the North and West, promises to become immense this season, and has in fact already commenced in some quarters but will be quite general by April.

There are seventy-six thousand barns in Massachusetts. The profit of cultivating an acre of corn in that State is fifty per cent. greater than it is in Illinois.

The Great Showman, Barnum, has at last "seen the elephant" for himself. At a meeting of his creditors at New Haven lately, which represented about $300,000 of his indebtedness, he was "put through" a course of bankruptcy, and Frederick Croswell, Esq., appointed trustee of his estate.

A dispatch dated Buffalo, Thursday, March 13, says: The first train which has arrived in this city since Sunday, came in this noon over the Central Road. It consisted of twenty-one cars, containing 700 passengers, and brought the first mails which have arrived from any quarter since Sunday.

A memorial has been introduced into the Minnesota Legislature, desiring Congress to divide that territory on the line of 45 deg. 10 min., from the St. Croix to the Missouri River.

One of the conductors of the Harlem Railroad during the Winter measured a snow bank fifteen feet high at Chatham Four Corners.

A dispatch dated Chicago, Monday, March 10, says: The Commercial Bank of Chicago closed its doors this morning.

A Republican Association has been formed in Providence, for the State of Rhode Island.

The expenses of the late Slave Trials at Cincinnati were $22,400.

New York Markets—March 17, 1856.

Ashes—Pots $5 75 a 6 00; Pearls 7 75 a 8 00.

Flour and Meal—Flour, 6 93 a 7 12 for State and Michigan, 7 31 a 7 75 for Indiana and Upper Lake, 7 56 a 8 12 for Ohio, 8 75 a 10 75 for extra Genesee. Rye Flour 4 00 a 6 25. Corn Meal 3 50 for Jersey. Buckwheat Flour 1 75 a 2 12.

Grain—Wheat, 1 84 for Western mixed, 1 78 a 2 00 for Canadian, 1 80 a 2 04 for white. Rye 1 18. Barley 1 20 a 1 29. Oats, 35 a 39c. for Jersey, 42 a 44c. for Western. Corn, 66 a 73c. White Beans 1 75 a 2 50.

Provisions—Pork, 14 50 for prime, 15 75 for mess. Beef, 8 75 a 9 25 for prime, 9 50 a 11 00 for country mess. Lard, 10 a 10¾c. Butter, 19 a 21c. for Ohio, 22 a 24½c. for State Dairies, 25 a 26c. for fresh-made State. Cheese 8½ a 10½c. Eggs 23 a 25c. per dozen.

Seeds—Clover 13 a 14c. per lb., Timothy 3 50 a 4 00 per bushel. Rough Flaxseed 2 12 a 2 20 per bushel of 56 lbs.

Tallow—10 a 10¾c.

Wool—35 a 38c. for Native, 45 a 47c. for full-blood Merino, 48 a 55c. for American Saxony Fleece.

MARRIED,

Nov. 21, 1855, by Eld. C. Rowley, Mr. James C. Hills, of the town of Scio, N. Y., to Miss Frances E. Wright, of Dansville, N. Y.

Feb. 10, 1856, Mr. Charles Walsh to Miss Barbary W. Proctor, all of Wellsville, N. Y.

March 8, 1856, the evening after the Sabbath, Mr. Ansel Stannard, of Genesee, N. Y., to Mrs. Asenath Oviatt, of the town of Amity, N. Y.

In Leonardsville, N. Y., March 1st, by Eld. W. B. Maxson, Mr. Henry B. Dye, of Plainfield, to Miss Celinda E. Meeker, of Burlington, N. Y.

DIED,

In Genesee, N. Y., on the 18th of February, Catharine L. Burdick, daughter of Jabez and Mary A. Burdick, in the 22d year of her age. The deceased had omitted to seek the Saviour while in health, which was a cause of deep sorrow to her on her dying bed. But through the kindness of a forgiving God, she found peace in believing in the Lord Jesus Christ, and when the time came for her to die, we believe death had lost its sting. She quietly fell asleep in Jesus, to await the resurrection morn, to put on her triumphant spirit anew. J. B.

At West Edmeston, N. Y., on the 6th inst., Mrs. Elizabeth B. Denison, widow of the late Francis F. Denison, aged 42 years. Sister Denison was a worthy and highly esteemed member of the First Seventh-day Baptist Church of Brookfield, N. Y. In her afflictions, as well as in the time of prosperity and health, she gave the most satisfactory evidence of the sincerity of her attachment to the Redeemer's cause, and she was happily prepared, when she was conscious that she was passing away, cheerfully to resign her son of a tender age to the guardian care of her heavenly Father, and her spirit to Him who gave it, with a strong hope of meeting her God in peace.

Suddenly, on the 8th inst, at his residence near Union Village, N. J., Mr. Ezra Wilcox, aged about 55 years.

In Lincklaen, March 9th, of chronic inflammation of the liver, Mr. Benjamin H. Burdick, in the 75th year of his age. His sufferings were great, which he bore with Christian fortitude. Bro. Burdick was born in Hopkinton, R. I., in 1781. His parents removed subsequently to Petersburg, N. Y., where he remained till 1805, when they removed to German, now called Lincklaen, Chenango Co., N. Y., where he spent the last 50 years of his life. He first joined the Berlin Seventh-day Baptist Church, where he remained a member until the formation of the DeRuyter Church. He remained a member of this church till the Lincklaen Church was organized. He then removed his standing to the Lincklaen Church, of which he remained a member until his death. Bro. Burdick has been a valuable man in society, and a pillar in the church.

LETTERS.

D E Lewis, A P Saunders, Wm F Randolph, C Vars, J P Livermore, A R Cornwall, John Drake, Eli Forsythe, Wm P Langworthy, O Snowberger, J Pierce, E Lanphear, S S Griswold, P C Stillman, Charles Card, P Soper, Jabez Burdick, C Thacher, B G Champlin (all right,) W C Kenyon, R S Nicholson, J Maxson, P S Crandall, L R Babcock.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana*.

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 10.

Camp Lancaster, Texas, Nov., 1855.

On the morning of the 12th of October, I found Captain Carpenter had made arrangements to go with a small party to the head of Live Oak Creek, which he did not reach in the previous effort, and I volunteered to accompany him, provided I could find a horse worthy his rider. Mr. Savier, the sutler, had a fine pony, almost an exact counterpart to my lost Pelicano of pleasant memory, without his fear of fire-arms. "Pompey's nerves are as solid as iron," Savier assured me, and his saddle was of the best Texan manufacture, and nearly new. It was charming to be so well mounted, and I hurried up to join the Captain. With us were Beardall, Dennen, M'Culloch, and a teamster driving a six-mule team, to bring the poles that were to be cut. The Captain rode his favorite old blood horse, "Driver," and was accompanied by his two dogs. His "six-shooter" hung at the horn of the saddle, and across the saddle in front of him he carried his shot-gun. Over one shoulder hung his powder-flask, and at the other his shot-belt; an ivory whistle, fashioned after a dog's head, was suspended at a button-hole of his hunting-jacket. Beardall was armed simply with a rifle, and rode a bare-boned, black pony, in which every thing seemed wanting but the essential *go*. Dennen rode a horse also, and was armed with a double-barreled gun, and into his pocket he had slipped a few musket-cartridges, each containing an ounce ball, and four buck-shot. M'Culloch had his musket and cartridge-box, and rode with the teamster, who was unarmed. The distance to the source of the creek was not more than seven miles for mounted men, and a mile further for the team, but we were all to meet at the crossing of the creek, three miles distant, from which point there was no road. We four who were mounted rode up the valley on the south side of the creek. The Captain and Dennen kept close up under the hill, on a military reconnoisance. Beardall skirted the creek, in hopes of falling in with game, while I held on *in medias res*, ready for any thing that might turn up, with a shot-gun and No. 6 shot, the best I had since Quail ran off with the larger size. My attention is arrested by a pile of small stones to the amount of several tons, resembling that which is broken up for macadamizing a road. Was it the grave of an Indian? I could not tell. I would have explored it, but it was the work of several men for half a day, and I rode on. When I joined Beardall I mentioned it, and he told me he had seen similar ones, but did not believe they were graves, as there were some undoubted graves near where we were going, and they were very unlike these. We hunted along the creek for ducks, and never did we look so far in vain. Crossing the creek where the El Paso road crosses it, we all met on the north side, and continued on, keeping close to the creek, where a belt of coarse grass intervened between it and the chaparral, in order to avoid the thorns of the latter, no less than the ravines that inrersected the plains. The creek is almost concealed by the growth of small trees and grape vines, whose leaves, already fallen, rustled under our horses' feet. We cross a deep ravine, where the bank of the creek is high and free from thickets, and a sand-bar makes out from the ravine, meeting the bare rock on the other side, and over which the creek glides with little noise. A chaparral cock *(Geocoxyx mexicanus,)* the first I have seen since I left Fort Clark, ran across, and disappeared on the other side. On each side of the valley, opposite to each other, and a mile asunder, are two natural curiosities, which I noticed when I first descended the creek, as they are distinguishable at a great distance. Were we not in a region where castle-crowned hills were always in sight, one would pronounce these two to be artificial works. They are completely isolated, and their tops apparently inaccessible without ladders, rounded, and one third way down the escarpment; that on the north side has another circular wall, as an outwork; that on the south has four disconnected outworks, forming a square around the hill, flanking each other, and commanded by the castle above them. As *lusi naturæ*, they are wonderful. Having reached the grove, which is ten or more acres in extent, the team was left outside, while the Captain, with three men, proceeded to open a way through the dense weeds and undergrowth that rendered the thicket impenetrable to the eye. The creek intervened, and was nearly obscured by the rank growth of weeds and flags—from which a flock of turkeys took wing and flew around the mott. I continued on alone, along the little chain of ponds which formed the sources or springs of the creek, until there appeared only a dry aroyo, and a treeless valley, stretching away to the northwest, until it was lost in the haze of the distance. I returned to rejoin the party, whom I found hard at work in the heart of the mott, cutting trees. The live oaks were too crooked to serve their purpose, but some hackberry and gum-trees furnished poles comparatively straight for the distance of thirty feet. Leaving the four men at work, the Captain and myself passed out on the other side of the grove, with the intention of going to another and smaller mott of trees, half a mile further up, and to the right of the aroyo, where the turkeys were supposed to have fled. I stopped to examine a shrub which bore a strong resemblauce to the apple-tree; the leaves were all fallen from it, and I could not be certain, but I believe it to belong to that genus. As I remounted, the Captain was just disappearing around the edge of the wood. The grass was very long and coarse, such as is used for thatching, and patches of dead weeds almost buried my horse. I found Driver tied in a little opening on the left of the grove, and there I tied Pompey, well concealed, and plunged into the thicket, as I heard the report of the Captain's gun, to get my chance at the game. This grove was entirely of small live oaks, with much undergrowth. There was an abundance of turkey signs in the deepest shade, where the ground was bare; they had nestled in the dirt during the heat of the day, digesting their morning's feast of acorns, and filling their feathers with dust. I proceeded cautiously, expecting each moment to get sight of a file of red-heads stealing through the bushes, (for even when full-grown, the wild turkeys follow their parents in Indian file) until I had traversed the thicket. The Captain was not there. Where could he be, and what meant the report of the gun? At the edge of the wood, opposite that at which we had entered, I was startled by the sight of a trail of four or five horses. No party from our camp had ever been here, and white men from any other quarter were still less likely to have been. They entered from above. I inspected the trail closely; it could not have been more than two days old, for the tracks were sharp, though dry to dustiness. It could not have been made by wild horses, or strayed ones, for such avoid thickets, and the tracks were so deep as to make it certain that they had riders; besides, I noticed that it did not pass under the branches, but around them. The Indian horses are unshod, or only with raw hide when necessary; only one of these was shod, and he must have been recently stolen. What had these tracks to do with the shot I had heard, and the absence of the Captain? I thought I would follow the trail until I should find that of the Captain. I dared not call, and I crept along, carefully avoiding breaking twigs, or making any noise that might betray me. I soon heard something rushing towards me, breaking and bearing down the bushes, and my breath grew rapid as I raised and cocked my gun, for though I had but fine shot, the bushes were so dense, that when the object became visible, the shot would be as effective as ball. I saw the two white dogs of the Captain, and their master's legs, and hailed, "Captain, what's the matter?" although my mind naturally connected what I had already discovered with the Captain's alarm. "Where are the horses?" "This way," said I, and led off in quick time in the direction where, to the best of my recollection, the animals were concealed. Having found them and mounted, "Now, then," said he, "I have old Driver and the six-shooter, let them come on." "Where are they, Captain?" He then explained, as we rode back to join our party, how he had wounded a turkey, and pursued it over the hill with his dogs in full chase, when, just as he reached the crest, he saw a large party of Indians at the foot of the opposite slope. He called in his dogs at once, and thought they must have been observed, and started to return for his horse, but taking a second thought, he returned to reconnoitre. There were fifteen in a file, and several others riding up in the line. To the best of his judgment there were nineteen, well mounted, armed with shields, bows and arrows, lances, and a few with guns; they were painted and bedeviled for war. The hill to which he referred was a long, narrow ridge, running parallel to the creek, and about fifty feet high. It commenced just above the crossing, and above the motts it turned off to the right gradually, and terminated in the high bluffs. Having returned to the thicket where the men were at work, the Captain ordered that no one should leave the spot for hunting or other purposes, but that all haste should be made to complete the loading of the team, and we rode down the creek, with the view of crossing it and the hill in rear of the savages, to inspect their trail, and to keep an observation upon them. We had gone a few hundred yards, when the report of a gun in the mott caused us to return. Beardall had fired his rifle in order to light his pipe, and the Captain was now unwilling to leave the working party until we could all leave together. We all fell to work to expedite matters, so as to get out of the way of the Indians, and permit them to go up tha valley unobserved, as they seemed disposed to do. The skirts of the thicket were so dense that we could not see out, and if they designed mischief, they knew better than to attack us there. There was no doubt that they intended to escape observation, and were bound up the country.

The wagon being loaded, was driven out into the level ground, where the flag-staff had been previously dragged, and this was still to be adjusted to the load; and, as the Captain was not there to direct, much time was lost. Growing impatient, I went back to find him. He was concealed in the skirts of the further end of the mott, watching the hill over which he had seen the Indians, and where they must pass to reach us. The presence of our chief having adjusted difficulties, we were soon on our way, in the order in which we came. As the Captain was still anxious to reconnoitre, he took Beardall with us, and we proceeded in advance, leaving Dennen and M'Culloch to go with the team. From the tangled thickets of grape-vines, buck-eye, and other shrubs, that choked the ravine of the creek, it was difficult to find a passage across it. The long hill here came down close to the creek, and the bank was abrupt. "Here," said Beardall, "on the highest part of this hill, are those Indian graves of which I spoke." We determined, if possible, to take these in our course. The team being delayed, we waited a short time, until the Captain returned with Beardall, to aid them, if necessary, and I lost sight of them as well as the team from the inequality of the ground.

I stood still while Pompey browsed the coarse grass. The sun was about three hours high, and the eastern slopes of the hills were already in deep shadow. One feels in such a country a constant disposition to gaze even when the uniform glare of the sun on the rocks, and the distance to which one looks, make the act painful to the eyes; for the fewer objects of interest there are, the more we look for them. From the bend in the long hill, which had been the object of so much solicitude, and the small elevation of the part opposite to me, I could, from my position, get a rear view of the part where the Indians had been seen. The little valley where they were was bounded on every other side by impassable bluffs, and the conviction forced itself upon me that the savages were there for no other object than concealment. At the same moment a yell from the direction of our party drew my attention, and a scene burst upon me that nearly paralyzed my nerves. The incarnate fiends! Running to and fro with the swiftness of hell-hounds and yells of triumph over the very spot where I had just before seen my companions! I saw the teamster running for his life towards the creek, and two nearly naked and painted, mop-haired savages in close pursuit, and making two yards to his one; the white man disappeared, and I saw only the infuriated savages. I strained my eyes to see if any one had escaped from the *mêlée*; but there was not one, and my turn was next. The two savages who had run down the teamster came towards me like blood-hounds, without a sound, as though their object was not to alarm me, but to kill. I had not heard a shot fired. Had the surprise been so complete! There was no time for reflections. A warrior, mounted on a pie-bald horse, joined the runners, and I had no doubt that they would all be down upon me as soon as they could mount their horses. Turning Pompey's head towards camp, and striking him with the shot-gun and spurs at the same moment, I soon put his mettle to the test, as well as my own equestrianship. He vaulted over the chaparral with the elasticity of the Spring-bok, clearing a rod at a bound. It was my first lesson in the steeple-chase, and I did not know but each bound would be the last. I would have dropped the gun, but it was not mine, and it served me for a whip, and might yet save my life, should the enemy close upon me; and on I went, holding on with one hand to the horn of the saddle, and the other to the gun. The deep ravine which we noticed coming up yawned an instant before me, and the next we were poised on the opposite brink; here my horse voluntarily stopped, as though he was sprung, and until then I could not look back without great risk of being thrown. I could not tell, from the inequality of the ground and the shrubs that intervened, whether the pursuit was continued. I knew that Pompey was good for them, provided we could keep together; but I feared the party might, by following the creek out of my sight, still cut me off in my fancied security, but I gave Pompey the reins. I had yet three miles to run through the chaparral before I could strike the El Ross road that led past the camp. A herd of deer broke before me, as if they thought I was after them, and for a time held on my way, but soon fell off to the right and left, to let me pass. I discovered that my horse was running away, and paid no attention to the bridle, but would use his own discretion whether he would jump a bush or go round it, and in the effort to manage him the bridle parted in my hand; but, as he held on towards camp, I had only to hold on to him.

Once more on the road, I felt that I had a good chance of living to fight another day, and I quietly resolved that the first requisite for that purpose was a good horse. My arrival at camp, swaying in my saddle from exhaustion, and the appearance of the horse told all that I could. I reported the whole party killed, as I had no doubt they were, before I "broke" for camp.

Remainder of No. 10 next week.

A Story with a Moral.

A gentleman, who had seen the world, one day gave his eldest son a span of horses, a chariot, and a basket of eggs. "Do you," said he to the boy, "travel upon the high road until you come to the first house in which there is a married couple. If you find that the husband is the master there, give him one of the horses. If, on the contrary, the wife is the ruler, give her an egg. Return at once if you part with a horse, but do not come back so long as you keep both horses, and there is an egg remaining."

Away went the boy full of his mission, and just beyond the borders of his father's estate, lo! a modest cottage. He alighted from the chariot and knocked at the door. The good wife opened it for him, and courtesied. "Is your husband at home?" "No;" but she would call him from the hay-field. In he came, wiping his brows. The young man told them his errand. "Why," said the wife, bridling and rolling the corner of her apron, "I always do as John wants me to do; he is my master—ain't you, John?" To which John replied, "Yes" "Then," said the boy, "I am to give you a horse; which will you take?" "I think," said John, "as how that bay gelding seems to be the one as would suit me the best." "If we have a *choice*, husband," said the wife, "*I* think the gray mare will suit us best." "No," replied John, "the bay for me; he is more square in front, and his legs are better." "Now," said the wife, "I don't think so; the gray mare is the better horse; and I shall never be contented unless I get that one." "Well," said John, "if your mind is set on it, I'll give up; we'll take the gray mare." "Thank you," said the boy; "allow me to give you an egg from this basket; it is a nice fresh one, and you can boil it hard or soft, as your wife will allow." The rest of the story you may imagine; the young man came home with both horses, but not an egg remained in his basket.

A Word to the Ladies.

The old adage aptly says, "An ounce of preventive is worth a pound of cure." When we consider how fatal a disease consumption is, and how comparatively easy it is to avoid it, we are more than ever impressed with the truth of this old proverb. During the last few days, we have been amazed indeed at the folly of women whom we have seen promenading the streets, with the snow a foot deep at the crossings, in low, paper-thick shoes, thinner than the thinnest worn by men in summer time. Will the sex ever exhibit common sense in regard to this matter? There is but one proper covering for the foot of a woman, in either cold or sloppy weather, and that is a Wellington boot, such as every gentleman uses. In fact, the protection which it affords to the leg, especially against wet, is more necessary in the case of women than of men, because, in such a case, the damp skirt flaps against calfskin or morocco, instead of against the limb. We are glad to see that within a few years these high boots are beginning to be worn by the ladies; but they are by no means universal, as they ought to be, and it is a pity that the leaders of fashion would not set the example, both of walking and of wearing water-proof boots.

For daily walking is as requisite to health as the wearing of impervious shoes. The wives and daughters of our rich men, who never take exercise except in a carriage, are undermining their constitutions quite as effectually as those of their sex, who, unable to keep coaches, yet imitate them in wearing their drawing-room shoes, The one is injured by wet feet, the other by want of proper exercise. It is a common thing, at this inclement season of the year, to hear ladies congratulate themselves on their warm rooms; yet often these furnace-heated apartments are only less deleterious than the unprotected hovel of the beggar. We often enter parlors, where the thermometer is eighty, where the air is fairly scorched, and where, to cap the climax, every door is shut so as to exclude the possibility of ventilation. Yet many females remain in such rooms, at this season of the year, week after week, without once going out, especially if they are in circumstances too good to compel their working for a livelihood, yet not good enough to enable them to keep a carriage. The consequences are impaired digestion, or hysterical affections, or incessant head-aches, excessive liability to catch cold, and, what some perhaps will think more than all, loss of color and beauty.

There are, therefore, two faults characteristic of American women; one a neglect to exercise and the other a too thin style of dress in winter. Every female, who can possibly do it, ought to walk in the open air, from one to to two hours every day. If suitable clothing was worn, and especially if the feet were properly protected, a daily walk, even in winter, would be more conductive to health and loveliness, than all the panaceas ever concocted, or all the drugs prescribed by the faculty. It would give elasticity to the step, bloom to the cheek, brilliancy to the eye, gay spirits, brightness of intellect, sound slumbers, every blessing, in short, that vigorous physical health bestows, and of which, alas! so many American women practically know nothing. Vitality would be strong and high, the deficiency of which, in most cases, is the beginning of consumption. The lungs, too, would have needful play, for no one can go out, on a bracing winter morning, without inflating the lungs fully; and the air at such times, is always the purest. If you would escape pulmonary complaints, ladies, if you would live to a good old age, if you would enjoy life while living, if you would add to your personal charms, dress warm and dry, and take daily exercise in the open air. Let nothing keep you in doors but inclement weather; but be always clothed to defy cold and wet, especially to your feet. [Philadelphia Ledger.

The Legend of the Koh-i-noor.

There is a strange and gloomy superstition in India, respecting the possession of the Koh-i-noor—that famous diamond which all England went mad to see, in the Crystal Palace in Hyde Park, which the Hindoos say entails ruin and destruction on every dynasty that possesses it. This is its history, as far back as it can be traced. The earliest years of the Koh-i-noor are lost, like the beginnings of all great things, in the obscurity and mists of time. Meer Joomlah, its first historical possessor, is supposed to have torn it from a native Hindoo prince, and is known to have presented it to Aurungzebe, the Emperor of Hindostan. With him then begins its historical existence. At the death of Aurungzebe, the fortunes of his house declined, and the Empire, consolidated by him with so much skill and power, crumbled to pieces as soon as his powerful hand was withdrawn. A complete desolation came over India on the invasion of the tyrant robber, Nadir Shah of Persia. He took the Koh-i-noor from Mahommed Shah, the degenerate Emperor of Hindostan; and after plundering Delhi, and floating its streets in blood—after committing cruelties and excesses that make one blush for humanity, and after gathering up a fabulous amount of spoil from his victims, he set out on his return to Persia—but never to reach it. He was assassinated by his chiefs in the mountains of Cabul, and Ahmed Shah Dooranee, the first king of Cabul, secured the Koh-i-noor as his share of the plunder. His dynasty lasted till our own times; but a fate hung over it parallel only to that which brooded so darkly over the fortunes of Ægisthus. Parricide, murder, incest, treason, rebellion—these make up the annals of Ahmed Shah Dooranee's house, the only alternations being from crime to misfortune, from sorrow to sin. Shah Shooja, driven into exile, sought hospitality as a fugitive king from Runjeet Sing. The fatal Koh-i-noor was still preserved to him—almost the only remnant of his former wealth. Runjeet Sing knew that he had the diamond with him, and starved him till he gave it up to him, which the poor, weak, craven runaway was at last compelled to do. Soon afterwards, Runjeet Sing entered into an alliance, offensive and defensive, with our Government, one of the objects of which was the absurd one of replacing Shah Shooja on the throne of Cabul. When the alliance was concluded, Runjeet Sing died, bequeathing the diamond to the god Juggernaut. His bequest was disregarded, and after a rapid succession of members of his family had each in turn obtained possession of the Koh-i-noor, and each in turn came to sorrow and ruin, the British Government destroyed the Sikh nation, and Lord Dalhousie sent the Koh-i-noor to Queen Victoria.

This, then, is the history of this famous diamond, and these are the facts on which is founded the superstition that no dynasty possessing the fatal gem can prosper or continue. This supposition has a material truth. So many foregone coincidences could not fail of leading to a like conclusion for that which is to come after; the dark shadow of such a past must inevitably fall on the pathway of the future. But it has also a spiritual truth, which is, that ill-gotten wealth seldom prospers with those who have gotten it, and that if Justice sleeps for one generation, she wakens up with her naked sword brandished before the eyes of another. The Koh-i-noor has been fatal to all its possessors, because they were all men of violence and crime; they ruled lawlessly, and they plundered ruthlessly, and that plundered wealth turned to curses, not to blessings, in their hands. With us—when the people of India shall be ruled in justice and in mercy—the chief ruler of England may wear the Koh-i-noor on a brow uninjured by its mystical blaze, but until then, until justice and not lawlessness, right and not violence, stand by the Indian throne in our British halls of Government, we may fear that the fate of the Koh-i-noor may be fulfilled here as in Hindostan, and that ruin may follow robbery, and judgment come after crime. [Pen and Pencil.

The New Perpetual Motion.

There stands on a table at No. 565 Broadway, New York, an innocent-looking machine, consisting mainly of two brass wheels geared together, moderately but continuously revolving without the visible expenditure of any power! The smaller gear wheel, between one and two inches in diameter, is mounted on a vertical axis and is steadied by a small fly-wheel. This makes some 80 revolutions per minute and gears into another some ten times larger, which latter is fixed on a shaft inclined toward the first some fifteen degrees from the perpendicular. This wheel carries delicately mounted on its upper surface two heavy bars of brass, extended diametrically across at right angles to each other. A small wheel on the quick shaft comes in contact with the ends of these bars as they pass and continually thrusts them over toward the highest side. What we have termed bars are much larger at the ends than at the middle, and are in fact weights connected by a wire; but the effect is the same, and the increased weight on the side which is descending apparently causes and maintains the motion of the whole. The glass covering was partially removed and the machine was stopped in our presence—the second time only, we are assured, for several weeks—but it slowly started again when released in a suitable position for gravity to act favorably on the bars, and soon attained its ordinary speed.

A perpetual motion of the character which this *appears* to be is simply impossible. The difficulty of solving the riddle, however, renders it a most interesting object for study, and we recommend it to the attention of the curious. The machine is an importation from New Haven, and some score of editors, mechanics, and *savans* of various grades in that favored city, certify strongly to their belief in its genuine character. If a humbug, it is certainly no shallow one; and such is the irresistible conclusion of every one after watching its quiet revolution closely for an hour or more.

Forty-three years ago a perpetual motion in this city attracted great attention, until Robert Fulton suggested the existence of a secret band, which, impelled by suitable means outside the room, might be connected to one of the shafts of the machine at some point concealed within a bearing. Backed up by the audience, he commenced a "pursuit of knowledge under difficulties" more earnest in its character and fortunate in its results than morally justifiable, and forcibly separating the parts of the construction proved his supposition to be correct, a band of twine being found to lead into the room above, where an old man sat turning a crank with one hand and holding a crust in the other. In the machine now under notice both shafts are delicately supported both at the top and bottom on thin discs of transparent glass, thus effectually cutting off any mechanical assistance through these avenues, and the nonconducting property of this material tends to shut the mouths of those superficial philosophers who are always ready to explain everything unusual by simply pronouncing the words "animal magnetism" or "electricity."

Our solution of the phenomenon consists in supposing the large wheel, or more likely the crossed bars supported thereon, to contain iron at one or more points. This wheel runs in very close proximity to two wooden posts in the framing, one or both of which points we conceive to conceal iron bars, which latter become magnets at regular intervals. The magnetism is induced, either directly or inductively, by the aid of a battery or a revolving armature, located outside the room, and connected through the legs of the table. The fluid operates in the ordinary manner, by a helical coil, the period of the current being regulated by clock work. As the iron in the wheel approaches the post, the iron therein becomes a magnet and attracts it, but as it reaches the nearest point, the current is suspended, and the magnetism disappears. Should the wheel turn too fast, the magnetism does not cease in time, and by operating as a slight retard after the point is passed, soon brings it back to its favorite velocity. This theory explains both the *existence* and the *regularity* of its motion, and, if correct, leaves the apparatus possessing a very moderate degree of interest as a feeble magnetic engine. [N.Y. Tribune.

The London Police.

London is a very quiet city, for the most part. In all the west end, the streets are seldom disturbed by noise or confusion of any kind. You may walk through them with perfect safety at any hour of the night. The police is numerous and admirably trained. It constitutes in itself a small standing army. Besides two commissioners, it embraces a Superintendent-in-chief, 18 Superintendents, 127 Inspectors, 613 Sergeants, and 4,812 Constables; in all 5,571 persons. This is exclusive of the city police (the old Corporation) which employs about 600 men. The policemen are all uniformed and carefully drilled, and move with military precision. More than half of them are on duty all night; and when occasion requires it, there is a mounted patrol. They are prepared for all weathers, and while on duty at night they are forbidden to sit down. Of course, the metropolis is carefully mapped out into sections, and each man has his beat assigned him. So thoroughly, it is said, has this arrangement been carried into effect, that every street, road, lane, alley, and court, within the metropolitan district—that is, the whole of the metropolis (except that small part the city of London,) the county of Middlesex, and all the parishes, 218 in number, in the counties of Surrey, Kent, Essex, and Hertfordshire, which are not more than 15 miles from Charing Cross, comprising an area of 700 square miles and a population of more than two and a half millions—is visited constantly, day and night, by the police. There are some 125 police stations, and the system of communication is such between them and the chief office at Whitehall, that the Commissioner can collect the whole 5,571 men in one place in two hours. The wages of the policemen are understood to be from 2s. 5d. to 3s. per day, or from 60c. to 75c., and the cost of the whole force in 1853 is stated at upwards of one and a half millions of dollars. The charges for "truncheons, rattles, belts, and swords" were some $430,000. Each police constable walks about twenty miles daily in his rounds, besides attending the police offices, equal to five miles more. During two months out of three according to Timbs, each constable is on duty nine hours each night.

And so this great living machine keeps watch and ward over the lives and property of the largest city in the world—holding in check the multitudes of desparate men who would not hesitate otherwise at deeds of violence, and the thousands of professional thieves who are always on the watch for opportunities to plunder. Since its establishment under its present organization, the military has not been actually mustered in London to aid the civil power. Happy the people who do not need so extensive a police; but where a large police is needed, happy the people who have one as well organized and efficient as that of London.

The Draining of the Harlem Sea.—The Chairman of the Commission on the Draining of the Harlem Sea has published a final report on this work, which is to be finished this year. The expenses from 1839 to 1855, inclusive, are $3,400,000, and the receipts from land to be sold is estimated at $3,200,000. It was at first supposed the reclaimed land would be worth only some $32 per acre, but in 1853 it was actually sold for over $120. This return exceeds all expectation, as the draining was not undertaken as a speculation, but as a precaution against further inroads of the sea. Fruitful farms already begin to appear here and there, on the former floor of the sea. Forty-five thousand acres in all have been reclaimed from the sea, which will supply 100,000 people bountifully, with the means of life. [N. Y. Tribune.

The business men of St. Louis propose to clear the ice opposite that city by the use of powder. Experiments have been made, and there seems to be no obstacle in the way. The explosions so shatter the ice that the current floats it down the stream.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic, There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating to the* bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, *unless* it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

JEHUISM.

There are few mistakes in religion of more serious consequences than intemperate zeal. Pope seems to have had reference to this false zeal in that part of his poetic prayer where he says:

> "Let not this weak, unknowing hand,
> Presume thy bolts to throw;
> And deal damnation round the land,
> On each I judge thy foe."

Saul charged his Jewish brethren with possessing this zeal, when he admitted that they had a zeal for God, but that zeal was not according to knowledge.

Jehu, one of the kings of Israel, was decidedly a man of this stamp. In his zeal for the Lord, he seemed to think it would be justifiable to advance reform by any means, not excepting deceit, cruelty, or even murder. And the sequel of his history shows, that under the cloak of zeal for the Lord, he was aiming to gratify his own ambition, and to secure, by his horrid barbarities and murders, safety to his throne. (See 2 Kings, 9th and 10th chapters.)

Such are the circumstances, many times, in which men are placed, that resort is had to questionable means in order to extricate themselves from difficulty, or to gain some apparent good. Such was the case with the Puritans who settled New England. Believing they were the appointed agents of Heaven to plant Christianity there, they often resorted to deeds of cruelty and death, which even Judaism could hardly sanction—much less Christianity. The massacre of the aborigines of that country, the burning of whole villages of those wronged red-men, was done from a zeal for the Lord. The error of those Puritans lay in the fact that they mistook Judaism for Christianity. So also the death penalties inflicted on those wretched ones denominated witches, was a zeal for God, more in accordance with Moses than Christ.

But even the nineteenth century has not ushered in the fullness of the Gospel dispensation. Modern Christianity seems to partake much of ancient Judaism. Even Christianized slavery falls far behind that of Judaism. Jewish servitude forbade the recovery of the fugitive, but modern Christianity, as ultimated in the Fugitive Slave Act, not only sanctions the rendition of slaves, but imposes fines and imprisonment if one refuses to aid in catching the fleeing bondman. So in respect to war. Judaism seldom, if ever, presented a more warlike appearance than now do Christian nations. Even the few in Christendom who maintain what seems to be the plain teachings of Jesus on these subjects, are generally classed with Infidels, Universalists, Quakers, &c., by way of reproach.

I have been led to these remarks by reading Wm. L. Garrison's remarks on H. W. Beecher's moral efficiency of Sharp's rifles in settling the Kansas question. And in order that the readers of the *Recorder* may judge which of the views—Garrison's or Beecher's—accords most with the plain teachings of Jesus, I beg leave to make a few extracts from articles published by them respectively. Mr. Garrison says:—

"I admit, that if it be right to destroy human life in any case—to resort to murderous weapons in defense of life and liberty, when these are in peril—then the *bona fide* settlers of Kansas are fully justified in employing Sharp's rifles against the Missouri bandits who are thirsting for their blood, and in destroying as many of them as possible. On that point we have no controversy. But we insist on the inviolability of human life; on the duty of returning good for evil, at whatever hazard; on the *immense superiority of the martyr spirit to that of armed resistance;* on taking the shield of faith, putting on the whole armor of God, and following His example, 'who, when he suffered, threatened not, but committed himself to him who judgeth righteously; leaving us an example that we should follow in his steps.' We maintain, that it is from the assumed right of man to take the life of his fellow man at discretion, on the ground of necessity, duty, personal safety, or the general welfare, that all the tyranny, violence, and bloodshed in the world emanate, as water flows from a fountain; hence, to *make life sacred in all cases* is to cure all these excesses, and render their perpetration impossible. 'Where no fuel is, the fire goeth out.'

"Who threaten the lives of the honest settlers of Kansas? Who have invaded their territory, assumed the reins of government, committed robbery and murder, and sought to drive out every freedom-loving spirit? Surely, not a band of non-resistants—not those who act upon the self-evident truth, that the Creator has endowed every human being with an *inalienable* right to life—not believers in the sinfulness of war under all circumstances. No; they are those who scoff at the principles of peace, and are ready at any time to join with Henry Ward Beecher in eulogizing Sharp's rifles and Colt's revolvers, as worthy of all acceptance. What if they had been taught, by precept and example, from early childhood, to discard all such murderous weapons, and to revere the image of God, however marred by sin, and to return blessing for cursing—would Kansas at this time be suffering from their lawlessness? What—wild and besotted as they may be—if they had been met by the Free State men in a Christlike spirit, [illegible] in principle, and ready to die rather than return evil for evil—would they now be filled (as, alas! they are) with the spirit of hell? Mr. Beecher begs the question when he declares, 'Let thieves, assassins, and rioters, know that their schemes of violence would never be resisted, except by moral means, and society could not stand a month.' We shall leave him to resort to the weapons and devices of thieves, assassins, and rioters, and descend to their plane of deadly antagonism, but, as for ourselves, we shall rely on moral means for the blessing and protection of Heaven, and if these shall lead us to the stake or the cross, we know that the blood of the martyrs is the seed of the church, and cannot doubt that the world will be aided by the sacrifice. Let society act upon this principle, and be animated by the divine spirit of love toward all its enemies, and we have no doubt that there will be fewer thieves, assassins, and rioters, than there are now, with all the instruments of death relied upon for protection. It may excite the laugh of the unreflecting to say, 'You might as well read the Bible to buffalos as to those fellows who follow Atchinson and Stringfellow;' but the comparison is a beastly one, and places man on a level with a brute, for the purpose of justifying his destruction. This is not to be in the spirit of Him who came to seek and save the lost, even the most degraded. In what manner Christ and his Apostles would have been seen going down to the Indians, had they been living at that time, it is not difficult to conjecture, inasmuch as the weapons of their warfare were not carnal, and as they had no fear of those who kill the body only. Did the Indians look upon William Penn and his followers as mad, because they had no deadly weapons?—or revere them almost as if they were demi-gods, on account of their loving spirit? It is strange, it is shocking, that at this late day Mr. Beecher should exult, in view of the sanguinary exploits of the fierce old Puritans against the poor Indians, who were regarded by them as no better than 'buffalos,' to be hunted to their extermination, and whose blood is yet crying to Heaven for retribution. With what a gusto he says, 'The Puritans used to carry their muskets and their Bibles with them to church—the one for inside work, and the other for outside work.' History shows us the result of this policy, in characters of fire and blood. Contrast with it the pacific course of Penn and his associates, and the consequences flowing therefrom."

The above are the views of Mr. Garrison, a man whom the church calls infidel, and unworthy of membership in its body. In reply to the above, Mr. Beecher says:—

"There have been two parties among Christians from the beginning in respect to the true intent of Christ's teaching in the matter of physical force in self-defense. One party, (and it has been numerically the minority, but has ranked very able writers in its service,) hold that it is wrong to use force for self defense—for the protection of societies, or for defensive national wars; that men are to repel wrong only by moral means, and when these fail, that then they are to suffer patiently and heroically." [Can any one doubt but that Christ and the Apostles did thus?] "The other party, (continues Mr. Beecher,) and they are an immense majority of ethical writers and commentators, believe that no man may retaliate a wrong, or avenge himself, for the sake of gratifying his temper. Yet they hold that self-defense is allowable, and that defensive wars are justifiable."

Mr. Beecher maintans that "the use of physical force is no more at variance with the law of love, than is a parent's chastising a child with a rod, or a magistrate's condemning a culprit to a life imprisonment for his crimes." Mr. B. adds, that "in the present condition of the world, he should regard the spread of peace principles *in that* (Mr. Garrison's) *sense,* in which they deny the right of self-defense, as a premium bid upon rascality and tyranny. It is the devil's doctrine, and it would inure to the benefit of satan, and of his minions throughout the world." Now, it seems to me, that all must admit that Mr. Garrison's view coincides nearer with the teaching and practice of Christ than that of Mr. Beecher. And when Mr. Beecher declares that the views of Mr. Garrison, as a non-resistant, are a premium bid on rascality and tyranny, and that such a doctrine is the devil's doctrine, I am at a loss what to think. Was not Christ, and were not the Apostles and early Christians, non-resistants to the extreme? And was their practice a bid on rascality and tyranny? And did they teach the doctrine of the devil? And would their conduct inure to the benefit of satan and his minions?

Mr. Beecher says: "In the present condition of the world, he would regard the spread of peace principles in that (Garrison's) sense, as a premium on rascality and tyranny." But I would inquire, if the present condition of the world is worse than when Christ taught and practiced non-resistance? Mr. Beecher indirectly admits that a time will come when the views of Mr. Garrison, as a non-resistant, will be right and expedient. Mr. Beecher ought to know, that nothing but true Christian non-resistance will or can bring that time about. "It is in vain to expect that preparation for war, or actual self defense with brutal force, will, either individually, socially, or politically, bring about such a state of things. It is the merest moonshine to talk of non-resistance, when the whole world is at peace. We might as well talk of Temperance when there was nothing to excite the appetite, or of Slavery when nobody desired to enslave. No—it is when the enemy comes in like a flood, that the Spirit of the Lord is to lift up a standard. It is when men are smitten that they are not to smite. It is when they are put to death, even by those who think they are doing God service, that they are to forgive, and, like Stephen, pray, when dying, for their murderers.

It is because Christ's kingdom is not of, or governed like, the kingdoms of this world, that his subjects are forbidden to fight. Some men, some communities, some churches, some nations, must first set the example of non-resistance. If Christianity only forbids its subjects to engage in offensive wars, what is it better than any other religion in that respect? What nation ever justified offensive war? None. When Mr. B. thinks defensive war justified by Christianity, wherein does he make Christianity any better than paganism? Can he point to any war for which its abettors did not enter the plea of defense? The invasion of Kansas by the "border ruffians" was to defend their property, as well as to secure luxurious pasturage for their bipeds while the free-soilers are defending their right to that soil. Thus both claim defense. That the free-state men have a right to live in Kansas, is true. So Paul had a right to live in Jerusalem or Damascus. Still, when he could not stay longer without using brutal force, he left. The whole body of martyrs, perhaps, had a right to live, even at the expense of their murderers, but they did not. It must be remembered, that Christianity professes to stand on higher ground than naked justice. It has announced to the world that evil can be overcome with good—that suffering, even unto death, is the surest way to gain the victory over an enemy. It thus becomes the transcript of the Divine government. It was therefore designed that the church should govern only by those divine principles of reason, moral means, suffering for truth's sake, painstaking for the good of enemies, and, if necessary, death in behalf of the offender. So when the real church becomes universal, all kingdoms ruled by physical force will have passed away, and the kingdom of heaven be triumphal. Therefore it seems to me that until the consummation of that event, every Christian may expect that he may be called upon perhaps to lay down his life in behalf of the cause. Let us all then be careful, lest, in showing our zeal for God in the Kansas troubles, we be too much like Jehu, who invited Jehonadab to ride with him in his chariot, and see his zeal for the Lord.

Mr. Beecher says that the non-resistants have been "numerically the minority." But what of that? Have not real Christians always been "numerically the minority?" The true worshipers of God were numerically the minority in the reign of Ahab. But what of all that? When one can chase a thousand, and two put ten thousand to flight, is there not much nearer an equality of power than might be supposed? If God be a majority against every thing besides, will it not follow, that the numerical minority of non-resistants are in fact on the side of the majority, if so be they are on the side of Christ? It may not be amiss for numerical majorities to consider this, else they may reason without their host. True Sabbatarians are just now numerically the minority, (and some think that minority is growing beautifully less;) yet none can dispute but that they may be considered in the majority when reckoned with the Lord of the Sabbath.

Mr. B. says: "There have been two parties among Christians from the beginning in respect to the true intent of Christ's teaching in the matter of physical force in self-defense." If history be reliable, Mr. Beecher is mistaken. For there is no fact better established, perhaps, than that the primitive Christians eschewed all wars, and refused to participate in them, even although their lives had to pay the forfeit. They understood that the Christian profession forbade even their enrollment as warriors. Jehuism and Christianity are incompatible and irreconcilable with each other. S. S. G.

ASSYRIAN DISCOVERY.

It is stated that Colonel Rawlinson, who is at present engaged in prosecuting the discoveries commenced by Layard and Botta, and in exhuming from the mounds of the long-lost rival cities of Nineveh and Babylon, the instructive remains of this once gigantic power, has lately discovered in a state of preservation what is believed to be the mummy of Nebuchadnezzar. The face of the rebellious monarch of Babylon, covered by one of those gold masks usually found in Assyrian tombs, is described as very handsome—the forehead high and commanding, the features marked and regular. This interesting relic of remote antiquity is for the present preserved in the museum of the East India Company. Of all the mighty empires which have left a lasting impression on the memory, none has so completely perished as that of Assyria. More than two thousand years have gone by, since the two "great cities," renowned for their strength, their luxury, and their magnificence, have crumbled into dust, leaving no visible trace of their existence, their very sites forgotten. A chance traveler, Layard, riding through the Mesopotamian valley, discovered "the buried city," and with a success that will immortalize his name, has commenced to unroll the book of Assyrian history and civilization, which of all the histories of the first period of the world, is most clearly connected with the subsequent destinies of the human race. The discoveries already made, furnish ample testimony to refute the sceptic and unbeliever of Scripture truth.

THE WINTER KING.

I come! I come! with my frozen breath,
To blight your fields and scatter death;
My car is seen in the ragged cloud,
My voice is heard when the storms wail loud;
My merciless hand
Shall cover the land
With chains of ice and a snowy cloud.

I'll seize each mount in my ruthless grasp,
And every vale in my cold arms clasp;
And forest oaks at my nod will shake,
And fast I'll fetter the stream and lake;
The sun will look down
With desolate frown,
And nature's self at my reign shall quake.

I'll rush at night from my hidden seat,
And fill the air with a driving sleet,
And when some pilgrim alone is found,
I'll bind him stiff to the frozen ground;
And as the storm moans,
Will he utter his groans,
And I will laugh at the dismal sound.

I'll ride the gale to the roaring sea,
Where sailors' cries shall my welcome be;
I'll sport awhile with the reeling mast,
Then crush the ship with a fearful blast,
And mock at the prayer
They utter there,
And flee away when the sound is past.

I'll seek some widow in lonely cot,
Where peace and plenty inhabit not,
Where the flame on the cold hearth dies,
Heeding not tears, nor cold, nor cries:
I'll seize the fond child,
Rave she ever so wild,
And bid her look where the victim lies.

I'll clothe the earth with my dazzling sheen,
And who shall live where my track is seen?
The leaves shall fall and the birds take wing
When first approacheth the Winter King:
A sound will go out
With echoing shout,
Beware, beware of the Winter King.

AN INCIDENT.

The Rev. John H. Gode, a missionary in Nebraska Territory, writing from Omaha City, on the 7th of January, mentions the following incident that occurred while attending a religious meeting held in the State House in that place:—

I believe and love the sentiment, that "moral effort never is lost." Occasional and unexpected incidents through past life have contributed to strengthen the sentiment. One such has just occurred. Last evening—Sabbath—was cold and stormy. The winds were raging fearfully. Still a few were found at the place of worship, not, however, without some marks of injury from the frost, even in the short walk from their lodgings. During the period that elapsed before the service commenced, a gentleman to whom I had been previously introduced, seated himself by my side, and introduced a conversation in substance as follows: "Do you recollect, in the summer of 18—, to have traveled by stage through the counties of —— and ——, in the State of I——?" "I do," was my reply. "You got on board at the village of S——, at a late hour of the night, took a seat outside with the driver, and rode to G——'s station?" "I remember it perfectly well." "You conversed freely and familiarly with the driver on the way, and gave him some moral and religious advice." "I have some recollection of this also." "Well," said he, "I am the young man who was then driving; I have often wished to know who that stranger was. I have desired to meet him that I might give him my thanks, and now I have the opportunity." I only add, that the gentleman referred to is now the head of a family, a reputable member of the Methodist Episcopal Church, and occupies a seat in the Nebraska Legislature. Often have I fled from the undesirable associations "inside" a crowded stage-coach, taken refuge "on deck," admired the scenery by day or by night, and sought to drop a word into the ear of exposed and unpolished youth. This is the first instance of manifest fruit.

THE MONEY LENDER.

A merchant sat in his private counting-room, with an anxious, troubled look upon his face. A few thousand dollars had just been paid, which he now wished to re-invest. But it was the dark winter of 1854, a date long to be remembered by the business world. Railroad companies were failing, banks were crashing, large firms were daily being closed, men supposed to be high above the tide were astounding their acquaintances by assignments; indeed, the commercial bark seemed to have struck the hidden rock, and only a general wreck could be anticipated.

The merchant continued his perplexed meditations, which were every moment becoming more unsatisfactory. He could easily lend the money at forty or fifty per cent., but his sense of uprightness would never allow him to take advantage of his friend's necessity; besides, were he disposed to lend it, whom could he trust? At length a silent voice whispered to his soul a little text of Scripture, about "lending to the Lord." A warm glow stole over his heart, and a ray of light seemed dawning on his mind. Yes, that would be a safe investment. No fear of loss or failure there.

But Prudence queried, "Can you afford to give so much? Does your income justify it? Few rich men bestow as large a sum at once, unless it be something in their legacies."

Again the merchant pondered long, but was dissatisfied and undecided. Kneeling, he prayed earnestly for guidance from an all-wise hand. He rose with a soul filled with the sweetest peace. The decision was made. In his own home was enough to supply all the wants of his household, and a portion for the needy. Had the money been lost before it reached him, no suffering would have come near his dwelling in consequence. Besides, it was only a partial payment on the immense debt he owed, for all his mercies. The sum was appropriated, and a light heart and a soft pillow were his that night.

The money went its ways, cheering the sad hearts of widows and orphans, gladdening a poor home missionary's little circle as they wondered over the anonymous letter, which brought them fifty dollars, sending little tracts to the lowly home of the pioneer, or buying the bread of life for starving souls in Asia, Africa, or the islands of the sea. It was ever increasing in value, until, at length, the amount was beyond computation. Never did the merchant regret the investment, for the sums were secured to him with a sure bond, with a three fold signature, and laid up in the mansion where were all his treasures.

Would that many, who yearly compute by thousands the surplus of their incomes above their expenditures, might follow the example of this money lender. [N. Y. Evangelist.

UNIVERSAL PROVIDENCE OF GOD.

Dr. Williams, in one of his published discourses, expresses this thought finely:—

"The experienced disciple sees the most trivial incidents entering into the counsels of God's all-grasping government. Is Kish to have his son made king of Israel? The straying of the beasts because they found the fence low or saw the herbage beyond it greener—the roving fancy of a brute herd—brings the youth to the prophet who is to crown him. The woman of Samaria needs, as is her daily wont, to fill the urn at the well, and her unconscious errand is to meet, in that memorable day, salvation incarnate in that Messiah, whom the world had for centuries been expecting. Zaccheus climbs the tree from curiosity, the blind man sat by the wayside to intercept the passing traveler's gift, the lame man is borne to the Gate Beautiful of the Temple to win by the old spectacle of his distress the daily pittance of alms; and for all these the Gospel is waiting thus, to meet and bless them eternally. Nothing is petty in God's government. So, too, how strange the chemistry of heaven, that, from *evil,* extracts its own good and blessed ends. How many, and long-cherished, and murderous, must have been the grudgings of Joseph's brethren against the lad with the coat of many colors; but all their unbrotherly love, and Reuben's lie, and the Midianites' covetousness—all are to prepare for the feeding of Jacob and his household in famine, and to make way for the wonders of the liberation of the nation of Israel from the house of bondage. Look at Pharaoh's obduracy and unblushing falsehood, as miracle after miracle wrests a fresh and larger promise from him in favor of the chosen tribes, to be afresh forfeited and falsified. How daring his defiance of Jehovah, but Jehovah sees the end from the beginning, and all this impenitence, so tantalizing and exasperating to the Hebrews, is but the foreground of the picture, in whose dim distance are seen, Egypt and her gods confounded, the Red Sea cleft, and the thundering Sinai, and the subdued and apportioned Canaan. Look at Goliath and Saul, and Doeg, and Absalom and Shimei, all mad against David's life; but all tributary to his best interests. See, in later times, the school of Gamaliel, and the massacre of Stephen, the letters of the High Priest—all fitting Saul of Tarsus to be a relentless persecutor, a ravening wolf of the tribe of Benjamin, as successful as he is savage in his quest of the lambs of Christ's sheepfold. No—man and Satan so meant it. But God otherwise *disposed* what man and fiend *proposed.* His Rabbinic learning is to write the Epistle to the Hebrews. His zeal in persecution is to seal the genuineness of his conversion, and to guard his humility."

EARNEST GOSPEL PREACHING.

The *Genesee Evangelist,* in noticing a statement of the *Puritan Recorder,* that there is a growing taste for earnest Gospel preaching in New England, says:—

"Do not the crowded audiences, that now assemble almost daily to her plain, practical extempore preaching in this city, afford additional evidence that the above sentiments are becoming well nigh universal? In two instances within a few months have we seen the interest of an audience lost, and their sensibilities apparently shocked by discourses, which elsewhere, and at another time than in the pulpit and on the Sabbath, would have been regarded as literary efforts of a high order.

"The rage for sparkling intellectualities in pulpit discourse does seem to be declining, and that not to the detriment, but, as we think, greatly to the advantage and promotion of true religion in our midst. Ignorance and crude commonplace in the pulpit have been known and deplored as one extreme, in some branches of the Church, and this falsely learned style is perhaps the opposite extreme brought about by reaction. All must rejoice, then, if there is an increasing appreciation of that learning which is of the Word and of the Spirit, and which appeals to the heart as well as understanding."

TIME AND ETERNITY.

A lady once looked into a book and saw a word which made her much afraid. She could not sleep that night. She loved life. She loved this world. She did not wish to leave it. The word she saw in the book was "ETERNITY." It is a solemn word. I do not wonder that it fills the minds of sinners with fear. Yet the pious do not hate the word. They think of it often. They love to think of it.

But what is eternity? It is like a sea which has no shore; a race that is never all run; a river that has no spring and no mouth, yet always flows. It is forever-and-ever. None but God fully knows what it is. We know it is not time told by hours, days, months, years, and ages. We speak of an eternity past, and of an eternity to come. Yet there are not two. But we so speak, because we are at a loss for words. We go back, back, back, until our minds tire; but we come not to any point where eternity began. We go on, on, on, until we can go no further, and yet there is no end.

A teacher in a blind school, once gave this sum to one of the boys. He was to work it out in his mind: "A pile of sand is ten feet high, ten feet wide, and seventy feet long. Each square solid inch contains ten thousand grains. A bird comes every thousand years and takes away one grain at a time. How long would it take to carry away all the sand?" The little blind boy soon gave the answer, which was, that it would take 120,960,000,000,000 years. What a long row of figures! You cannot form an idea of such a sum. Now put all the sand on the sea-shore into one heap, and let a bird take away one grain every thousand years till all is gone, and yet that would not be the end of eternity. Eternity has no end.

Some of the ancients tried to give some idea of eternity by drawing a circle. A circle has no end. In that it is like eternity. But in no other respect. We can measure all circles. But we cannot measure eternity. None but God knows what it is.

Men's bodies may die, but shall live again. But their souls live on, and on, and on, forever. Nor do angels ever cease to live. All angels and all men shall live as long as God lives.

THE PARTING HOUR.

The hour is coming, and it is a fearful and solemn hour, even to the wisest and the best; the hour is coming, when we must bid adieu to the scenes which please us, to the families we love, to the friends we esteem. Whether we think or whether we think not, that body which is now warm and active with life, shall be cold and motionless in death—the countenance must be pale, the eye must be closed, the voice must be silenced, the senses must be destroyed, the whole appearance must be changed by the remorseless hand of our last enemy. We may banish the remembrance of the weakness of our human nature, we may tremble at the prospect of dissolution; but our reluctance to reflect upon it, and our attempts to drive it from our recollection, are in vain. We know that we are sentenced to die, and though we sometimes succeed in casting off for a season the conviction of this unwelcome truth, we never can entirely remove it. The reflection haunts us still, it haunts us in solitude, it follows us into society, it lies down with us at night, it awakens with us at morning. The irrevocable doom has passed upon us, and too well do we know it. "Dust thou art, and unto dust thou shalt return." [Townsend.

THOUGHTS WORTH PONDERING.

Said Nettleton—"We may talk about the best means of doing good; but, after all, the greatest difficulty lies in doing it with a proper spirit. Speaking the truth in love—in meekness instructing those that oppose themselves—with the meekness and gentleness of Christ. I have known anxious sinners to drop the subject of religion in consequence of the preacher addressing them in an angry tone."

Said Payson—"I never was fit to say a word to a sinner, except when I had a broken heart myself; when I was subdued and melted into penitence, and felt as though I had just received pardon to my own soul, and when my heart was full of tenderness and pity."

Said Brainard—in speaking of the Spirit of God—"When ministers feel these special gracious influences in their hearts, it wonderfully assists them to come at the consciences of men, and as it were to handle them with hands; whereas, without them, whatever reason and oratory we make use of, we do but make use of stumps instead of hands."

Inquiries—1st. Must we not infer from the foregoing, that the great secret of the success of these men as laborers for God, was their deep-toned piety?

2d. Must we not believe that the same deep-toned piety continues to be the secret of all success in spiritual things at the present day?

3d. Ought not, then, this type of piety to be regarded as the first and highest of all qualifications in the minister of the gospel, or other spiritual teachers?

4th. Do our churches, ministers, theological students, and theological professors, act in accordance with this principle? And if not—and a beautiful sermon—a polished style and a pleasing address—are, after all, the first and highest qualifications to be aimed at and sought after—why marvel at cold churches, worldly preachers, and few conversions? View this matter as we may, it is certain that the fruit will be of like character with the tree. Erroneous principles bring forth mournful and disastrous results.

5th. A guilty one cries out, "Is it not quite time to awake out of sleep in this matter?" [Congregationalist.

THE FIRST BOOK.

The first book published in America was "The Psalms in Metre, Faithfully translated for the Use, Edification and Comfort of the Saints in Public and Private; Especially in New England," printed in Cambridge, in 1640. The version was made by Thomas Welde, of Roxbury, Richard Mather, of Dorchester, and John Elliot, the famous Apostle to the Indians. The translators seem to have been aware that it possessed but little literary merit. "If," said they in their preface, "the verses are not always so smooth and elegant as some may desire and expect, let them consider that God's altar needs not our polishings; for we have respected rather a plain translation, than to smooth our verses with the sweetness of any paraphrase, and so have attended rather to conscience than elegance, and to fidelity rather than poetry." After a second edition had been printed, President Dunster, of Harvard College, assisted by Mr. Richard Lyon, attempted to improve it, and in their advertisement "to the godly reader," they state that they had special eye both to the gravity of the phrase of the sacred writ, and sweetness of the verse." Dunster's edition was reprinted twenty-three times in America, and several times in Scotland and England, where it was long used in the dissenting congregations.

The Bible contains numerous epitaphs of the pious dead, written by God himself. The writing on Abraham's tomb is, "He was the Friend of God." On Enoch's, "He walked with God, and was not, for God took him." On David's, "A man according to God's own heart." And on John Baptist's, "He was a burning and a shining light."

The Sabbath Recorder.

New York, March 27, 1856.

British Correspondent—JAMES A. BEGG.

OUR ACCOUNTS.—The twelfth volume of the Sabbath Recorder is more than three-quarters completed. Bills to the end of the volume have been sent to those who owe the establishment, so that no one need be in doubt as to the state of his account. All of these bills ought to be paid before the volume closes. It has been proposed to make out a list of dues at the end of the volume, and print it with the next Annual Report of the Publishing Society, so that the members may estimate for themselves the value of those unpaid accounts which so seriously embarrass our operations. It is desirable that the list should be as short as possible.

MORAL GOVERNMENT AS AFFECTED BY CHRIST'S MEDIATION—NO. 4.

The *Providence of God* indicates the modifying influence which the mediation of Christ has upon the government of the world. It is evident from the Scriptures, that the dispensations of divine providence are managed with especial reference to the redeemed. To accomplish their good, "all things work together." (Rom. 8: 28.) The Apostle's reasoning, in this connection, is worthy of notice. His declaration that "all things work together for good to them that love God," is founded upon the divine purpose concerning the saints. God has "predestinated" that they shall all bear "the image of his Son;" and having "predestinated" this, he "calls" them by his grace, "justifies" them unto eternal life, and finally "glorifies" them. If they love God, they are already "the called according to his purpose," and are also justified; so that the particular "good" in store for them is their conformity to the image of Christ, and their glorification with him in heaven.

To bring about this "good," "all things" are made to contribute. The preaching of the Gospel, the afflictions which befal them, the losses which they incur, the poverty which pinches them, the oppressions of the wicked, the assaults of Satan, death itself, in a word every thing, tend, under the wise and powerful direction of the Almighty, to this great result. (See 1 Cor. 3: 21—23) The following Scriptures may also be taken as bearing upon this point; Deut. 8: 2, 3, 16, 2 Cor. 4: 15—17, 2 Chron. 16: 9, Ps 34: 15, 16, Nah. 1: 7, 8, Ps 37: 18—24; together with all those passages which declare the refining, sanctifying influence of "the sufferings of this present time."

Had man never sinned, afflictions had not entered into the dispensations of providence, nor made any part of them. And after he sinned, even on the supposition that he was to remain on the earth and propagate his species, yet if the Redeemer had not interposed for his salvation, the afflictions of life could not have tended to any such result as they are now made to with respect to God's chosen. But now, not only the sorrows growing out of the Apostacy, but the "all things" embraced in the Providence of God, are made to "work together" in order to the spiritual and eternal good of the saints. And that "all things" may contribute to this end, the management of the universe is committed to Him who has undertaken to redeem them. (See Matt. 11: 27 and 28: 18, John 3: 35, 13: 3, and 17: 2, 1 Cor. 15: 27, Phil. 2: 9—11, Eph. 1: 21, 22, 1 Pet. 3: 22) Accordingly, he must reign, till the salvation of his people shall have been fully accomplished in their resurrection and glorification; nor will he deliver up the kingdom to the Father, to be administered in any other manner, till his mediation shall have brought to pass this grand result.

What is sometimes called *special* providence, as distinguished from general, seems to amount to this—that God's plan or method of dispensing his providence did, from all eternity, contemplate the spiritual and everlasting good of his people as the great point to be compassed. All things were arranged in the Divine mind, therefore, and so adjusted and related to one another, as to carry out this design; and therefore all things, as they transpire in the history of the world, are actually working together to this end. There are a thousand things which, taken singly or as isolated facts, do not tend to the good of God's people; but taken in their relation to one another, are made to "*work together*" for this purpose. The *specialty* or *particularity* of divine providence with regard to the saints, would therefore seem to imply nothing more than that God's *general* providence embraces the spiritual and everlasting good of his people as the *particular, definite* object in view.

Hence, the rise and fall of empires, desolating wars, commercial activity, agricultural thrift, the construction of railroads, the operations of the printing press, the legislation of civilians, the administration of justice, the erection of colleges and schools, improvements in the arts, together with every thing by which the condition of the world is affected physically, morally, or politically, are controlled, ordered, and directed, with reference to this one particular, definite object, as embraced in God's great and ultimate purpose of glorifying himself through his Son Jesus Christ.

Now it is very obvious that, when men come to render their final account to the Judge of All, their conduct as related to the peculiar manner in which providence has been dispensed will be brought under review. The proceedings of Judgment will be *grounded* upon what has been the providence of God; we may say, indeed, that Judgment will be the *consummation* of his providence. T. B. B.

DONATIONS.

In the *Recorder* of March 20th, notice is taken of several "Donation Visits" made to pastors of Seventh-day Baptist churches. These visits, it seems, produced satisfactory pecuniary results, while the "social features" of them are highly commended; and the remark is very properly made, that "such visits, when properly conducted, often lead to pleasant and profitable intimacies between the families of pastors and those who, except for these occasions, would keep at a distance."

Please add to the list of "visits" one made to Rev. N. V. Hull, pastor of the 1st Seventh-day Baptist Church in Alfred, on the 18th inst.; and as an intimation of what the people of Alfred understand by "properly conducted" donation visits, please publish the following programm:—

1st. The pecuniary results were highly satisfactory.

2d. A hymn was sung by the choir.

3d. Prayer was offered by Rev. Mr. Washburn, of Andover; and after another hymn was sung, Elder Hull gave his views of "properly-conducted donation visits," of which the following is a synopsis:

He said such visits should always be so conducted as to aid other instrumentalities of the Gospel in promoting the glory of God and the salvation of souls. They should not be the scene of gluttony and frivolity, such as would tend to bring the cause of Christ into disrepute, and to give occasion for criticism by the ungodly. Minister and people should so conduct that they could confidently ask God to bless the occasion to the conversion of souls, and so that the remembrance of it may not hang like a cloud over the minister the next time he enters the desk, to teach the duty of doing all that we do to the glory of God. All should go away loving God more, and loving the minister more, as the faithful oracle of God to declare the whole truth. It should be an occasion of *feeding the soul*, and not the body. Donation visits, thus conducted, had been the means, in the hands of God, of converting souls, while others, conducted on the *more popular* plan, had brought deep disgrace on the cause of Christ, for which all the contributions in the world could not atone.

After this statement of his views, Eld. Hull gave a brief, but most affecting history of his Christian experience, into which the *trials* and the *joys* of the Christian minister's lot entered most conspicuously. This truthful narrative elicited tears, not only from the eyes of him whose experience had been bathed in tears, but eyes unaccustomed to weep involuntarily filled with tears. Those tears flowing together were indications of the union of heart between *pastor* and *people*, which such an occasion could not fail to elicit.

Eld. Washburn followed in many interesting and profitable illustrations of the minister's calling, and heartily concurred with Eld. H. in his views of "*properly conducted donation visits.*" Between these exercises, and at the close, the choir discoursed much sweet music, and after the blessing of God had been invoked by "our beloved pastor," we all went home, thanking God for the Gospel, and the faithful ambassadors who proclaim it to us from week to week. D. E. MAXSON.

THE STATE OF THE CHURCH.

I wish to offer some of my views on the situation of the Church of the present time. The religion of Jesus Christ differs in nearly every essential point from all other systems. The Great Head of the Church was not ushered into this world with regal pomp and splendor, surrounded by wealth and affluence, courting the association of the rich and honorable of the earth; nor was he influenced by the glittering pomp and splendor of earthly kings and potentates, to deviate from the course he had designed to pursue. When he commenced his career as a public teacher, he passed by the rich, the learned, (in this world's wisdom,) and chose for his associates and active agents, poor illiterate fishermen, and although he had worlds at his control, and might have furnished his followers with abundance of gold, he never condescended to use such vile means; but, destitute of purse or scrip, sword or staff, he sent them on their mission of saving sinners and relieving the distress of the needy. Thus armed, he sent them forth to meet the haughty Scribe and stubborn Jew, with the gracious promise, "Lo, I am with you always, even to the end of the world." In what age, or under what circumstances, have the labors of his followers been attended with such success? On their first return, they informed him that even the devils were subject unto them through his name. So great had been their influence, that he informed them that he saw Satan as lightning fall from heaven. The subsequent history of the church furnishes abundant proof that his disciples followed the example of their great leader. The Apostle who is so often quoted as an example for mental training and sacred wisdom, drank deep into the spirit of his divine Master, and cautioned his brethren against their partiality for the rich. He asked, "Do not rich men oppress you, and draw you before the judgment seat, and blaspheme the worthy name whereby ye are called?"—and informs them that God had chosen the poor of this world as heirs of his kingdom. The Scriptures abound in proof that the disciple of Jesus Christ has too much benevolence to become rich, or to remain so after his conversion.

In contrasting the Church of the present day with that of the apostolic age, my object is not to wound feelings or impugn motives; but, as of old, when comparing the second temple with the first, the old men wept while the young men laughed, so it is now; we exclaim, How is the most fine gold become dim, and the church become as a wilderness! How is it that our missionaries labor and pray for months and years with so little success?—that though our ministers preach year after year, and our brethren and sisters pray and hand out their money with a liberal hand, still the church is becoming more and more like the world? From the humblest member in the church to the reverend in the desk, pride and popularity reign supreme. The cry is, Money, money, money. The clergy, instead of leaving the pecuniary business of the church to the lay brethren, as the Apostle gave directions, or to persons qualified and chosen for that purpose, undertake to do all the duties of the members, except laboring for money by the sweat of the brow, and then ask us to hand the money over to them to expend. The brethren, thinking they are not the most judicious persons to use it, often refuse to hand over, thereby showing that they have become very covetous and ungrateful. I have thought sometimes that I would attempt to show the contrast between the course pursued by the clergy in the days of the Apostles, and that of modern times; but a hint to the wise is sufficient. I would ask, which of the Apostles hired out to a church to preach for a stipulated sum, satisfied himself by delivering a discourse or two of one hour's length on the Sabbath, and loitering about the house the remainder of the week? What Christian brother in that age labored six days of the week to accumulate property for himself and children, satisfying himself with occasionally handing out a few shillings or dollars to build up the church of which he was a member, while sickness and poverty met him at every corner, and the cry of the needy was coming up to the throne of God? My brethren, can the Judge say to us in the last day, "I was an hungered, and ye gave me meat; thirsty, and ye gave me drink; a stranger, and ye took me in; naked, and ye clothed me;' and inasmuch as ye have done it unto one of the least of my disciples, ye have done it unto me?" L. P. B.

SERMON ON THE SABBATH.

To the Editors of the Sabbath Recorder:—

Before me lies the following skeleton of a sermon preached not long since by Rev. N. Colver, pastor of the 1st Baptist church, Detroit, Mich., and published in the *Michigan Christian Herald*.

Text—Mark 2: 27.

Proposition—"The Sabbath as a divine provision for an abiding necessity of man."

In speaking, *first*, of the *institution* of the Sabbath at creation, it was remarked—

1. That from the beginning it was a provision for our race. Gen. 2: 3. God sanctified, i. e., set it apart for man, the race. Very good. Noble testimony this to the divine origin of God's holy Sabbath.

2. It was so recognized by the law of Moses. Ex. 16: 5, 23. All true.

3. It was so referred to by the Prophets. Isa. 56: 4, &c. Very good.

4. It was so claimed by Christ. Mark 2: 27, Rev. 1: 10. This is grand.

In remarking, *secondly*, upon the *uses* of the Sabbath, it was observed—

1. It meets a demand for alternation in our nature, both of body and mind.

2. It is the poor man's release from the oppressions of cupidity.

3. It is the Christian's release, with surety, from worldly toil to spiritual enjoyment.

4. It is God's ordinance day, when he waits to be spoken to, and to speak to man.

Remarks—1. The Sabbath is disregarded, whether by individuals or nations, at their own cost and peril. Query—Does any body know how Bro. Colver appropriates the Sabbath instituted in the beginning at the end of the first week of time? Does he regard or disregard *it*? And if the latter, may it not be at his cost and peril?

2. Sabbath despisers are man corrupters. The virus of moral leprosy is in the crime of its desecration. It is a revolt against God and nature. Hear, hear.

3. The Sabbath is entitled to sanctified uses. The Pharisee and Libertine alike pervert it to purposes of mischief. Sure enough.

Now, what is there peculiar about all this? It was preached on what we are wont to call a Sunday evening, in honor of that day Really, was there ever any thing more positively out of joint than this subject, and its reference, and application. Bro. C. has talked all the way through just as though the first day was the seventh. What an absurdity! CONSISTENCY.

BEECHER ON SPIRITUALISM.

Rev. Henry Ward Beecher having been represented in various parts of the country as a convert to the faith of modern spiritualism—and having received many letters "of inquiry, or of expostulation, or of congratulation"—has made public through the *Independent* his answer to one of those letters, which is as follows:

BROOKLYN, March 15, 1856.

DEAR SIR:—Your letter asking me whether I am a believer in modern spiritualism, is but one of a number which are before me. And by publishing both your inquiries and my reply, it will serve to disabuse other persons who have been told the same stories which are circulated in your neighborhood.

1. I have no doubt that there are curious and surprising phenomena witnessed in "spiritual circles," quite worthy of scientific attention and investigation. The fact that imposture is often mixed with such exhibitions, and that many peripatetic exhibitors are in part or wholly designing men, does not alter the fact, that the phenomena witnessed in these circles are often such as have never yet been adequately accounted for.

2. But, I am a stout unbeliever in the spiritual origin of these phenomena, either by good spirits or bad spirits, or any spirits whatever. This testimony I have borne again and again, in private and in public, by speech and by pen. And they who represent me as believing in modern spiritualism, do so without any warrant whatever in truth. The substance of the "communications" have quite turned the stomach of my faith. Nor do the results of such faith in others incline me to it; for,

3. Although many sincere and excellent people do believe in modern spiritualism; and although there may be some who have been brought by it to a belief of the Scriptures, yet, in so far as I have had opportunities for observing, it has seemed to weaken the hold of the Bible upon the conscience and the affections, and to substitute diluted sentimentalism and tedious platitudes instead of the inspired truth. And the general adoption of the modern spiritualistic doctrines, I should regard as no better than a march of Infidelity in the garments of Faith. Without doubt, those who have represented me as a spiritualist, have done so honestly; but, without any foundation in fact. Truly yours,

H. W. BEECHER.

BLESSING INFANTS.

The following extract from a letter of Rev. G. W. Lehmann, a Baptist pastor in Berlin, Prussia, was communicated to the London *Christian Times* by Sir Culling E. Eardley. It will be perused with interest by all of our readers, and especially by those who were favorably impressed with the views on the subject of blessing infants set forth in our columns by the late Dr. Fahnestock:—

"Finally, I come to the subject which engaged our attention in our conversation at your hotel in Cologne—I mean *the blessing of infants*, on which you desired me to make some statements. I would say, that when the question about the true and scriptural mode of baptism was mentioned, among the many discussions against Baptists' views, this was also a very important point—what should be done with infants, seeing that with the Jews there was a ceremony at their birth, (observed indeed only with males, and the Christian feeling seemed to require a similar one in our time and circumstances. The passage, Mark x. 13, 16, of course, was urged to the utmost; but it would only prove that the Saviour spake on that occasion a blessing on those children. It appeared to us, then, in yielding to Baptist views, that such an act (of laying on of hands on children, and 'praying over them, and speaking a blessing on them,') though not directly instituted by the Saviour, yet could not be against his intentions, seeing he himself had acted on this rule.

"Accordingly, we agreed upon such a practice, and at the beginning of our church in Berlin, nearly twenty years ago, it was introduced, and many doubts and scruples, especially of twelve mothers, were thus calmed. We indeed enjoy much blessing on such occasions, and I am happy to say, that at the present revival among our children, which the Lord vouchsafes to give us, most of the new converted and baptized children are such as were in this way consecrated to the Lord—indeed, the very first which was converted was one of those. However, there was prevailing also with us a feeling of a want of explicit institution, and therefore a danger of falling into our own devices, which feeling was with various of us so strong that they abstained from the mentioned practice. Gradually the growth of our church, from a very little band of twelve or some twenty to three or four hundred, made the performance in a church meeting inconvenient and much likely to reinstate infant baptism. Therefore we ventured to perform the act of blessing our infants, not any longer in our meeting place, but in the bosom of the family. There, generally, the babe lies on his mother's lap, and a number of relatives and members surround her; I then induce the father to pray first; give an address on an appropriate Scripture passage; and, laying on of hands, I pray myself, and close with the benediction. But I ought to state again, that a goodly number of our members do not invite me for such a performance. How far this practice is followed in other churches, I cannot say, but I believe that those in Prussia, which mainly sprung out of our church in Berlin, follow our example."

HEALTH OF BRO. SAUNDERS.—Bro. Charles Saunders, one of our missionaries at Jaffa, Palestine, has suffered much during the past year from diseased eyes. From a letter just received from him, we learn that he has nearly recovered from that difficulty, and is able to devote most of his time and energies to his labors. Very little has as yet been accomplished in that department of the mission of which he is superintendent, as he has been laid aside by sickness. He also reports the members of the mission as in good health. It has been greatly feared that the locality they had selected would prove too unhealthy for a missionary station. J. B.

REVIVAL AT MOUNT MORRIS, N. Y.—The New York *Chronicle* learns that the church at Mount Morris, Livingston Co., N. Y., under the care of Rev. David Bellamy, is again enjoying a sweet season of revival. Several have been hopefully converted, congregations large and solemn, and the work is spreading. In many respects it resembles the revivals of earlier days, particularly in the fact that the knowledge of the conversion of one is the means of arousing and convicting another. In one rural district connected with the church, almost every house has been visited by the Spirit, and one or more converted. Convictions for sin appear to be deep, clear, and thorough; but the season of distress has, in all cases, been brief, being followed by a ready reception of the Gospel plan of mercy. The church is much encouraged, and hope for great things.

THE BROOKFIELD ACADEMY commenced a new term on Fifth-day, March 20th, with Prof. A. R. Cornwall, A. B., Principal; Mrs. A. R. Cornwall, Preceptress; Miss Eliza Potter, a graduate of Alfred Academy, and other able and approved teachers. Andrew Babcock is President of the Trustees, and Hosea B. Clark, Secretary. Post-office address, Brookfield, Madison Co., N. Y.

REV. W. R. WILLIAMS, D. D.—The New York correspondent of the Boston *Daily Journal*, has the following notice of this eminent scholar and divine:—

"Rev. Dr. Williams, of the Amity street Baptist Church, gave a lecture last night in his own church, before the Young Men's Christian Association. No man stands higher in this city than Dr. Williams, though he is one of the most peculiar men that fills a New York pulpit. He is a very learned man; but no orator in any sense of the word. His voice is feeble, and it is made more so by his refusal to 'make an effort,' as Mrs. Chick would say. He speaks like a man far gone with the consumption; it is painful at times, in the extreme, to hear him. A husky whisper is all that can be heard at first, and but for the death-like stillness of his auditory, nothing would be heard at all. He rises in his pulpit as one overborne with lassitude, and sinking with fatigue. He gives out his text in a whisper. His manuscript, written in a firm hand, is laid on the Bible. His head is brought down so low as to almost touch his paper. His arms are extended, and he grasps the ends of the pulpit cushion with each hand. And save as he occasionally rises when very much impressed, and raises both hands, he keeps the recumbent posture to the close. But his sermons are of the highest order. His imagery is surpassingly fine; his thoughts bold, original, and most beautifully expressed. His audience is held in a hushed stillness to the end. No one moves, no one coughs, no one seems to stir. The stillness is painful; one can hear the clock tick. And the universal movement at the close of the sermon, indicates how close the attention has been. The congregation is usually small, but very select; and some of the first literary men of the city and State are found in the congregation. Washington Irving is seen among Mr. Williams' hearers, when he is in the city. Rev. Dr. Skinner, a Presbyterian and Professor in the Union Theological Seminary, has a pew in the house, and on each Sunday Dr. W. preaches to a 'fitting audience, though few.'"

LIBERAL LEGACIES.—The late Mr. Asa Hopkins was born February 2d, 1779, in the town of Litchfield, Northfield Society, Ct., where he spent a very useful life. He died in New Haven, after a short residence there, October 31st, 1838. He left the use of his property to his widow during her life, directing his executor, after her decease, which occurred December 1st, 1855, to pay certain small legacies to his surviving sisters, and to distribute the balance of his estate as follows:

To Northfield Congregational Society, $3,000; to the Church of said Society, $300; to his native school district, $600; to the Bible Society, $500; to the A. B. C. F. M., $250; to the American Tract Society of Boston, $250; to the Missionary Society of Connecticut, $250; the residue, amounting to about $7,000, to the aforesaid Congregational Society of Northfield.

KINGS SHALL BE NURSING FATHERS.—Missionaries Dawson and Kincaid, of the American Baptist Union, in Burmah, have recently visited Ava, where they were very kindly received by the King. His Majesty asked them when they would bring their families and make his royal city their home. When they replied, "Not this year," he expressed disappointment, and told them he would pay all the expenses of their removing. Soon after he sent them a thousand rupees, saying that it was only an expression of good will, and out of respect for the memory of his royal father, and not to impose any obligations on the teachers. When he left, he expressed a very kind wish for them to return soon with their families. The missionaries feel encouraged in the belief that the time has arrived in the providence of God to commence the Ava mission.

AMERICAN BOARD.—The *Journal of Missions* gives a statement of receipts of the American Board for fifteen years, which discloses some unexpected facts. There has been considerable advance in the annual income of the Board during this period; yet the greatest amount given in any one of the years was in 1842, when the donations amounted to $277,495. The largest amount of legacies occurred in 1846, when it reached $63,437. The greatest debt existed in 1848, when it amounted to $59,891. In 1851 the debt amounted to $43,999. The total amount of donations in all this period is $3,544,314; of legacies $471,195. Though there has been an increase, the amount of donations in different years has been very fluctuating.

LIQUOR-SELLING ON SUNDAY.—On the 19th of March, the New York State Senate passed the following Act, which is strangely enough entitled "An Act to secure the better observance of the *Sabbath* in the cities of New York and Brooklyn:"—

No person shall sell, or expose for sale, any strong, spirituous, or intoxicating liquors in the cities of New York or Brooklyn, on Sunday. Any violation of the provisions of this act is hereby declared a misdemeanor, and may be tried by any Court of Special Sessions in said cities, and, if found guilty, shall be punished by a fine not less than ten dollars nor more than fifty dollars, or by imprisonment in the penitentiaries in said counties, not less than ten days nor more than sixty days, or both, in the discretion of the court before which such conviction shall be had.

THE SUNDAY ORDINANCES IN BROOKLYN.—On the 18th of March, the City Court, Judge Culver presiding, was engaged in the trial of Thomas Townbee, the keeper of a public house, for selling liquor on Sundays, in violation of the city ordinance on the subject. The suit was brought by the city authorities for the recovery of certain fines incurred by repeated violations of said ordinance. The offense is charged on the 30th December, 1855, and on all the preceding Sundays during the year, making 53 counts in the indictment. The case was given to the jury under charge of the Court, and a verdict for plaintiff was rendered in about half an hour. Defendant was fined in the sum of $800.

An interesting revival of religion is in progress in the First Baptist Church, Staten Island.

RELIGIOUS INTELLIGENCE.

The Executive Committee of the American Bible Union—the association organized for the purpose of making a new translation of the Bible, to supersede King James' version—holds a meeting monthly. At the last meeting it was reported that the expenses of the work in February amounted to nearly $3,500. The venerable Wm. Colgate, Esq., the Treasurer, tendered his resignation, assigning as a reason the infirmities of advanced age. Dr. Eleazer Parmly was elected his successor.—The committee that reports from time to time the progress of the translation, announces that the version of the New Testament is now in such a state of forwardness that its publication may be expected before the ensuing May anniversaries.

From January to July about fifty persons have been baptized in connection with the Prome mission, some of them men of talent and promise. A native teacher at Toungoo sent information that 37 new zayats for preaching and teaching had just been built, in connection with that station, in different villages, with the hope that they would all soon be occupied by suitable teachers. No less than three thousand Karen converts were waiting to receive the ordinance of baptism. "The intelligence," says Dr. Dawson, "was overwhelming to our poor fainting hearts. It is as marvellous as the showers of divine grace poured down at Pentecost."

On Sunday, March 18th, being the appointed day of communion, *forty persons* were received into Rev. Mr. Cuyler's church, in New York, as the first fruits of a revival which has been enjoyed by the congregation for several weeks. "The reception of the converts to membership with the church," writes a correspondent, "was a scene of exceeding solemnity, and filled the crowded assembly with grateful joy. The inquiry-meetings are largely attended, and the work gives blessed promise of being only begun."

The American Missionary says that the Rev. Mr. Hotchkiss, who has been laboring among the colored people of Canada, meets with much success. Mr. Hotchkiss says he fears there has been one man "kidnapped" from Canada recently, under the pretense that he was a fugitive from justice. This is a mode of regaining their fugitive slaves practiced some years ago by slaveholders, but put a spot to by the British government.

A new museum is projected in London. It is to be called the Scriptural Museum; and its purpose is to afford a series of illustrations of Bible history, geography, and manners, embracing all the various departments of Biblical knowledge. The Earl of Chichester is President, and the Rev. D. Edwards, Secretary. It is proposed to establish a library in connection with the Museum; and also to organize courses of lectures on the topics illustrated by the articles in the Society's collection.

There are 119 American and English missionaries in the Pacific Islands; 45,929 communicants, and 54,708 pupils. This wonderful success in the missionary efforts of barely a single generation, is an earnest of the immense harvest yet to be reaped among the millions of Asia, Africa, Australia, and Polynesia, when once the Bible and the living teacher shall be found heralding the Gospel in all the different tongues and languages of the Eastern Hemisphere.

It is stated that in the Andover Association of Congregational Ministers, embracing eighteen churches, fifteen of the number have dissolved their pastoral connection *within less* than five years, and four of them have changed twice within the same period. Six vacancies have occurred during the past four months; and the only three ministers remaining undisturbed, are Rev. Messrs. Blanchard of Lowell, Clark of Chelmsford, and Phillips of Methuen.

A correspondent of the Notes and Queries says, The only words in English for the first day of the week, before the existence of Puritanism, were Sunday and Lord's day. The former of these expressions was used by our Saxon ancestors, with all Teutonic nations. The latter was adopted from the Christian form of Southern Europe. Saturday, in Italian, still retains the name of Sabbato. The word for Sunday, in Russian, means resurrection.

The Directors of the London Missionary Society have heard of the death of a venerable Missionary, Mr. Davis, who landed in Tahiti in 1081, and died in his work at Papara in August last, in his 85th year. He died on Sunday morning, having preached on the preceding Sunday; thus called to his rest and reward after 55 years of missionary labor in Polynesia.

On board the ship Cæsar, before Cronstadt, there were, last year, three only that professed Christ, but now there are between sixty and a hundred; more than half of these can rejoice in the pardoning love of Christ, and have the witness of the Spirit—results attributable to the labors of Nelson, Ryding, Lindalius, and other sailor missionaries.

It is now said that the Protestants of the Russian empire are allowed to have the Bible, if they can get it; but the scarcity of that bread of life is very great, and whole villages of Protestants are found, which have not a single copy—and among one hundred and twenty children assembled at a church, not one had ever seen a Bible or a Testament.

During the past year the number of ordained missionaries in the service of the American Board was one hundred and six-five, and the number of members added to the church was fourteen hundred and eighty-seven—making an average of a little more than nine members to each missionary.

Two Chinese evangelists from Hong Kong have reached Melbourne, Australia, where are already congregated 30,000 Chinese, and where others are coming in swarms, and have entered on Missionary work among their countrymen, with the Scriptures in their hands, and hallowed zeal in their hearts.

The rumor of a union between the Theological Schools at Yale and East Windsor, has brought out a communication from the officers of the latter seminary, stating that such a result was attempted, but it has failed for the present, and that they must now try to maintain the institution on its old basis.

Rev. Leonard Withington, D. D., pastor of the Oldtown Congregational church, Newbury, has been induced by the urgent desire of his people to withdraw his resignation, and enter upon the second half century of his pastorate.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MARCH 17.

In the **Senate**, Mr. Douglas reported a bill authorizing the people of Kansas to form a State government. Mr. Clayton made a speech on the Clayton-Bulwer treaty, the course of Great Britain in regard to it, the proposed Pacific Railroad, the importance of an interoceanic canal across the Isthmus of Panama, the Transit Company's difficulty, fillibustering, and General Walker, whom he stigmatized as a ruffian, buccaneer and pirate. Mr. Weller intimated his intention of giving his views with regard to General Walker's character on some future occasion. Bills for the improvement of the St. Clair and St. Mary rivers, the mouth of the Mississippi, and the harbor of San Diego, were passed. The correspondence on the subject of the back pay of General Scott was received. It is very voluminous. The War Department allowed the General but ten thousand dollars for arrearages, while he claims forty thousand dollars.

In the **House of Representatives**, the discussion on the Kansas contested election case was resumed and continued until the hour of adjournment.

THIRD-DAY, MARCH 18.

In the **Senate**, notice was given of a bill to increase the pay of Members of Congress. A bill was introduced to regulate the appraisement of merchandise. Mr. Houston made a speech condemnatory of the doings of the Naval Board. Mr. Clayton and Mr. Bayard defended Capt. Dupont and Mr. Butler, and Mr. Mallory also spoke in defense of the Board.

In the **House**, the Kansas debate was continued. Mr. Smith (Va.) opposed the resolution to send for persons and papers. Mr. Granger said give the Committee full power to examine the facts; the country demands this; let there be no dodging. Messrs. Hall (Iowa) and Lake spoke against and Barbour in favor of granting the request of the Committee. Mr. Damrell defended the Massachusetts Aid Society. Mr. English should not vote to give the Committee the unlimited power asked. He was willing to have the subject investigated by a disinterested commission.

FOURTH-DAY, MARCH 19.

The **Senate** passed the Military Academy Appropriation Bill, and considered for a while the Deficiency Appropriation Bill. Mr. Clayton concluded his remarks on Central American affairs, in the course of which he took occasion to deny, on the authority of the President of the Nicaragua Transit Company, that there was ever any act on the part of that Company which in any manner encouraged Walker's movements in Nicaragua.

In the **House**, the debate on the application of the Committee on Elections for power to send for persons and papers in the Kansas contested election case was concluded, and finally Mr. Dunn's proposition, in lieu of the original resolution, providing that the Speaker shall appoint a Committee of Three of the members of the House to proceed to Kansas and take testimony, was adopted by a vote of 101 against 92. This plan provides for an appropriation of $10,000 to pay the expenses of the Committee, and requests the President to give them military protection, if necessary.

FIFTH-DAY, MARCH 20.

In the **Senate**, Mr Douglas made an elaborate speech on the Kansas question, principally in answer to the minority report by Judge Collamer. Mr. Trumbull replied to some of Mr. Douglas's personal remarks. Mr. Seward submitted a substitute for Mr. Douglas's bill for the admission of Kansas as a State. Mr. James reported a bill to prevent frauds in the collection of the revenue, and making important changes in the tariff. The Senate adjourned to Second-day.

In the **House**, Mr. Campbell reported the Navy Appropriation bill. Mr. Benson, from the Committee on Naval Affairs, reported the Senate bill for the construction of ten sloops-of-war, with amendment providing that the Secretary of the Navy may, in his discretion, cause two of them to be built with side-wheels, with a view to the greatest attainable speed. After a speech on Kansas, by Mr. Benton, the House adjourned to Second-day.

European News.

The mammoth steamer Persia arrived at New York on the 20th March, with later but not important news from Europe.

In the British House of Commons, Lord Palmerston announced that the preliminaries of peace had been signed by all the representatives of the several parties to the Paris Peace Conference, and his tone appeared to imply a hope, and inspire a general confidence, in the establishment of peace. The speech of Louis Napoleon was marked by a similar character. The Conference still continues sitting, but the nature or result of its deliberations are not permitted to transpire.

A debate has taken place in Parliament on the subject of Church rates in England, and a motion in favor of abolition of the impost was carried by a large majority—Lord Palmerston and the members of his Government sustaining the rates. A new measure of education was introduced by Lord John Russell, but as it proposes the introduction of religious as well as secular education, it is not likely to succeed. A severe and bitter attack was made on Lords Raglan, Cardigan, Lucan, the Duke of Cambridge, and Gen. Simpson, by Sir De Lacy Evans, who exposed in strong and forcible language the inability and corruption of the English military system. Rumors of a dissolution of Parliament were still afloat, but they are not reliable.

In Ireland, the Tipperary Joint Stock Bank had failed for £400,000, of which £200,000 was an overdraft of the late Mr. John Sadlier, and the remaining £200,000 is said to be connected with his difficulties.

Covent Garden Theatre has been destroyed by fire, and the ruins have been visited by the Queen and various of the nobility. The loss sustained is computed at £100,000, £75,000 of which is covered by insurance.

From the continent, the most important intelligence relates to the expected arrival of a new scion of the Bonaparte family. The near relatives of the French Empress have left Spain for Paris in order to be present at her confinement.

Kansas News.

The inauguration of the new Free-State Government was quietly accomplished on the 4th inst. Charles Robinson was sworn in as Governor, and W. Y. Roberts took the oath as Lieutenant-Governor of the State. The Legislature was duly organized; Lieutenant-Governor Roberts presiding in the Senate, and T. A. Minard being elected Speaker of the House. Governor Robinson delivered a brief inaugural Address upon taking the oath of office, and afterwards sent in his first Message. The Governor takes strong ground in opposition to the President, whose special message and proclamation in reference to the affairs of Kansas are discussed critically and fearlessly. The Governor exposes the hollowness of the pretence that the acts of the bogus Territorial Legislature were binding upon the people of Kansas, and animadverts upon the President's declaration that a regularly organized resistance to the decrees of that body would be an act of treason. Facts and precedents are cited in the Message, to show that the people of Kansas are wholly justified in the course they have seen fit to pursue, and that the Free-State movement is not a mere party movement, but that all parties in the State united in the formation of the Constitution under which the new State organization has been effected.

The following is the closing paragraph of the Message:—

"It is understood, that the Deputy-Marshal has private instructions to arrest the members of the Legislature and the State officers for treason, as soon as this address is received by you. In such an event, of course, no resistance will be offered to the officer. Men who are ready to defend their own and their country's honor with their lives can never object to a legal investigation into their action, nor to suffer any punishment their conduct may merit. We should be unworthy the constituency we represent did we shrink even from martyrdom on the scaffold or at the stake, should duty require it. Should the blood of Collins and Dow, of Barber and Brown, be insufficient to quench the thirst of the President and his accomplices in the hollow mockery of 'Squatter Sovereignty' they are practicing upon the people of Kansas, then more victims must be furnished. Let what will come, not a finger should be raised against the Federal authority until there shall be no hope of relief but in revolution. The task imposed upon us is a difficult one, but, with mutual co-operation, and a firm reliance on His wisdom who makes 'the wrath of man praise him,' we may hope to inaugurate a Government that shall not be unworthy of the country and the age in which we live."

A dispatch dated St. Louis, Tuesday, March 18, says: The Kansas correspondent of the St. Louis *Democrat*, writing from Topeka, March 8, says that in joint session of the Legislature on that day, Gov. Reeder was elected United States Senator on the first ballot, (six years,) and Gen. Lane on the second (three years.) Each candidate received 38 votes—56 members being present. The Legislature, which organized on the 4th inst., was still in session on the 8th, and the letter makes no mention of any anticipated time for adjournment.

Fate of the Murderers of Lovejoy.—A correspondent of the Ravenna *Democrat*, writing from Alton, Illinois, says:

"An old and intelligent citizen, formerly of the East, who was present at the death of Lovejoy, stated to me that as he was acquainted with the two men who shot him, he resolved to mark their after history. The first, a Dr. Beall, went to Texas, was taken by the Indians, and chopped to pieces and divided among the tribes. The other man, by the name of Jennings, went to New Orleans, and in an affray in a gambling-house was cut to pieces with a bowie-knife. Thus perished the miserable murderers of Lovejoy.

"The fall of Lovejoy was the death blow to the growth and prosperity of Alton. Many business men became disgusted, and abandoned the place, and others who were seeking homes and business places in the West passed it. Thus for more than twelve years, Alton was a hiss and a byword, and it is only very recently that it has exhibited signs of life and growth. It is a fixed fact in the minds of the people of Alton, that no such occurrence would be permitted to transpire in their midst again."

Kansas Meeting at New Haven.—A company of men from New Haven, Ct., are about to start for Kansas, to found a free city there. They are mostly church members, and all men of good standing in community. On the 20th inst. a public meeting was held at New Haven for the purpose of raising money to provide the party with proper weapons of self-defense against the "border ruffians." Several addresses were delivered, one of which was by H. W. Beecher. Money was subscribed to buy twenty-seven Sharp's Rifles at $25 each, and Mr. Beecher pledged the Plymouth Church for twenty-five more rifles.

The train which left New York at 12 o'clock, March 19, on the Hudson River Railroad, was thrown from the track when about three miles below Albany, by the breaking of some of the running gear of the first passenger car. The first and second passenger cars were pitched down an embankment into a field, landing bottom up. George B. Woodbridge, Sergeant-at-Arms of the Legislature, had both legs broken. Joseph Ranney, of Greenbush, one leg broken. Reuben Ellis, of New York, injured internally. A Mr. Ellis, from Fair Haven, N. Y., ankle broken. A lady, name unknown, was severely burned by the stove. Many others were slightly injured. Among the passengers in the first car who escaped injury were Rev. Dr. Osborn, Rev. C. Phillips, and Rev. S. Van Duesen.

The editor of the Cincinnati Gazette has seen a note from Gov. Morehead of Kentucky, addressed to the agent who was employed by Gov. Chase to proceed to Frankfort, to demand the return of the slave woman who had murdered her child in Cincinnati, but who had been sent by her master, Mr. Gaines, to Arkansas, before the requisition could be served in due form of law. Gov. Morehead expresses his extreme regret and indignation at the course taken by Mr. Gaines, and says that the slave shall be returned, and that measures have already been taken to cause her return.

SUMMARY.

On Monday, March 17th, the New York Juvenile Asylum sent off its fourth detachment of children, seventy-five in number, to comfortable homes in the West. They were sent by the Erie railroad to Danville, Ill., where they are provided for by a benevolent society organized for that purpose, and where they remain until the arrangements for sending each child to its special destination can be completed. Every family into which any of the children are received pay their fare of travel, bind themselves to provide for them and treat them well, teach them to read, write, and cipher through compound interest, and give the boys, when they have attained the age of twenty one, a Bible, a suit of new clothes, and $125, and the girls $50 at the age of eighteen.

Another act has recently been passed by the General Assembly of Virginia to provide for the more effectual protection of "slave property," in that State. The ostensible object of the law is to prevent the abduction of slaves by means of Northern vessels navigating the streams tributary to the Chesapeake Bay; but whether it will have any other tendency than to ruin the already limited commerce of the State remains to be seen. The pilots are required by it to search every vessel outward bound, to ascertain whether any fugitive slaves are on board, and for making this search they are to exact a fee of five dollars from the vessel, whether there may be any thing wrong or not!

An immense and most enthusiastic Kansas meeting was held at Milwaukee, Wis., on the 6th March, E. D. Holton in the chair, the object being expressed in the call, to raise money and men for Kansas—"money," to relieve the present necessities of those who are now there; and "men," to swell the hosts of freedom as citizens of the new State. The meeting was eloquently addressed by Gen. Paine, Wm. Dawes, Vaughan of Chicago, and others; many young men pledged themselves to go, and a subscription was raised of nearly $3,000, of which the Chairman gave $500, four other gentlemen $100 each, and eight $50 each, &c. A Kansas Emigrant Aid Society was formed.

A brighter day is at last dawning for Kansas. So much endurance, so much heroism, as the Free State inhabitants of that territory have exhibited, could hardly fail of accomplishing its object. Simultaneously with the organization in Kansas itself of a Government based on the new State Constitution, the House of Representatives at Washington has resolved to send thither a committee of its own members clothed with ample authority to investigate the whole political history of that territory since its first organization, and to lay bare the mean frauds and the gross violence of which the Free State settlers of Kansas have been by turns the victims.

A collision occurred between two freight trains on the Baltimore and Philadelphia Railroad, on the night of March 10, near Havre de Grace. George Godwin, the conductor, and William Todd, brakeman, were killed. A drover named Flynn was injured. The collision occurred at Aberdeen, at about 10 P. M. One of the trains left Baltimore at 6 o'clock, and the other, an extra freight train, about an hour afterward. The advance train was delayed, waiting for the mail train to pass, and the usual signals were displayed, but, in consequence of the thick snow-storm, they could not be seen by the engineer of the rear train—hence the collision.

The reaction in the freight business, consequent upon the recent long-continued embargo, is completely glutting the several forwarding lines between Boston and New York. The Sound steamers, between the latter City and New Haven, and in fact all the Sound steamers, are reaping immense harvests. The Hartford and New Haven Railroad is completely "overflowed."

Land Warrants are in active demand, with good supply. Messrs. F. P. James & Co. quote:—

160	Acre Warrants,	selling at	$1 15	per acre
120	"	"	1 10	"
80	"	"	1 15	"
60	"	"	1 10	"
40	"	"	1 20	"

A line of first-class steamers is about to run from Quebec to Lieverpool. It is now proposed to etxend the telegraph from Quebec about 700 miles, to Forteau Bay, on the Straits of Bellisle. This is only 1878 miles from Liverpool, and 122 miles nearer than Cape Race, the nearest point in Newfoundland, and could be easily reached in six days, so as to send all important news at once to Quebec, and thence all over the continent.

The colporteur employed by the Reform Tract Society of Cincinnati writes from Lawrence, K. T., Feb. 21: "I was to-day in the neighborhood where resides the widow of the martyred Barber. She is as inconsolable as ever, and it is the opinion of her neighbors that she will grieve herself to death. The widow of the martyred Brown is a raving maniac, caused by intense grief."

The latest account from Mexico says that General Comonfort left the capital on the 29th ult., to put himself at the head of the troops and 48 pieces of artillery. The Revolutionists at Puebla were about 80,000 strong. The officers who led the revolt at the Castle of San Juan de Ulloa had been sentenced to be shot.

A farmer, named Buck, was murdered at his residence near Morrisville, Madison Co., N. Y., on Friday night, March 14th. His body was found on Saturday morning, horribly mangled, with a bloody axe near by. A man who worked for deceased, and who had had some difficulty with him, has been arrested on suspicion.

It is reported that the steamboat Alabama, plying on the Red River, has been totally destroyed; that the boiler burst, the boat took fire, and was burned to the water. A number of persons were injured, according to the account, and several are missing.

The Cincinnati *Price Current* publishes full returns of the pork trade in the West, and also of the shipments East. The increase in the number packed up to the present time, as compared with last year, is 343,000, and the increase in the shipments east 155,000.

The contract for building twenty miles of the Sheboygan and Fond du Lac Railroad, from Sheboygan to Greenbush, has been let to some Eastern contractors of means and energy. By the terms of the contract, this portion of the work is to be in running order within one year.

The late L. B. Leavell, a wealthy citizen of Elkton, Ky., by will provided for the emancipation of several of his slaves, and disposed of the entire residue of his large estate—said to be worth at least $200,000—to three or four of them, who, by the provisions of the will, are to be removed to the city of New York as soon as practicable.

On the 3d of March, Rev. Dr. House and lady of Newark, N. J., and Rev. Andrew B. Morse and lady of Princeton, sailed from New York, in the ship Robert B. Forbes, as missionaries to Siam. They sail direct for Batavia, Java, and from thence will go to Singapore, China, and thence to Bangkok, Siam, their destined field of labor.

During the year ending June 30, 1854, Great Britain and Ireland bought of the United States property to the value of $150,000,000, exclusive of what was taken by the British colonies and dependencies; France and her colonies took more than $33,000,000; Austria, $1,903,600; Russia less than half a million.

The Mt. Pleasant Observer states that a fine bed of Cannel coal has been discovered a few miles south of Salem, Iowa. The vein is, at the opening, four feet and a half thick. The coal is equal to Kentucky Cannel coal, being set on fire by the blaze of a candle and burning up, leaving but few ashes and but a small quantity of other matter.

A letter dated Coast of Africa, Feb. 3, reports the loss of the whaling schooner Mountain Spring, of Provincetown, which was capsized in Cintra Bay, Jan. 8. Her master, Capt. Young, a boat-steerer named Center, and a cabin-boy named Miller, were saved; all the rest on board perished.

The census returns show that there are in St. Louis six hundred and forty-six manufactories, employing eleven thousand and seventy-two hands, and having an aggregate capital invested of nine million seven hundred and eighty thousand two hundred and thirty-five dollars.

The ship Potomac, Capt. Sweeney, from New York for Australia, sprung aleak, and was abandoned at sea Jan. 13, in lat. 1 deg. 4 min. S., long. 32 deg. W. The captain and eleven men reached the coast of Brazil five days after; the mate and five men took a boat and have not since been heard of.

Andrew Jackson Donelson says, in a published letter, that he was not the adopted son of General Jackson, but that the latter was his uncle, guardian and friend from infancy. General Jackson's adopted son bears the old hero's name, and is now living at the Hermitage.

The Kansas League, 229 Broadway, N. Y., give notice that they intend to dispatch a party of settlers for Kansas five times a month, viz., in first-class trains on the 1st and 15th of each month, or in second-class trains on the 1st, 10th and 20th of the month.

The New Haven company bound for Kansas, already numbers above two hundred persons, and will be organized as a Christian church before starting on their journey. They will be amply provided to commence at once with all the materials of a thriving and happy town.

A. Kidder communicates to the Independent some account of a revival in Friendship, N. Y. About twenty-five had united with the Congregational Church, and others were intending soon to unite. Several had joined the Methodist and Baptist churches.

The Savannah (Ga.) Republican states that several companies of emigrants from that State are about to start for Kansas, but that few, if any of them, are slaveholders, and that no slaves accompany them.

Another attack has been made by the Indians of South Florida on the settlers on the Alafa, about thirty miles east of Tampa. Four men, one woman and three children were brutally murdered and scalped.

Thirty-one bodies have been recovered from the Delaware river, near Philadelphia, since the burning of the ferry-boat New Jersey. A number of persons are yet missing, and it is thought that the number of lives lost will not fall much short of fifty.

Churches are being built in Paris as stock speculations. The shares will be convertible, like those of the Rentes. Quotations will be governed mainly by the popularity of the preacher and quality of the music.

Sarah, a negro child about eight years of age, the property of P. A. Clayton, of Columbus, Ga., was recently killed by wounds inflicted upon her head and body by Mrs. Clayton.

At a Kansas meeting in Albany on Thursday, March 13th, after eloquent speeches, a subscription was raised of $4,940, of which Gerrit Smith gave $3000, and E. C. Delavan $1000.

The American Almanac thus divides the population of the globe; Europe, 263,517,521; Asia, 620 000,000; Africa, 100,000,000; America, 57,706,882; Australia, 1.445,000; Polynesia, 1,500,000; total, 1,050,169,403.

Seven of the eight Judges of the Supreme Court of Michigan have affirmed the constitutionality of the Prohibitory Liquor Law of that State, which is similar to the law of New York.

The boiler of a steam saw-mill in Oakdale, Indiana, exploded on Friday, March 14, killing four persons and wounding three others. The building was shattered to pieces.

Judge Burgoyne, of Cincinnati, has decided that a Commissioner has no constitutional right to act in Fugitive Slave cases, and that all such acts are null and void.

Rev. Dr. Thomas E. Bond, principal editor of the New York *Christian Advocate and Journal*, died last week at his residence in New York, aged seventy-five years.

A Legislative Committee recently visited several tenement houses in New York, in one of which they found two hundred and sixty families!

Fifty-one children, from the New York Children's Aid Society, were dispatched to Western homes, March 19th. The parting was a touching time. Good luck to them.

Rev. John Pierpont, within two years past, has traveled 25,000 miles, and lectured five nights a week on an average. Mr. Pierpont is now upwards of 70 years of age.

The Norwich Courier (Ct.) says:—A very marked and gratifying state of religious interest exists in most of the churches of this city at the present time.

A meeting of prominent citizens was held at Buffalo, recently, to consider the subject of tunneling the Niagara. A committee was appointed to prepare a memorial, or bill, to be presented to the Legislature, praying for the passage of an act authorizing the formation of a company for the purpose of constructing a tunnel under, or a bridge over, the Niagara River.

Neither England nor France can approach Russia in the cheapness of sustaining their armies. Russia could support four soldiers and a half for one English soldier, three and ten-twelfths for one French, two for one Prussian, and one and five-thirtieths for an Austrian.

The intelligence from Nicaragua is important. It is alledged that General Walker has seized the property of the Accessory Transit Company, annulled their charter, and granted a new charter to another company.

The researches of the late Professor Edward Forbes have rendered it probable that there was a time when Ireland, the Faro Islands, Iceland, and even the Azores, were connected together by continuous tracts of land.

A man named Hunter has been fined $1,000, and forfeited six slaves, at New Orleans, for selling them in such a manner as to separate mother and child, contrary to the laws of Louisiana.

Leverton Thomas, the wealthy citizen of Washington Co., Pa., lately convicted at Pittsburg of forgery, and sentenced to the penitentiary, has been pardoned by Governor Pollock.

The Hartford Bank, at Hartford, Ct., recently redeemed a $2 bill that had been in circulation for fifty-two years.

Tallow—10 a 10½c.

MARRIED,

By Eld. H. P. Burdick, in Hornellsville, March 10, 1856, John Beeker, of Cattaraugus Co., to Miss Nancy Burdick, of Hornellsville.

By the same, March 13, 1856, at the Alfred Highland Watercure, Mathew Potter to Miss Sarah Hemphill, all of Hartsville.

At Alfred Center, March 20, by Eld. N. V. Hull, Mr. Jarvis S. Kenyon to Miss Lydia Sweet, all of Alfred.

In New York, on the 22d inst., by L. Crandall, Mr Timothy Quigley to Miss Harriet Louisa Vanderbilt.

DIED,

In West Edmeston, Otsego Co., N. Y., after an illness of eight days, Benjamin F. Burdick, aged 36 years. The subject of this notice experienced religion in early life, but had never put on Christ in the ordinance of baptism. His mind had been frequently called up to this duty. but timidity, and a want of entire consecration to God, had prevented him. This neglect he deeply regretted, and solmenly promised God, if He would spare his life, he would publicly own his Saviour. During his sickness he rejoiced in the hope that God had, for his Son's sake, pardoned all of his wanderings. His last days were spent in exhorting his friends to faithfulness and sinners to repentance. He leaves an afflicted wife and three sons, with a numerous circle of relatives and friends, to mourn his sudden departure. In his death society has lost an active member, a kind citizen, and the poor a warm friend. May this affictive providence be sanctified to us all. L. M. C.

In Hartsville, N. Y., March 6th, Mrs. Fanny Burdick, wife of Stillman Burdick, of erysipelas, after an illness of five days, aged twenty years, six months, and eight days.

In Hope Valley, R. I., March 13th, 1856, of disease of the brain, Wayland Rogers, son of Geo. E. and Lucy E. Lanphear, aged 2 years, 8 months, and 9 days.

In Verona, N. Y., March 19th, 1856, George Nelson, son of Albert and Sophrona O. Babcock, aged 8 months, and 7 days.

LETTERS.

H P Burdick, N V Hull, D E Maxson, C D Langworthy, C W Langworthy, H W Randolph, S S Griswold, P S Crandall, S D Petty, W Pigsley, A M West (return and exchange,) D P Curtis, T G Briley, Abel Stillman, C A Minor, J L Boyd, Ephraim Maxson, Wm F Randolph, Zebulon Scriven.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

Board Meetings.

THE next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary Society, the American Sabbath Tract Society, and the Seventh-day Baptist Publishing Society, will be held at the house of T. B. Stillman, No. 30 Seventh-St., New York, on Fourth-day, April 9th, commencing at 10 o'clock A. M. GEO. B. UTTER, Sec.

The next Quarterly Meeting of the Executive Board of the Seventh-day Baptist Education Society, will be held at No. 30 Seventh St., New York, on the 8th day of April, 1856, commencing at 10 o'clock, A. M. The Committee on the location of the Denominational College and Theological Seminary will, at this Meeting, present their report, which will be made the subject of consideration. A large attendance of the members of the Board is solicited. W. C. WHITFORD, Rec. Sec.

Savery's Temperance Hotel

AND

TELEGRAPH DINING SALOON,

No. 14 Beekman Street, N. Y.

KEPT ON THE EUROPEAN PLAN.

MEALS AT ALL HOURS OF THE DAY.

LODGING ROOMS,

From $2 to $3 per Week, or 50 Cts. per Night.

Bela Sawyer, Sup't. John S. Savery, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE, For Family Use, entitled

THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years, become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	[illegible]
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price, 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest.

NO. 10—Concluded.

The probable death of Captain Carpenter, who was so much beloved by the whole command, created a most painful sensation. There was a hurrying of men to arms, and a party started off on foot at quick time. In the mean time, a large draft of whisky and water, and a portion of cold turkey, which had been waiting for me, so far revived me, that I was ready, with a fresh horse, to accompany Lieuts. Reynolds and Williams; but Savier, whose horse I had, claimed the privilege of riding it himself. When they were gone, I climbed the hill in the rear of the camp, to watch their progress. It was just dusk when I saw the Captain, to my great surprise as well as delight, slowly riding in, and I ran down to meet him. He supported a bloody hand, his horse was bleeding from an artery in the foreleg cut, and his dogs, at his horse's heels, were of a crimson color from head to foot. The sight was sanguinary indeed. M'Culloch followed on foot, limping with an arrow-wound in the foot.

"Is it possible, Captain, that you have escaped?" He held out his hand to me, and asked if he was badly hurt. I examined the wound, and assured him that he was not. "The rascals were determined to have old Driver," said he; "but I was determined they should not, while I could defend him." At the camp I proposed to dress the Captain's wound, but he told me to save Driver if I could. An arrow had transfixed his leg and severed an artery, and his life was fast ebbing from the wound. A compress and bandage arrested the blood, and he was led down to the corell, with instructions to the Orderly to give him all the water he would drink. While I was dressing the Captain's hand, through which an arrow had passed, he told me the particulars of the attack.

At the moment in which he reached the team, which had stopped to adjust the loading, he saw the Indians issuing from the wood directly on our tracks, and approaching to within two hundred yards, open to the right and left, to encircle the little band. Their intention was to *stampede* the party, according to their custom, run down the fugitives, and take their scalps and horses. But they had an extraordinary man to deal with. Captain C. immediately dismounted, as did Dennen and Beardall, and gave orders not to fire, until the savages should approach so near as to make a sure thing of each shot. Several rifle-shots were fired by the Indians at too long range to do any execution, but by which they hoped to draw the fire of our men, when they would have charged in upon them, and dispatched them before they could reload. Disappointed in this, they withdrew a short distance, when our men started on with the mule team, but the Indians, having secured their animals, now returned to the attack on foot. The teamster, being unarmed, acted on the advice of Beardall, and abandoned his team, and fled for safety to the creek, unconsciously followed by the two savages, who I supposed had killed him. The position of the Captain was in the grass, which skirted the creek a few rods wide; beyond this the ground rose somewhat, and was covered with the thin, scattered bushes of which I have already spoken.

The Indians approached under cover of the bushes, rising to let fly an arrow, and immediately hiding again, before a sight could be drawn upon them, and all the while they were in sight, jumping about in the most sprawling and ungraceful attitudes, at the same time yelling, to frighten the men from their steadiness in aim. Our men dodged the arrows successfully, until the Indians approached within fifty yards, when they began to return the fire.

Dennen and Beardall were musicians to Company K, and from boyhood had served in the army on the frontiers, were expert hunters, and cool as if it were only deer that they had to shoot. Beardall felt the brush of an arrow, and saw the Indian who shot it, and disregarding all others, he held his rifle to the spot where he saw him disappear behind a bush, until he rose again, when he fired, and the savage fell without sending his arrow. There seemed to be two Indians who were decorated with whistles, and which they used to stimulate their men to the attack, and they singled out the Captain as particularly worthy of their regard. One of them was a huge-framed fellow, whose vermillion-colored face bore more malignity than he had ever seen expressed in a human countenance. They advanced upon him at right angles, launching their arrows from behind their circular shields. The Captain held his horse and shot-gun by the left hand, and in his right his six-shooter, pointing the latter at the chief alternately. He had already fired three shots, and his antagonists had advanced to twelve paces from him. One arrow had struck his horse, which was rearing and plunging, one severed the strap at his shoulder, which held his shot-belt, another transfixed his boot from behind, passing between the sock and his leg; this he drew out with his other foot; a fourth pierced his heavily-quilted hunting-coat, and passed through, and a fifth struck his hand in which he held his gun, by which the force of the arrow was arrested from passing into his vitals. It was a critical moment for him. He had abandoned all hope of saving his own life, and became intent only on selling it dearly. If his next shot failed he was lost; he leveled his pistol upon the fierce chief in front of him, who stooped, the more perfectly to protect his body with his shield, when, by a quick movement of the pistol, he brought it to cover the other chief, who was closing upon him with his spear, and struck him full in the chest before he could raise his shield. Then, dropping his pistol, he was about to try the effect of the shot in his gun upon the shield of the other chief, but he was already stretched out dead, in all his ferocity and paint. A cartridge from Dennen's gun laid him low, just at the moment that he was about to spring upon the Captain. It was the work of a moment; and all was as hushed about them as a calm after a storm. The whistle no longer sounded to the charge, and our men stood ready to meet another attack; but, save the gurgling breath of the dying chiefs, not an indication was given of their being in the vicinity.

The mule-team, during the fight, had strayed off, grazing, amongst the bushes, to the distance of several hundred yards, when an Indian rose from his concealment and led them off up the valley; and the Captain felt himself in no condition to make an effort for their recovery. Beardall's horse, which he had hitched to the wagon, in order that he might drive the team after the flight of the teamster, fell also into their hands. From the concealment afforded by the bushes, it was impossible to tell the extent of their loss, and reinforcements did not arrive on the ground until an hour after the Captain left it, and the Indians had carried off their dead and wounded, according to their custom. They knew that I had escaped to camp, and that reinforcements would soon be at hand, and they lost no time in getting away. Lieutenant Reynolds found one of the mules still hitched to the wagon, and an arrow sticking in his side, but he was not seriously injured by it. Pieces of harness were scattered along the trail. A small bear-skin, wet with blood, and several articles of Indian wearing-apparel, and arrows, were strewn about the ground where the conflict took place.

These Indians were a band of Apaches, and, as we learned by following their trail afterward, they had observed us in the morning as we passed up the creek, from their concealment in one of the cañons near the north fort; and they descended and crossed the valley, keeping themselves concealed in the bottom of the ravine, from which, seated on their horses, they could just observe our movements; and when we entered the mott, they crossed the creek and passed along under the hill to where they were seen by the Captain at noon. There they waited until our full number had left the grove and were on open ground, where there was no chance of escape. Their dispositions were well made, and the whole plan of attack showed great sagacity, and would have been successful in cutting off every man in the party, were it not that they wanted victory too cheap. They are not satisfied to get victory, unless it can be had for nothing. But, the fact is, that, in a greet majority of cases, they would have been left in possession of the field under the circumstances. Two days after this affair, a train of wagons, bound to Fort Davis, which had left our camp but a few days before, was surprised by a large party of Indians, and every animal was carried off, amounting to sixty six, in broad day-light—the men not firing a shot in their defense. This was my first sight of an Indian in Texas, although I had had such convincing evidence that they had more than one of me. I shall be glad to know that it will be the last. I had rather die by wild beasts, than by the hands of beings who possess all the ferocity of the wildest beasts, added to the cunning and cruelty of man.

I had promised to my friend Dr. Nott, of Mobile, a skull of this tribe, if I could get it; but I think I would prefer to send him mine, while it is at my disposal, than to pursue such ethnological inquiries at such risks.

The next morning two parties were sent out, under Lieutenants Reynolds and Williams, one to the crossing of the Pecos, and the other to follow the trail. But the parties being on foot, and a drizzling rain having fallen during the night, making the walking very laborious, the pursuit was abandoned. This was the first rain that I had seen in two months; during all that time the sky has been almost if not quite cloudless. A northerly wind has occasionally broken the monotony of fine weather, and rattled our tent-ropes and stiffened the locusts that came in myriads with the first north wind, and made another blanket comfortable at night. In a few days I shall be again upon the road to leave a dreary country and a pleasant camp, where I have experienced many kindnesses and cordial greetings, that one will look for in a band among the crowded "tents of Israel."

J. D. B. S.

Sufferings of the Poor.

Dickens, in his *Household Words*, describes in his inimitable style one of the scenes of wretchedness which may be seen nightly in the streets of a crowded metropolis like London:—

"On the 5th of last November, I, the conductor of this journal, accompanied by a friend well known to the public, accidentally strayed into Whitechapel. It was a miserable evening; very dark, very muddy, and raining hard. There are many woful sights in that part of London, and it has been well known to me in most of its aspects for many years. We had forgotten the mud and rain in slowly walking along and looking about us, when we found ourselves, at 8 o'clock, before the workhouse. Crouched against the wall of the workhouse, in the dark street, on the muddy pavement-stones, with the rain raining upon them, were five bundles of rags. They were motionless, and had no resemblance to the human form. Five great beehives covered with rags—five dead bodies taken out of graves, tied neck and heels, and covered with rags—would have looked like those five bundles upon which the rain rained down in the public street. 'What is this?' said my companion. 'What is this?' 'Some misereble people shut out of the casual ward, I think,' said I. (Mr. Dickens then describes his inquiries in the workhouse. He found that the women were shut out simply because the house was full.) We went to the ragged bundle nearest the workhouse door, and I touched it. The rags began to be slowly stirred within, and by little and little a head was unshrouded—the head of a young woman of three or four and twenty, as I should judge, gaunt with want, and foul with dirt, but not naturally ugly. 'Tell us,' said I, stooping down, 'why are you lying here?' 'Because I can't get into the workhouse.' She spoke in a faint, dull way, and had no curiosity or interest left. She looked dreamily at the black sky and the falling rain, but never looked at me or my companion. 'Were you here last night?' 'Yes, all last night, and the night afore, too.' 'Do you know any of these others?' 'I know her next but one; she was here last night, and she told me she came out of Essex. I don't know no more of her.' 'You were here all last night, but you have not been here all day?' 'No; not all day.' 'Where have you been all day?' 'About the streets.' 'What have you had to eat?' 'Nothing.' 'Come,' said I, 'think a little. You are tired, and have been asleep, and do not quite consider what you are saying to us. You have had something to eat to-day. Come! think of it.' 'No, I haven't. Nothing but such bits as I could pick up about the market. Why, look at me!' She bared her neck, and I covered it up again. 'If you had a shilling to get some supper and a lodging, should you know where to get it?' 'Yes, I could do that.' 'Get it, then.' I put the money into her hand, and she feebly rose and went away. She never thanked me, never looked at me, melted away in the miserable night, in the strangest manner I ever saw. I have seen many strange things, but not one that has left a deeper impression on my memory than the dull, impassive way in which that worn-out heap of misery took that piece of money and was lost. One by one I spoke to all the five. In every one interest and curiosity were as extinct as in the first. They were all dull and languid. No one made any sort of profession or complaint; no one cared to look at me, no one thanked me. When I came to the third, I suppose she saw that my companion and I glanced, with a new horror upon us, at the last two, who had dropped against each other in their sleep, and were lying like broken images. She said she believed they were young sisters. These were the only words that were originated among the five."

The Earthquake at Jeddo.

A trading vessel which arrived at San Francisco from Japan, reports an earthquake in the Island of Niphon on the 11th of November last, in which the city of Jeddo suffered the loss of a hundred thousand houses and thirty thousand inhabitants.

Japan is a volcanic country. Ever since it has been known to Europeans, earthquakes have from time to time occurred there; and no longer ago than last year there happened one by which the Town of Simoda, our treaty port in the Island of Niphon, was greatly damaged, and a Russian frigate then lying in the harbor totally disabled. Jeddo was reported to have suffered somewhat from that shock; and without putting implicit reliance in the extent of the injury inflicted by the present one, we may well believe that it has been very serious.

In the case of earthquakes in Japan, the injury done is almost always aggravated by fires, common everywhere on such occasions, but to which the Japanese are peculiarly liable from the excessively combustible character of their buildings, which, with the exception of a few ancient stone castles, are all built of wood, with windows and partitions of paper, and covered with varnish, which makes them still more combustible.

Jeddo is a great city; all the princes and nobles of the empire are obliged to maintain establishments there. It is possible that a hundred thousand houses may have been destroyed, but the alledged loss of life is, we hope, exaggerated. The Japanese houses are not of a kind to crush the inhabitants by their fall, and those who perished must either have been swallowed up by the yawning earth, or have lost their lives in the flames or in the crash and confusion incident to such an occurrence.

The most recent accounts which we have of Jeddo, from persons who actually saw it, are those given by Herr Herodrick Doeff, who resided in Japan from 1797 to 1815, during which he twice or three times visited Jeddo, and that of J. F. Van Overmeer Fischer, who went to Japan soon after Doeff left it; and that of Dr. Phillipp Frans Von Siebold, who was at Jeddo four years after Fischer. In his "Recollections of Japan," Doeff describes a terrible fire which occurred in Jeddo in 1806, while he was in the city. It began at a distance from the inn where the Dutch lodged at about 10 in the morning. At 1 the Dutch took the alarm and began to pack; at 3 they fled. "On running into the street," says Doeff, "we saw everything in flames. There was great danger in attempting to escape by running before the fire; we therefore took a slanting direction through a street already burning, and thus succeeded in reaching an open field. It was studded with the standards of princes whose dwellings had been destroyed, and whose wives and children had fled thither for refuge. We followed their example and marked out a spot with out Dutch flags. We had now a full view of the fire, and never did I see anything so terrific. The terrors of this ocean of flame were enhanced by the heart-rending cries of the fugitive women and children." This fire raged till noon the next day, when it was extinguished by a fall of rain. The hotel of the Dutch was on fire within five minutes after they had left it. The palaces of thirty-seven princes were destroyed. The weight of fugitives broke down the famous Nipon-bas, or Bridge of Japan, (across a river which runs through the city and from which all distances throughout the Empire are reckoned;) so that beside those burned to death, many were drowned, including a daughter of the Prince of Arva. Twelve hundred lives were said to have been lost.

[N. Y. Tribune.

Reasons for Growing Ruta-Bagas.

Turnips, both of the Swedish and common varieties, are cultivated to a much greater extent in England than in this country. A few years ago we met with a statement to the effect that the annual value of the turnip crop of England, with a population about the same as that of the United States, was somewhere in the vicinity of 20 millions of pounds sterling, or nearly equal to $100,000,000. About the same time the turnip crop of the United States was so inconsiderable that it was not included or reported in the Census Returns of 1850 at all. According to the above estimate, and the Census Returns of the Agricultural Products of the United States, the turnip crop of England not only exceeds that of the latter country immeasurably, but is fully equal to the largest crops which we raise. According to the census of 1850, the wheat crop of the United States was a little over 100,000,000 bushels, which at $1 per bushel would make the value of it just equal to the estimated value of the turnip crop of England. In 1850 the hay crop of the United States was 13,838,642 tons; and this at eight dollars per ton, would again be about of the same value as the turnip crop of England. From these data it is very obvious that this crop is much more highly valued in England than in this country, and much more extensively cultivated.

We were led to make the examination of the Census Returns, &c., the results of which have been just stated, in consequence of a visit lately made to an English farmer, who is somewhat celebrated for raising ruta-baga and other root crops. He has raised crops of ruta-bagas averaging over 600 bushels per acre, for several years, and notwithstanding that he makes as widely known as possible what he esteems as the advantages and recommendations of this crop, still very few of his neighbors have ever been induced to try to raise it. This seems truly surprising considering that the recommendations which he gives of this crop do not fall much if any below a dozen in number. Of these we remember the following as the most important.

1. Ruta-bagas are a very profitable or remunerative crop, as an acre will generally produce from 500 to 800 bushels, with an expenditure upon it, for seed, labor, &c., of from $20 to $30. Our informant stated that no crop he had ever raised had cost him as much as five cents a bushel, and that for feeding all kinds of stock he estimated them, by a comparison with the value of hay, &c., at average prices, to be worth as much as twenty-five cents per bushel. After deducting expenses of cultivation, there would be, according to this estimate, a net profit of over one hundred dollars per acre. Our informant assured us that repeated trials of this root as to its feeding qualities had made him confident, or, as he phrased it, "perfectly certain and no mistake," that there is no crop that he raises, or that is usually raised in the Northern, Middle, and Western States, which is as profitable, per acre, as this crop.

2. Ruta-bagas make a good and palatable food for oxen, sheep, and hogs. Horses, also, often eat them.

3. Sheep are particularly fond of them, and thrive on them.

4. They are especially good for ewes having lambs.

5. They can be kept easily until there is a good supply of grass in the spring. They do not become pithy or deteriorated in their feeding qualities, as white turnips do.

6. They can be planted as a second crop, as the last week in June or first in July is about the right time of sowing, in the latitude of 42°, and two or three degrees on each side of that.

7. They do not "run the land," as they derive much of their nourishment from the atmosphere.

8. They can stand in the ground till all other fall work is disposed of and out of the way.

These and some minor advantages of this crop, having been set forth with some earnestness and enthusiasm, have deepened our conviction of the importance of it. To aid in fixing in other minds a similar conviction we have been induced to make a record of the principal recommendations which may be urged in favor of *increased* attention to this crop so generally and so unwisely neglected. Additional reasons for more attention to this crop may be found in the *Country Gentleman* and *Cultivator* for 1853 and 1854.

[Country Gentleman.

Dr. Dwight and Mr. Dennie.

As Dr. Dwight was traveling through New Jersey, he chanced to stop at a stage hotel, in one of its populous towns, for the night. At a late hour of the same night, arrived also at the inn, Mr. Dennie, who had the misfortune to learn from the landlord that his beds were all paired with lodgers except one, occupied by the celebrated Dr. Dwight. Show me to his apartment, exclaimed Dennie; although I am a stranger to the Rev. Doctor, perhaps I can bargain with him for my lodging. The landlord accordingly waited on Mr. Dennie to the Doctor's room, and there left him to introduce himself. The Doctor, although in his night-gown, cap and slippers, and just ready to resign himself to the refreshing arms of Somnus, politely requested the strange intruder to be seated. The Doctor was struck with the literary physiognomy of his companion, unbent his austere brow, and commenced a literary conversation. The names of Washington, Franklin, Rittenhouse, and a host of literary and distinguished characters, for some time gave a zest and interest to their conversation, until Dwight chanced to mention the name of Dennie.

"Dennie, the editor of the Portfolio, (says the Doctor in a rhapsody,) is the Addison of the United States—the father of American Belles Letters. But, sir, continued he, is it not astonishing, that a man of such a genius, fancy and feeling should abandon himself to the inebriating bowl, and to bacchanalian revels?"

"Sir," said Dennie, "you are mistaken; I have been intimately acquainted with Dennie for several years, and I never knew or saw him intoxicated."

"Sir," says the Doctor, "you err; I have my information from a particular friend; I am confident that I am right, and that you are wrong."

Dennie now ingeniously changed the conversation to the clergy, remarking that Doctors Abercrombie and Mason were amongst our most distinguished divines; nevertheless, he considered Dr. Dwight, President of Yale College, the most learned theologian—the first logician—and the greatest poet, that America has ever produced. But, sir, continued Dennie, there are traits in his character unbecoming so great and wise a man of the most detestable description—he is the greatest bigot and dogmatist of the age!"

"Sir," said the Doctor, "you are grossly mistaken. I am intimately acquainted with Dr. Dwight, and I know to the contrary."

"Sir," says Dennie, "you are mistaken; I have it from an intimate acquaintance of his, whom I am confident would not tell an untruth."

"No more slander," says the Doctor, "I am Dr. Dwight, of whom you speak!"

"And I too," exclaimed Dennie, "am Mr. Dennie, of whom you spoke!"

The astonishment of Dr. Dwight may be better conceived than told. Suffice it to say, they mutually shook hands, and were extremely happy in each other's acquaintance.

Mending Roads.

The veteran editor of the Massachusetts Ploughman thinks roads should be improved in early spring. He says:—

"A little gravel spread on our roads early in the Spring is so moist that it is soon trod hard, and remains solid through the summer, but if applied in June or September, it lies loose, and is a nuisance in the highway till another season. We have every reason, therefore, in favor of mending the roads early in the season. More leisure, easier labor, better work, and the use of a good road through the whole summer season, in lieu of heaps of mud and mortar that surveyors used to make a show of work, and to while away the time, which has been allotted to them, to get rid of their highway taxes.

Now, let the old district system be pursued, or the new mode of letting one surveyor do the whole business of road mending. Let the work be seasonably done, and when it will be of some use to the public. This carting of mud or any other substance into the highway in September, October, or November, as we often see it done, is but a nuisance, a cheat, and a squandering of the public money.

We were much pleased, last year, to see numerous districts early engaged in mending their roads, and doing real service to the public instead of rendering the traveling worse through the summer. Towns have now a legal right to say at what time the labor on the highways shall be performed, and we trust that all town officers will look to this important matter.

A Chronicle of Cold Weather.

In the year 301, the cold was so intense in Europe, that the Black Sea was frozen entirely over.

In 401, the Pontus Sea, and the sea between Constantinople and Scutari in Turkey, were entirely frozen over.

The Danube was frozen over in 462, so that a whole army crossed on the ice.

The Black Sea was again frozen over in 765, and the snow drifted to the depth of 50 feet

Carriages crossed the Adriatic Sea, or Gulf of Venice, in 859, and in 860 the cold was so intense that cattle froze to death in their stalls. The Mediterranean Sea was so thickly frozen over, that it was passable for carriages and horses, and merchandize was transported across it on the ice.

1133. This year the river Po, in Italy, was frozen from Cremona to the sea; wine burst the casks containing it, and the trees split with a loud report.

1216. The river Po was frozen to the depth of *sixteen* feet.

1234. The Mediterranean was again frozen over; and a whole pine forest was killed by the cold.

1282. This year the snow was so deep in Austria that the houses were entirely buried beneath it, and many persons perished.

1292. The Rhine was frozen over, and the snow is represented as being of an "enormous depth."

1323. The Baltic Sea was frozen over so as to be passable for six weeks.

1344. All the rivers in Italy were frozen over.

1349, 1392, and 1408. The Baltic Sea was frozen over in each of these years.

1384. The Rhine and Gulf of Venice were frozen over.

1423, 1426, 1459. In each of these years the traveling from Lubec to Prussia was performed on the ice.

1620. The sea between Constantinople and Iskodar was passable on the ice.

1670. The cold was intense throughout Europe.

1681. This year the cold was so severe as to split whole forests of oak trees.

1690. Scotland this year was visited with an awful snow-storm, which lasted *thirteen* days and nights, during which time nine-tenths of the sheep were frozen to death, and many shepherds lost their lives.

1692. Wolves came into Vienna, and attacked men and women, owing to the intense cold and hunger.

1729 and 1730. In one of these years another snow-storm visited Scotland, in which about twenty thousand sheep and many shepherds were lost—"by a single day's snow."

1776. This year the Danube was frozen over *five feet* thick below Vienna.

Scotland was the scene of another terrible snow-storm in 1794, which is the most extraordinary one of which there is any record. In one single night snow fell to the depth of eight or ten feet, and in some places the most lofty trees were entirely covered. By this one night's storm seventeen shepherds lost their lives, and thousands of sheep, besides other animals, were destroyed. One farmer alone lost fourteen hundred sheep. After the storm had somewhat disappeared, there were found collected together (by its violence) in one spot, the dead bodies of two men, one woman, forty-five dogs, three horses, nine black cattle, one hundred and eighty hares, and one thousand eight hundred and forty sheep.

The above contains the most remarkable accounts of severe weather in the old world; and some of them could hardly be believed were they not well authenticated by the histories of the times. They contrast strangely with the weather of recent times there, and of the present, in the new world, until the Winter we are now passing out of.

The Use of Tobacco.

It is to be hoped that a crusade may be commenced against tobacco at some future day, which may lead to a general abandonment of its use. It is a fruitful source of evil to young and old, and is of small utility, save to gratify a morbid appetite and amuse a vacant hour. *Uncle Toby* has enlisted heartily in this crusade, and says many hard things of the slaves of the weed. He thinks its use a sin.

"I knew one who said, 'Sir, I can hear no more, for all you say on this drug is true, and cuts me to pieces. I have been a slave to it twenty years, and shall die a slave; but, if my son uses it, I will disinherit him!' Here was consciousness of slavery and sin.

I knew an excellent deacon, who was an inveterate 'chewer,' who, on reading the passage which bids us glorify God, whether we eat or drink, said to his wife, 'I cannot glorify God in the use of this poison.' He dropped it once for all, and became a holier and happier man. Here was the consciousness and renunciation of sin—a ceasing to do evil in one form.

I can name a clergyman who was much enslaved to his snuff; he sometimes reproved a neighbor who was a drunkard. At length the drunkard said to him, 'If you will give up your snuff, I will give up my rum.' The bargain was made. But within forty-eight hours the clergyman was in perfect anguish for his snuff. He set a spy over the drunkard to watch for his downfall. When told that the fatal cup had passed his lips, he flew to his snuff-box with the fury of a maniac, made himself idiotic, and died a fool! Tell us which was the greater drunkard? Or, as sin is the point in debate, which was the greater sinner?

The time would fail me to tell of men, Christian men, and Christian ministers, who have renounced this sin as they renounce other sins, and who, with rejuvenated health and jubilant hearts, bless God for their escape from these 'bonds of iniquity.'"

Uncle Toby thinks also that the use of tobacco is the parent of numerous other sins, and adduces the following facts in confirmation:

"Documents relating to the State Reform School at Westboro, now lie before me. I see that of the whole number of young criminals now in this establishment, 290 of 569 had used Tobacco before going there. This I think an instructive fact, which, with other facts, the same in kind, leads me to believe that there is a connection between tobacco and crime, as well as between alcohol and crime."

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is *acrimonious and irritating to the bowels*. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary disease, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation; and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE SABBATH.

A correct theory is indispensable in any branch of mechanical art; and no man can form a pattern, or model of any thing, without having a preconceived theory or idea of the thing which he would produce. As it is in mechanics, so it is in religion; and as an error in theory in one department leads to error in practice, or to wrong results, so with the other. No man, therefore, errs in religious belief, without more or less affecting his practice.

Perhaps there is no subject on which there are so many and such conflicting theories as on the observance of the Sabbath. While some professedly believe that there is no Sabbath, and consequently keep none, others keep the first day of the week, in conformity to the prevailing custom, or to legislation, and others still because on that day Christ rose from the dead. Only a few question the origin of the Sabbath, that is, the divine appointment of it, or its obligation, requiring rest on the seventh day of the week, up to the resurrection of Christ. And we think that if prejudice, selfishness, and tradition, were laid aside, the conflicting theories that now confound the world in regard to the Sabbath would cease. But if prejudice be indulged, in regard to any thing, the chance for arriving at just conclusions is small. It is useless to attempt the propagation of any truth whilst this great enemy stands in the way. It at once magnifies its idol to enormous proportions, and compresses its victim to mere nothing. To limit or calculate its power is very difficult. The only way to see things in their proper light is for us to dispossess ourselves of prejudice altogether. Then we may perhaps with profit compare views on subjects about which we differ, and that too without being hurt with each other because we differ. Now, since the obligation to observe the seventh day is acknowledged until the resurrection of the Saviour, let us inquire whether that obligation ended then, or remains still, and is perpetual.

First, then, if the Sabbath was instituted as a commemorative institution, what benefit could it impart to one generation, which the next was not also entitled to? Why should God require that commemoration of one man more than of another. Christ said that "the Sabbath was made for *man*, and not man for the Sabbath"—for man indiscriminately—that is, for all men. As every scholar knows, a noun without an article is used in its widest and most general sense. Take the following example by Mr. Webster: "*Man* is mortal, i. e. *all* men are mortal." In this sense must the language of Christ be understood; and therefore it must apply to *all men*, in every age, under all circumstances and dispensations. See what God says to Israel, Ex. 31: 16, 17—"Wherefore, the children of Israel shall keep the Sabbath, to observe the Sabbath throughout their generations for a perpetual covenant. It is a sign between me and the children of Israel forever, for in six days the Lord made heaven and earth, and on the seventh day he rested and was refreshed." Mark the expressions, *throughout their generations*, and *for ever;* the one must reach to the end of time, and the other as long as a generation of Israel can be found on the earth. These generations have already run far beyond the resurrection, and will continue, no doubt, to the end of the world. This is certain, according to Scripture prediction. But some one may say, "I admit it to be a perpetual institution of the Jews." Well, then, it was not to be changed at the resurrection, nor at all affected by the gospel. For, says the Apostle to the Jews, "To you and your children was the gospel of this salvation sent; but since they counted themselves unworthy of eternal life, lo, we turn to the Gentiles." Again, it is certain that many of the Jews did embrace the gospel, and constituted a part of the Christian Church, and in obedience to the commandment of God, kept the Sabbath. And Christ told his disciples to pray that their flight be not on the Sabbath day, when Jerusalem should be destroyed, which did not take place until some forty years after, thus acknowledging the perpetuity of the same Sabbath to that time, and that too by the church, or by his disciples who composed the church. It would be very unreasonable to suppose that God would require the observance of two days as Sabbath. Finally, to think he ever has required the observance of any other day than the seventh, is unreasonable, if Scripture silence of any such requisition be taken as evidence, which we think should be accepted as evidence conclusive. For if, as God has said repeatedly, "the seventh day is the Sabbath of the Lord thy God," what reason have we, or can we have, for substituting any other day in its stead, without the least intimation from Him of a change of His will or purpose. I know that some say an intimation may be inferred (nothing more) from the practice of Christ and his disciples meeting for worship on first day. If this were proved, and nothing more, it would fall far short of proving it a Sabbath; and nothing short of precept or command was ever designed as a guide in the pathway of duty. "Where there is no law there is no transgression;" consequently, nothing short of precept or command should ever be relied on in matters of religion, especially when the plain commandment of God stands recorded to the contrary, as it does in this case. In no ordinance or institution that God ever committed to man was mere intimation considered sufficient authority for its observance; at least, God never left one to mere conjecture, unless this case be an exception.

But we will see how far it was the practice of Christ and the Apostles to meet on first-day. First—Luke 24: 13—two of his disciples traveled to Emmaus, a distance of some seven or eight miles, Christ bearing them company on the way; and so far was he from reproving them for traveling or making such a journey on first-day, that he appeared as though he would have gone farther, but they constrained him, and he went in. Although he had much conversation with them by the way, and enlightened their minds in a proper understanding of the Scriptures, yet nothing appears to have been said of any requirement that they should observe that day as the Sabbath. The same evening he appeared to the eleven, where they were met for fear of the Jews. See John 20: 19. This is the first, the last, and the only meeting of Christ with the Apostles, or of the Apostles themselves, on the first day of the week. There is not an instance on record, showing that any of the twelve ever met a congregation on the first day of the week. We have two particular instances of Christ's meeting with his disciples afterward, one of which certainly could not have been on first-day, for the reason that it is stated to have been "after eight days." The other was at the sea of Tiberius, where the disciples were fishing. Whether this was on first-day or not, we are left to conjecture, as the sacred historian has not informed us. We are further told, that he was seen of them forty days, so that if his appearance to them constituted the day of such appearance a Sabbath, then we have forty Sabbaths in succession.

But we are told that the apostles or disciples were accustomed to meet on first day for worship. Let us see if this is true. Of all the disciples, among whom were probably many preachers, seventy being sent out at one time, we find but one solitary instance of their meeting for worship on the first day of the week, and that was at Troas, where Paul preached in the evening. See Acts 20: 7. Were many such meetings held, we think the first-day cause could gain nothing from the fact; for, as every Bible scholar knows, in those days time was reckoned, according to the mode adopted in "*the beginning*," from evening to evening, which mode is still kept up by the Jews and many others; consequently it must have been the evening following the seventh day, and Paul started on his journey first-day morning. Thus, instead of keeping it as the Sabbath, he spent it as a working or traveling day, just as Christ and the two disciples did on their way to Emmaus. But if it were admitted, as some pretend, that they came together to break bread and for worship on that day because it was first-day, and that therefore it became an example for imitation, then those who believe the day began at midnight have in the example a portion of two days, and there is as much reason for observing the second day as there is for the first, and more, if the breaking of bread has any weight in point of evidence, which did not take place until in the morning of second-day; so that, taking it in whichever light we may, there seems to be no intimation of Sabbath-keeping growing out of it at all It indirectly proves, and quite conclusively too, that the day on which they assembled was not Sabbath, if taken, as I think it should be, that Paul started and traveled on his journey on first-day.

We are referred to 1 Corinthians 16: 2, where Paul gave instructions concerning the collections for the poor saints at Jerusalem, telling his brethren that every one, on the first day of the week, should lay by *himself*, (or "*by him*" as it reads, meaning one and the same,) that there be no gathering on his coming; that is, upon the *first of the week*, (*day* being supplied, as shown by Italics) No doubt the Apostle would have them commence the fore part of the week, without any reference to a particular day, to cast up in their minds and lay aside what they could afford to give, that it might be in readiness when he came, for he was not then present with them. But as he was visiting the churches, and as it was doubtless his custom to preach on the Sabbath, they were to commence in time, so that there should be no gathering when he came. Nothing like a public contribution is implied in the injunction, but laying "by him" in store seems to be strictly worldly in character, and if the word *day* is admissible, I think it appears conclusively, that first-day was devoted to worldly occupations, and therefore was no Sabbath. I certainly must place this passage along side of others which I think prove this fact.

We have now gone through with all that can be found in regard to the holding of meetings on the first day of the week by Christ and his Apostles. It appears that the first day on which the Saviour arose was the only one on which he met with his disciples, and that he then gave them not the least intimation that the day ought to be observed as the Sabbath, but the reverse, by journeying on that day. The disciples were met for *fear of the Jews*, as the Scriptures tell us, and no other reason is mentioned; hence there are no grounds for assigning any other. Their peculiar circumstances at that time render it very rational to suppose that they would come together, inasmuch as they were that day accused of committing a misdemeanor in stealing away the body of Christ from under the guard which government had stationed at the sepulchre; which, if true, would no doubt have subjected them to severe punishment. But suppose it could be proved that they actually met for worship, I submit, whether *one* meeting proves a custom. That the day on which Christ arose should be celebrated in any way, we are not informed; and as a matter of obedience, it certainly cannot be celebrated at all, for there is no commandment, express or implied, to this end, any more than there is for the observance of the day of his birth, crucifixion, or ascension. If there is reason for the observance of either of those days as a Sabbath, I think that on which he ascended has the preference, because then, and not until then, he entered into rest. The work of redemption was not complete until he took his seat at the right hand of the Father; his mission was not finished until then, for he was seen of them forty days, speaking the things pertaining to the kingdom of heaven. Acts 1: 3. I know not why we may not think he honored the Sabbath, or seventh day, by resting in the grave until it was past; and from the fact that he burst the tomb, and immediately set himself to work again, on first day, have we not an example of labor there instead of rest? The Sabbath, or a Sabbath, is no commemoration whatever of resurrection, or of any work performed on that day. But the work of atonement, as we understand it, was completed when he gave up the ghost, as he said, "It is finished;" and commemorative of this event, he instituted the Lord's Supper, saying, "This do in remembrance of me." Hereon the Apostle says, "As oft as ye do this, ye do show forth the Lord's death, until he come." Two commemorations of one event, so closely allied in all its parts as the work of redemption, would appear unnecessary; and so it seems Christ thought, for he instituted one only. The apostles give us no intimation of any other; and Paul said, he shunned not to declare the whole counsel of God, (Acts 20: 27,) but no where has he declared, or even intimated, that it was God's will that any one should keep first-day for a Sabbath, as we have already shown. That God himself has declared that the seventh day is the Sabbath, no one acquainted with his word will deny. That the apostles observed this day, we think is evident. It seems to have been their custom to preach to their congregations on that day, and on no other, and they called it the Sabbath, which name was never applied to any other day than the seventh. First-day is called first-day, and no where in sacred writ is it called Sabbath. That the day on which the Jews met for worship was the seventh, none, I think, pretend to deny; and that it was of weekly occurrence, is proven from Acts 13: 27—"Because they know him not, nor yet the voices of the prophets, which are read every Sabbath day." Also, Acts 15: 21—"For Moses of old time hath in every city them that preach him, being read in the synagogues every Sabbath day." This not only proves the practice of the Jews in meeting every Sabbath, but that the apostles called that day the Sabbath. These quotations are from Paul and James, and they agree in calling this day the Sabbath, without comment.

We will now see what was the custom or example of the apostles. First, Acts 13: 5—Paul and Barnabas, preaching in the synagogues of the Jews; and, verse 14 and onward, they went to Antioch, and went into the synagogue on the Sabbath day, and sat down, and after Paul had preached, and the Jews had gone out, the Gentiles besought that these words might be preached to them the next Sabbath. And the next Sabbath came almost the whole city together to hear the word of God. Here we have Jews, Gentiles, and Apostles, observing the same Sabbath together, calling it by its own appropriate name, and understanding, apparently, its true meaning. Again—Acts 14: 1—In Iconium Paul and Barnabas went both together into the synagogue of the Jews, and so spake that a great multitude, both of Jews and Greeks, believed. Here again we find not only Jews but Greeks, with the Apostles, met on the Sabbath, or seventh day; so that it is clearly intimated that such was the custom, not only of the Jews and disciples, but also of the Gentiles, if they were in the habit of meeting at all for worship. In the first instance—at Antioch—it is recorded that the whole city came together; and in the second we are told that great multitudes of Greeks believed. We have already three examples of Gentiles having met in worship on the seventh day of the week, and we have yet another at Thessalonica, (Acts 17: 2,) where "Paul, as his manner was, went in unto them, and three Sabbath days reasoned with them out of the Scriptures." And of the devout Greeks a great multitude believed. So we have four positive records of Gentiles having met in worship on that day. Besides, we think two others may be pretty clearly inferred in this place, inasmuch as three meetings were held, and no distinction made. In verse tenth another is found, where it is stated that Paul and Silas, at Berea, went into the synagogue of the Jews, and that honorable women which were Greeks believed, and of men not a few. In all of these instances, it appears that a multitude of Gentiles were in attendance at worship on the seventh day, or Sabbath day, and agreed in calling it by its own appropriate name, and probably understanding its import.

But to return to the practice of the Apostles. Acts 16: 13—"On the Sabbath they went out of the city, by a river side, where prayer was wont to be made, and spake unto the women who resorted thither." This is evidence of the practice of Apostles and Gentiles to meet on the seventh day. This was a Roman colony, and at or near the same place where Paul directed his epistle to the Romans, or the Romish church; and I know of no evidence showing that any Jew ever resided there; and yet they were accustomed to meet there for worship on the seventh day. The woman whom Paul baptized was of the city of Thyatira, another Gentile city, and I think all concur in the belief, that she was a Gentile; and here she appears, in company with other women, to have established a prayer-meeting, or meeting for worship, on the Sabbath; for it is said that she was one who worshiped God, and that where prayer was wont to be made, thither the women resorted.

Again—Acts 18: 4—Paul abode at Corinth, with one Aquila, being of the same craft, a tent-maker; and he reasoned in the synagogue every Sabbath, and persuaded the Jews and the Greeks. Here it appears that the Gentiles were in regular attendance, for many Sabbaths together, in the house of worship, listening to the preaching of Paul. Although declaring it to be his intention to leave them, yet, being told by God to speak boldly, and be not afraid, for He had much people in that city, Paul continued there a year and six months, converting and baptizing many of the Corinthians. And after this it is said, "he tarried there yet a good while." Every Sabbath he reasoned in the synagogue, persuading the Jews and Greeks; and in this statement, together with the fact that he abode there more than eighteen months, we see a well-established custom; for the Jews and Gentiles met on the Sabbath at least seventy-eight times in regular succession, and were taught "the word of God." While many Corinthians believed and were baptized, and both Jews and Gentiles became members of the same church, yet there seems to have been not the least misunderstanding respecting the Sabbath, or the time of meeting, during all that long period. Here it seems to me we have an *example* in *reality;* and especially when we consider that this was about twenty years after the resurrection, and yet no change from the seventh to the first day had been made, and no apparent disposition existed among the brethren, either Jews or Gentiles, to observe any other than the Bible Sabbath.

Again—Acts 19: 8—at Ephesus, Paul went into the synagogue and spoke boldly for the space of three months; so that in all we have examples of more than one hundred meetings for worship on the seventh day, or Sabbath-day, and at some eighty-two of these meetings the Jews and Gentiles in concert attended on the ministration of the word of God by Paul and other Apostles, while we have but a single instance of their holding public worship on the first day, or Sunday as now called, and that was in the night, when Paul preached until the dawn, and then pursued his journey. We find, then, that it was the custom of Christ and his apostles to meet with the Jews and Gentiles in the synagogues on the Sabbath, and all, indiscriminately, agreed in meeting then, and in calling the seventh day the weekly Sabbath. No where, indeed, do the Scriptures give the least intimation that any other day was ever so known. And no where do they tell us that the first day is any different from, or should be any more observed than, any other of the working days; but to the seventh day, on which God rested from His labors, and to which He affixed the name of Sabbath, which name he has always applied to that day, whenever he has in his sacred word given any account of it. This name belongs to it as justly and appropriately as that of the sun and moon to those orbs, or as that of man and woman to the sexes, or as that to any other thing created. In commemoration of creation's work it was made a Sabbath, and must remain so just as long as the universe exists. God therefore gave a special commandment, saying, "Remember the Sabbath-day to keep it holy; for in six days the Lord created the heavens and the earth and the sea and all that in them is; wherefore the Lord blessed the Sabbath day, and hallowed it, because that on it he rested from all his works that he created and made." And so long as we keep it, we evince to the world that we believe in God, the creator of all things. There is no other way that we can so clearly exhibit to the world our belief in God. We find it to have been the practice of the Apostolic Christians to observe the seventh day, not as Judaizing religionists, but as disciples of the Saviour, showing, both by precept and example, fidelity to the law of Jehovah. Paul says, "Do we then make void the law through faith? God forbid; yea, we establish the law." He farther says, "So worship I the God of my fathers, believing all things which were written in the law and prophets;" and certainly he must have herein embraced the keeping of the seventh day as the Sabbath, which belief he no doubt held, for he says, "Herein do I exercise myself, to have always a conscience void of offense, towards God and towards man." Is it not established, beyond controversy, by these passages, that he kept the only Bible Sabbath? It would seem they were sufficient, and that nothing more need be added. The fact that he never was accused by the Jews of doing otherwise, amounts to evidence quite conclusive; for, had he neglected to observe the Sabbath, or had he changed it, or taught contrary to it, how quick the Jews would have brought such an accusation against him; but nothing of the kind was ever alledged. Although, when before Festus, the Jews stood round about and made many and grievous complaints against him, yet no one charged him with violating the Sabbath, which most certainly would have been the case, had such been the fact. He himself declares, (Acts 28: 17,) that "he had committed nothing against the people, nor customs of our fathers." Certain it is, that it was the custom of the Jews, and of their fathers, to keep the seventh day of the week as the Sabbath, and since Paul committed nothing, neither by deed nor word, contrary to it, we can not suppose he taught or practiced the observance of any other.

We have now come to the winding up of the historical account of this matter given by the great Apostle, founder-in-chief of the Christian faith and religion—the inspired Apostle to the Gentiles; and we find him, with all of the church of Christ, obeying God by heeding his holy law, which says, "Remember the Sabbath-day to keep it holy; six days shalt thou labor and do all thy work, but the *seventh day* is the Sabbath of the Lord thy God; in it thou shalt not do any work, thou, nor thy son, nor thy daughter, nor thy man-servant, nor thy maid-servant, nor thy cattle, nor the stranger that is within thy gates."

Daniel Babcock.

Scott, N. Y., Jan. 26, 1856.

To the Editors of the Sabbath Recorder:—

The following lines were suggested by reading, in the *Recorder* of February 7th, an account of a fugitive slave-mother who cut her children's throats rather than have them carried back to slavery. Those striking words of Jehovah, contained in Genesis 4: 10—"What hast thou done? the voice of thy brother's blood crieth unto me from the ground,"—were forcibly brought to my mind.

THE VOICE OF BLOOD.

Methinks I hear a mournful sound—
It is the voice of blood,
Crying for vengeance from the ground—
Its cries ascend to God.

'Tis like the voice of innocence—
A sad and plaintive moan;
What was it caused thy cruel death,
Thou little helpless one?

"It was the law of freedom's soil,
That caused my early death,
Which bids go hunt the fugitive,
Who runs and pants for breath.

'Twas in accordance with this law
That hirelings sought for me;
My mother hid me in the grave
From cruel Slavery.

She suffered cold, and hunger too,
With her poor children three,
In hope to gain some safe retreat
Where they might all be free.

But while her anxious bosom throbbed
With joy, and fear, and hope,
Behold! the officers of law
Had come to take them up.

How could she let her darlings now
Be torn from her embrace,
To go and dwell with tyrants vile
In ruin and disgrace?

She 'd sought on earth, but all in vain,
For hope or liberty;
The friendly knife should end their life,
And set their spirits free.

She 'd witnessed their last agonies—
Their last faint sigh for breath—
And feel that she had saved them from
A fate far worse than death."

This child's faint moan—this voice of blood—
Men may refuse to hear;
Yet there's an ever-present God
Who lends a listening ear.

He will take vengenance on our land
Of boasted liberty,
Unless we listen to his voice,
And let the oppressed go free.

How long, O Lord, shall bondmen's blood
Thus stain free soil with gore?
Hasten the time when Slavery
Shall curse our land no more. Republican.

CHARACTER OF JOSHUA.

The *Presbyterian Quarterly Review* complains that preachers fail in giving distinctness of outline to Scripture character, and ascribe to them all alike such gifts and graces as destroy their individuality. In contrast with such monotony it gives a portraiture of Joshua, which has at least the merit of uniqueness, whatever one may think of its sobriety or good taste:—

"Joshua was the *Jewish hero;* his character was essentially military; he was a pious captain. His faith took the form of implicit obedience to the Lord of Hosts, the Commander-in-Chief of the universe, and as a consequence of this implicit faith and obedience, he had perfect confidence in himself as the chosen instrument of God. All great captains have this. It may be seen in Mohammed, Gustavus Adolphus, Cromwell. The early Greek and Roman commanders felt it; even Attila thought that he was the scourge of God, and Napoleon had a singular idea that he was an instrument of fate. Joshua's mind had comparatively little of the range of that of Moses or of David. He never wrote a psalm. His speeches are military orders, or else pithy statements, like Wellington's: "As for me and my house, we will serve the Lord." His courage was military—unswerving, unflinching, straightforward, like Jackson's or Taylor's. He never troubled himself about the philosophy of things, like Moses, who hesitated about the quails, and the water at Meribah; or Jeremiah, who used sadly and doubtingly to argue with the Almighty as to the effect of his prophecies. Joshua looked to his orders, and whether he was to march three millions of men, women, and children dry-shod through a river, or make the sun and moon stand still, or take a city by an assault, or by ram's horns, was nothing to him; if God told him to do it, he did it. He had, too, the courtesy and grace of a soldier, and in his expeditions, the *coup d'œil* that always characterizes great leaders, for example, Hannibal, Conde, Washington. The Gideonites, with their old shoes and stale provisions, would not have imposed upon David; and yet as a purely military stratagem, as at Ai, Joshua was capital. His piety, in short, had every characteristic of a soldier's, and the man was a simple-hearted and noble hero. If one wishes to draw a parallel after the manner of Plutarch, let us say that Joab was a great captain, but he was fierce, cruel, irreligious and selfish; Jonathan was a most noble and brave gentleman, who could fight with even romantic bravery, but his fighting was like Sir Walter Raleigh's, an accomplishment rather than a profession or taste; David was a great strategist, but he was king, statesman, poet, scholar, as well; but Joshua is very like Claudius Lysius, the Roman captain, who came down on the mob at Jerusalem that were misusing Paul, examined impartially into the case, treated him courteously, and then, without troubling himself with either the politics or religion of the business, sent him skillfully, by night, with a sufficient escort, to the Roman procurator. Heroic, simple, faithful, pious, generous, courteous, straightforward, without much scholarship, or extraordinary range of mind, except as a general; such was Joshua."

A Beautiful Incident.—A lady visiting New York city, saw one day on the sidewalk, a ragged, cold and hungry little girl, gazing wishfully at some cake in a shop window. She stopped, and taking the little one by the hand, led her into the store. Though she was aware that bread might be better for the child than cake, yet desiring to gratify the shivering and forlorn one, she bought and gave her the cake she wanted. She then took her to another place, where she procured her a shawl and other articles of comfort. The grateful little creature looked the benevolent lady up full in the face, and with artless simplicity asked: "Are you God's wife?"

THE EFFECT OF A TEAR.

In a little village, in the northern part of England, open air services, for the purpose of preaching the gospel to the ignorant and profligate, had been carried on during nine successive summer seasons, and not without some salutary effects, as evidenced in the conversion of several. But among others, Joseph K., full of self-righteousness and prejudice, despised in his heart the preacher, his message, and all who loved the truths which he declared.

In the week he was, by necessity, associated with two or three, who, since the preaching of the gospel in their village, had tasted that the Lord was gracious, and who, as a consequence, ardently longed that others should enjoy the same holy privileges, and pleasures as those in which they participated.

But Joseph despised all their desires and efforts, because in his heart he viewed them only as hypocrites, or as enthusiasts. Many a word in season was dropped by these plain Christians in their daily intercourse with their fellow-laborer. But for a long time all was to no good purpose; K. remained insensible, caring for none of these things.

During the winter, his master ordered him and John B. to thrash together in a barn. And often between the strokes of the descending flail, was many a stroke tenderly aimed at K.'s conscience. However, the only return which he usually made, was a taunting answer as to some people being righteous overmuch, or else a silent yet significantly contemptuous sneer. But his associate in labor was a man of patient, tender spirit, yet of very susceptible feelings. He grieved inwardly at the hardness and impenitency of heart manifested by his neighbor. At length, having on one occasion spoken to K. very kindly about his need of a Saviour, and of the things which related to his everlasting peace, and seeing that he disregarded all B.'s counsel, and would have none of his reproof, the fountains of his grief were suddenly broken up, and turning towards a dark part of the barn, a gush of grief burst forth, and betrayed itself, rolling down the cheeks of the poor and pious, yet despised, thrasher. But although B. had turned aside, and endeavored to hide his tears by hastily wiping them away with the rough sleeve of his smock frock, K. saw the big round tear glistening in his fellow-laborer's eye, who silently but thoughtfully soon resumed his work, by diligently plying with his flail the corn which lay spread out on the thrashing floor.

That tear, by the over-ruling power of God, did more than all the sermons he had heard under the elm tree, or all the kind and truly Christian expostulations of his associate in labor. That tear subdued his heart. He melted into tenderness and godly sorrow for his past sins. From that moment he considered. "What," thought he, "shall John B. shed tears on my account, and yet I have never shed one tear about my soul's concern?"

After much inward conflict, he obtained joy and peace in believing. He began soon to love the minister and the people, whom before he as heartily despised.

SCENE IN A LOG CABIN.

It was nearly midnight on Saturday night, that a messenger came to Col. ——, requesting him to go to the cabin of a settler, some three miles down the river, and see his daughter, a girl of fourteen, who was supposed to be dying. Col. —— awoke me and asked me to accompany him, and I consented, taking with me the small package of medicines which I always carried in the forest; but I learned soon that there was no need of these, for her disease was past cure.

"She is a strange child," said the Colonel, "her father is as strange a man. They live together alone on the bank of the river. They came here three years ago, and no one knows whence or why. He has money, and is a keen shot. The child has been wasting away for a year past. I have seen her often, and she seem gifted with a marvelous intellect. She speaks something as if inspired, and seems to be the only hope of her father."

We reached the hut of the settler in less than half an hour, and entered it reverently. The scene was one that cannot easily be forgotten. There were books, and evidences of luxury and taste, lying on the rude table in the center. A guitar lay on the table near the small window, and the bed furniture, on which the dying girl lay, was as soft as the covering of a dying queen.

She was a fair child, with masses of long black hair lying over her pillow. Her eye was dark and piercing, and as it met mine, she started slightly, but smiled and looked upward. I spoke a few words to her father, and turning to her, asked her if she knew her condition.

"I know that my Redeemer liveth," said she, in a voice whose melody was like the sweetest tones of an Æolian. You may imagine that the answer startled me, and with a few words of like import, I turned from her. A half hour passed, and she spoke in the same deep, richly melodious voice:

"Father, I am cold; lie down beside me," and the old man lay down by his dying child, and she twined her emaciated arms around his neck, and murmured in a dreamy voice, "Dear father, dear father."

"My child," said the old man, "doth the flood seem deep to thee?"

"Nay, father, for my soul is strong."

"Seest thou the thither shore?"

"I see it, father; and its banks are green with immortal verdure."

"Hearest thou the voices of its inhabitants?"

"I hear them, father, as the voices of angels, falling from afar in the still and solemn night-time; and they call me. Her voice, too, father—oh, I heard it then!"

"Does she speak to thee?"

"She speaketh in tones most heavenly!"

"Doth she smile?"

"An angel smile! But a cold, calm smile—but I am cold—cold—cold! Father, there's a mist in the room. You'll be lonely, lonely. Is this death, father?"

And so she passed away.

A RELIGIOUS LANGUAGE.

Missionaries, in almost all pagan lands, have found it extremely difficult to translate the Word of God into the language of the country so as to convey the ideas that the English version contains. This difficulty arises, in part, from the meagreness of the language of pagan countries; but more from the fact that the natives use few if any words that are necessary to express Christian ideas. The English words that are used as names of the Supreme Being, when translated into pagan languages, convey to the mind of the pagan the idea of his own God, and not the Christian idea of God. So also the idea of sin, as conveyed by our language, cannot, in some cases, be conveyed through the language of pagan lands. Thus is it, also, with other ideas that are peculiar to Christianity. There are not words to convey them adequately to the mind of pagans. This has presented a very serious difficulty to missionaries in their labors. It has been asserted by missionaries, that there is a marked difference in the feelings and conduct of natives converted under the use of the vernacular of the country, and those converted through the use of the English language. The one receives his impressions from the language used to define the character of heathen deities and heathen views of religion. If his language represents his deity as possessing attributes and a character different from the true God, how can he correct his ideas, and feel as the one does who gets the true idea of God? If the idea of sin is conveyed to his mind by language that fails to represent it in its true character, how is he to feel the exceeding sinfulness of sin? That such is the case with regard to the language of most pagan countries, there can be but little doubt. The ideas of Christianity, as represented by the English language, are not conveyed through such language. We cannot, therefore, expect converts from paganism to look upon Christianity altogether as those do who are better instructed in its ideas.

The Romans, as the worshipers of Jupiter and Mars, were a warlike people; as the worshipers of Venus, they were a lecherous people. So all the ancients cultivated and practiced the virtues and vices of which their gods were the patrons. Not one of all the gods described in heathen mythology, and worshiped by the Orientals, possessed the characteristics of the God of the Bible. The Budhists, Taouists, and Confucians of China have learned to pay their highest veneration to their deities. And when the English words used as names of the Supreme Being are translated into Chinese, there are no words to be found to express the true idea of God, that are not used as appellations of their own deities. What is true in this case, is also true all through the languages of pagan countries. And what is true of this one item of religion, is also true of many other items of it. Hence we find that the English language is the only one in use, by which Christianity can be fully represented and understood.

The literature of every nation is embodied in its language. Every Latin student has become familiar with Latin literature by the time he has mastered the language. It will be impossible for him to cast out of his mind the many new ideas he has obtained from the study of the language, so long as he retains a knowledge of the language. So is it with all languages. The French language conveys the polite, voluptuous literature of France to the mind of the one that learns it. German ideas are learned by the study of the German language. Thus is it, that one thinks and talks and believes and frames his mind and character in the language he learns and uses.

The language of pagan lands conveys pagan literature and pagan ideas and habits to those who use it. It will be almost impossible for a pagan, in the use of his vernacular, to rise above the habits and character of his country. His religious ideas will be those conveyed by his literature. And nothing short of the Divinity that accompaines the Gospel of the blessed Saviour can change or entirely modify his religion.

The language and literature, as well as the religion of pagan lands, are alike serious hindrances to the introduction of the true religion. The easiest and surest method of overcoming these hindrances, is an unsettled question of vast account. The universal prevalence of the English language would materially aid, as it has a religious literature, and fully expresses Christian ideas, and on this account is sometimes called a religious language. The pagan receives ideas through the English language that he could not receive from his vernacular. He receives the idea of the exceeding sinfulness of sin from the English. From his vernacular he received only the idea of mistake or error. Under the former impression he sees himself condemned and lost; under the latter, he can readily find an excuse for his mistake, and justifies himself.

Our missionaries have complained much of the exceeding duplicity of the Chinese character. They have had to use their utmost sagacity in detecting it, and preventing imposition. There is every reason to fear that this will always present an obstacle to their success. Could they talk to them in plain English, they might perhaps be able better to meet this difficulty. Some missionaries have taught the English language to the natives as the best means of bringing them to embrace the religion of the Bible. Others esteem a knowledge of the English language by more or less of the people as indispensable to the success of the Gospel in pagan lands. J. B.

ALFRED ACADEMY.

The Winter Term of Alfred Academy has been unusually prosperous. The number in attendance has been about two hundred and thirty. The term closed on Wednesday, March 12th, at 1 o'clock P. M., after an examination of classes occupying the two and a half days previous. The examinations indicated, that very much labor had been expended during the term upon the studies pursued in the several departments, with a corresponding success on the part of the students. On the Tuesday evening previous to the close of the term, the Department in music held an *exposè*, consisting of a concert given by the classes in Vocal and Instrumental Music. Although the evening was exceedingly stormy and tedious, the large chapel of the Institution was filled, and the audience indicated that they were amply repaid for coming out on so boisterous a night. Some of the performances, both in singing and instrumentation, were very successful. Among the pieces upon the piano, we noticed particularly, "Speed the Plough, with variations," played by Miss Wood; "Gov. Miller's March," played by Miss Mitchell; "The Wandering Minstrels," played by Miss Goodrich; and "La Prophetè," an instrumental duette, played by the Teacher of the Department, Mrs. E. P. Larkin, and Miss Goodrich. There were many other pieces well played, which we have not time to notice. Of the songs, "I long for Jenny with the light brown hair," was sung by Miss Wood, with much delicacy and expression. "A Musical Dialogue," by Mr. T. M. Stillman and Mr. Tanner, was sung with much humor, and convulsed the audience with laughter. The "Captive Knight" was finely sung by Miss Goodrich, also "Life on the Ocean Wave," by Mrs. Pickett, was beautifully enunciated, and sung with sweetness and expression, although it would have been an improvement if it had been sung with more volume of voice. But it remained for Miss Ida F. Sallan to crown the vocal performances of the evening by the highly successful manner in which she sung, "I know that my Redeemer liveth," from the oratorio of the Creation.

The Spring and Summer Term of Alfred Academy commenced Wednesday, the twenty-sixth March. The prospects are fine for a large term. A SPECTATOR.

FROM THE LAND OF CANAAN—NO. 7.

JAFFA, January 1, 1856.

DEAR SISTERS,—With heartfelt gratitude, I hail the opening of this new year. It brings to mind the blessings which have crowned the past; and I feel to devote myself with renewed vigor to this work, and to Him who has watched kindly over us, who never slumbers nor sleeps, who numbers the very hairs of our heads, who suffers not a sparrow to fall to the ground without his notice, and "hears the young ravens when they cry."

While recounting our blessings, I cannot well dismiss the sad thought, that the grave has closed over one of our colony. And we have cause for deeper sorrow even than this; for there is a more ruthless destroyer here than even the grim monarch of the grave; and not only here, for when we look at the records of the last year, and read the testimony that comes up from nearly every quarter of the globe, we see that sin sits enthroned in high places, and holds dominion from sea to sea. We hear of "wars and rumors of wars," and little else appears to our vision but confusion and devastation. Still, we may not despair, for better and brighter days are spoken of by Him who mistakes not, nor fails in the full accomplishment of all his plans. Yet let us not, dear friends, lose sight of our own individual responsibility in hastening these promised and glorious results.

Jan. 2d. The Rev. Mr. Marks, of America, and the Hon. Mr. Calthorp, son of Lord Calthorp, of England, left here this afternoon for Alexandria. They arrived here yesterday afternoon from Jerusalem, and accompanied us last evening to the Rev. Mr. Kruse's, who gave a new year's party, and where we passed a very pleasant evening. Mr. Kruse is a clergyman of the English Church. Mr. K. and his worthy wife are highly esteemed by all who know them.

Jan. 8th—Evening. The flat roof of our house affords an inviting position to look at the heavens, for night has thrown a sombre mantle over a weary world; and Luna, pale, yet peerless, moves on in her majesty, and in her train are all the constellations of the skies, and myriads of glittering stars bespangle the deep blue serene. No where are the heavens more pure, intense, and cloudless, than above Syria. Most probably it was a night like this when David gazed upon the bright constellations and said, "When I consider thy heavens, the work of thy fingers; the moon and the stars, which thou hast ordained; what is man, that thou art mindful of him? and the son of man, that thou visitest him?" The inhabitants now, as in by-gone days, resort to the roof to enjoy the open air. Most of the dwelling houses are built of stone, with a flat roof surrounded by a wall from three to five feet high, to prevent persons from falling. Moses said, "When thou buildest a new house, then thou shall make a battlement for thy roof, that thou bring not blood upon thy house, if any man fall from thence." The staircase from the roof leads down into the court, by which one can descend and escape without passing through the house. Our blessed Lord said to his disciples, when he predicted the destruction of Jerusalem, "Let him that is on the house-top not go down into the house, neither enter therein to take any thing out of the house."

Feb. 10th. Alone upon the terrace; much rain has fallen this day; but the scene has changed, and the setting sun is now casting a charming, hallowed spell on every thing around; while it moves majestically from the white clouds tinted with gold, which rest on the edge of the horizon, and is fast sinking behind the western wave, and climbing high to its zenith, over the far distant homes of many loved ones. What a charm hangs around them! How many tender and thrilling associations spring up from the deep fountains of the soul! Memory, ever faithful to its charge, now arrays before me dear countenances, which draw forth a tender tear. Shall I ever greet them again? Hope says yes, and plumes her pinions to light the pathway, and points to a future world.

Feb. 12th. There is much suffering here on account of the extreme high prices of provisions. One poor widow, who has three small children, comes to us for her daily bread to prevent starvation, and we are doing what we can for others. There is no lack here of lip confession that God is good; still there is a deadness of the conscience which it seems almost impossible to arouse. There are some persons, however, with whom I have daily conversation, who seem to be awakened. I cannot say that this is a real work of grace in the heart. Still, my hope and my trust is in God, whose command to us is, "In the morning sow thy seed, and in the evening withhold not thy hand; for thou knowest not whether shall prosper, this or that."

MARTHA SAUNDERS.

THE FIRST RESPONSE.

INDIANAPOLIS, Ind., March 24, 1856.

In response to a call, in the *Sabbath Recorder* of last week, for "Ten Life Members of the Missionary Society," I herewith enclose you twenty-five dollars, to constitute myself one of the ten, hoping it may prove at least some slight aid in the pulling down of the strong holds of the adversary, and in the advancement of Christ's Kingdom in the earth. Could not something be done to "stir up" our *young men* in this work? Plain *facts* will move those whom *arguments* will not reach, and I hope the *Recorder* will lay them before the people. Yours very truly,

NOYES SPICER.

THE REVIVAL AT ADAMS.—A recent letter from Eld. James Summerbell says:—

"You will be glad to learn, that since the last notice in the *Recorder* of our revival, we have been again called to the baptismal waters. Last Sabbath nine more happy converts were laid in the liquid grave, making forty-seven since the revival; and others still are to go forward. In addition to those received into the church by baptism, seven have been received upon their profession, who had been previously baptized—some by Eld. A. B. Burdick—but had not united with the church till now; and some have been received by letter. During the winter, the church has held about five evening meetings during the week, and for about three weeks we met every evening. In view of what has been accomplished, therefore, I cannot help repeating, we have done but little; yea, I fear we have been *altogether* unprofitable servants, and, as I look back upon the good work, give all the glory to God, and cry, 'What hath God wrought!' To some it will be interesting to learn that several of the number baptized were formerly observers of first-day."

A NEW SOCIETY.—A Society has been organized in Philadelphia, called "The American Systematic Beneficence Society." Its object is to endeavor to promote the great work of *Systematic Beneficence*, according to the scriptural principle, viz: that of *giving statedly*, and "*according as the Lord has prospered*" each person. The characteristic doctrine of the Society is, that a certain per centage of every one's income is to be given to the Lord, and a portion also of what each one already has. In a Circular, it is stated that in Philadelphia "many are giving ten per cent., others one-quarter, others one-third, and some nearly the whole of their income. Some gentlemen connected with this Society are giving for benevolent purposes twenty-five to thirty thousand dollars a year. It is said that there are those in New York who give twice this amount, and that one gentleman in England has given, for a long time, one hundred dollars a day for Foreign Missions."

The following is the Pledge, or Covenant, adopted by those who become members of the Society:—

"Believing that the Scripture system of benevolence requires every one statedly to 'lay by him in store as God hath prospered him,' I engage, on every Sabbath, or at other stated periods, to set apart such a portion of what God shall give me, as my judgment and conscience shall dictate; to be sacredly applied to charitable objects, according to my sense of their respective claims."

SUNDAY TRAINS SUSPENDED.—The Albany *Argus* states that "the Central Railroad has discontinued its Sunday passenger train, and that the Erie road signified a willingness to do the same. We believe that the proposition originated with the Central; and that, without waiting for the concurrence of the rival line, they have carried it into effect. The Northern Railroad, it is stated, has adopted the same rule; and, last of all, the Hudson River."

DEATH-BED TESTIMONIES.—Whitfield was accustomed to say that earnest and devoted Christians do not always have peaceful and triumphant deaths. God is honored by their holy lives, and does not need additional testimony from their last hours. F. D. Maurice has some striking remarks of a similar bearing:—

"We must turn elsewhere than to the books of the New Testament for death-bed scenes. One beautiful record of the first deacon of the church, who prayed for his countrymen, 'Lord, lay not this sin to their charge,' is all that we have of martyrology in the Bible. Its warriors fight the good fight. We know that in some battle or other they finish their course. Where, or how, or under what circumstances of humiliation or triumph, we are not told. If it pleased God that their lamps should shine out brightly at the last, that was well, for He was glorified in their strength. If it pleased Him that the light should sink and go out in its socket, that was well too; for He was glorified in their weakness. Not by momentary flashes does God bid us judge of our fellow-creatures; for He who reads the heart, and sees the meaning and purpose of it, judges not of them by these. And never be it forgotten, that at the death which has redeemed all other deaths, and made them blessed, there was darkness over the land until the ninth hour, and that a cry came out of the darkness, 'My God, my God, why hast thou forsaken me?'"

A USEFUL CHURCH.—The *Independent*, in a notice of recent confirmations at St. George's Episcopal Church, in New York, of which Rev. Dr. Tyng is rector, says:—

"The size and liberality of this congregation, and the extensive benevolent operations carried on by it, are well known. The customary Dorcas Society is efficiently sustained. The Parish Sunday-school numbers over *one thousand* scholars, and is one of the largest in the city. A mission Sunday school is supported, numbering nearly three hundred, in which is included a department for German children, under the direction of a German superintendent. A chapel has also been established as a place of worship principally for the parents of the children attending the mission school, in which church services are held, after the scholars are dismissed from their classes. Its congregation is large and flourishing. A sewing-school, under the charge of the young ladies of the church, is held on Saturday mornings, in which poor children are taught the industrial art of the needle. We learn that the church and chapel not only, but also both the Sunday-schools, are imbued with a missionary zeal, and that by the personal solicitation of scholars large contributions are statedly made to the cause of missions."

SELLING SERMONS IN MANUSCRIPT.—The English Plymouth *Journal* says:—

"The clergy of the Clerical Society, meeting at Bridstow, Devon, some days ago, addressed to the Rev. A. Watson a remonstrance on the steps he was taking in the sale of manuscript sermons, and, while acknowledging the many services rendered by him to the church, they thought it right to tell him, that the measure was calculated to bring the church into disrepute, and had already given occasion for much scandal."

Mr. W. sent a long reply, in which he says:

"One great reason which had induced me to put forth the series is, that I have found idle men, if led to choose the sermons they will copy, choose those which offer but little rebuke to their idleness, and which commit to them little or nothing to the order and system of the church. Knowing that the practice largely prevailed, such sermons were as little distinctive as possible, I resolved on publicly avowing my readiness to supply a distinctive and consecutive exhibition of the church's teaching."

SINGULAR SCENE IN AN ENGLISH CHURCH.—The new church at Ambleside, England, has recently been warmed by means of flues leading from a coke fire. Owing to some imperfection in the flues, a deleterious gas issued into the body of the church during the morning service on a recent Sabbath. Young children being nearest the floor, were first affected, and about twenty of them followed one another out before the adults took the alarm. At about the middle of the sermon the congregation rose in a body and went out, to the apparent astonishment of the preacher, who, in his elevated pulpit, was unware of the mischief. He was left entirely alone in the church; and it is the opinion of the medical men that if the congregation had staid fifteen minutes longer no one would have been able to help himself or his heighbor, and many must have perished.

THE SUNDAY IN ENGLAND.—The following motion, offered in the British House of Commons by Sir Joshua Wamsley, and discussed with great interest, both in and out of Parliament, has at length been rejected:—

"That, in the opinion of this House, it would promote the moral and intellectual improvement of the working classes of this metropolis, if the collections of natural history and of art in the British Museum and National Gallery were opened to the public inspection after morning service on Sunday."

CHRISTIAN HARMONY.—In no other part of the world is there such a degree of Christian union as is exhibited by the different missionaries, one towards another, in India. While occupying stations apart from each other, the laborers in the different societies cultivate each other's acquaintance, and preach together to the heathen. Almost all use the same versions of the Bible, and at Calcutta, Madras, and Bombay the missionaries of all societies meet monthly for united conference and prayer.

THE WEATHER IN ALLEGANY CO.—A business letter from Eld. N. V. Hull, of Alfred Center, Allegany Co., N. Y., says:—

"I have nothing noticeable to communicate, unless it may be to say, that the weather, for severity, is uneqaled. This (the 28th March) is a severe winter day; the snow flies briskly, and everything without looks like the dead of winter. We have now had some ninety-five days' sleighing, and present indications are that we shall have it for weeks to come.

N. V. H.

ORTHODOXY AND UNITARIANISM.—In a late number of the *Christian Examiner*, Rev. Dr. Ellis, in a review of Unitarianism during the last half century, gives the following as the three leading points on which Unitarianism opposes what it calls Orthodoxy:—

First, that human beings do not inherit from Adam a ruined nature—that there is no transfer from his guilt made to us, inflicting upon us a moral inability—that our relation to God has not been prejudiced by his fall.

Second, that whatever be the rank of Jesus Christ in the scale of being, and whatever be his nature, he is not presented to us in the Scriptures as the Supreme God, or as a fractional part of the Godhead—therefore he is not the source, but is the channel of Divine grace—he is not the object of our homage or our prayer.

Third, that the Scriptures do not lay the emphatic stress of Christ's redeeming work upon his death, above or apart from his life, character, and doctrine—and that his death as an element in his redeeming work is made effective for human salvation through its influence on the hearts and lips of men, not through its vicarious value with God, nor through its removal of an abstract difficulty in the Divine government, which hinders the forgiveness of the penitent without further satisfaction.

THE PROHIBITORY LIQUOR LAW UNCONSTITUTIONAL.—The Court of Appeals has decided that the Prohibitory Liquor Law passed by the Legislature of New York during its session in 1854–5, is unconstitutional, and therefore null and void. The feature of the law which seems to have been most prominent before the Court was that which allows the destruction of liquor, or what was held as property before the passage of the law. The Court is said to have stood three for the constitutionality of the law, and five against it. It is also said that they were unanimous in the opinion, that the Legislature has power to prohibit the sale of intoxicating liquors. The Opinions of the several Judges in the case have not yet been written out and made public. It is not likely that a new law can be got through the Legislature this season, but a stringent excise law has been introduced in the Assembly, which may be passed.

THE KANSAS INVESTIGATION.

Probably the most important measure adopted by Congress during its present session is that to investigate proceedings in Kansas. The Committee consists of Messrs. Howard of Michigan, Oliver of Missouri, and Sherman. They are to be accompanied by G. C. Fogg of Concord, N. H., Mr. Bowen of Westchester, Pa., and S. P. Hanscom of Boston, as Secretaries and Sergeant-at-arms. The following is the act of the House of Representatives under which the Committee was appointed:—

A committee of three of the members of this House, to be appointed by the Speaker, shall proceed to inquire into, and collect evidence in regard to the troubles in Kansas generally, and particularly in regard to any fraud or force attempted or practiced in reference to any of the elections which have taken place in said Territory, either under the law organizing said Territory, or under any pretended law which may be alledged to have taken effect therein since. That they shall fully investigate and take proof of all violent and tumultuous proceedings in said Territory, at any time since the passage of the Kansas-Nebraska act, whether engaged in by residents of said Territory, or by any person or persons from elsewhere going into said Territory, and doing, or encouraging others to do, any act of violence or public disturbance against the laws of the United States, or the rights, peace, and safety of the residents of said Territory; and for that purpose said committee shall have full power to send for, and examine and take copies of all such papers, public records and proceedings as in their judgment will be useful in the premises; and, also, to send for persons, and examine them on oath, or affirmation, as to matters within their knowledge, touching the matters of said investigation; and said committee, by their chairman, shall have power to administer all necessary oaths or affirmations connected with their aforesaid duties.

Resolved further, That said committee may hold their investigations at such places and times as to them may seem advisable, and that they have leave of absence from the duties of this House until they shall have completed such investigation. That they be authorized to employ one or more clerks, and one or more assistant sergeants-at-arms, to aid them in their investigation; and may administer to them an oath or affirmation faithfully to perform the duties assigned to them, respectively, and to keep secret all matters which may come to their knowledge touching such investigation as said committee shall direct, until the report of the same shall be submitted to this House; and said committee may discharge any such clerk, or assistant sergeant-at-arms, for neglect of duty or disregard of instructions in the premises, and employ others under like regulations.

Resolved further, That if any persons shall in any manner obstruct or hinder said committee or attempt so to do, in their said investigation, or shall refuse to attend on said committee, and to give evidence when summoned for that purpose, or shall refuse to produce any paper, book, public record, or proceeding in their possession or control, to said committee when so required, or shall make any disturbance where said committee is holding their sittings, said committee may, if they see fit, cause any and every such person to be arrested by said assistant sergeant-at-arms, and brought before this House to be dealt with as for a contempt.

Resolved further, That for the purpose of defraying the expenses of said commission, there be, and hereby is, appropriated the sum of $10,000, to be paid out of the contingent fund of this House.

Resolved further, That the President of the United States be, and is hereby, requested to furnish to said committee, should they be met with any serious opposition by bodies of lawless men, in the discharge of their duties aforesaid, such aid, from any military force as may at the time be convenient to them, as may be necessary to remove such opposition, and enable said committee without molestation to proceed with their labors.

Resolved further, That when said committee shall have completed said investigation, they report all the evidence so collected to this House,

RELIGIOUS INTELLIGENCE.

A magnificent column is about to be erected in Rome, opposite the College of the Propaganda, to commemorate the promulgation of the Dogma of the "Immaculate Conception." It will be 46 feet high, and the capital ornamented with lilies and wreaths of olives. There are to be two basements; one supporting colassal statues 15 feet high, in Carrara marble, of "the Prophets who spake of the future glory of the Virgin—Moses, Ezekiel, Isaiah, and David,"—and the other bearing the column itself, together with bas-reliefs and inscriptions, recording the solemn definitions of the dogma and also the arms of the present Pope.

The Rev. Dr. Jones, a distinguished Presbyterian minister of Georgia, is earnestly advocating the education of slave children in the Sunday-Schools. He thinks it may be safe to introduce them into the same schools with white children, if placed in another part of the room, and is very confident that religious instruction will make them more useful and reliable as servants. He urges, what has been unavailingly urged a thousand times, that if the slaves of the South perish eternally for want of Christian knowledge, upon their owners will the heavy guilt rest.

It is now becoming a regular practice for travelers to visit the interior of the Great Mosque, on the site of the Temple at Jerusalem. The Pasha of Jerusalem went so far as to offer to the Jews to enter the Mosque, in order to pray for rain; but they refused for two reasons—*first, because they* were all ceremoniously unclean; and secondly, they might have put under their feet the words of the law, which they believe to be buried under this Mosque. The Jews, however, went to the tomb of Daniel to pray for rain, which came next day.

Rev. Dr. Prime died, suddenly, at the house of his son-in-law, A. P. Cummings, Esq., of the New York Observer, March 27. He was well known as a Presbyterian minister of great ability, and author of the History of Long Island. He was a native of the island, having been born at Huntington, in 1785. His sons are men in active service; one of them is a physician at White Plains, two of them are clergymen and connected with the New York Observer, and one of them is a lawyer, now traveling in the East.

The Report of the Methodist Book Concern for the year 1855, presented to the Conference of the Methodist Episcopal Church at Baltimore, states that the periodicals, except the *Christian Advocate*, failed to meet the expenses of their publication. The assets of the concern amount to $738,977, against which there are liabilities to the amount of $170,249, leaving a capital stock of $568,672.

A benevolent individual, having at heart the spiritual advantage of young men, sent to President Maclean, two hundred and fifty copies of "Rev. Dr. Magie's Spring Time of Life," for distribution among the students of the College at Princeton. Another sent fifty copies of "Primitive Piety Revived." Such instances of liberality and benevolence should be recorded, and incite others to go and do likewise.

About thirty citizens of Norwich, Ct., have founded a Free High School in that city, and endowed it with $84,000, of which $50,000 is a permanent fund, the rest being in land and school buildings. The same generous citizens propose to endow it still further, so that every school district in New London County may send one scholar to the school free of charge.

A large number of the most respectable citizens of Portland, Me., united in a very complimentary letter to the Rev. Dr. Cummings, so many years editor of the *Mirror*, on occasion of his leaving that place for his new home, tendering him a public dinner, where the public respect for him and his faithful services might find fit expression. Dr. C. replied affectingly to the letter, but declined the dinner.

It is stated that of the six hundred and six convicts who now occupy the Ohio Penitentiary, two hundred and forty-four cannot read and write, and four hundred have no trade. This statement is full of meaning. It admonishes and instructs. It suggests two great essentials for success in life—education and regular occupation.

Extensive preparations are making on the Continent of Europe for getting up pilgrimages to Jerusalem. According to Galignani, a fresh departure of pilgrims for Jerusalem and the Holy Land was to take place at Marseilles toward the end of February. About the same period another caravan, formed in Germany, was to sail from Trieste for the same destination.

An English officer, after some thirty years' service in India, was engaged in the missionary work. He might have returned to his native land with a pension and a fortune, but he has become a lay-assistant of the Church Missionary Society; his post being Peshawur, a distant frontier station. Such an instance is too rare not to be recorded.

The Christian Advocate, of last week, was in mourning for the death of its late editor, Dr. Bond. A blank column is left under the editorial head, where his weekly speculations on religious and other subjects used to have their place.

Andrew Carney, Esq., of Boston, presented to the trustees of the Sisters of Charity the munificent sum of twelve thousand dollars toward the new St. Vincent de Paul Orphan Asylum, in course of erection.

Romanists boast of thirty-one Colleges, thirty-seven Seminaries, and one hundred and seventeen Female Academies in the United States—all founded and controlled by Jesuits.

A letter from Jerusalem states that on a recent Sunday his Excellency, Kiamil Pasha, attended the English service in company with his two secretaries, and followed as far as the door by a long train of servants.

It is stated that there has been a powerful work of divine grace the past winter in Piermont, N. Y. There were about 70 inquirers, and between 40 and 50 have indulged hope in Christ.

Gov. Gardner of Massachusetts has appointed Thursday, the tenth day of April, to be observed in that Commonwealth, as a day of fasting, humiliation and prayer.

At the close of the first week of the session of Oberlin College, 605 students had settled their bills, and still the daily additions were large.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MARCH 24.

In the **Senate**, information in regard to Nicaraguan affairs was called for. The Deficiency bill was considered for a time, when, on motion of Mr. Weller, the Pacific Railroad bill was made the special order for April 14. The bill for a Government Printing Office was made a special order for April 21.

In the **House of Representatives**, the Speaker announced the Kansas Investigating Committee: Messrs. Campbell of Ohio, Howard of Michigan, and Oliver of Missouri. Mr. Millson made a speech condemnatory of the action of the Naval Board. After voting themselves books to the amount of $1,000 each, the Members adjourned.

THIRD-DAY, MARCH 25.

In the **Senate**, Mr. Mason gave notice of his intention to introduce a bill amendatory of the act remodeling the diplomatic and consular system. A bill was reported, providing for the reception at Government officers of the Spanish and Mexican quarters, eighths and sixteenths of a dollar, at the rate of twenty, ten and five cents respectively, and making them legal tender at such rates to the amount of five dollars. The bill provides for the recoining of these pieces as fast as they come into the possession of the Government. The Deficiency Appropriation bill was discussed.

In the **House**, the Judiciary Committee were instructed to ascertain whether the Kansas Investigating Committee have power to compel the attendance of witnesses, and punish for contempt. Mr. Campbell was excused from serving on the Committee, and Mr. Sherman was appointed in his stead. The Naturalization question was discussed with considerable animation.

FOURTH-DAY, MARCH 26.

In the **Senate**, the Post Office Committee were instructed to inquire into the expediency of discontinuing the franking privileges of Members of Congress, and allowing them money for the payment of postage instead. The Senate also passed the Deficiency Appropriation bill, after amending it.

The **House** debated the Senate's bill in relation to the confinement of persons guilty of violating the laws of the United States in Penitentiaries within the Judicial District where convicted.

FIFTH-DAY, MARCH 27.

In the **Senate**, all matters connected with the action of the Naval Retiring Board were made the special order for Second-day next. The Invalid Pension bill was passed. Senator Harlan made a speech on Kansas affairs, taking ground against Mr. Douglas' report. Adjourned to Second-day.

In the **House**, the Committee on Foreign Relations were instructed to inquire into the expediency of modifying the act remodeling the Diplomatic and Consular system. The rest of the day was occupied in the consideration of the bill defining the rights of voters and the duties of the Commissioners of Elections in Washington.

SIXTH-DAY, MARCH 28.

The **Senate** was not in session.

In the **House**, the bill prescribing the qualifications of voters in the District of Columbia was recommitted to the Committee. Mr. Lane, from Oregon, appealed for aid to suppress Indian hostilities in that Territory, and offered a bill appropriating $300,000 to secure the services of friendly Indians. Adjourned to Second-day.

European News.

The Cunard steamship Emeu, with Liverpool dates to March 12th, arrived at Boston March 27th. The news brought by her is unimportant.

The Paris Congress held its seventh sitting on Monday, the 10th of March, but its proceedings, like those of previous sittings, were enveloped in complete secrecy. The belief continued to prevail, that the object of the Conferences would be attained. In a written reply to an address of the nobles of Silesia, in Prussia, thanking him for the readiness he had shown to negotiate, the Czar expresses "a hope that God will favorably hear the prayers which he, and those who share his sentiments, unceasingly offer Him for the success of this attempt."

Paris was, as usual, in an excitement about the approaching Imperial birth; and correspondents say that the greatest curiosity was manifested by the public to see the Imperial baby-clothes. Prince Jerome Bonaparte had been seriously ill; but on the day previous to the steamer's departure, his malady had taken a favorable turn, and he was considered out of danger by his physicians.

The Coroner's Jury have returned a verdict, in the Sadlier fraud case, that the deceased committed suicide while perfectly sane.

Intelligence dated Marseilles the 11th of March, and Crimea the 1st, mentions that a neutral line had been traced between the Allied armies and the Russians. A review of 50,000 British troops took place on the 25th of Feb., at Balaklava. The White Works at Sevastopol were blown up on the 28th of February.

The Allies were constructing wooden huts on both banks of the Bosphorus, for their troops, and English Engineers were laying out a camp on the Asiatic Coast.

A financial crisis had occurred at Constantinople. The Exchange on London had risen to 197; that on Vienna to 520. The French piece of 20 francs was worth one hundred and eleven piasters, and the English pound sterling one hundred and forty piasters. The Ministers of Finance had appealed to the merchants, and invited them to devise some means of remedying the evil.

Telegraphic accounts from Hamburg state that advices had been received there from Norway, announcing that a serious commercial crisis had occurred there. In the city of Bergen alone twenty houses had suspended payment.

Three Days Later.

The Canada, with three days later news, being to March 15th, arrived at New York, on the 28th March. The news brought by her is epitomized by the *Tribune* as follows:

She brings no news of the Pacific. Mr. Dallas had arrived at Liverpool, where the American Chamber of Commerce greeted him in a congratulatory address. Mr. Buchanan's speech at the Lord Mayor's banquet had produced a soothing effect, and all excitement respecting a war with the United States had died out. Accounts from Paris and other parts of the Continent agree in considering peace as certain. The Peace Congress, however, has still many details to arrange, and the signing would for that reason be somewhat delayed. The Russian and Allied Generals in the Crimea had established a line of neutral ground. There was still considerable sickness in the French and Russian armies. In Parliament, Admiral Napier has brought forward his motion for a committee of inquiry into his management of the Baltic fleet. The programme of arrangements for the birth of the Empress Eugenié's baby had been published, but the interesting stranger had not arrived. Persian affairs are looked upon with some interest, and two British war steamers had gone up the Persian Gulf to watch a rumored attack upon India.

California News.

Two weeks later news from California was received in New York on the 27th March, by the steamer Illinois. She brought $1,261,000 in gold dust. The following summary embraces the principal items of news.

The most interesting topic in San Francisco during the two weeks before the steamer sailed was the trial of Cohen for embezzling the assets of Adams & Co. It seems that the cash book and ledger of Adams & Co. were the evidence chiefly relied on in the case, but these were missing. On the 27th of February they were discovered in the most extraordinary manner on the beach where they had been washed ashore by the waves. The event created quite a sensation.

The City Council of Sacramento has passed an ordinance requiring all the butcher shops or meat-markets in the city to be closed at and after 12 M. on each Sunday, nor must they make sale of any meat on that day after that hour. This is the first law in the State to forbid on Sunday the prosecution of a calling acknowledged by all to be necessary and moral.

A large fire occurred in Sonora the 26th February. The loss was $36,000.

The Indians about the mouth of Rogue River have attacked the whites, burned a number of houses, and killed about twenty persons. Among the killed is Capt. Ben. Wright, late Sub-Indian Agent. A lady and her daughter are in captivity with one of the Indian tribes.

Slave Case in California.

A very interesting case has been decided in favor of freedom, by Judge Benjamin Hays, of the first Judicial District in California. Robert Smith left the State of Mississippi, took two slave women with their six children, went to California, where he has kept them as servants, the number of the family having now increased to fourteen. Smith was about to return to the Atlantic side, intending to settle in Texas, carrying the blacks with him. A writ of habeas corpus brought them before the court, where Smith pretended that they were going to Texas with their own consent, and one of the women declared that he told them they would be as free in Texas as in California. It was proved that Smith had but $500, after making provision for his journey. Also, that the lawyer who sued out the writ of habeas corpus had been tampered with after the parties had been brought into court, and had abandoned the suit. The judge decided that those persons were all free by the express provision of the constitution of California; that there was no proof of their willingness to go to Texas; that if the women were willing to go, they could not be allowed to decide the momentous question of voluntary slavery for their young children; that Smith could not take them back to Mississippi because the importation of slaves is prohibited by the constitution of that State; that he could not take them to Texas as free, because the constitution of that State prohibited the settlement of free negroes; that the mother would be the proper guardian of the children, if a suitable person, and able to protect them; that under the circumstances they should be placed in the special charge of the Sheriff, who should watch and protect them; and that if Smith or any one else should attempt, by force or fraud, to rescue or inveigle any of them from the Sheriff, it would constitute the crime of kidnapping, and be severely punished by law. There seemed to be no person to claim the rights of paternity to these children, which is remarkable, as there seems to have been no man slave in the family. [Independ.

Heroes of the Rail.—Engineer John F. Haskins, in charge of a passenger locomotive upon the Rochester and Niagara Falls Road, saved a train of cars containing one hundred and fifty travelers, thus skillfully and bravely. He was running rapidly upon an embankment. A flange flew off from one of his forward truck wheels. The divergence of the head of the machine from the line of the track caught the engineer's eye, and told him that the engine must go down the bank. At the same instant he felt the train press upon the tender and engine, and knew the couplings were slack. This sensation suggested to his experienced mind as quick as lightning, the salvation of the passenger cars by the breaking of the first coupling next the tender by a sudden and powerful jerk. He twitched open the throttle valve to its full width, and gave the pistons suddenly a full head of steam. The engine leaped and snapped the couplings of the first car, plunged down the bank and overturned—the whole train passed in safety upon the rails, and were stopped by the breaks—its saviour, severely wounded, but not killed, laid at the bottom. Dignified as heroic, the faithful engineer refused a large present of money from the passengers whom his devotion had saved.

A Husband Property.—The free North, after all, is not half as free, in some respects, as the South. Only in the slave States is it any woman's prerogative to go into the market and buy a husband on such terms that she can compel all the world to treat him as property, while she secures the advantages of getting a chattel instead of a master. This prerogative has been exercised by a New Orleans dame, one "Margaret Adams, a sprightly f. w. c, of No. 269 Bienville street." The Bee says that on the 1st of March she made affidavit before Recorder Ramos, that her husband was her slave, "she having bought him for a husband," and demanded the arrest and amersement in damages of a bellicose free black named Edwin Nash, who had whipped her spouse so severely that he was confined to the house.

Horrible Tragedy.—The Syracuse *Journal* of Monday, March 24, says that a most heart-rending occurrence took place, yesterday (Sunday) on the Oneida Lake Shore road, six miles east of the village of Bridgeport, in Madison County. A woman by the name of Ward, wife of Matthew Ward, who is represented to us as being a drunken, worthless fellow, murdered four of her children in cold blood!

It appears that the husband neglected his family, and treated them in the most cruel manner. The wife and mother has threatened that if he did not reform his ways and help her to take proper care of the children, she would murder them and take her own life. He heeded not the threat, but persisted in his brutality.

Yesterday morning he left home to go fishing on the Lake, and during his absence she executed her threat, taking an axe, and with it cutting the throats of four of the five children, the youngest of whom was only two months old. The oldest of the children, aged about eight years, escaped only by running away, she vainly pursuing him, with axe in hand, for some distance.

She then returned to the house where she had perpetrated these shocking acts, and seizing her husband's razor, attempted to commit suicide by cutting her throat. She did not cut deep enough, however, to render the wound fatal, and when discovered was literally covered with blood, and suffering the most intense agony.

Capture of an American Slave-Schooner by a Brazilian Brig-of-War.—By way of England we have Rio Janeiro dates to the the 4th of February. The American schooner Maria E. Smith had been captured by the Brazilian brig-of-war Olinda, while attempting to land 320 negroes which she had brought from the coast of Africa. The Olinda took the schooner into Bahia, where the commander and crew (all American) were ironed and locked up in the jail. When the schooner left the coast of Africa she had on board 500 blacks, but they were so closely packed on board, totally naked, and so badly fed during the voyage, that 180 died and were thrown overboard, and of those landed at Bahia 64 died a few hours afterwards. The survivors were immediately fed and clothed, and will be taken care of until their ultimate destination is resolved upon. The Maria E. Smith (or Mary Smith) was formerly a packet running between Boston and Halifax. She left Boston for the coast of Africa some time last Autumn. Attempts were made to detain her on suspicion of her being a Slaver, but she ran away from the Revenue Cutter after she had been seized by the U. S. Marshal.

Value of a Microscope.—Professor Ehrenberg's microscope, which did such good service in procuring undeniable proof of the Simonides fraud, has been made use of again, in Prussia, to detect the thief that stole a barrel of specie, which had been purloined on one of the railways. One of a number of barrels, that should all have contained coin, was found, on arrival at its destination, to have been emptied of its precious contents, and refilled with sand. On Professor Ehrenberg being consulted, he sent for samples of sand from all the stations along the different lines of railway that the specie had passed, and by means of his microscope identified the station from which the interpolated sand must have been taken. The station once fixed upon, it was not difficult to hit upon the culprit in the small number of employees on duty there.

An Old Miser.—The Wilmington (Del.) Republican tells a story of John Beeson, an old miser in those parts, who is a bachelor, about eighty years of age, and by his peculiar mode of living has amassed a fortune, being the owner of some two or three hundred acres of land in Brandywine Hundred. It is alledged that since he arrived to manhood he has never slept in a bed, preferring to lie on the floor near the fire-place, with a stick of wood for a pillow. He has taken all the wheat he produced on his farm to the Brandywine mills, where, it is said, the money has remained for two or three years before he would lift it. He went without shoes, and the soles of his feet became impervious to briars and even thorns.

SUMMARY.

In the Supreme Court at Boston, a few days ago, among the opinions delivered was one in the case of Mary Chase vs. Job Chase. This was a suit brought by plaintiff against her father-in-law for damages for a large amount for slander. It appeared that the plaintiff had procured in the State of Maine a divorce, and had commenced the suit in the present case in the Supreme Court of Massachusetts in her own name. The Court ruled that the divorce in Maine was void in Massachusetts on the ground that the plaintiff went there for the purpose of obtaining it on grounds which would not have been sufficient in Massachusetts. The suit in her own name was not therefore properly brought, and the action was void.

Florida papers speak of the delightful spring weather, many of the earlier-leaved trees being already clothed in living green. The Alligator *Advertiser* says: "The cropping season is fast approaching, and our planters are getting ready for it. We saw a field of corn planted two weeks ago. The annual burning of the woods has just commenced, and in the upper part of the country the range is thoroughly burnt off."

According to the English journals, the Minie weapon must soon be superseded. Lancaster's elliptically bored carbines having been subjected to various proofs in the arsenals at Woolwich, her Majesty's corps of sappers and miners are now being armed with them. These muskets have several qualities which have caused them to be pronounced superior in construction and power to the Minie rifle, and have a range of upwards of 1,000 yards.

The last number of the *Herald*, published at Camden, Arkansas, contains the following: A few days since, a negro woman, belonging to Col. John Ducery, the worthy President of our railroad, was delivered of four children at one birth—three girls and one boy; their average weight is seven pounds each. When last heard from, the mother and children were doing well.

The Presbyterian church in Ovid, Seneca county, N. Y., was destroyed by fire on Monday week, and the district school adjoining. The estimated loss of the church is $10,000, and no insurance. The loss of the school about $1,000.

The Legislature of New Jersey at the recent session incorporated, with very liberal privileges, the Long Wharf Company of Jersey City, capital stock $800,000, with authority to borrow money, if this be not sufficient, for an extensive improvement of the Hudson River front opposite this City, and to build a rail track to and through Bergen Hill. The whole improvement will be arranged with particular reference to the convenience of the Erie Railroad and its freight customers, and is also expected to be the means of inviting many Flour and other Produce receivers to put up extensive storehouses on the Jersey side of the North River, as well for the convenience of shipping as receiving Produce arriving by the Erie Railroad.

A bill has passed the Legislature of Kentucky to raise a sum of money by special tax, for the purpose of keeping [redacted] bank of the Ohio river, to [redacted] of slaves. The injustice o [redacted] in the fact that there are [redacted] 37,456 slaveholders, who [redacted] while there are 722,957 [redacted] who of course own a large amount [redacted] property, real and personal, in the State. This bill proposes to tax the property of these 700,000 non-slaveholders for the especial and exclusive benefit of the 40,000.

Several varieties of pears were imported by one of the Havre packets lately. Twenty cases of them came in excellent order, packed in paper cuttings. The largest weigh about one pound, and sell readily at one dollar each; smaller ones retail for seventy-five cents, and those of ordinary size for fifty cents! The flavor and juice are well preserved. Each of the cases contains from 125 to 150 pears, and they cost in France about $10 per case. The fruit was all grown in the open air.

John Dougherty, a prominent young man in Irish movements in New York, died suddenly on the 25th of March. He was Corresponding Secretary of an association of "Young Friends of Ireland," and while they were celebrating St. Patrick's Day with a banquet and speeches, he fainted in the supper room, and died in a short time, causing great dismay among the guests at the festival.

The consolidation of the Perkins Mills and the Dwight Manufacturing Company, at Chicopee, brings into one concern a capital of $1,700,000. This is said to be the largest establishment in New England devoted entirely to the manufacture of domestic goods. Seven first-class mills are included in it, running 60,000 spindles, and giving employment to more than 1,600 persons.

At the Island of St. Helena there has been established by the British Government an excellent hospital for sick seamen of all nations, to which they are admitted free of charge; and also a Time Ball office for rating and correcting ships' chronometers, at which the ball drops twice daily for the benefit of the shipping.

Hon. John G. Palfrey has withdrawn himself from the political arena, and it is understood intends to devote the remainder of his life to literature. He is writing a history of New England, and will in a few weeks sail for England, in order to prosecute his researches in the archives of the mother country.

The Pacific steamer has now been out ten weeks. The public expectation of seeing her, or even hearing of her fate, is very faint indeed, but the insurers have not yet consented to acknowledge that she is lost. The ice has been unprecedented in the Atlantic, and the average time made by vessels from Europe has been very long.

The St. Paul Minnesotan announces an arrival in that town from Pembina. The party were eighteen days on the route, and had a pleasant trip. The snow on the level is three and a half feet deep; and the cold has been intense, and many cattle have frozen to death. The oldest inhabitants consider this the most severe winter ever experienced in the North.

A wrecker is constructing a novel apparatus for raising ships. It consists of two large timber tanks, shaped like a boot-jack, to receive the ends of a sunken vessel between them. They will be first sunk, by filling with water, attached to the vessel to be raised, after which the water will be exhausted, thus securing a lifting power.

A dispatch dated Philadelphia, Sunday, March, 23, says: Mr. William J. Hatch, a member of the Camden Common Council, was shot this morning by a party of gunners, whom he had ordered to leave his premises at Cooper's Point. The murderers were arrested and committed.

The Lexington Observer and Reporter of the 16th ult., advertises a public sale, to be held at the residence of Cassius M. Clay, in Madison county, Kentucky, consisting of land, cattle, furniture—"also about twenty-two slaves, men, women and children, which will be sold during said Clay's life."

The Japanese are not so ignorant and benighted after all. They do not punish a prisoner for attempting to escape, if retaken, believing that every one has a natural right to liberate himself, if possible—but those through whose neglect the escape is effected are visited severely.

A lump of coal was taken from the Coal Mine of D. Smith & Co., in Austintown, one day last week, which weighed two thousand two hundred and forty pounds. It measured 6 feet 4 inches in length, 2 feet 6 inches in breadth, and 3 feet 2 inches in thickness.

The Cincinnati Commercial says that the costs taxed in the late fugitive slave cases amount to at least $20,000, and that there is no appropriation by Congress to pay any costs occurring prior to the issue of the Commissioner's certificate.

Upwards of forty tons of fresh codfish were carried over the Boston and Providence Railroad to New York, on Saturday. The fish were packed in one hundred and seventy boxes.

The Salem Register states that in Danvers, last year, persons were employed in planting and sowing on the 12th day of March, in fields where there was this year a foot in depth of snow and ice.

Nelson Robinson, a New York millionaire recently died very suddenly, from apoplexy, aged 47 years. He had been to church, and on his way home in a carriage, became insensible, and died a few hours afterward.

The Messrs. Longman recently paid to Mr. Macaulay the sum of sixteen thousand pounds for his two new volumes.

Revivals of religion are now in progress in Tiverton, R. I., and Littleton, Mass.

The interesting and long-disputed case of Ogden vs. Astor, which has been so often before the Courts, and in which no less a sum than $250,000 was involved, has been at length settled by a compromise. Mr. Astor pays Mr. Ogden half the amount claimed, $125,000, and charges himself with the total expenses of the suit, about $15,000.

Dennis Kimberly and John C. Hollister, Esqs., of New Haven, are appointed Commissioners on the estate of the Jerome Clock Company, and Wm. P. Burrall and Dwight Morris, Esqs., of Bridgeport, are the Commissioners on P. T. Barnum's estate. The time for presentation of claims is limited to sixty days.

The Joliet (Ill.) *True Democrat* says apple and peach trees are nearly all destroyed in that region. Not less than four-fifths of the fruit trees in Will County are killed. The [redacted] *Guardian* says the fruit buds are [redacted]bouts, except [redacted] Sunday, [redacted] and tried to kill [redacted]

A letter from Montgomery, Ala., says [redacted] the planters had commenced putting their seed into the ground on the 15th, a half a month later than is usual with them.

The *Church Journal* states that the late Henry Parish, of this city, in his will, left a bequest of $10,000 to St. Luke's Hospital.

New York Markets—March 31, 1856.

Ashes—Pots $6 00; Pearls 8 00.

Flour and Meal—Flour 6 87 a 7 25 for ordinary to good State, 7 25 a 7 87 for Ohio and Upper Lake, 8 50 a 10 50 for extra Genesee. Rye Flour 4 25 a 6 25. Buckwheat Flour 1 50 a 1 75.

Grain—Wheat, 1 70 for red Southern, 1 75 for white Michigan. Rye 1 11 for Pennsylvania, 1 14 for Northern. Oats 41 a 43c. for State, 42 a 46c. for Ohio and Chicago. Corn 60 a 67c.

Provisions—Pork 15 00 for prime, 16 25 for mess. Beef, 8 25 a 8 75 for prime, 9 25 a 10 75 for country mess. Butter 17 a 20c. for Ohio, 20 a 23c. for Dairy, 23 a 26c. for fresh made. Cheese 8 a 10½c.

Hay—1 12 per 100 lbs.

Lumber—14 00 for Eastern Spruce and Pine.

Seeds—Clover 13½ a 14c. Timothy 3 50 4 00 per bushel for reaped. Rough Flaxseed 1 16 a 1 18 for 56 lbs.

Wool—36 a 55c. for low to fine qualities Fleece.

MARRIED,

On the 6th of March, by Eld. V. Hull, Mr. George R. Maxson to Miss Lydia Elvira Babcock, all of Milton, Rock Co., Wis.

In DeRuyter, March 20, by Eld. J. R. Irish, John A. Weeks to Blendine Allen, all of DeRuyter.

In Hopkinton, R. I., March 23d, by Eld. D. Coon, Mr. Cyrus H. Brown, of North Stonington, to Miss Sarah C. Maxson, of Hopkinton.

DIED,

In Hopkinton, R. I., Jan. 21, 1856, Mrs. Desire Crandall, wife of Nicholas Crandall, aged 57 years. She was a member of the 2d Seventh-day Baptist Church in Hopkinton. Her death was very sudden. We believe she rests in hope. D. C.

At Verona Mills, Oneida Co., N. Y., March 25, 1856, Clarissa-Annette, aged 7 months, daughter of Daniel and Abigal H. Ayers. D. P. C.

At Adams, Jefferson Co., N. Y., of putrid sore throat, after a short illness, Asa Nathan Maxson, aged five years, son of Harvey Maxson, of Adams. "Jesus said, Suffer the little children to come unto me, and forbid them not; for of such is the kingdom of God."

In DeRuyter, March 17, Mary, wife of H. P. Hart, aged 36 years, leaving a large family of children to mourn their early motherless lot. She was mild and lovely in life, and placid in death.

On the 23d, Hiram L. Swift, aged 24 years. He had never embraced religion till during his decline, but died committing his soul in confidence to God.

Also, on the 23d, after a lingering decline, Horatio Coleman, aged 40 years.

LETTERS.

W H Webb, L H Vars, J R Saunders, C M Lewis, Lee Brown, A H Lewis, T F West, N V Hull, T R Green, G W Post, S P Stillman, J R Irish (box not received,) V Hull, A Utter, W B Maxson, D Doty, Z Scriven, D P Curtis, J D Coon, Welcome Clarke, Abram Burger, Charles Spicer, Noyes Spicer, L Sission, Daniel Coon, James Summerbell, V M Burdick, John Whitford, Lyman Pratt, D Saunders.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

WILLIAM M. ROGERS, Treasurer.

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

Board Meetings.

THE next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary Society, the American Sabbath Tract Society, and the Seventh-day Baptist Publishing Society, will be held at the house of T. B. Stillman, No. 80 Seventh-St., New York, on Fourth-day, April 9th, commencing at 10 o'clock A. M. GEO. B. UTTER, Sec.

The next Quarterly Meeting of the Executive Board of the Seventh-day Baptist Education Society, will be held at No. 80 Seventh-St., New York, on the 8th day of April, 1856, commencing at 10 o'clock, A. M. The Committee on the location of the Denominational College and Theological Seminary will, at this Meeting, present their report, which will be made the subject of consideration. A large attendance of the members of the Board is solicited.

W. C. WHITFORD, Rec. Sec.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

[redacted] Union for [redacted] tion Book Trade, as testi [redacted] refer to the unparalleled success of our [redacted] the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid.)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Miscellaneous.

Shipwreck, Suffering, and Death.

The packet ship Germania, Capt. Wood, from Havre, arrived at New York on the 24th of March, having on board a young man picked up at sea, named Thomas W. Nye, of New Bedford, who is probably the only survivor of the ship John Rutledge. From the statements made by Mr. Nye, the New York *Times* furnishes the following sad narrative:

The packet ship John Rutledge, commanded by Captain Kelley, of New York, and owned by Messrs. Howland & Ridgeway, sailed from Liverpool on Jan. 16. She met with severe weather, and fell in with ice, on Feb. 18, in lat. 45° 34′ N., lon. 46° 56′ W. The following day, about noon, she entered a field of ice, but cleared it. A few hours later she was precipitated against an iceberg, which stove a hole in her bow [illegible] water poured [illegible]gers, [illegible] an accident before [illegible] was encountered, and died in consequence. There was only one cabin passenger; all the rest were in the steerage, and were a mixture of English, Irish and Scotch, but belonging to a better class of emigrants than those which usually land upon our shores. As soon as it was certain that there was no possibility of saving the ship, and that she must go to the bottom, her five boats were lowered, and as many of the passengers and crew as could find their way into them immediately did so. What food could be snatched up, in the extremity of desperation, was placed in the boats, together with demijohns of water and compasses. Men, women, and children, were huddled together, with no more covering than they had on them at the time of the encounter, and well-nigh paralyzed with terror. The weather was very murky. A thick fog fell upon the heaving waves. When the last boat—the one found by the Germania—was nearly full, and as the mate, Mr. Atkinson, and several others, were about stepping in, it broke adrift, with the thirteen persons already in it, and the mate and his companions went down with the wreck. A wild cry rose; the five boats parted company; the shades of night enveloped the ocean; and when the morning broke, after many hours of suffering, the boat in which the young seaman Nye had escaped was alone upon the waves, with nothing in view but distant icebergs. Soon some loose floating ice was encountered, which greatly impeded her progress, and in the struggle of those who rowed her to get free from it, the compass which was on board was broken and rendered useless. Clouds overspread the sky, and a thick snow storm succeeded. They knew not which way to pull, and were seized with dismay. From the haste in which they were compelled to leave the sinking ship, they had only been able to place on board a few pounds of small biscuit, and a demijohn containing about a gallon of water. A small piece of biscuit was the daily ration appointed for each individual, and a draught of water could not be permitted to any one. A suck through the cork was all that could be allowed, and if any one obtained enough for a swallow, the demijohn was immediately taken from him, and he was deprived of his evening's ration. The consequence was, that on the first day out all on board were tormented with a raging thirst, which hourly grew more frightful and unendurable. The second day dawned, and there was no sail, and neither of the other boats visible. Rain and snow fell, and the unfortunate creatures were nearly frozen with cold, in addition to the pangs of hunger and thirst. They kept up bravely, however, cheering each other. The women especially were brave.

Day after day passed by, and on the fifth day, a woman, the wife of one of the passengers, died. They had no shroud to wrap her in, so they threw her overboard in her clothes. The hearts of the surviving twelve began to fail in earnest then. Many were in a sinking condition, though they had tried to conceal it, but the sight of the first corpse plunged overboard unmanned them. The next day the husband of the woman died, and they threw him overboard. A huge shark had followed them for two days past, and when this second body was consigned to the waves, he dived deeply after it, and disappeared. That evening the provisions failed. There were no more biscuits, and the demijohn was dry.

Early on the morning of the seventh day, two boys, who were brothers, died, and shortly afterwards their father. There were three sharks in the wake of the boat now, but after these three bodies were thrown overboard, there was only one visible, and he soon dropped away and disappeared. Some time during that night another passenger died. They threw him over at day-break.

On the eighth day the boatswain died. Him they threw overboard. All that were thrown overboard were in their wearing apparel, and were so disposed of, just as they died. On the same day another passenger died, who was the last that was thrown overboard. Mrs. Atkinson, the mate's wife, died about two hours later, and after her, in quick succession, three other passengers. The young seaman Nye was the sole survivor, and he was so much exhausted that he had not strength to give his dead companions to the sharks. He sat frozen in their midst, and the boat drifted at the mercy of the winds and waves.

On the ninth day, the Germania came in sight, but he had not power to hail her, or to wave a signal. The drifting boat was fortunately espied, and the poor young fellow was received on board. He told his story, and Capt. Wood humanely resolved to look after the other boats. For two days he sailed to the Northwest and the Southwest, keeping watch. Thick snow storms fell during this time, but when cleared away there were no boats to be seen. They had compasses on board. They had more food than the ill-fated boat, from which Mr. Nye was rescued. But the weather was very stormy and cold during all these subsequent days, and their probable fate is one of painful conjecture. We trust that we shall hear something of them. Some good ship may have picked them up. If they should never be heard of, then only one individual, young Nye, will have been rescued out of all the passengers and crew of the packet ship John Rutledge. And it is not even certain that he will recover. He remains in a very low state.

Another terrible hurricane was experienced by the Germania on March 11, which lasted three days, driving her back 150 miles into the Gulf-stream. Capt. Wood adds his testimony to that of the many experienced commanders who have lately crossed the Atlantic, respecting the unexampled severity of the weather during the present Winter. We expect to receive frightful tidings from sea for some weeks to come.

The Governorship of Wisconsin.

The case of the disputed Governorship in Wisconsin, whether considered in a political or in a juridical point of view, is one of the most remarkable that has yet occurred in our history. For the following summary of the proceedings in it thus far, the New York *Tribune* is mainly indebted to the editorial correspondence of the Milwaukee *Daily Sentinel:*

Willi[illegible] regulating [illegible] by *quo warranto*, in which he represents that, in fact *he* was elected Governor by some 800 majority, there being numerous frauds and forgeries in the canvass, which he asks leave to prove. He presents this paper to the Attorney-General, asking the use of his name, as provided for by the act above mentioned, to bring a suit in the Supreme Court, in the nature of a *quo warranto*, to test his right to the office. The Attorney-General, W. R. Smith, of the same politics with Barstow, instead of giving his consent, goes forward and files a paper of his own, on behalf of the people, alledging that Barstow usurps, and that Bashford is entitled to the office, and thus commences the suit.

Mr. Bashford, by his counsel, comes into Court and moves to substitute the information prepared by him for that filed by the Attorney-General—the former being *particular* in its allegations of the frauds and forgeries. He also asks the Court to give his counsel control of the case, on the ground that the Attorney-General exhibits hostility toward him. The Court decide that the information filed by the Attorney-General is sufficient in the view of the law—that he had a right to file it, and that the people are so far interested that they have a right to appear. Also, that the case being a tripartite one, having for parties the relator, (Bashford,) the respondent, (Barstow,) and the people, the Court has the full power to protect the rights of each, and will exercise that power whenever the exigency may arise. The Court ordered the writ of quo warranto to issue to William A. Barstow, the respondent. Counsel, by consent of the Attorney-General, were entered for Bashford as relator.

The respondent, (Barstow,) appeared by his counsel, H. S. Orton, J. E. Arnold, and M. H. Carpenter, and moved to stop the proceedings, on the ground that the Court had no right to call upon the Governor to leave his functions and appear before them. The relator, (Bashford,) by his counsel, J. H. Knowlton, T. O. Howe, A. W. Randall, and E. G. Ryan, appeared, and argued the contrary. The Court decided that the person who held the office of Governor might, at the suit of a claimant of the office, be compelled to stand on his defense, and show his superior right to it, and they directed him to plead to the information. The respondent, (Barstow,) by counsel, argued on a new motion to dismiss the proceedings, that the Court *has no jurisdiction* over the Governor; which motion was overruled by the Court, on the ground that they claimed jurisdiction over the respondent only in the character imputed to him by the information of a person who was not rightful Governor, but had wrongfully usurped the office. The respondent, by counsel, argued on another motion to dismiss the proceedings, that he had received the certificate of the State Board of Canvassers, and that the Court cannot go behind it. After argument the Court overruled the motion. The respondent next sent into the Court a communication of a very remarkable character, refusing to appear before it further, denying its jurisdiction, and bidding it defiance, threatening to use force to resist its decrees. He also sent a copy of this document to the Legislature, with a Message complaining of the attempted usurpation of the Court, and calling upon the Legislature to sustain him in his resistance to it.

On the last day allowed for the plea, Tuesday, March 11, respondent *appears not*. The counsel for relator, Bashford, thereupon move for judgment by default. The Attorney-General says that he does not agree that the judgment must be to the whole of the information, and must go to the same extent, but that it might be interlocutory, and go only to oust the respondent, and still in some manner call upon the relator Bashford to produce his proofs that he was in fact entitled to the office. The counsel for the relator reply, that the information filed by the Attorney-General has concluded them, and that no interlocutory judgment can meet the case. On Tuesday, March 18, the Court having this point under consideration, and not having yet rendered judgment, the Attorney-General comes in and reads and files a paper in which he claims to *dismiss the whole case*, and refuses further to prosecute it on the part of the people! The counsel for relator deny the right of the Attorney-General thus to throw another party out of Court, and remind the Court of their promise to protect the rights of each of the parties if the exigency should arise. They also agree that the use of the Attorney-General's name being a right of the relator, either with or without his consent, by the act of 1855, his withdrawal does not affect the form of the information, which was a point which the Court had asked them to consider. The next afternoon Justices Cole and Smith read opinions sustaining the case of relator thus far, and refusing to dismiss the case. Chief Justice Whiton gave the judgment of the Court, that relator was entitled to judgment; but in view of the great importance of the case, the Court would call on him to establish a prima facie case. The Court held this equal to an interlocutory judgment. Counsel for relator decided to procure proofs, and asked directions of the Court as to the method to follow. The following day proofs were produced showing that Bashford was actually chosen Governor by more than a thousand majority. Barstow, finding that the more considerate and better portion of his party would not sustain him in the attempt to maintain himself by force in an office into which he had been originally intruded by force, sent the same day a message to the Legislature, resigning his office. Of the further proceedings we are not yet informed, though there seem some indications of a disposition, by substituting the Lieutenant-Governor in the place of Barstow, still to struggle to keep Bashford out of the office to which he was elected by so decided a majority.

The Slave Trade.

A schooner of about 250 tuns, with all of the fixtures to accommodate some 500 negroes, undertook to sail from New York recently, but was captured and brought back by United States officers. In referring to her case, the N. Y. Tribune says:—

We learn from good authority, that no less than thirty vessels are fitted out at this port for the African slave trade every year. This fact is well known to the authorities of the United States, who do all in their power to [illegible] the iniquitous traffic. But in spite [illegible]ce, and regardless of the rig[illegible]ch have been enacted for its [illegible]business is still carried on here, [illegible] some cases, by persons who, [illegible]position in society, would be least suspected of engaging in it. In fact, it is so lucrative that those who pursue it are ready to run every risk for its enormous profits. The immediate agents engaged in it are mostly Portuguese and Spaniards, who have long followed it, and whose experience and cunning too often enable them to escape from the consequences of their crime. It is exceedingly difficult to convict these men. Their vessel may be seized and detained, but on searching her nothing can be found to criminate those who had her in charge, and yet there may be no moral doubt of their culpability. Formerly these vessels took out weapons to overawe the blacks as well as to fight off intruders; they were also wont to carry shackles enough to secure as many slaves as they could carry. Now they depend upon their speed to elude cruisers, and instead of binding their living cargo, they simply carry a keg or two of sharp carpet-tacks; and, if the slaves become restive, a handful or two of these sprinkled among them soon reduces them to submission. The slaves being naked and closely packed, cannot make any movement against their captors without being subjected to the most excruciating pain—every step which they take forcing the sharp points of the nails into their feet. They also stow the coppers away; and, if boarded by a cruiser before the slaves are taken on board, the vessel presents the appearance of a legitimate trader. A few scattered bricks might perhaps be found, as well as a barrel of lime, on a close scrutiny; but the former might easily pass for ballast, and if any body should be inquisitive enough to ask the use of the latter, why, it would be the easiest matter in the world to convince him that it was required to purify the ship. Once on the slave coast, however, and the slaves on board, bricks and mortar would serve just as well to fit up the coppers for cooking their food. Such are a few of the modern improvements.

The profits accruing from a successful run to and from the West Coast of Africa, are so great that the captain generally hides all traces of his crime, immediately after landing his cargo, by either setting on fire or scuttling the vessel. In this way a steady market has been established for light, swift-sailing schooners and brigs, which are built "for one voyage only." At present, the most difficult part which a slaver has to play is to obtain his clearance. To clear the Custom-House he must show that his voyage is a lawful one. Here he is liable to suspicion, and, it may be, arrest and forfeiture. Hence, we find that the practice of leaving port without effecting a clearance is becoming frequent. Recently, several vessels have sailed from this port, under cover of the night, undoubtedly bound on slave voyages.

Small Matters worth Knowing.

BY PROF. J. A. NASH.

Corn planted three feet apart each way, gives $30\frac{1}{4}$ hills to the rod, 4840 to the acre, and 48,400 to a ten-acre field. Allowing $5\frac{1}{4}$ hills to the rod for the worms and crows, it would leave 25 hills to the rod, 4000 to the acre, and 40,000 to a ten-acre field.

Planting four feet apart each way, gives 19 9-64 hills to the rod, $3062\frac{1}{2}$ to the acre, and 30,625 to a ten-acre field. Whether the crows and worms would find as many hills four feet apart, is not a matter for mathematical calculation, but supposing they should destroy $62\frac{1}{2}$ hills to the acre, there would be left 19 hills to the rod, 3000 to the acre, and 30,000 to a ten-acre field.

It is manifest that about 4000 hills are to be expected from 3 feet planting, and about 3000 from 4 feet. A pint to a hill on the 3 feet planting, will give $62\frac{1}{2}$ bushels to the acre. A quart to the hill, (and I would quite as soon undertake to get a quart from 4 feet planting as a pint from 3 feet,) will give $93\frac{3}{4}$ bushels, allowing 4000 bushels to have escaped all accidents in one case, and 3000 in the other. The corn plant seems to have no objection to two or three very near neighbors; but it wants all others to be remote—as if it would say to any thing within less than four feet, except its bosom companion of the same hill, as Diogenes in his tub said to King Philip—"out of my sunlight."

Owing to this strange sort of propensity, if I may so call it, or rather owing to unknown causes—possibly to the generation of vegetable warmth, as pigs profit by each others' animal heat in a cold winter's night—for stalks of corn will grow quite as luxuriantly in the smallest space possible, as one of them would have grown alone; but are annoyed and put back if other hills are too near. Nothing is lost by planting the kernels in a hill thickly together. I would as soon have a corn-planter that should leave them in actual contact, as one that would scatter them over a square foot. Whether, like the pigs, they keep each other warm, by close packing, each generating a kind of vital heat, by which all the others are benefitted, or what may be the true cause, I know not; but the fact is certain, that three or four stalks in a circular inch will do as well, and each will put forth as extended roots and as broad leaves and as long stalks, and just about as many and as full ears as if there were but one.

It would seem as if there was an influence of corn plants upon each other, calorific, electrical or some other, not yet known, favorable within short distances only, and that for this reason, whatever it may be, nothing is lost by putting the seed in juxtaposition. But much has been lost in this country, both in the increase of labor and in the diminution of crop, by planting the hills too thickly. Four feet each way, giving in round numbers, 3000 hills to the acre, is the best distance. If the corn be of a very small kind, it may be nearer together. But who wishes to raise such corn, unless it be in some cold mountain region, much exposed to May and September frosts? Or if you wish to grow a corn crop on hard, uncomfortable land to till, it may be well to fill the soil with manure and plant $3\frac{1}{2}$ feet instead of 4, calculating to raise the heat of the soil by the fermenting manure as a sort of compensation for shutting out the sun, and so to get your allowance of corn by the cultivation of as small a piece as possible. But in proper corn land, ordinarily manured, 4 feet planting will give more corn with less labor.

In 3 feet planting, the length of row is $5\frac{1}{2}$ rods to the square rod, 880 rods to the acre, and 8800 rods to a ten-acre field. In 4 feet planting, the length of row is $4\frac{1}{8}$ rods to the square rod, 660 rods to the acre, and 6600 to a ten-acre field. To plow out, or to cultivate a ten-acre field, planted at 3 feet, twice to a row, the horse walks 55 miles; in plowing ten acres, at 4 feet, he walks 41 miles, 80 rods.

In planting a ten-acre lot, at 3 feet, the planter walks $27\frac{1}{2}$ miles. In planting the same, of 4 feet, he walks 20 miles, 200 rods. If in planting in the old way with the hoe and pouch, it requires five distinct motions to a hill, it will require 242,000 for a ten-acre lot, at 3 feet; and 153,625 for planting the same at 4 feet. On land not uncommonly feasible, the former would be ten good days' work; and the latter, at the same rate of time per hill would be upwards of sixteen; but as one would plant hills near each other in a little less time, say fifteen.

If there should ever be brought into use a horse-planter, which would plant two rows at a time, and be so light of draft as to be easily drawn by one horse, and would yet do its work well, this work could be done in one day by a single horse and a man. The travel, in case of 3 feet planting would be $14\frac{1}{4}$ miles; and, in case of 4 feet, would be 10 miles, 100 rods.

The expectations of such a planter would appear visionary to most men; and so did that of a steamboat to the cotemporaries of Robert Fulton. [N. E Farmer.

Ingenuity in Vice.

The following extract from the *London Athenæum*, illustrates the ready devices to which rogues resort, to raise a penny in time of need:—

"A correspondent, who is interested in autographs, sends us an account of a curious case of autograph collecting which occurred in France some little time ago, although only recently brought to light. An ingenious rogue, being rather badly off, as rogues often are, hit upon a mode of replenishing his exchequer by means of a novel description of begging letter. Feigning himself to be in the deepest mental distress, overwhelmed with an accumulation of agonizing miseries, which had driven him to absolute despair, he professed himself to be utterly disgusted with life, and on the point of terminating his troubles by committing suicide. In this state of mind he pathetically entreated the person addressed to inform him confidentially what he really thought of the right of the overburdened wretch to 'shuffle off this mortal coil.' Having crowded into his letter all the touching and miserable words at his command, he wrote copies of it to many of the most distinguished persons in Europe. In due time answers came crowding in. Espartero replied laconically, 'Sir, I do not advise you to kill yourself. Death is a bullet which we must all encounter, sooner or later, in the battle of life; and it is our part to wait for it patiently.' Others—good natured men—filled the four sides of their sheet of paper with the high teachings of lofty philosophy, or with sound religious advice—replete with studied argument and amiable eloquence. The answer of Lacordaire was a masterpiece of evangelical persuasion. He offered to confer with the poor despairing wretch, and entreated him, with the warmest sympathy, to dismiss forever from his mind all thoughts of his meditated crime. Such letters were the very things which the impudent rascal wanted. As soon as received, they were taken off to a dealer in autographs, who purchased them at prices proportioned to the notoriety of the writer, and the length of his effusion—five, ten, twenty, and even fifty francs apiece. The trick was brought to light by a collector chancing to buy three of the answers. Finding them all upon one theme, his curiosity was excited; he called upon the dealer to inquire their history, and found that he had in his collection—all purchased in a few days—five-and-forty similar letters. The whole were secured at the price of six hundred francs. Amongst them are what the collectors call 'admirable specimens' of Montalembert, Cardinal Antonelli, J. Fennimore Cooper, Xavier de Maistre, Sophie Gay, Abd el Kader, Armand Marrast, Alexander Humboldt, Tony Johanno, Taglioni, Henri Heine, Alfred de Vigny, Rachel, Sontag, Charles Dickens, Emilie Souvestre, George Sand, Jules Lacroix, and many others.

Lost in a Snow-Storm.

A letter from Iowa Point, Kansas, dated Feb. 9th, gives the following extraordinary narrative:—

A Miss Martha Perkins, who resides five miles from this place, was on a visit to her brother-in-law, who resides here. On Tuesday last, the 5th inst, she started to walk home. It was snowing hard at the time she started, and continued for two days. The snow was then eighteen inches deep. Her road was mostly over high rolling prairie—the snow beating directly in her face. She pursued her journey with much difficulty until, within a mile of home, she lost her way, and rambled about until near sunset, when she took refuge for the night in a deep, bushy ravine. There, in a deep snow, she constructed a very ingenious little house out of the tall weeds that grew near by, and there she spent the first night of camp life, without food to sustain life, or fire to warm, or any clothing except her apparel to shelter her, the little weed house she had erected being the only thing she had to protect her from exposure to the bleak winds and the storm. Early next morning she started out in pursuit of her home, but went entirely a different course. After traveling all day, frequently through snow four feet deep, exhausted and fatigued, her feet frozen, abandoning all idea of ever reaching home, she stopped and again built her a weed hut. In this little frail tenement she resigned herself to her fate, and it came well nigh being her last resting-place upon this earth. She remained in this situation, at this last-named place, from Wednesday until Saturday, about 12 o'clock, when she was found by a party who were in search of her. She had been out four days and a half, and four nights, exposed to the merciless storm on the prairies. The weather was intensely cold. During two nights of her exposure the thermometer ranged from 17 to 20 degrees below zero. She said to those who found her, that she never slept during the whole time, believing that if she had gone to sleep she would never awake again.

The Scientific Value of Snow.

The snow was proverbially the "poor man's manure" before scientific analysis had shown that it contains a larger per centage of ammonia, than rain. The snow serves as a protecting mantle to the tender herbage and the roots of all plants against the fierce blasts and cold of winter. An examination of snow in Siberia showed that when the temperature of the air was 72° below zero, the temperature of the snow a little below the surface was 29° above zero—over 100° difference. The snow keeps the earth just below its surface in a condition to take on chemical change which would not happen if the earth were bare and frozen to a great depth.

The snow prevents exhalations from the earth; and it is a powerful absorbent, retaining and returning to the earth gases arising from vegetable and animal decomposition. The snow, though it falls heavily at the door of the poor, and brings death and starvation to the fowls of the air and beasts of the field, is yet of incalculable benefit in a climate like ours, and especially at this time, when the deep springs of the earth were failing, and the mill streams were refusing their motive powers to the craving appetite of man. If, during the last month, the clouds had dropped rain instead of snow we should have pumped and bored the earth in vain for water; but, with a foot of snow upon the earth and many feet upon the mountains, the hum of the mill stones and the harsh notes of the saw will soon and long testify to its beneficence. Bridges, earth-works, and the fruits of engineering skill and toil may be swept away, and man will still rejoice in the general good, and adore the benevolence of Him who orders all things aright.

The snow is a great purifier of the atmosphere. The absorbent power or capillary action of snow is like that of a spounge or charcoal. Immediately after snow has fallen, melt it in a clean vessel and taste it, and you will find immediately evidences of impurity. Try some a day or two old, and it becomes nauseous, especially in cities. Snow water makes the mouth harsh and dry. It has the same effect on the skin, and on the hands and feet produces the painful malady of chilblains. In Alpine countries, snow water has been thought to be productive of the disease called goitre. The following easy experiment illustrates beautifully the absorbent property of snow: Take a lump of snow (crust answers well) of three or four inches in length, and hold it in the flame of a lamp; not a drop of water will fall from the snow, but the water, as fast as formed, will penetrate or be drawn up into the mass of snow by capillary attraction. It is by virtue of this attraction that the snow purifies the atmosphere by absorbing and retaining its noxious and noisome gases and odors. [Dr. Page in the National Intel.

Brief History of Guano.

The London *Farmer's Magazine* furnishes the following brief history of guano:—"Guano, as most people understand, is imported from the islands of the Pacific—mostly of the Chincha group, off the coast of Peru, and under the dominion of that government. Its sale is made a monopoly, and the avails, to a great extent, go to pay the British holders of Peruvian government bonds, giving them, to all intents and purposes, a lien upon the profits of a treasure intrinsically more valuable than the gold mines of California. There are deposits of this unsurpassed fertilizer in some places to the depth of sixty or seventy feet, and over large extents of surface.

The guano fields are generally conceded to be the excrement of aquatic fowls, which live and nestle in great numbers around the islands. They seem designed by nature to rescue, at least in part, that untold amount of fertilizing material which every river and brook is rolling into the sea. The wash of alluvial soils, the floating refuse of the field and forest, and, above all, the wasted materials of great cities, are constantly being carried by the tidal currents out to sea. These, to a certain extent at least, go to nourish, directly or indirectly, submarine vegetable or animal life, which in turn goes to feed the birds, which in our day are brought away by the shipload from the Chincha Islands.

The bird is a beautifully arranged chemical laboratory, fitted up to perform a single operation, viz.: to take the fish as food, burn out the carbon by means of its respiratory functions, and deposit the remainder in the shape of an incomparable fertilizer. But how many ages have these depositions of seventy feet in thickness been accumulating?"

THE CHINESE YAM IN AMERICA.—A responsible correspondent at Cincinnati says of this so-called Chinese potato:—

"We have two varieties of the Dioscorea found in a state of nature here, one of which closely resembles the Chinese Yam, and, if not the same, I think upon cultivation will be found equal to it in every respect. It is known as the Wild Yam or Wild Sweet Potato. I have been familiar with it for more than forty years; can now find it growing in the same ground where it was growing in 1815. Like the Chinese Yam, it runs deep into the ground. Hogs are very fond of it, and often dig for it to great depths. I often heard in my childhood stories told of hogs digging for this root, in the soft bottom lands, till they got a pit so deep they could not get out, and, not being incited by appetite to keep on digging till they dug out again, have been known to perish in the holes."

SOOT AND CHARCOAL.—Never permit the soot from your chimneys and stove pipes to be thrown away. The carbon contained in these substances, produces the best effects when applied to vegetation. It is a valuable constituent in the compost heap, also. Pulverized charcoal is in itself a most valuable manure, and when mixed with gypsum, poudrette, or guano, acts with great energy. As a dressing for onions, soot and charcoal dust are unequaled. [Germantown Telegraph.

Dr. Anderson, just home from India, says, nothing is talked of so much around the world as the Maine Law.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

EATING PORK.

To the Editors of the Sabbath Recorder:—

Herewith you have an extract from the "*Working Farmer*," which I offer as a reply to an article that appeared in your paper some weeks since on the use or abuse of Pork as an article of food for the human family:—

"Swine have, at certain periods in the history of the world, been considered *unclean creatures*, of gross habits, &c. If they are *unclean, and of gross habits*, their owners are more to blame than they. How can we expect to teach them better *habits*, while confined in cellars and other locations where they are often compelled to wallow knee deep in mud and excrement, dragging out a woeful existence in the midst of a perfect hot-bed of filth, respiring an atmosphere concocted from the decomposition of a pest-hole? And their *food*—what shall we say of that? It is too beastly to describe; yet the cravings of an appetite not naturally morbid, but otherwise, compel them to convert their stomachs into living sesspools. Some persons consider any system of management good enough for hogs. How, then, can we expect them to improve, either in habits or condition? Hence, if domesticated swine have lost their natural instincts, and acquired filthy habits, the blame should fall on their keepers. We know from experience, that if young pigs are kept in clean locations—not brutalized—and fed on good wholesome diet, they will refuse to partake of some of the horrid stuff called swill. They will exercise the same sagacity in the selection of nice morsels as the wild originals are known to manifest.

"The idea, originating with the Egyptians, Jews, and Mahommedans that the use of swine's flesh was an abomination, and its touch pollution, is nothing more than prejudice, and has no foundation in fact. That it is the cause of *scrofula* and *leprosy*, as some contend, we emphatically deny; for the very persons who most abhor pork, and consequently abstain from its use—the Jews—were the greatest sufferers from the above diseases. Then, again, Jewish historians have informed the world, that the strangers sojourning with them partook freely of pork, yet enjoyed immunity from scrofula and leprosy. Pork is the principal article of food among the Romans, Greeks, Chinese, natives of the Archipelago Islands, the negroes inhabiting the burning regions of Asia, and the more refined, straight haired, of the Northern.

"England, a nation of beef eaters, consumes an immense amount of pork. America, her eldest daughter, boasts of a host of *fat, hearty, good looking, smart* men, who subsist on pork and beans one day, and beans and pork the next, and on Sunday more *pork* and less *beans*. Now, if pork is the cause of leprosy, we might expect to find among the latter a host of lepers; but the converse is the case, and American physicians do not profess to be practically acquainted with the disease. So that the uncomplaining and much abused creatures we are writing about have hitherto been most awfully slandered and ill-treated.

"We contend, therefore, that the flesh of swine, properly fed, is nutritive, wholesome, and pleasant to the taste; and in its excellence is considered a great delicacy. Like other substantial food, however, it does not agree with some stomachs; and therein lies the fault, but not in the pork. Still, it would appear to be in perfect harmony with *retributive justice*, if the above diseases were the consequence of man's criminal neglect and indifference towards a class of animals that claim his care and protection, and on whom a great proportion of the human family are dependent for subsistence. But this is not the case; the very worst kind of pork, fed in the most objectionable places, is partaken of by most men with impunity.

"The errors we complain of are not so prevalent in the country as in our maritime cities. We contend that a *grunter* is not a *citizen*, never chews tobacco nor smokes; he is not one of *nature's noblemen*—thrives best on roots and fruit, in the universal sty. The city air don't vitalize his blood—don't agree with him; down-cellar locations, and narrow, filthy stys, are abomination; they toughen his muscles, tuberculize his lungs, and send him into a galloping consumption, from which nothing but the butcher's knife can rescue him!—and then,

After sad usage and sore abuse,
He's salted down for sailors' use."

I would ask those who object to the use of swine's flesh as an article of food, or possess any doubts of its being used for that purpose at the commencement of the Christian era, why a herd of two thousand were collected together in one place? And how were they to be disposed of, if not for food? Now I do not learn that *any* animal "that liveth or moveth" was given to man at the creation for food, but only the herb, *and the fruit of the tree yielding seed;* yet many of them are very useful to him as helpers in his labor, and may be taught many useful and amusing performances; but what has the swine ever done to render his labor or company desirable? I admit that some animals, useless for food or labor, have been domesticated and admitted among the human family; the monkey, for one, on account of his amusing antics, and his slight resemblance to the "image of God," has gained admittance into some of the first families. But the lazy, stupid swine, has done nothing to gain an eminence in the world? I have heard of a "learned pig," but it is hearsay only; I have never seen him, nor have I ever seen any performance by them that entitles one to any preëminence above another. Why then should two thousand be congregated in one herd, if not for food? I have long sought an answer to this question, but as yet I have found nothing satisfactory. I therefore conclude that if any of the animals were designed for food, the swine must be one of them. J. S.

PREACHING THE GOSPEL.

To the Editors of the Sabbath Recorder:—

In an article in the *Recorder* of March 15th, I noticed a remark, the reading of which awakened a few thoughts, which I transcribe for the perusal of your readers. The writer of the article says: "To promote religion, the Gospel must be preached in its primitive simplicity." How true, and yet how little realized! He then adds: "Possibly the influences of the age may have tended to lead God's ministers, though unperceived by them, to depart from the plainness and simplicity of the past, and in adopting a more modern style of sermonizing, they have either blunted the edge of the sword, or formed it a sheath which has made it harmless." To say that this is possibly the case, is, in my opinion, not all that is necessary to say at the present time. The idea expressed by the writer of the article is all very true; but is it well to use language from which may be drawn the inference that a doubt exists as to the certainty of such a state of things, when the thing is not only *possible*, but the facts in the case prove it to be an absolute certainty? When the low state of religion in the churches, the worldly-mindedness of professed Christians, and the want of that vital principle of Christianity—brotherly love—are apparent, is it not better, under such circumstances, to say such *is* the case, or at least to ask the question, If this is not the cause, what may it be? The question then is, What was the Gospel in its primitive purity?—what the great distinguishing trait of those principles laid down by the Son of God? Why were they so superior to all that had been taught or known previous to the ushering in of the Gospel dispensation? I answer, *It was the glorious principle of universal brotherhood.* An eye for an eye, a tooth for a tooth, love thy neighbor and hate thine enemy, had been the preaching of the world up to that time. But how different the principles taught by the Saviour of mankind! Reader, dost thou recollect that sermon on the mount? Listen! "Blessed are the *meek*, for *they* shall inherit the earth. Blessed are the *peace-makers*, for *they* shall be called the *children of God.*" How beautiful! And again He says: "*Love your enemies.*" How like God, who loved a world of rebels, and gave his Son to die that they might live! And through the whole of our Saviour's teachings came, first, such principles as these. Here, then, I repeat, is the great distinguishing trait of the religion taught by Christ—universal love, and consequently universal brotherhood. Glorious thought!—heavenly principle! But, says one, are not these same principles preached at the present time? Does not our minister tell us to love one another? He may tell us, but who minds what he says? Echo answers, Who? And the laity are not the only ones who neglect the carrying out of these principles. Many preach well, but practice indifferently. It has become fashionable, among men who can talk, to turn preacher; and we, as a denomination, are not entirely free from this fashion. When a man has succeeded in placing "Rev." before his name, and "D. D." after it, he is considered by many as being prepared for battle, with one exception, and that is the knowledge necessary to the preaching of a *fashionable* sermon. This must be neither too long nor too short, too grave nor too trifling—must not hit too near home nor too far off. In short, it must be just so, and all is right. Why wonder that churches grow cold and die under such preaching? Why wonder that the spirit of the world not only creeps in, but, with head erect, stalks in and takes the place of that vital piety which *should* characterize the meek and lowly follower of the Lamb? Why wonder that the world, looking upon *such* Christianity, should conclude that there is no truth in its principles? Who can wonder that the world is infidel? I cannot. This state of things, however, is not entirely universal. God forbid that it should ever become so. But, Christians, is it not too much the case? Ministers, is it not too true? L. H.

BERLIN, Wis., March 22, 1856.

DR. LOWELL'S SHORT SERMONS.—Some years ago, a countryman, wandering hopelessly through the streets of Boston, was accosted by a stranger, who asked him what he wanted. "I want," said he, "to find the man who preaches *short sermons*." The stranger had no hesitation in pointing out the road that led to the West Church, (Rev. Dr. Lowell's;) but, anxious to ascertain what peculiar hold that pastor had taken of this man's mind, he suggested that the sermons at the West Church *were* very short indeed, and that perhaps the great city might offer to one who seldom entered it others more worthy of consideration. "Not they," replied the warm-hearted rustic; "I never heard him preach but once, and that was before the convention the other day; but I remembered every word of his sermon, as if I had preached it myself; and my wife and I had something to talk of for a week after. I tell you, stranger, that after he has preached his *short sermon* there is not much more to be said on the same subject."

CHANGE.

BY MRS. L. H. SIGOURNEY.

Change sweeps o'er all. The ancient columns quiver;
Through the rent chasm the exulting whirlpool flows,
The rifted rocks man's magic thunders shiver,
And o'er the desert steals the wandering rose.

The buried seed to perfect blossom springeth,
From its damp bed the lily of the lake,
The acorn o'er the land broad shadow flingeth,
And song and wing the solemn groves awake.

Where erst the panier'd mule went slowly creeping,
The plodding wheel its tardy message bore,
The iron-footed steeds like flame are sweeping,
And thought electric darts from shore to shore.

His last sweet lay the wan musician drinketh,
The pencil fades, the artist's eye grows dim,
The mighty statesman from the senate sinketh,
And eloquence in sackcloth mourns for him.

The tyrant Czar, who held his millions quaking,
Who stirr'd the nations with a warrior's tread,
On his camp bed a pulseless sleep is taking,
Pale as the serf that in his battles bled.

Change sweeps o'er all. In home's small orb it worketh,
Clouds silver-lined grow dark with gushing rain;
But prism'd on tears, a bow of promise lurketh,
The sun shines forth, and all is bright again.

Up comes the cradling to his father's stature,
Down o'er his staff the man of power bends,
Unpitying Winter strips the pomp from nature,
And snow o'er beauty's lustrous locks descends.

To her first babe the joyous mother clingeth;
Another weepeth in a rifled nest,
And to the grave's cold casket, grudging bringeth,
The little diamond from her yearning breast.

But the redeem'd soul hath no declension—
Tir'd sense may fail, the eye forget its fire,
The nerve be sever'd in its firmest tension—
The chainless spirit soareth toward its Sire.

Back to the Giver of its life it tendeth—
Up to his glorious throne where angels dwell;
Oh! unknown friend, that o'er this poem bendeth,
That home of rest be thine! A sweet farewell!

[Ladies' Repository.

THE ROMAN CATHOLIC COWHERD.

[At a meeting held in the Jane-street M. E. Church, New York, the following anecdote was related by Rev. W. Arthur, (one of the Methodist deputation from England to this country, to plead the cause of the Irish,) as an illustration of the ignorance and superstition of the Romanists in Ireland.]

He commenced by relating a story told by one of the Irish preachers. In a certain part of Ireland there lived a farmer. On a certain occasion the preacher, who was traveling the circuit, having heard of him, determined to pay him a visit, which he accordingly did. Almost as soon as he entered the house, the son of Wesley opened his message, and requested the privilege of preaching in the neighborhood. This was granted; the word of God was attended with power; the Lord opened the farmer's heart, as he did that of Lydia of Thyatira, and he opened his parlor and invited to the preaching-place. This, of course, was accepted with gladness, and it was not long before the farmer and his family, and several of the neighbors, were happily converted to God. A class was formed, and the farmer was appointed its leader. He had in his employ a cowherd, a Roman Catholic, who, hearing of what was going on, became wonderfully alarmed. It was his custom to bring the cows home at a certain hour in the day; but whenever the period arrived for the meeting, he was always sure to anticipate the time by an hour, so that he might be away, and not be annoyed by the "swaddlers," as the Methodist preachers were called. While he was using all his precaution, the Spirit of God was silently, yet powerfully, working in the soul of the simple-hearted man. He had heard enough of gospel truth, by rumor and otherwise, to awaken him to a sense of his lost condition, and he became sad and dispirited. As he went moping about with a dejected countenance, unfit for work, his wife said to him one day:

"Brian, what ails you? You are good for nothing."

"Molly, my dear, I'm afraid I'll lose my sowl."

"Lose your sowl, man; an' how's that? Are ye not the best man in the parish, and don't ye attend to all your dues and duties? What have ye been doing? Have ye been robbing any body?"

"Nae, Molly; the truth is, I'm afraid I'll lose my sowl—indade, I'll lose my sowl!"

"Why, Brian, what makes ye think that?"

"Because," said the deeply convicted man, "I'm all dirty within!"

"My advice is, that ye go immediately to the praist, and tell him all about it."

Brian accordingly went to see the holy father, and commenced telling him how bad he was and how badly he felt.

"What's the matter, Brian?"

Brian then related the conversation which passed between him and Molly, and closed by saying, "O, holy father, I'm all dirty within!"

"O, you dog," said the priest, "you have been to hear the swaddlers preach."

"Not I, yer riverence; I kept far enough away from them. To be sure I did, and never a one of them have I heard preach!"

The priest then tried to allay his fears about losing his soul, telling him to come to confession, and attend the mass, and all would be well. But, alas! Brian grew worse and worse, until finally the priest told him to go to Loch Dergh, St. Patrick's purgatory. In the midst of Loch Dergh, or Red Lake, there was a rocky island, which was called St. Patrick's Island, or the purgatory for refractory, incurable Catholics. And indeed it was a purgatory, a bleak and dreary spot, and the banished one was obliged to go barefooted upon the sharp stones, and kneel upon his bare knees, fasting and praying to the virgin, until he was restored, or had suffered sufficient to atone for his sins.

Brian accordingly went to Loch Dergh, and crossed over to St. Patrick's purgatory, where he went through with the penance on his bare knees. After remaining there some time he returned home.

As soon as his wife saw him, she said, "Well, Brian, you won't lose yer sowl now."

"Och, dear," he replied, "I've been to Loch Dergh, but I'm dirtier than I iver was before!"

"Well, then, ye must go and see father Tom again;" which he did, and the priest meeting him, said, "Well, Brian, it's all right now."

"Nae, holy father, I'm dirtier and dirtier!"

"Brian," said the priest, "you must try and get your spirits up. There is to be a dance at such a place; go, and don't forget to take a drop; it will do you good."

Brian, supposing that any advice from the clergy was right, never having been instructed otherwise, went to the dance and did take a drop, but it was a drop too much, and he became intoxicated. He came home late at night, and his wife was awakened by hearing him roaring and rolling on the floor, saying, "Sure, and I'll lose my sowl!" She became alarmed, and commenced crying, and together they wept and prayed as well as they knew how until morning.

This day he went to his work, and, as usual, brought the cows for his master; but he forgot that it was the day of the meeting. He concluded to stay and hear the preaching. The text was, "What must I do to be saved?" He found the sermon wonderfully to correspond with his own thoughts, and he became intensely interested. The preacher alluded to the different answers sometimes given to the question, "What must I do to be saved?" and among others, he remarked, the poor convicted sinner is told by the priest to go to Loch Dergh, and he will be saved.

"Och, I'll declare," said Brian, audibly, "it's me, sure. Haven't I been there?"

Sometimes he is told to go and drink, and drive away his sorrows.

"Och, and wasn't it only yisterday the praist towld me to do the same; and the divil's advice it was, too."

At this the master went out and brought him in and quieted him. After the preaching was ended, Brian whispered to his master and said, "I would like to stay and speak to that gintleman." When the congregation was dismissed, and they were about to hold class-meeting, his master requested him to stay, which he did, and when he was spoken to he got up and told the whole story we have been relating. "You say," addressing the preacher, "that if I believe on the Lord Jesus Christ I shall be saved. How do you know that?"

"By the Word of God," said the preacher.

"An' have you that Word?"

"Here it is," said he, holding up the Bible.

Brian sat down comforted; but before the class was through he sprang to his feet, and, seizing the preacher, he said, "What ails me, sir? I don't feel bad any more at all at all; I'm all clane within."

"You are converted," the preacher replied.

"And when will you convert again? I'd like to have Molly converted."

He went home a happy man, walking, and leaping, and praising God. When he met his wife he exclaimed, "O, Molly, I'm all clane within; the Lord Jesus has converted my sowl." On Sunday morning he took Molly with him to meeting, and it was not long until she was brought to taste the pardoning love of God. Still, Brian had not forgotten his church, and he said to his master, "Shall I go to mass?" The master, believing he was under the teachings and guidance of the Spirit, told him to go if he desired. He and Molly accordingly went to church, and after the ceremony of reading the prayers in Latin was over, the priest, addressing Brian and his wife, said, "Come up here, you heretic dog!" (Many a man has thus been singled out and denounced from the altar, and not long after had a bullet shot through his heart.)

"You have deceived me, you arch heretic," continued the priest; "you have been to hear the swaddlers."

"Yes, yer riverence, glory be to God! I have been converted, and so has Molly."

"How dare you speak to me thus! Go down on your knees before the altar, and pray to the virgin, or I'll curse you, bell, book and candle."

Finding him unyielding, he then uttered the curse before the whole congregation. Candles were placed around, and at the ringing of a bell the curse began. All the saints, and angels, and holy martyrs, were invoked to curse him. The curse went into detail, extending to every member of his body, from his hair down to his toes. He was cursed in all possible conditions and circumstances in life. Such a curse everlasting malice only could invent. The person cursed was cut off from all the sympathies and aid of the congregation; and if he was a merchant, mechanic, or laboring man, all custom would at once be withdrawn. After the curse he was permitted to leave, and he went out, notwithstanding, a happy man; for how can a priest "curse whom God has not cursed?" Brian and Molly led consistent and pious lives, died in the faith, and went up to glory. This case, said Mr. Arthur, illustrates the condition of a vast majority of the people in Ireland.

He then drew a picture of the physical, mental, and moral condition of the country, contrasting it with Scotland, England, and Wales, and showed that while the latter were of the same stock as the original Irish, the Welch language and literature were flourishing, while that of Ireland was going into decay. The Irish, he remarked, were looked upon everywhere as hewers of wood and drawers of water. In many hamlets in Ireland, there is no Bible, not even a book. In six counties, comprising seventy four towns, there is not one bookseller, and in all this region nothing can be seen scarcely but mud cabins, brown and dingy, with a mud chimney scarcely defined, out of which the smoke creeps sluggishly, or comes out at the door, where may be seen men, women, children, and pigs. Nothing but cheerlessness is to be found. If you were in the midst of this waste to see a neat cottage, with every thing cheerful about it, you need not ask if it was occupied by a Protestant; you might be sure of that.

BEWARE OF MAMMON.—My young Christian brethren, let me utter one warning: *Do not be misled by coveting after wealth.* Do not share in this unhealthy and perilous overestimate and passionate pursuit of riches. It is the disease of our times, and fearfully within the churches. How else it withstands God's work is not now to be told; but it stands at the very gate and turns away them that would enter the ministry. Under other names and more seemly pretexts, it is Mammon that defrauds the ministry of the men that God meant for it, more than all other causes together. Beware of that peril. Be not seduced by it to decline the ministry. If it win that victory over you, what will it not have the power [redacted] do with you in those coming years when [redacted] will lie more at its mercy than now?

[Cong. Her[redacted]

STRANGENESS OF DEATH.

Angels have no death to undergo; there is no such fear of unnatural violence between them and their final destiny. It is for man, and, for aught that appears, it is for man alone, to watch, from the other side of the material panorama that surrounds him, the great and amazing realities with which he has everlastingly to do—it is for him, so locked in an imprisonment of clay, and with no other loopholes of communication between himself and all that surrounds him, than the eye and the ear—it is for him to light up in his bosom a lively and realizing sense of the things that eye hath never seen, and ear hath never heard. It is for man, and perhaps for man alone, to travel in thought over the ruins of a mighty desolation, and beyond the wreck of that present world by which he is encompassed, to conceive that future world on which he is to expatiate forever. But a harder achievement, perhaps, than any—it is for man, in the exercise of faith, to observe that most appalling of all contemplations, the decay and the dissolution of himself; to think of the time when his now animated framework, every part of which is so sensitive and dear to him, shall fall to pieces—when the vital warmth by which it is so thoroughly pervaded shall take its departure, and leave to coldness and abandonment, all that is visible of this moving, and acting, and thinking creature—when those limbs with which he now steps so firmly, and that countenance out of which he looks so gracefully, and that tongue with which he now speaks so eloquently; when that whole body, for the interest and provision of which he now labors so strenuously, as if indeed it were immortal—when all these shall be reduced to a mass of putrefaction, and at length crumble, with the coffin that encloses them, into dust! Why, my brethren, to a being in the full consciousness and possession of its living energies, there is something, if I may be allowed the expression, so foreign and so unnatural in death, that we ought not to wonder if it scare away the mind from that etherial region of existence to which it is hastening. Angels have no such transition of horror and mystery to undergo. There is no screen of darkness interposed between them and a portion of their futurity, however distant; and it appears that it is for man only to drive a bridge across that barrier which looks so impenetrable, or so to surmount the power of vision, as to carry his aspirings over the summits of all that revelation has made known to him.

[Dr. Chalmers.

THE APOSTATE'S END.

Soon after my settlement in the town of N., I was called to a sick chamber, where a man of sixty years was apparently near his end. His short and quick breathing, and his frequent groans, indicated an acute disease, accompanied with sharp pain, and the physician informed me that he was dying under a severe attack of pleurisy. The sick man was at first reluctant to converse with me, but his deep sighs soon betrayed that remorse was preying upon his spirit, and that in his intense mental agony, bodily suffering was almost unheeded. Finding it difficult to learn anything definite of his past life or his present feelings from his constrained and ungracious answers, I read a portion of the Scriptures, talked plainly with him on the probability of his speedy death, and after prayer, left with a promise of repeating the visit on the next day.

In the meantime, I learned from a neighbor his sad history. He had once been an active member of the church of which I was pastor, and for a year after his professed conversion had been noted for his zeal in the meetings of the church, and for his faithful warnings to unconverted friends. But after a brief season of devotedness, he had grown lukewarm in feeling, had neglected the means of grace, fallen into bad company, and at last been excluded from the church for intemperance and profanity. For twenty years he had been an apostate, running into sin, profaning the Sabbath, and mocking at all sacred things.

On my entrance into the room, the second day, he stretched out his hand eagerly, and said in sharp, hurried words, "Pray for me! O pray for me! I am a miserable sinner, who have crucified the Son of God afresh, and am fit only for hell." The flood-gates of feeling were now open, and he detailed to me, by snatches, his long course of guilt and wretchedness. He had plunged into many excesses to drown the reproaches of conscience. He had associated only with the ungodly to escape bitter memories of the past. He had not dared to enter the house of God, lest the poignancy of remorse should be beyond control. After unburdening his troubled conscience, he shrieked convulsively, "Is there any hope for such a vile sinner?" "Can such a guilty apostate find mercy?" I repeated precious promises from the Bible, "Return unto me and I will return unto you;" "I will heal your backsliding;" "Though your sins be as scarlet, they shall be as white as snow;" but all in vain, he found in them no comfort, and tossing wildly on the bed, and throwing his arms about as if in despair, he repeated, with frightful emphasis, the words, "Lost!" "lost!" "forever lost." I left him with the fear that I might never see him again, and that his own gloomy apprehensions would be soon realized; but calling on the next day, found him easier in body and calmer in mind.

He said he felt he was too great a sinner to be pardoned on his death-bed, and had been praying all night that God would spare his life only a little longer, that he might confess his sins to the church and the world, and lead a reformed and Christian life. The intensity of his feelings seemed to be absorbed in the hope of recovery and repentance, and he protested, often solemnly, that if a few years of life were only granted him, the remnant of his days should be faithfully consecrated to the service of Christ.

I was surprised at the apparent change of feeling occasioned by his new hopes and re[redacted]ions, but found it quite impossible to fix [redacted]pon his present state, and the [redacted]pentance and pardon. [redacted]ith the future, [redacted] new [redacted] and friends, [redacted] weeks was able to go [redacted] and attend to his accustomed [redacted]ed his progress with great solicitude, [redacted] it more and more difficult to engage him in religious conversation. As his strength returned, his spiritual solicitude abated in inverse ratio. When he was able to go out of doors, I reminded him of his remorse on the sick bed, and his solemn vows for the future, and expressed the hope that we should see him a regular attendant upon the services of the Sabbath and the week. He listened in silence to my admonitions, evaded all my questionings, and it was too apparent that his repentance was only like the morning cloud and the early dew. I saw him once only in the sanctuary, as listless and unconcerned as the most callous hearer, and soon learned to my sorrow that he was gradually relapsing into his old habits, and ridiculing the terror experienced in the sick room. I felt sadly, that all hope in his case was over, and that he was in imminent peril of God's swift judgment.

About three months after his recovery, I was startled early one morning by a call from his brother, requesting me to attend his funeral, and on further inquiry, learned that on the previous day he had walked from the house in apparent health, and failing to return at the expected time, anxiety was felt, and a search commenced, and he was found not far from the house, lying lifeless against a stone wall. He had been struck down by a sudden paralytic shock, and died without consciousness and without repentance. Never before or since have I felt so profoundly the force of the passage, "He that, being often reproved, hardeneth his neck, shall suddenly be destroyed, and that without remedy."

[Watchman and Reflector.

THE TWO SMALL FORTUNES.

"Your heaps of glittering dust are yours,
And my Redeemer's mine."

A few days since, the writer was in company with a worthy Christian minister, who remarked that a friend of his, perhaps a college associate, was making his eight or ten thousands a year in his chosen profession, while he himself, a poor minister, received for his labors scarcely more than half as many hundreds.

The remark has since recurred to me in connection with the lines quoted at the head of this; and I record them merely as a suggestion to those laborers in the ministry who do not receive the amount of silver and meat of which they are certainly worthy. The men of the world may heap to themselves piles of glittering dust. They may call them theirs, until some providential disarrangement of their plans shall scatter them, or until the hand of the "grim messenger" shall drag the possessors from their golden gods. Then whose shall these things be?

But he who can say with humble and well-founded confidence, "My Redeemer is mine," has a fortune within his own soul, which no fire nor flood nor thief can destroy. He can turn with the spirit of calm and triumphant faith to his friend, "increased in goods," and repeat the words of the hymn—

"Your heaps of glittering dust are *yours*,
And my Redeemer's *mine!*"

Which of the two fortunes has the larger substantial value? Which should envy the other? [Maine Evangelist.

A SOFT VOICE.

We agree with that old poet, who said that a low, soft voice, was "an excellent thing in a woman." Indeed, we feel inclined to go much further than he has on the subject, and call it one of her crowning charms. No matter what other attractions she may have; she may be as fair as the Trojan Helen, and as learned as the famous Hypatia of ancient times; she may have all the accomplishments considered requisite at the present day, and every advantage that wealth can procure, and yet, if she lack a low, sweet voice, she can never be really fascinating.

How often the spell of beauty is rudely broken by coarse, loud talking! How often you are irresistibly drawn to a plain, unassuming woman, whose soft, silvery tones render her positively attractive! Besides, we fancy we can judge of the character by the voice; the studied, fawning tone seems to us to betoken deceit and hypocrisy as invariably as the musical, subdued tones indicate genuine refinement.

In the social circle, how pleasant it is to hear the sex talk in that low key which always characterizes the true lady! In the sanctuary of home, how such a voice soothes the fretful child, and cheers the weary husband! How sweetly its cadences float through the sick chamber; and around the dying bed, with what solemn melody do they breathe a prayer for the departing soul! Ah! yes, a low, soft voice is certainly "an excellent thing in a woman."

HOW TO PROSPER.—Dr. Hawes, in his biography of Normand Smith, a merchant in his congregation, says, he never grew in grace more rapidly, or shone brighter as a Christian, than during the last six or seven years of his life, when he had the greatest amount of business on his hands. From the time when he devoted all to God, and resolved to pursue his business as a part of his religion, he found no tendency in his worldly enjoyments to chill or enchain his affections to earth. His business became to him a means of grace, and helped him forward in the divine life, just as truly as reading the Scriptures and prayer,

MORAL GOVERNMENT AS AFFECTED BY CHRIST'S MEDIATION—NO. 5.

That the Divine Government is modified by the mediation of Christ, with respect to a *part* of mankind, cannot reasonably be doubted by any whose views coincide with those of [illegible] gelical Christians in general. W[illegible] seen, that *justifica*[illegible] ferent f[illegible] [illegible] his [illegible] to eternal life, [illegible] he stands justified, the [illegible] he exercises faith in Christ, and before he has done any thing to earn the blessing; that by the Law his justification follows a life of righteousness, while by the Gospel it goes before it; that by the Law the blessing must be earned and merited, by the Gospel it is a free gift.

We would add, that with respect to the justified portion of mankind, the Law holds a different aspect, by reason of the mediation of Christ, from what it otherwise would. We are told, expressly, that believers are "not under the law." (See Rom. 6: 14, Gal. 3: 23—25, and 5: 18, 1 Tim. 1: 9—11, Rom. 7: 4—6.) In these passages, "the law" does not refer to the ceremonial institutions, exclusively; indeed, it is evident that Gentile Christians, whom the Apostle addresses, were *never* bound by them. Yet his argument supposes, that they were once bound by *the* law of which he speaks. Besides, it is abundantly clear, that "the curse," from which the blood of Christ delivers the believer, (Gal. 3: 13,) is not that which was due to the transgressor of ceremonial precepts, but the penalty of the moral Law. Still, if there is any logical connection in the Apostle's argument, it is this same moral law, (including the ceremonial service as far as the Jews are concerned,) with its dreadful "curse," which serves as "a schoolmaster to bring us to Christ," and under which we are no longer held "after that faith is come." (v. 24, 25.) So, also, the law which "is not made for a righteous man," (or, as it might be rendered, *does not* LIE AGAINST *a righteous man*,) is clearly, not the ceremonial, but the moral Law. (1 Tim. 1: 9.

There is no room for debate on this point. It is an established maxim, that a law without a penalty is no law at all; it is only advice. Yet Christ delivers the believer from the penalty of the law, as all admit. With what propriety, then, can it be said that believers are under obligation to the law, when the *curse*—the *penalty*—the very thing that *obliges* them—is taken away?

What then? Is the Law nothing more to believers than a system of *advice*? By no means. The idea that a believer may, or may not, regulate his conduct by the law of God, just as he pleases, and still have hope of eternal life, is not only at war with the Scriptures, but of most pernicious and corrupting tendency. The believer, though not *obliged by the penalty*, is nevertheless *conformed* to the Law by a working which worketh in him mightily. Sanctifying grace, freely given him in Christ Jesus, is that power which worketh in him, and brings his thoughts, desires, and actions, into conformity to the will of God; so that he walks in the law, of *choice*, as the most delightful course that he can take. It is this *conformity*, brought about by the effectual working of the grace of God in the heart, which fulfills the promise of the New Covenant—"I will put my law in their inward parts, and write it in their hearts." (Jer. 31: 33.)

Not observing this distinction between *obligation* and *conformity*, has been the fruitful source of disputes, both with respect to doctrine and duty. Sabbatarians and anti-Sabbatarians have here fought in a cloud of dust about the claims of the Fourth Commandment, beguiled into a mere logomachy, for want of proper discrimination on this point. But there is no need of any controversy here, for the grace which works in the believer to conform him to the will of God, conforms him to the Fourth Commandment, as well as to all the other precepts of the Decalogue.

As for unbelievers, they are actually "under the law," now, as much as they ever were. They are "debtors" to it—they are under its curse—they are obliged by its penalty; and there is no way of being delivered from this condition, but by becoming *conformed* to the law. To whatever extent, or in whatever measure, they are not conformed to it, they have reason to fear that they are yet "under" it. Yet, because of the intimate relation between man and man, that modification of government which delivers believers from the law, must have *some* sort of modifying influence upon the condition of all mankind. If there is an opportunity for those who are yet *under* the law to become *conformed* to it, (and the command to preach the gospel to every creature implies that there is,) this opportunity is secured to them by the mediation of Christ, and the government of the world is managed accordingly; it is managed with much long-suffering and forbearance, with many earnest calls and entreaties, the ambassadors of Christ being sent to the revolted provinces, beseeching sinners to be reconciled to God. The *embassy* system would find no place under a government not affected by the mediation of the Redeemer. T. B. B.

THE DESTRUCTIVE INFLUENCE OF A SINGLE SINNER.

"One sinner destroyeth much good." Eccl. 9: 18.

The influence of a single individual for good is sometimes very great. But such is the inclination of men's hearts towards that which is evil, that the influence of one sinner is oftentimes unspeakably disastrous in its consequences.

One ungodly king will establish and promote false religion; by his power and influence cause the people to sin; persecute and put to death the disciples of the Prince of Peace; oppress his subjects, and override [illegible]r consciences; and engage in bloody wars [illegible] other sovereigns.

[illegible] *slaveholder* may destroy the peace and [illegible]t of hundreds; obliging them to toil [illegible]out reward; to endure untold sufferings; and to live in ignorance of the great truths of revelation; that his own profit and convenience may be promoted, and that he may gratify his love of ease and power.

One manufacturer of intoxicating drinks, so exerts his powers, and uses his capital, as greatly to increase human wretchedness, and prematurely fill up the grave yards with the dead. He sends out firebrands, arrows, and death, through the civilized world. Nay, more; he sends out among the poor Indians and Africans, the debasing, the destroying liquid, and thus hedges up the way of pious missionaries, and prevents the heathen from embracing the gospel. All this to gratify the accursed lust for gain!

The vender of intoxicating drinks, deaf to the appeals of the wise and good, when he knows the destructive consequences of the unholy traffic, continues on in his course; though vice is thereby promoted, poverty increased, the peace of neighborhoods and families destroyed; though women and children become thereby half starved and half naked, and the poor drunkard himself sickens, dies, and falls into the drunkard's grave and the drunkard's hell!

One moderate drinker, who has a reputation for morality and religion, will do more to influence the young and unsuspecting to take the first steps in the downward road of intemperance than many drunkards. This, too, without thinking that he is doing any harm!

One libertine frequently decoys many virtuous females from the path of virtue and chastity, blasts their character and reputation, their interests present and future, for the purpose of gratifying his unholy desires.

One person, denominated by Solomon *the strange woman*, will lead astray from the path of rectitude many young men. Such is her winning manner, and such her flatteries, that they will follow right along after her, "as an ox goeth to the slaughter, a fool to the correction of the stocks, or as a bird hasteth to the snare, and knoweth not that it is for her life." "She hath cast down many wounded; yea, many strong men have been slain by her. Her house is in the way to hell, going down to the chambers of death."

One infidel, by his pernicious writings, his sophistry, and scoffs, may corrupt many communities, and thus greatly increase the amount of crime, and hinder multitudes from enjoying the blessings of religion here and hereafter.

One tattler is sufficient to effectually destroy the peace of a neighborhood, to stir up the worst passions of men's minds, and keep the community in a perpetual ferment. By whispering, backbiting, misrepresenting, &c., this is done. Those who were friends, and otherwise would be still, become by this means the worst enemies.

One profane little boy will by his example teach a whole school to take the name of God in vain, and to belch out fearful curses against each other, and against all others who may displease them.

One author, by writing corrupt fictitious works, can poison the minds and morals of thousands. Thus mentally intoxicated, the readers seem to live in a world of imagination; they are unfitted for the sober duties of real life; and are effectually prevented from seeking and obtaining the "one thing needful." Under the influence of these writings, they live and die, and go down to perdition.

One ungodly or unfaithful parent, may, by precept or example, or both, so influence his children, that they will grow up in the commission of almost any crime. Yes, they oftentimes hinder them from embracing the religion of Christ.

One unfaithful minister, by neglecting to "watch for souls as one that must give account" to God, by exhibiting a light and trifling spirit, a spirit of worldly mindedness, or otherwise acting inconsistently with his holy calling, will greatly hinder the success of the gospel. Truly disastrous to the cause of God and the interests of souls must be his influence, if he neglects faithfully to warn the wicked, or if his example does not accord with the pure principles of the gospel.

One unholy professor of religion may exert an influence that will confirm scores of sinners in their sinful habits, and help them along in the road to destruction. Such a person, though he professes to know God, "yet in works denies him." The influence of such an one either leads others to neglect and despise all religion, or else to take up with something short of true conversion, and thus being deceived, to travel on in the way to death, and yet suppose themselves to be in the way to heaven.

Numerous other cases might be mentioned to show how destructive to religion, peace, and happiness among men, is the influence of one sinner. But not only does he injure others, but by living in sin prevents his own salvation and enjoyment, and brings down upon himself "tribulation and anguish," yea, "everlasting destruction from the presence of the Lord."

God has made us social beings; we are capable of exerting moral influences upon others, and also of receiving influences from them. It becomes us therefore so to live as to impart a good influence to the farthest possible extent, and at the same time to be so watchful and prayerful as to resist all evil influences from others. What a multitude of unholy and soul-destroying influences there are in this world! What a mighty mountain of sin and wretchedness! What multitudes of men are pursuing the way to ruin! Shall we do any thing to increase this mass of sin and misery? Shall we in any way aid the guilty traveler on in the way to death? O let us give the whole weight of our influence against sin, and in favor of Bible religon—in favor of justice, benevolence, temperance, chastity, and all those things which are lovely.

One faithful Christian, through the blessing of God upon his labors and influence, has often been the means of leading many souls to Christ. Let such then be encouraged to go on in their "labors of love," knowing that "in due time they shall reap if they faint not."

Reader, are you a sinner? Know, then, that you are engaged in a destructive work. You are fighting against God, against the best interests of mankind, yea, you are destroying yourself. And now, while mercy lingers, turn from the work of destruction, "be reconciled to God" through Jesus Christ, and give your powers and influence to the cause of God and salvation. C. A. O.

THE CHRISTIAN LIFE.

There is life in Christian character—life imparted by the Divine Spirit, the great generator of both intellectual and spiritual life—life hid deep in the soul at the moment of regeneration, and developing itself by degrees, until the Christian comes up to the perfect measure of a man in Christ Jesus. The first pulsation of this life is repentance for sin; the next faith, or trust in an almighty Saviour, whose infinite atonement and perfect righteousness are sufficient for us. These are followed by love to God and man, and all in such rapid succession as to make us a wonder to ourselves. This life has its pains and its pleasures, its sorrows and its joys, its struggles and its victories, in the onset, and so it will have until it rises up into immortal life in a more congenial clime. It is an exotic here, and consequently will always have hindrances to its full development, until it finds its native element. The winter's blasts of adversity will blow upon it, and the summer's suns [illegible] prosperity will put it to the test, and the varied engagements, cares, duties, afflictions, and changes of life, are all designed to discipline and fit it for the skies Though this principle of spiritual vitality is divine in its origin, and is carried on by spiritual influences, we have to cultivate it by labor, reflection, and prayer. The appliances are divine, as well as the principle itself, and if neglected, the soul will not prosper and grow in grace. Life in the soul is an active principle, as the term supposes, and its tendency is to progression; but it has its opponents, both within and without, demanding all the energies we possess to overcome. There is no greater delusion than to suppose the work of grace will go on in the soul without our own labor and culture. We grow in grace by watchfulness and prayer for the Spirit's power, by Christian conversation and public worship, and by active efforts in the cause of Christ, in the use of the talents God has given us. Christian virtues gather strength by exercise, just as the arm and the whole muscular system do by proper and active use. There is yet a progression in the Christian life, when human strength decays—when the strong man, physically, falters—when the arm becomes weak and paralized; for the inward man is spiritual and divine, and will be strong in weakness, and young in old age. "Those who are planted in the house of the Lord shall flourish in the courts of our God; they shall still bring forth fruit in old age; they shall be fat and flourishing." Ps. 92: 13, 14.

The worst opponent to the work of grace, and the most hurtful, is the friendly intercourse of an ungodly world. Stern and direct opposition, even though it should amount to persecution, will not harm us; it may improve us, and often does, and tend to confirm our determination to serve God and his cause—like some trees and plants, which, the more they are trampled on and oppressed, the faster they grow, and the deeper their roots strike in the earth. Let the world take up arms against us, and we immediately gather up our own arms, and use them dexterously; we gird on the harness, and fight the battles of the Lord. But if the world meet us with a smile, take us by the hand, speak fair words to us, and seem to manifest an interest in our welfare, we are in danger of being weakened—perhaps prostrated, if not ruined.

The Christian life has a great and noble end to answer, both with regard to ourselves and others. In regard to ourselves, it is the preparative for a future, endless, and glorious life, as the divine elements or principles of which it is composed are in perfect harmony with the heaven revealed in the word of God. Without the possession of this life in the soul, it is all visionary and vain and deceptive to expect this mortal life to be succeeded by a life of blessedness in eternity. But the spiritual life in the renewed soul is rising upward to its native element, and panting to breathe that pure atmosphere in which it can live and act and enjoy and progress without interruption forever. In regard to others, it is the preserving, improving, and purifying element of the world. It sheds a light divine upon the moral darkness in which man is enveloped, and from which he will never emerge, unless by some divine instrumentality, applied by a divine energy. The Christian is called a light in the world, by which we understand that the Christian life is a light illuminating the minds of unregenerate and wicked men, showing them what they are—how far off from right and truth and salvation—and what they may and must be in order to be saved. The Christian life reveals both the law and the gospel—the law because it gives a practical illustration of its precepts, and the gospel because it shows how a guilty and polluted sinner can be restored to moral excellence. Christianity, as it is developed in the life, is the great sanitary and transforming principle introduced into the great mass of moral corruption, misery, and death, in which mankind are lying. It has already performed a glorious work in the world, and it is still onward in its course, blessing the habitations of men, breaking in upon idolatry and superstition, making infidelity in all its forms to blush, and constraining multitudes to say, "We will go with you, for we perceive that God is with you." How important to have this life in us, and to give a practical demonstration of its existence and vigor. Nominal Christianity will do nothing for us, and will make no inroads upon the kingdom of darkness; but a real and spiritual Christianity will elevate and adorn and bless. GEO. R. WHEELER.

SELF-DEFENSE.

In the *Sabbath Recorder* of March 27, 1856, under the head of *Jehuism*, I find an article, intimating that self-defense is not justifiable, in accordance with the doctrine taught in the New Testament. I wish an explanation.

1st. Does the writer regard the Old Testament doctrines as abolished?

2d. Does he deny that all men are born with certain inalienable rights, among which are life, liberty, and the pursuit of happiness?

3d. Suppose thieves break into your house in the night, and commence murdering your family, for no other reason than that there should be no evidence left to convict them, (for dead men tell no tales,) would it be your duty to remain passive, and see your wife and children butchered, and wait quietly for your own turn to come? And, to have the case appear in its true light, suppose you had in your house lodgers—strong, able-bodied men, double the number of the burglars; they, hearing the cries and death groans of your family, come to the rescue; but you refuse to let them interfere, saying, it is contrary to the New Testament doctrine, and the examples of Christ and his disciples, to fight in self-defense; let them alone; let them satiate thier thrist for blood, and then plunder my house. Would you be considered sane?

4th. Once more—Suppose 50,000 Indians from the Rocky Mountains should make a descent upon the frontier settlements in Oregon, and commence to tomahawk and scalp the inhabitants, (retaining as prisoners such as their lusts should prefer,) plunder and burn their dwellings, and drive off their cattle; would it be immoral, unjust, and unchristian for the United States troops stationed there to resist them by force, and, if it became necessary, to shoot some of those savages? Would it be murder to do so?

5th. Would suffering death at the hands of thieves and robbers be the same as suffering martyrdom for the witness of Jesus and the word of God? ONE OF THE SUBSCRIBERS.

EXTRACTS FROM MISSIONARY LETTERS.

In a letter to the Corresponding Secretary of the Seventh-day Baptist Missionary Society, dated Shanghae, Dec. 6, 1855, Bro. Carpenter says:—

"The past season has been one of the most unhealthy of any since foreigners have resided at this port. Two of our children were sick for some time, and afterwards Mrs. Carpenter and I both together were taken down with chills and fever for the first time.

"Brother Wardner has already informed the Board of the act of the Seventh-day Baptist Church here in reference to one of whom we had hoped better things. But you may perhaps expect from me a more particular account of the causes which led to that act. The exceeding duplicity of the Chinese character enhances the difficulty of distinguishing between a true and false profession, felt more or less in all countries. But for years I have witnessed, with painful anxiety, the want of courage on the part of Tâng for the aggressive warfare to which every Christian, by his profession, is called. When urged to this or that duty, there was always a lion in his way. And, as we might expect, he did not seem to grow with his years. While I was building the house we now live in, he had considerable leisure, which I used to urge him to employ in persuading his countrymen. Finally, I thought of an expedient which I resolved to try. Accordingly, in March last, I asked him to write out in order the several points on which the teachings of Confucius were, in his view, insufficient to save men. He seemed to be shocked at this proposition, and peremptorily refused compliance, saying that the Emperor himself would not dare to *say* any thing derogatory to the sage, much less would he dare to *write* it. I was taken quite aback; and began to cast in my mind whether it would do to yield the point. A crisis, I saw, had now come. The question was to be practically decided, which, with him, was the greater authority, that of the Saviour of the world, or that of the sage of China. I was not long in resolving what to do. But not wishing to act too hastily, I tried to reason with him; after which he faintly assented to my proposition, and I faintly hoped he would try. But after half a month, finding that he had made no effort to write anything, I promptly dismissed him from my employ. I had no heart to retain him. After a lapse of more than three months, I commenced a labor with him for violating his covenant obligations in forsaking the house of God. This was carried up, and in the last step of labor there was pretty strong evidence, unexpectedly brought to light, going to show that he was addicted to opium smoking. On the 3d of August Tâng Yuen Chau was solemnly excluded from the church. May God have mercy upon him. Perhaps I ought, in justice to Tâng, to say, that Chong, who is dead and gone, was of the same opinion with him in regard to the impropriety of writing what I required of Tâng. And I know not how much weight the opinion of Chong may have had on the mind of Tâng.

"Since I last wrote I have tried to preach about thirty times, for the most part in the chapel, but several times under the open canopy of heaven, in some of the neighboring hamlets."

In a letter to the Corresponding Secretary, dated Dec. 9, 1855, Bro. Wardner says:—

"I have lately employed a personal teacher half of each day, and am engaged in putting Romans into the Shanghae dialect, for family and chapel use, and am myself transcribing it in the new character for the benefit of our cook. I was never before so sensible of the necessity of using the local dialect in order to make the Scriptures intelligible, even to literary men. My teacher took his degree of A. M. more than twenty years ago, and has ever since been engaged in literary pursuits; yet, with two of the best translations before him, he finds but very few verses that he can render correctly without help. So indefinite and equivocal is their book style.

"My missionary operations have been considerably interrupted for two or three months, except on Sabbath days, in consequence of the constant and vigilant watch necessary in building houses here.

"The tailor, whose case I mentioned in my last, hesitates about being baptized, and his timid disposition may yield to the opposition he meets. He attends our meetings regularly when in the place, and, as far as we know, still keeps the Sabbath.

"The Rev. Mr. Belton, of the Southern Methodist Mission, left for the United States a few weeks ago, under gloomy prospects. There are now only two male Protestant missionaries in Shanghae, who were here when we came, who have not since been home for their health. Besides, there are thirty-three (male and female) who have been taken away during the time, by death or removal; and still our number has not been broken in upon. God has truly been far better to us than our fears or deserts. But unvarying prosperity cannot always be the lot of mortals."

TRACTS FOR CHINA.

We have received the second response to that call for funds to circulate Sabbath Tracts in China. It comes by way of Mrs. D. P. Rogers, of Waterford, Ct., and reads as follows:—

"In reply to the call through the *Recorder* for funds to publish Sabbath Tracts in China, I send enclosed twenty dollars for that object, contributed by the sisters of our society, with the suggestion that the sisters in our several churches go and do likewise."

Bro. Abel Stillman, of Poland, N. Y., has also ordered the payment to the Missionary Treasury of twenty-five dollars for the circulation of Tracts in China.

TACT IN THE MINISTRY.—Speaking of Rev. Mr. Little, of Granville, Ohio, who, for upwards of twenty years, has labored there, and made his mark second hardly to any other man in the West, a correspondent to the N. Y. *Evangelist* says:—

"Mr. Little has a surprising tact to know when to speak and when to be silent, and just what to say. This talent he exhibited in his endeavor to bring estranged brethren together. A verbatim statement of his conversations with particular individuals, and of his tact in allaying present anger by calling into action old friendships; now laying the 'new commandment' as a heavy burden on this good man's conscience, and now the burden of the fifth petition in the Lord's Prayer on that good man's conscience; now eliciting some kind remark from this man concerning some old friend with whom he was now at war, which remark he would repeat to that old friend, waking in him some kindly response; how he put the tale-bearers who had carried evil from one good man to another, to carry good; inducing the stronger to yield to the weaker, and the good to the bad—a process so eminently Christian that it sifted the church, leaving the wheat and giving the chaff to Satan and the —s; the way in which he got the two parties face to face in a church meeting, and effected a reconciliation, which was soon followed by a revival of religion, which completed the good work; all this, as I have heard Mr. Little and others relate it, would make a most delightful narrative. That transaction placed Mr. Little in the front rank of pastors in the public estimation, and his subsequent successes have sustained the award then made."

TOMB OF HENRY MARTYN.—A monument to the memory of Rev. Henry Martyn, the devoted missionary, is being erected at Tocat. The inscription is to be as follows:—

"Here lies buried Henry Martyn, a chaplain in the service of the East India Company. Born at Truro, in England, on the 18th February, 1781. Died at Tocat, on the 16th of October, 1812. He labored for many years in the East, striving to benefit mankind, both in this world and in that to come. He translated the Holy Scriptures into Hindostanee and Persian, and made it his great object to proclaim to all men the God and Saviour of whom they testify. He will long be remembered in the countries where he was known as a 'man of God.' May his grave be honored."

PERSECUTION IN GERMANY.—A Mr. Earnest Mann, an American Wesleyan missionary, was tried on the 15th January, at Wessenbourg, (Bas Rhin,) for having preached the Gospel in two villages near. He was accused of being a bad character, and of leading people astray by illicit teaching. These accusations were proved to be totally false, and his only crime was clearly ascertained to be, "having preached the Word of God without an authorization." He was, however, condemned to six days' imprisonment. He had been arrested on the 14th December, and immediately confined in the jail of Soultzsous Forétes, which made, therefore, just five weeks that this Christian was incarcerated. On leaving the prison at Wessenbourg, Mr. Mann was only given his liberty on the condition of never preaching within the limits of that arrondisement.

RELIGION IN COLLEGES.—In Nassua Hall, Princeton, N. J., there are 327 students, of whom 67 are professors of religion, 50 candidates for the ministry, and 28 sons of ministers. In Washington College, Va., there are 71 students, of whom 26 are professors of religion, and 20 studying for the ministry. Washington College, Pa., has 90 students, of whom 37 are professors, and 20 candidates for the ministry. In Davidson College, N C., are 74 students, of whom 21 are professors, and 12 candidates. In the Oglethrope University, Ga., are 84 students, of whom 20 are professors, and 11 candidates. Westminster College, Mo., has nearly 100 students, of whom over 30 are professors, and 15 candidates for the ministry.

RELIGIOUS INTELLIGENCE.

The Rev. Ebenezer Burt is one of the oldest Baptist ministers in Massachusetts. He was born in Norton, 1766; experienced religion when fourteen years old; commenced preaching in 1794, and was ordained in 1797, standing upon a great *rock, in Hardwick*, Mass. It was here he collected a Baptist church, and continued pastor of the same until 1846, at which time the church removed to Ware Village to form a new interest there. The whole number of sermons preached by Father Burt is 4,966. Whole number of Baptisms 197. Married 1,941 persons, and attended 322 funerals. This aged father in the ministry preached recently in the Baptist church in Athol Depot Village.

The *Presbyterian Herald* says: "We congratulate the citizens of Kentucky upon the fact, that their legislators have at last waked up to the duty of providing the State with a corps of teachers, natives of the State, and trained upon her own soil, to educate the rising generation. The State Legislature resolved to reorganize Transylvania University, and convert it into a Normal School. They made an appropriation of $12,000 per annum to that institution, to enable it to carry into operation this object."

The *Christian Chronicle* has intelligence of revivals at several places in New Jersey and Pennsylvania. Rev. T. Swaim writes that the church in Flemington has been "favored of the Lord with a precious outpouring of the Holy Spirit," and already thirty-seven converts have united with the church. At North Wheeling seventeen persons have been baptized recently. In other places there are cheering tokens of the Divine presence with the people.

Since the first of January, about sixty persons have united on profession of faith with the Baptist church in Cannon-street, New York, of which Rev. Joseph Banvard is pastor. In the same time, between twenty and thirty additions have been made to the Sixth-street Baptist Church, Rev. Mr. Norton's. A revival of religion is in progress in the Baptist Tabernacle, of which Dr Lathrop is pastor; the work is described as one of great power, with less than the usual stir.

In Piedmont, the Protestants have suffered much persecution. Sixteen *Bible-readers* have been arrested by the authority of the government. The Tuscan laws, which are boasted of as tolerating all religious *opinions* are quick to pinch and crush when any sentiment adverse to Romish doctrines is *expressed*. It is understood that Cardinal Corsi, the Archbishop of Pisa, is the great mover in this prosecution.

The Syracuse *Chronicle* says that a gentleman of that city, who lately returned from the South, saw, on a Sunday, a coachman at church chained to the wheel of the carriage, the chain being round the poor fellow's neck, and then fastened to the carriage, so as to prevent his escape. His master was inside partaking of the sacrament!

A pleasing state of religious interest is now existing in the Presbyterian Church in Fourteenth-street, on the corner of Second-av, New York, Rev. Dr. Asa D. Smith's. Morning prayer-meetings are held in the lecture-room, which are abundantly attended, and preaching is had in the evenings. A strong religious influence rests upon the whole congregation.

New Orleans has three colored Methodist Episcopal Churches, and three colored local preachers who are slaves, as are most of the 1,200 communicants—one is the driver of a dray, another a carpenter, and the third a porter in a wholesale coffee store; over all is a white pastor appointed by the Louisiana Conference.

The Imperial Firman, granting equal rights to all the subjects of the Sultan, of whatever religion they may be, which was publicly read in the great council hall at the Porte, on the 18th of February, it is thought by those most conversant in Turkish affairs, will not be effectual in securing the object.

At a meeting of some of the friends of Theological Education, held at the time of the assembling of the Southern Baptist Convention, at Montgomery, Alabama, it was resolved that the cause of truth demands that the Baptists of the South and South-west unite in establishing a Theological Institute of high grade.

A very severe loss to the Protestant Church in France, and to the cause of Protestantism throughout the world, will doubtless soon be felt in the death of Rev. Adolphe Monod, whose end according to all human probability is rapidly drawing near. He has been confined to his bed for nearly eight months, suffering at times most intense agonies of the body.

An English clergyman a few weeks since stated in a public meeting in London, that the number of youths whose names are enrolled in the books of Sunday-schools as regular attendants throughout England, is no less than *two millions and a half*.

Three cases have recently been tried in the Prerogative Court in Dublin, of Romish priests arraigned for altering the wills of deceased persons, in which the accused have endeavored to fall to the possession of large estates by defrauding the rightful heirs.

A little book, entitled, "Come to Jesus," by Newman Hall, has, through the aid of different associations, reach its 546th thousand.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MARCH 31.

In the **Senate**, the consideration of the resolutions submitted by Mr. Iverson, for the appointment of a Committee to ascertain the reasons which governed the action of the Naval Retiring Board, was resumed. The matter was discussed by Senators Iverson, Slidell, Butler, Clayton and Crittenden, but no definite action was taken.

In the **House of Representatives**, the Military Committee was instructed to inquire into the expediency of accepting the services of volunteers to aid in the suppressing of Indian hostilities on the Pacific Coast. The greater part of the day was occupied in a debate on the proper method to be taken to suppress the Indian hostilities in Oregon and Washington Territories.

THIRD-DAY, APRIL 1.

In the **Senate**, Mr. Mason, from the Committee on Foreign Relations, reported a joint resolution, which was adopted, amending the Act of March, 1855, to remodel the Diplomatic and Consular system. Mr. Clayton then resumed his remarks on the action of the Naval Retiring Board, and was followed by Senator Bell. The discussion eventually led to a personal colloquy between those two gentlemen, in the midst of which the Senate adjourned.

In the **House**, the bill appropriating $300,000 for restoring and maintaining the peaceable disposition of the Indian tribes on the Pacific coast, and $120,000 for the purchase of gunpowder, was passed; after which the House went into Committee of the Whole on the President's Message, and the Slavery question was discussed.

FOURTH-DAY, APRIL 2.

In the **Senate**, the House resolution for the enlargement of the Government buildings at Buffalo was passed. A joint resolution from the Committee on Foreign Relations, to permit Dr. Kane and the officers associated with him in his Arctic Expedition to accept testimonials from the British Government, was discussed at considerable length, and finally postponed. The $3,000,000 armament bill was then taken up, and Mr. Fessenden spoke on the subject of the Clayton-Bulwer Treaty, taking ground against harsh measures, and in favor of settling the differences between this Government and Great Britain by negotiation. Mr. Cass followed, and argued that we should take a decided stand for the maintenance of our rights. The difficulty between Senators Clayton and Bell was settled.

The **House** was engaged during its whole session in the consideration of the Senate's amendments to the Appropriation bills.

FIFTH-DAY, APRIL 3.

In the **Senate**, the bill for the relief of the widows and orphans of those who were on board the sloop-of-war Albany, was passed. Kansas affairs were discussed by Mr. Colburn, who defended the action of the Emigrant Aid Societies.

In the **House**, the Senate's amendments to the Deficiency Appropriation Bill were considered.

SIXTH-DAY, APRIL 4.

In the **Senate**, the House bill making an appropriation of $300,000 for restoring and maintaining the peaceable disposition of the Indians on the Pacific Coast, and $120,000 for gunpowder, was passed. Mr. Collamer then concluded his remarks on Kansas affairs, and was followed by Mr. Douglas in reply.

In the **House**, a bill was introduced to authorize and facilitate the construction of a Northern, Southern, and Central Pacific Railroad and Telegraph line, which was referred to the Select Committee on that subject. The Senate's amendments to the Deficiency bill were taken up in Committee, and the Slavery question was discussed. Both Houses adjourned to Second-day.

European News.

European dates to March 22d have been received.

The political and commercial intelligence is of little moment; the news is all gossip about the birth of the King of Algiers, the sufferings of his mother, the joy of his father, and the general commotion of all Europe at the announcement of the auspicious event.

Parliament has adjourned over the Easter holidays. Mr. Dallas has proceeded to London. Mr. Buchanan has taken formal leave of the Queen; Lord Palmerston accompanied Mr. Buchanan, and in this act the English papers see an indication that the Premier desires to stand well with the United States. There is nothing new to report respecting the difficulties with America.

The Madrid Epoca says: "The representatives of the Western Powers have received telegraphic dispatches announcing the early conclusion of peace as more than probable. It is said in political circles, that Lord Howden has received orders from the English Government to suspend the purchase of mules and other means of transport."

The Tartars at Eupatoria fear the consequences of peace. A great number of them will follow the Allies when they retire. Some bandits have been killed at Larissa.

Land Warrants.

An intelligent dealer in land warrants has furnished us with the following statement, (says the *National Intelligencer,*) which may convey useful information to persons concerned:—

The price of land warrants, like that of every commodity of intrinsic value, depends on the known laws of supply and demand, and a careful observance of these laws must indicate with more or less correctness the range of prices for the future.

The demand for warrants for immediate location for the last twelve months has been unprecedented, far exceeding the highest estimates of the most sagacious observer. Hence the trade has become of immense magnitude, and been embarked in by large capitalists in every section of the country.

When the Department commenced issuing warrants under the act of the 3d of March, 1855, it was supposed that prices would commence at from $1 to $1 05 per acre. Instead of that, prices from the commencement ranged from $1 10 to $1 15 per acre, varying but little until a sudden and unexpected panic was effected in November last, and prices went down as low as 87½ and 95 cents per acre. The season for locating having, as was supposed, nearly expired, it was predicted that prices would not again rally, but would fall still lower. All these predictions, however, have failed. Prices very soon started upwards, and such was the demand throughout the Winter, that rates continued to advance until $1 09 per acre for 120's and $1 14 for 160's and 80's was freely given. These rates were paid up to the 18th and 19th of last month, at which time a sudden and unexpected decline took place, and in a few days thereafter prices were quoted in New York from $1 01 to $1 03 for 120's and $1 06 per acre for 160's and 80's; and in this city at $1 04 for 120's and $1 08 for 160's and 80's.

The number of warrants that have been issued from the Department under the act of the 3d of March, 1855, is 114,000. These have been issued principally to those who had previously obtained warrants for 40 or 80 acres, and whose claims therefore presented no difficulties. Of the 240,000 claims presented, about 170,000 have been examined, leaving only 70,000 to be acted on before the whole number will have been either allowed or suspended. Of this number from 15,000 to 20,000 will probably be suspended; so that within a few months warrants can only issue in cases that have been suspended for further proof. These cases require much more care and time in examination, and the issue from the Department will decrease from one-third to one-half. The supply, therefore, for the present year, cannot be equal to the last. The present supply of warrants will consequently be soon exhausted, without the possibility of its again occurring; and should there be more than the usual demand, prices must go higher than they have ever done.

Ecclesiastical Legislation.—The present session of the British Parliament is likely to be one of much importance in relation to the interests of the Church of England. The following programme of motions respecting Ecclesiastical affairs is before it:—1. The Bible; an address to her Majesty for a commission to retranslate. 2. The Prayer Book; alterations in conformity with the suggestions of the royal commissioners of 1689. 3. Holy Orders; to enable clergymen legally to enter upon a secular profession, on resigning their own. 4. Church Rates; to abolish them in England and Wales. 5. Property of Cathedrals; a commission appointed by Parliament, to manage the estates of capitular bodies. 6. New Parishes; to rearrange the parochial subdivision of populous district. 7. Church Courts; to reconstruct and diminish their jurisdiction. 8. Ireland; a commission of the House to consider and readjust the temporalities of the Established Church, with some reference to their appropriation.

Dr. Emmons, in and out of the Pulpit.—This eminent divine and author preached short discourses, delivering only one on a Sunday, and having but two services. He delivered the body of the discourse in the morning, fully and accurately written out in a fair hand, logically constructed, with distinct divisions. In the afternoon he repeated his divisions, and then proceeded to the improvement of his subject, only putting down his propositions and preaching extempore. He was generally at home, spent a large portion of his time in his study, reading much, thinking profoundly, and writing but little. He never performed manual labor on his farm, and never visited his people except in their afflictions, when he was very attentive.

New Definition of Mortal Sin.—A considerable degree of excitement exists in the politico-religious world in Toronto, in consequence of the issue, by the Roman Catholic Bishop of Toronto, of a "Lent Pastoral," in which occur the following extraordinary passages: "Catholic electors in this country, who do not use their electoral power in behalf of separate schools, are also guilty of mortal sin. Likewise parents not making the sacrifices necessary to secure such schools, or sending their children to mixed schools. Moreover, the confessor who would give absolution to such parents, electors or legislators as support mixed schools to the prejudice of separate schools would be guilty of mortal sin!"

Newfoundland Dog putting out a Fire. The Troy *Daily Times*, April 3, says: One of the most astonishing instances of the sagacity of the dog transpired this morning, which ever came to our knowledge. The Messrs. Staude, Tobacconists, No. 35 Congress-street, closed their store last evening, leaving their favorite Newfoundland dog inside. This morning on opening the store, the floor in the back room was found to be on fire, and the dog was laboring with his fore feet and mouth trying to subdue it. A pail of water which stood in the room had been poured down the hole. the faithful animal had so successfully combatted the fire as to prevent its spreading beyond a spot two or three feet square. How long the noble fellow had stood sentinel and fought down the advancing flames can only be conjectured—it must have been several hours. His feet, legs, and mouth, were badly burned, and it is feared that he is seriously injured internally by inhaling the hot air.

Emigration to the West.—From all parts of New England we receive accounts of the swelling tide of emigration to the West, not to Kansas merely, but to all parts of the Great Northwest. From Worcester we learn that a large number of mechanics and business men are preparing to seek their fortunes at the West. The New Hampshire *Patriot* recently stated that persons in all sections of the State were preparing to start for the West, while many have already gone this month. The *State of Maine* says that the same remark holds good in that State, and that the tide of emigration to the West is stronger now than it has ever been since the "California fever" some eight years since. This large infusion of the New England element into the Western States cannot fail to exert a healthful influence in shaping the destiny of one of the most important sections of the country.

A correspondent of the Congregational Journal communicates a brief sketch of the organization and proceedings of the "Merchant Adventurers of London," the company under whose auspices and by whose aid the Pilgrim Fathers came to America, showing that it was very much like the present "Emigrant Aid Society" at Boston.

Industry of Massachusetts.—In 1845 the aggregate productive industry of the State of Massachusetts was one hundred and fourteen millions. Now, as seen by the statistics about to be published from the office of the Secretary of State, it will go up three hundred millions, making a growth of 100 per cent. in the productive wealth of the State in ten years. In the cotton manufacture the growth has been from twelve millions to twenty-six millions; in calico from four to five; in woollens from eight to twelve; in linen from one hundred and forty-five thousand to one million and a half; in shoes from fourteen millions to thirty-eight; in steam engines from two hundred thousand to three millions and a quarter; in copper and brass manufactures from one to three millions; in glass from three-fourths of a million to two and three-fourth millions; in chemicals from three hundred thousand to one million and twenty-four thousand dollars.

SUMMARY.

A dispatch from Providence, R. I., dated April 2d, says the election returns indicate the choice of a General Assembly composed of all the parties to the contest, without a large majority of either. So far as heard from, there are sixteen Americans and Republicans, and nineteen Democrats elected, exclusive of the Providence vote. As regards the State ticket, it is probable that Wm. W. Hoppin, for Governor, John R. Bartlett, for Secretary of State, and Charles Hart, for Attorney General, are elected, these candidates being on both the American and Republican tickets. For Lieutenant-Governor and State Treasurer there is probably no choice.

The New York State Temperance Society have just shipped to Rev. Israel S. Diehl, a Methodist Clergyman at San Francisco, and who is devoting the best energies of his life to the interests of Temperance in California, more than half a million printed pages, comprising copies of the Prohibitionist, and the various other publications of that Society. Upon application to the proper officers, the United States Mail Steamship Company have consented to forward the boxes containing this great amount of Temperance matter for California, entirely free of charge. The American Express Company have passed the packages free to New York.

The noted street preacher, J. S. Orr, better known in New York, and other parts, as the Angel Grabiel, has created great excitement in Demerara, between the Portuguese and blacks, so that the authorities have dispatched to a number of islands for vessels of war to protect the place. Dispatches were sent to St. Vincent, from the Governor of British Guinea, for vessels of war. No war vessels in port, and but few troops—mostly colored. They have taken about 600 or 700 rioters as prisoners. The negroes have pulled down, plundered and set fire to a good many Roman Catholic Churches and Portuguese ships. The Angel Gabriel is taken prisoner.

The Boston Bee says:—"Nearly every woman we met on the streets yesterday, had on a pair of boots—good, honest, long-legged, waterproof boots. How much better is this than paper-soled, disease-clinching, ridiculous shoes. We are beginning to think the millennium is approaching. Women wear boots—actual, soled, no-mistake boots. When women will allow common sense, instead of false notions of elegance, to control their selection of coverings for the feet, they will have done much to stop the ravages of that great enemy of the females of America—consumption."

The Rome (Ga.) Courier has an account of a duel lately fought near Dallas, Paulding County. The parties were Wiley Jones and William Bane, relatives. They fought with rifles, and fired three times. At the first shot, a part of Jones' right ear-lock was cut off by the ball of his antagonist. They were still not satisfied, loaded again and fired, Bane's ball passing through Jones' hat, just above his head. Jones then made at his antagonist with the rifle, and attempted to knock him down with it; but Bane got the advantage, knocked him down and beat his brains out, and fled unhurt.

The Independent says that the various Sunday Schools of New York that are connected with the American Sunday School Union, are in the habit of giving a pledge near the beginning of every year to collect a certain amount of money for the Union during the year. We have been shown several of these promissory cards, and notice that one school names $200, another $250, another $275, and another $500. We are told that none of these pledges are ever broken, and that many are often over-filled. Last year the united offerings of Sunday School scholars in this city were no less than $6000.

Extensive investigations into the condition of the tenement houses of New York city, have been officially made by a committee, and the subject is now before our State Legislature. The crowding of poor families into filthy, inconvenient, and miserably ventilated houses, in such numbers, and under such circumstances, that all the laws of decency as well as of health are violated, is no doubt one of the chief sources of pestilence and of death to our population, on the one hand, and, on the other, of crime and degradation.

Mr. Aiken, who was beaten by Mr. Banks, inherited a fortune of more than a million of dollars. Mr. Banks served his time as a machinist, and is not to-day worth $2,000 in the world. Mr. Aiken owns more than 1,500 slaves. Mr. Banks has a wife and two children, and worked twenty years of his life in the machine shop! Mr. Aiken represented the Slave Power; Mr. Banks the free muscle and spirit of the country. Mr. Aiken was beaten by Mr. Banks!

A plan has been devised for lining vessels with a continuous coating of India rubber, as a safeguard against leakage. It is intended to apply the lining within the frame of the ship, and beneath the ceiling. The edges of the sheets, which are proposed to be from one-fourth to three-fourths of an inch in thickness, are to be cemented by heat, and the gum, it is believed, will be as durable as the wood itself.

The director of the U. S. Mint has given notice that purchases of silver will be paid for at present at $1 22½ cents per standard troy ounce, the payments to be made in silver coins of the new issues. This will make the full weight five franc piece worth 99 cents, old Spanish dollars 105 cents, Mexican and South American dollars 106½ cents, half dollars of the United States 59½ cents.

Mr. Robinson, the Free-State Governor of Kansas, was in Washington last week. The object of his visit was to ascertain the true state of feeling there relative to that Territory—the reports transmitted thither being contradictory and wholly unreliable. While on the way from Kansas to St. Louis the passengers on board the steamboat organized a meeting and listened to his statement of affairs with respectful attention.

The Cumberland (Md.) Telegraph says that so terrible has been the effect of the cold and snow on the mountains west of that place, that the deer have become so weak from starvation that they have been captured in numbers by individuals, who have them confined in their stables for the [redacted] saving their lives. Mr. William G[redacted] in confinement, and so tame [redacted] that they will readily eat fr[redacted]

The list of factories in Rh[redacted] foots up a total of only 75,6[redacted] a single house is running a larger [redacted] spindles, and their whole product does not supply the cloths that are printed by the same house. What an enormous development of the resources of this State there has been within the last forty years! How the whole State is becoming a hive of industry and a garden of productiveness.

A correspondent of the Tribune, writing from Nebraska City, N. T., March 8, says there is a scheme on foot to prevent the admission of Kansas as a Free State until the part of Nebraska lying South of Platte River is annexed to Kansas; the object being to secure the aid of a certain pro-slavery population in that section of Nebraska to overpower the present free people of Kansas.

Of the 350,000 inhabitants in Wisconsin, about 35,000 are German; 19,000 English; 21,000 Irish; 4,000 Welsh; and 3,500 Scotch. In Louisiana the foreign is to the native population as one to five; in Texas as one to nine; in Virginia, as one to forty; in North Carolina, as one to three hundred; in South Carolina, as one to thirty-three; in Georgia, as one to one hundred; and in Florida, as one to twenty-four.

The sudden restoration of Alexandria to wealth and importance by her commerce during the present century, is not perhaps generally known. "E. W." states the population to have been but 6000 in 1798; in 1834 it had reached 60,000; and in 1855 it was 200,000. This rapid increase tells the whole story of her growing commerce. Her free trade with all the world has done it.

The Indians of Minnesota are in a suffering condition, which is owing in part to an interdict issued by the Government against the trade in guns and ammunition with them last Fall. This measure, which was designed as a preventive of war among themselves, has thrown them back upon the bow and arrow, those primitive means of obtaining game; and of course the supply has been limited.

A young lad named Ephraim Whitehead, living in Cleveland, was killed by a bloodhound on Saturday. He was missing, when the family became alarmed, and search was instituted for him. A nephew of Mr. Whitehead discovered the boy in a field, about twenty rods from the house, nearly dead, having been attacked and torn in a most awful manner by a bloodhound slut.

The oldest newspaper in Holland, the Harlemtche Courant had been published two hundred years on the 8th of January last. For more than one hundred years it has been owned by the family of the present editors, Johannes Enschede and Son. The paper was first started by Abraham Castelyn.

A line of boats is talked of, for the coming season, between Greenport, on Long Island, and Newport; thus making the Long Island Railroad the most direct route from New York to that great summer resort. Efforts will also be made to secure for this road a portion of the Boston travel.

Gov. Clark, on learning from the highest medical authority that Dr. Robert M. Graham, who was convicted, more than a year ago, of killing Mr. Loring in a personal rencontre at the St. Nicholas Hotel, is so ill at Sing Sing that longer imprisonment would have resulted fatality, granted a pardon.

The National Executive Republican Committee met at Washington recently, and issued a call for a National Nominating Convention, to sit at Philadelphia on the 17th of June, inviting the attendance of delegates representing all the opponents of the slavery policy of the Administration.

At a recent session of the Ohio Pomological Society, at Cleveland, a new variety of apple was introduced, which has been named, from its delicious taste, the "Melt in the Mouth." It is said to have been raised in Chester County, Pa., and to look something like the Jonathan.

The world has one Emperor more; a brother-in-law to one of the mighty potentates of Abyssinia, having dethroned his relative, has crowned himself Emperor, under the appellation of Theodore the First, and offered his powerful amity and allowance to the Viceroy of Egypt.

A small piece of paper or linen, moistened with spirits of turpentine, and put into a bureau or wardrobe for a single day, two or three times a year, is a sufficient preservative against moths.

The Legislature of New York has passed a bill to authorize the bridging of the Hudson River at Albany—an object which the Railroads centering there have long labored to attain.

An extensive revival of religion is going on in Hartford, Conn. On a recent Sunday, Rev. Dr. Murdock baptized a number of persons, one of whom was a lady seventy-six years of age.

The Cooperstown *Journal* speaks of several failures in that and adjoining counties of parties in the butter and cheese business, under circumstances which lead to the belief that fraud has been practiced.

The Chilian war steamer Cazadore, on her way from Talcahuana to Valparaiso, run upon a rock and afterward sunk. Only 43 out of 368 souls on board were saved.

War has been declared by the Government of Costa Rica against that of Walker in Nicaragua. Both parties appear to be very enthusiastic, and determined on victory or death.

Dr. Graham, who killed Colonel Loring at the St. Nicholas Hotel, now in the Sing Sing Prison, is so ill that he is not expected to live.

The Kansas Investigating Commission, before leaving Washington, made an arrangement with private parties for a supply of money, in anticipation that $10,000 would be directed to be paid, but not yet appropriated by Congress.

The United States District Court for Kansas meets at Lecompton on the 7th of April, when, it is expected, the Grand Jury will take into consideration the charges against the members of the new Legislature and the Free-State Government.

The Jury in the case of Sarah Jones vs. David Evans, tried in the Circuit Court, Brooklyn for breach of promise of marriage and seduction, rendered a verdict for plaintiff, with $1,200 damages.

[redacted] houses in the heart of the city of [redacted] by fire Tuesday, [redacted] iest Insu[redacted] pool Insurance Company.

The new license act in Pennsylvania, passed both Houses, will have the effect of reducing the number of taverns in Philadelphia to about 900, and restaurants to about 225.

New York Markets—April 7, 1856.

Ashes—Pots $6 00; Pearls 8 00.

Flour and Meal—Flour 6 75 a 7 12 for ordinary and straight State, 6 62 a 7 00 for Western mixed, 7 00 a 7 37 for common to good Ohio, 8 25 a 10 50 for extra Genesee. Rye Flour 4 25 a 6 25. Corn Meal 3 25 a 3 31 for Jersey.

Grain—Wheat 1 56 a 1 70 for inferior to good red, 1 93 for white. Rye 1 00 for inferior, 1 10 for prime. Barley 1 23 a 1 28. Oats 38 a 41c. for Jersey, 42 a 44c. for State, 46 a 47c. for Chicago. Corn 61 a 65c. for Southern, 62 a 68c. for White and Yellow.

Provisions—Pork 15 00 for prime, 16 56 for mess. Beef, 8 25 a 8 75 for country prime, 9 25 a 10 75 for country mess. Lard 10c. Dressed Hogs 8 a 9c. Butter 17 a 20c. for Ohio, 20 a 24c. for State, 24 a 26c. for prime. Cheese 8 a 10½c.

Potatoes—1 25 a 1 37 per bbl. for Western Reds, 1 50 a 1 75 for N. J. Mercers, 1 87 a 2 12 for N. J. Carters.

Apples—1 25 a 2 00 per bbl. for common, 2 50 a 2 75 for Greenings, 2 50 a 3 00 for Spitzenbergs. Dried Apples 5c.

MARRIED,

In Willing, Allegany Co., N. Y., Nov. 14th, 1855, by D. P. Willer, Esq., **Lyman L. Trask**, of Willing, to Miss **Margaret E. Hungerford**, of Burdsel, Allegany Co., N. Y.

In Verona, N. Y., on the evening of April 3, 1856, by Eld. D. P. Curtis, Mr. **Henry Burdick** to Miss **Eliza Warner**, all of Verona.

In Leonardsville, March 29th, by Elder W. B. Maxson, Mr. **Benjamin Adams** to Mrs. **Sarah D. Grants**, all of Leonardsville, N. Y.

In Brookfield, Madison Co., N. Y., March 30, by Eld. L. M. Cottrell, Mr. **George F. Denison** to Miss **Laura A. Burdick**, both of Brookfield.

In Rockville, R. I., March 31st, 1856, at the residence of Eld. P. S. Crandall, and by the same, Mr. **Richard Harrison** to Miss **Harriet A. Burdick**, all of Ashaway, R. I.

DIED,

On the 22d of February, in Bolivar, Allegany Co., N. Y., **Leone Kenyon**, daughter of Ethan Kenyon, Jr., aged 1 year, 8 months, and 8 days.

In Rockville, R. I., March 25, 1856, of consumption, **Hannah**, daughter of Asa and Sarah Woodmancy, aged 21 years, 7 months, and 17 days. She left satisfaction to her friends that her change was for the better.

In Genesee, N. Y., on the 26th ult., **George Potter**, Jr., in the 45th year of his age. The deceased was one of the excellent of the earth; and in his death, not only his family and the community in which he lived, but the 1st Seventh-day Baptist Church of Genesee, of which he was a member, has sustained a loss, which can be repaired only by the Power that wrought effectually in him, to make him what he was—a devotedly pious man. He loved Zion, and prayed for her welfare. He delighted in the ordinances of God's house, and was ever ready to bear his part in sustaining the spiritual as well as the temporal interests of the Church. Modest and retiring in his habits, he made but little stir in the world, but the silent influence of his example created for him a name "better than precious ointment." He has gone to enjoy

"A long eternity of love
Formed for the good alone."

In Plainfield, N. J., on the 3d inst., **Simeon F. Randolph**, aged 64 years. He embraced religion in early life, and became a member of the Piscataway Church. During his connection with that church he was an active member. He was the second Seventh-day Baptist that located in Plainfield, and became one of the members of the Church when constituted in that place. He was always an active, praying member, and bore his part in sustaining the institutions of religion.

Jared Stillman, Willing	2 00	13	17
Nelson Clarke, Leonardsville	2 00	13	13
J V Greenman "	2 00	13	52

FOR THE SABBATH-SCHOOL VISITOR:

J C Smith, for Sab Sch at Plainfield, N J	$12 00
J C Green, Independence	3 00
F Tallett and J J Tallett, 25c. each	50

WILLIAM M. ROGERS, Treasurer.

Eastern Association—Executive Committee.

The Executive Committee of the Eastern Association are requested to meet at the lecture room of the Seventh-day Baptist meeting house in Pawcatuck Village, R. I., on Wednesday, the 30th inst., at 10 o'clock A. M. Those churches which have not reported to the Corresponding Secretary how much they will raise for missionary purposes the present year, are requested to do so previous to said meeting.

S. S. Griswold, Clerk of Ex. Com.

Hudson River Railroad.

On and after Monday, Jan. 21, 1856, the trains will leave Chambers-st. station as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Through Way Train, 12 M. Express Train 5 P. M. For Poughkeepsie, 9 A. M. and 3.30 P. M. For Peekskill, 5.30 P. M. For Sing Sing, 4 P. M. The Sing Sing, and Peekskill Trains stop at the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. NO TRAIN on SUNDAY.

M. L. SYKES, Jr., Superintendent.

Every Reader

Will please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Alfred Highland Water-Cure.

This establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone. [redacted] with the establishment is a Dental Shop, [redacted] profession will be attended to. [redacted] BURDICK, [redacted] N. Y.

[redacted]

B WHOL[redacted] *Indiana.*

We are in the *very heart* of the [redacted] Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE, For Family Use, entitled

THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid.)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

The subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, **George B. Utter**, No. 9 Spruce-st., New York.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 11.

On the morning of the 27th of October, an unusual stir amongst the camp dogs announced the arrival of a stranger at the Post, and in a few moments a tall hunter rode up, dressed in buck-skin breeches and frock coat. His name was Clowd; he was guide to Major R., and he announced the arrival of the long-expected company of mounted Rifles, commanded by that officer; they were returning from a long search for Indians, with but trifling success, and I purposed to avail myself of this opportunity to return to San Antonio. Soon after, a squadron of horsemen appeared over a low hill, where the winding of the El Paso road loses itself to our view; a long train of wagons followed, their white covers shining in the sun, and successively disappearing in the ravin[illegible] camping-ground[illegible] dist[illegible] was sent with [illegible] I am indebted to the kind[illegible] Captain Carpenter, by which he added another to the many claims he has to my grateful remembrance. A hurried farewell to my late companions, and to my fast friends, Cola and Quail, and I was bounding over the rocky ground, away from scenes that I shall never see again, though every feature of them is indelibly stamped upon my recollection. We had a distant view of the theatre of our late conflict with the Apaches, passed up through the cañons, and out again upon the table-lands, and among the dog towns, at a rapid rate, but could not overtake the Rifles, until they had nearly reached their camp. I found Major R. an invalid, carried in an ambulance, and he tendered me his horse to ride.

The Major and Assistant-Surgeon Smith were the only commissioned officers in the command, and I was provided for in the tent. Whisky seems to be regarded as an essential in the stores of a campaigner; and the Captain, some days before my departure from Camp Lancaster, had placed a bottle of choice quality in mine, which I produced and presented to the mess, with a high encomium upon its quality. The Major prepared from it, with elaborate skill, a choice toddy; and, upon tasting it, declared that he did not appreciate the quality of the liquor. I took up the bottle, it looked paler than it ought; I tasted it, and the truth flashed upon me, that my servant at the Post had taken advantage of my delay in getting off, and substituted water for the greater part of my whisky. "I beg your pardon, Major; but I believe some one has substituted water in the bottle." "Yes," said he, gruffly, tasting it again, "and *d—n bad water, too!*"

Before daylight the next morning, the bugles sounded the *reveille*, and the camp was soon astir. A hundred and fifty mules were to be harnessed, and fifty horses to be groomed and fed, while fires were lighted in all directions, preparatory to breakfast; a fatigue party strike the tents, and stow the wagons, and the teamsters begin the day's work of beating and damning the mules. Breakfast over, the call of "boots and saddles" increases the commotion, and all are soon in readiness to start, when the bugle "sounds to horses," and before its last note is ended every man is mounted, and another day's march begins. The Major leads off in his ambulance, followed by his boy, like a dark shadow that he is, on a pony; his legs being too short to reach the stirrups, his feet rest in the straps. Next ride the Surgeon and the "Wanderer," smoking remarkably long pipes; then comes a wagon with camp equipage and baggage of the officers; behind it hangs a hen-coop, whose inmates are expected to lay eggs at every favorable opportunity, in default of which they are liable to get into a stew. Next come the company of riflemen, under the immediate command of the First Sergeant, and preceded by two men with bugles slung at their backs. The mornings are foggy, for it is late in October, and the nights are cool. About nine o'clock the sun breaks out; overcoats are laid across the saddles, and still it grows hotter. We become thirsty, and drink from a canteen that hangs at the horn of the saddle; the water is warm, and how can we "take it cool." Ye gods! what a thing it is to be a soldier, and wear a little cap, with not enough of front to protect the nose from blistering; to be a soldier and serve one's country brown. But the wagons string so far behind, that I had almost forgotten them, and the rear-guard I never saw on the march. Arrived at Howard's springs, a halt is made of a couple of hours, in order to afford an opportunity for the animals to get water, for we camp that night where there is none. Hastily unsaddling and turning my horse loose, I hurry down to the water to get a good draught at a small spring, that in my way up I had cleaned out and walled up, for those that might come after me; but, to my surprise, it was filled up with water-plants and insects that feed upon them, so I put my face down at the edge of the pond, where there was a space clear from weed, and drank my fill with the rest. There were no ducks in the pond, so I took my gun and strolled up the ravine, where I had killed turkeys a few months before; but the leaves were fallen from the willows, the buck-eye bushes, and the grape-vines, and the turkeys had grown older and wiser. Here was the first opportunity that I had had to realize that autumn is here also, as well as in the far regions of the north—a desolating season, and even when there is no killing frost, there too "leaves have their time to fall, and flowers to wither." A large "prairie snake" lay coiled up in my path, with its head resting close by a marmot's hole, apparently waiting for him to make his exit, and seemed not at all disposed to leave on my account. From my earliest recollections I have regarded it a virtue to kill a snake, and my aversion to that class of animals has in no wise diminished since I have learned to call them by their more respectable cognomen of Ophidian reptiles—are they not still serpents, and am I not of the seed of woman? My gun was loaded with small shot in one barrel, and buck shot in another; but I was unwilling to make a noise by firing it. I thought I could crush his head with the breech of the gun, but I was mistaken. I held him with it, however, until I could place my foot upon his neck, and draw out the ramrod; while his majesty took a turn around my leg, I endeavored to screw the wormer of the rod into his head, but the skull was too thick, and I grew desperate; notwithstanding my whole weight was upon him, he was slipping out from under my foot, and so, to decide the matter, I placed the muzzle of the gun to his head and fired. This was the largest snake I had seen in Texas, and measured three feet longer than my gun. It is not a venomous species; but they are more often met with in the open country than any other, except the rattlesnake. They are very destructive to poultry in the new settlements, and I killed one a few days after on the San Fillippe, attempting to swallow a rabbit.

Our camp for the night was choosen in a valley, where it was so dark, that it was difficult to select our ground. The grass was rank and dry, and as our fires were kindled they spread amongst it, and were allowed to burn far enough to prevent their rekindling in the night, and then extinguished by beating the flames with empty corn-sacks, for the want of bushes. In a box, [illegible] each night fro[illegible] Lancaster[illegible] etc., [illegible] was filled with whisky for their preservation. I noticed that this bottle was out of the place in which it had been closely fitted, and upon examining it, it appeared that one of the men who had taken it from the wagon, smelling the coveted beverage, and it being too dark to see the contents, had drank off a pint of the tincture, and was unable to replace the jar. As the party who unloaded the wagon would be the same on duty in the morning, it was left out for the benefit of the man, if he should relish the same by daylight. The affair was soon rumored through camp, but the offender was not discovered. Our guide, Clowd, whom we had not seen during the day, came into camp with a fine buck lashed to his saddle. He is a remarkable man; he leaves camp in the morning before the train, and we see him no more till we make our next encampment, when we generally find him with some game that he has killed during the day. He evades the society of all but one companion, with whom he seems never to speak. He is said to be a native of Tennessee; his appearance is that of a man of great intellect and perfect physical development; he knows the wilderness like a book, and he has that important accomplishment possessed by few even on the frontiers—of a good hunter. This is an art of more difficult attainment than is generally supposed by those who do not know the habits of game. I have had experience enough to convince me that one may perish from hunger in the midst of game, from the want of skill in hunting it. One should never rely upon it exclusively who travels in the most favored regions in that respect.

Remainder of No. 11 next week.

The Profits of Raising Wheat and Fruit.

The second annual meeting of the Fruit-Growers' Society of Western New York, was held at Rochester on the 8th ult. A discussion arose, says the *Rural New Yorker*, on the relative profits of raising wheat and fruits.

Mr. P. Barry, a gentleman from Livonia, and a very intelligent gentleman, expressed some doubts as to the propriety of growing less wheat and more fruits. He argued that because this has always been a fine wheat growing country, we should therefore always continue to grow wheat. Now we find that the land in the neighborhood of all large cities becomes a market garden. Our object should be, seeing that our lands are increasing in richness, to increase the value of our productions, and I think we can do so twenty fold. An acre of pears must be worth a great many acres of wheat. Winter pears have not attracted much attention yet throughout the country, while we have an immense population every year increasing, and requiring more in the way of luxuries and delicacies. Now nearly all the pears they get in New York city are sent from Boston.

Our own farmers will soon find the information they need, and will ascertain the best method of storing and ripening their pears. Standard pears must have ten years' growth before they are capable of raising fruit in perfection. The cultivator wants something to fill his time and the vacant space on his ground. He can plant dwarf trees between the rows, and by a little extra attention obtain almost immediate returns. A proper selection of varieties is requisite; hitherto too little attention has been given to this point. With our present knowledge, and means of supplying them, we may proceed with greater certainty.

Mr. S. H. Ainsworth said: The profit of wheat in this section is about ten dollars per acre. Those who have been raising fruit in good orchards will average at least fifty dollars a year above all expenses. This, of course, gives the fruit-grower five times the profit which the wheat-grower obtains. So much for apples.

Of pear orchards we have but very few in our country. One is that of Mr. Thaddeus Chapin, of Canandaigua, which has now been set nine years. Six years after being set out, he sent some fruit to New York, and obtained $8 a barrel for it. The next year he had thirty barrels of fine pears from his three acres. For these he obtained $15 a barrel, making $450. This was his own price, and after paying him for them, the market-woman remarked, that if he had asked $18, she would have paid it quite willingly. The year before last, he had fifty barrels, which he sold in New York for from $18 to $20 a barrel—making nearly a thousand dollars. This last year his crop was partly a failure, which he thinks was owing to his planting corn in his orchard, and close up to the trees. When his pears were nearly grown, they dropped off without ripening, and he lost nearly all. It was a pretty good crop of corn, but worth little in comparison with the pears he would have had.

A Vergalieu tree, from 60 to 70 years of age, stands on the old Judge Howell farm, near Onondaga. That tree, for 40 years in succession, has borne every year, and for the last 20 years has averaged not less than three bushels a year, which sold for three dollars a bushel. A gentleman of Onondaga county sold from three trees $137 worth of pears. Another gentleman in Onondaga has three Vergalieu trees; he has sold their product for $60 a year for three years back, and has been offered $50 for the fruit before picking. The soil is loose, with a heavy clay subsoil. Mr. Chapin's orchard is nine years old. The seventh year he received $450, and the eighth year $1,000. They are all pear stocks; with him pears on quince stocks do not succeed, nor do they with me. In cultivating pears on quince, Mr. Barry and I would not probably differ when we plant them in a sandy, open, and porous soil, because the quince roots will not extend so far as the roots of the pear, and therefore need a more loose and open earth. Those trees which I referred you to, have had no extra attention. Those trees of Judge Howell's have had scarcely any attention for a number of years. If these estimates hold good in other cases—and I know no reason why they should not in any good soil—then the cultivation of pears will pay the farmers of western New York thirty times as much as the raising of wheat.

L. Colby, of Nunda, said: I have been cultivating pears for about thirty years, and have been able to make standards bear as soon as those on quince. By transplanting them three times, and each time clipping the roots, we cause the usually few and long roots to branch out, thus hastening their bearing. I have a Seckle tree [illegible] or five feet high that bore [illegible] pears the second year after [illegible] some the first year. I find [illegible] ck injures the flavor, and [illegible] re liable to blight. [illegible] s sorry to see the com[illegible] merits of the pear and quince stock left in just the shape it now stood. He never had seen on pear stocks specimens of pears exhibit so high a degree of fineness as those on quince.

A committee, consisting of J. J. Thomas, P. Barry, and H. E. Hooker, was appointed to prepare a select list of fruits for general cultivation within the limits of the society's operations. A list having been prepared, the merits of the several varieties of pears was fully discussed, with their relative adaptation to the pear and quince stock. Each variety was presented by itself, when the following were adopted:

Selected Pears—Bartlett, Louise Bonne of Jersey, Vergalieu, (or White Doyenne,) Lawrence, Vicar of Wingfield, Glout Morceau, Easter Beurre. On motion, Sheldon and Flemish Beauty were added. There was some difference of opinion as to the Vicar of Wingfield, and its merits and demerits were fully discussed. The Onondaga was also proposed, but after a full discussion, was rejected, as the number was too limited to admit it.

Apples—King—(it was proposed to add of Tompkins county, as several spurious varieties were in cultivation, some of which were described by members present as much inferior to the Tompkins county King, a variety stated to have come originally from New Jersey, but never distributed till grafted, where it now prevails)—Rhode Island Greening, Northern Spy, Baldwin, Gravenstein, and Fall Pippin, were adopted. Sops of Wine was proposed but withdrawn, as it was not sufficiently known to those present.

The Imperial Baby-Clothes.

Galignai furnishes the following description of the clothing which had been prepared for the just-arrived heir of Louis Napoleon Bonaparte:—

The Princess Mathilde, on Saturday, visited the *layette* prepared by Mlle. Felicie, of the Rue Vivienne, for the Imperial infant. During the whole of that day and yesterday, an uninterrupted stream of persons of the first distinction in Paris visited these objects. The following is a very imperfect description of the articles exhibited:

The first thing that strikes the spectator in entering Mlle. Felicie's warerooms, is the exquisite beauty of the various articles displayed in view. Three rooms, one of them of great size, are thrown open, and every thing exhibited in them forms part of the *layette*. At the first glance, one would imagine that the only color to be seen was white; but afterwards the eye perceives that the ribbons and satin, used for trimming several of the articles, are blue. But as blue is the color appropriated to the male children, as rose or pink is to those of the opposite sex, the idea would occur to the looker-on that every thing had been prepared exclusively for a prince. Such, however, is not the fact, for as the Imperial infant has been *voué au blanc*, blue is used in such a case indiscriminately for either sex.

As some of our readers are not perhaps aware of what *voué au blanc* exactly means, it may be as well to state, that sometimes in France a mother consecrates her child before its birth to the Virgin, placing the infant under her especial protection; and, as a sign of her having done so, clothing the child in white only (with rare ornaments of blue sometimes,) and keeping it in such attire for a certain number of years—three, five, or seven, and on some occasions to the period of the child's first communion. It is in accordance with this custom that some of the articles of the Imperial *layette* have been ornamented with blue, without any reference to the sex of the infant. In the large room at Mlle. Felicie's all the tables along the sides, as well as an exceedingly broad one down the center, are completely covered with the most beautiful articles of lace, embroidery, silk, satin, and cambric, that perhaps were ever collected together for any one child. The number of dresses alone appeared so countless that we took the liberty of inquiring the number, and were informed twelve dozen. All are embroidered with such rare perfection as to really merit to rank as works of art, and the vast quantity of *point d' Alençon* with which they are trimmed must be of immense value.

Along the tables are also to be seen baby's caps, hats, and head dresses, in such abundance as to excite one's wonder; and of these, also, twelve dozen have been prepared—all beautifully embroidered and all trimmed with the most costly lace. Twelve dozen appears to have been the magical number in the order given, as every thing—stockings, gloves, shoes, boots, gaiters (such exquisite gaiters!) chemises, sheets, &c., &c., were all to the same extent. All the sheets were marked with the Imperial crown and cipher, and trimmed with Valenciennes lace. Of course, the richer articles were not ordered in such profusion, as, for instance, the long mantles, of which there were a dozen for State occasions, mostly richly embroidered and trimmed, while others were in satin, in silk, or in cashmere, but all of the greatest beauty. The quilts, also, some in blue satin and some in white, were on a more limited scale, but all as rich as human ingenuity could make them.

At the end of the room stands the cradle—not that which the City of Paris is preparing for the Imperial infant, but still one of great beauty. A lofty *flèche* at the head, formed of a vine branch of gilt bronze, gently bends over the part in which the infant is to sleep. From the *flèche*, curtains of Mechlin lace lined with blue silk are suspended at each side, the whole being looped up with gold cords, terminating with torsades to match of the same metal. One *couvre pieds* is of white satin, and another of blue, and the whole is covered over with Alençon lace, with the initials N. E. in the center, the whole producing an effect of the rarest elegance. Opposite the cradle, on the center table, stands the *robe de baptéme* all of *point d' Alençon*, with mantle and head dress to match. Near it is a muff of ermine, with a mantle of white satin lined with ermine. On the table lay the child's coral for the period of teething, in this instance made of amber, the ball for the rattle being hollowed from the solid mass. This little plaything alone cost 600f. Near it was placed an amber necklace, with a small gold medallion in the center, on which the Archbishop of Paris had given his benediction.

Three *corbeilles de baptéme* lay near, all lined with blue satin, and covered with Alençon lace, and bearing the Imperial cipher and arms. To go on would be to fill a column, and yet not a word has been said of the contents of the other rooms, equally worthy of being examined. We cannot, however, help stating, that the articles prepared for the nurse (twelve dozen in number) are also of extraordinary beauty and richness, as may be judged from the fact that her aprons are embroidered with as much care as the articles for the child, and like them trimmed with Alençon lace. The taste with which the whole display is laid out is not the smallest charm of this exhibition, which of its kind has perhaps never been equaled. It adds to the admiration excited to learn that the whole was designed, embroidered, and made up in the short space of two months and a half.

How Machinery Increases Beneficial Labor.

About five years ago, when sewing-machines were beginning to be introduced into this city, some furious attacks were made upon them by ignorant and mock philanthropists, who pretended to be anxiously concerned for poor seamstresses. They pictured the sad fate of those persons; told how the hard-earned bread was to be taken out of their mouths by such capitalists as could purchase and use such machines, thereby dispensing with the labor of needlewomen, and thus bring them to want for lack of employment. Have such predictions been fulfilled? We, who have for years carefully watched the effects of labor-saving machinery of every kind upon society, knew that such ideas, when uttered, were no better than the emanations of an idiot's dream, trusted to a few years' experience to prove the benefits of such machines to every class in the community. Thousands of such machines are now in operation in our country, and if we are rightly informed, more than a thousand of them are in operation in New York city alone; but instead of these having thrown any industrious females out of employment, they have rather increased the quantity of work for them to do.

We were told a few days since, by one engaged somewhat extensively in providing needlework, that twenty stitches are now made on some garments, for one that was made five years ago—in short, that sewing-machines had greatly increased the demand for sewed work. Thus coat linings, which used to be made plain, are now mostly elaborately worked, and finely stitched, and it is the same with almost every kind of sewed work. The amount of such work, he stated, had increased even in a greater ratio than the machines to execute it. A higher taste is now being gratified, and hundreds of women who used to ply the needle early and late with their fingers, for a mere pittance, are now better remunerated for their labor in attending sewing-machines, while, at the same time, their hours of toil have been measurably reduced. It is our opinion that the very class—needle-women—respecting whom so much was at one time said about being injured by sewing-machines, will be the most benefitted. In many, if not in almost every instance, this has been felt to be the case already. Sewing-machines, therefore, which are but a recent in vention, afford abundant examples "how machinery increases beneficial labor." [Scien. American.

Apples.

In grafting large trees, several varieties of scions are frequently employed in forming a new top; there are several objections to this practice. Every one at all familiar with fruit trees, must have observed that each variety has a mode of growth peculiar to itself, and those who have had much experience can often ascertain the kind, when not in fruit, by this circumstance alone. Some varieties are vigorous and of rapid growth, others are slow and unthrifty, and others of short duration and subject to decay early. A tree combining these discordant elements can possess little of symmetry or beauty, and the most judicious pruning cannot remedy the evil. For instance, a tree may be grafted with the Northern Spy, which is of remarkable upright growth; the Roxbury Russet, which is horizontal or spreading, and the Spitzenberg, whose branches are drooping or pendant. In a few years the scions clash and entangle, and it will be impossible to give them the proper form or direction, and when the tree comes into bearing the defect will be still more apparent. There is another objection to having more than one variety in a tree; it creates confusion in gathering the fruit, and where the kinds somewhat resemble each other, they are liable to get mixed, causing dissatisfaction among the purchasers.

Cause and Cure of Smut in Wheat.

There can be no excuse for farmers at the present day who have smutty wheat, since the mode of preventing it is so easy and certain; and he who carries smutty wheat to market may be set down as either a very lazy or a very careless farmer. The cause of smut, according to one writer, is a species of degeneracy of the grains in the ears of wheat, by which the substance that should form flour becomes entirely changed into a black powder, similar to puff-ball or mushroom. Another says it is caused by a fungi which breed on the plant. From my own observation I believe neither of the above are correct. Smut is produced from an insect of the bug species, much resembling the pea-bug, and smutty wheat is found where they are the most common. This insect has several propagations in a season. The smut-ball is its favorite place of propagation; but the eggs are frequently deposited in the furze end of the berry of wheat, and are thus covered with the seed when sown, and with the warmth of spring are hatched and matured on the roots of the wheat plant, and at the time the wheat berry is forming, they are ready to deposit their eggs. The sap which passes from the diseased root to form the berry does not contain starch and gluten, the articles necessary to make flour, but a fibrinous watery pulp, which, when dry, is smut. Let the wheat grower who wishes to satisfy himself on the subject, gather, say, twenty smut-heads, at the next harvest, and put them in a 6 oz. vial, and cork it tight. Before he is ready to sow his wheat, he will have produced a fine lot of smut-bugs. Enclose these in a dish of clean wheat for a few days, and then sow it, and he will have a crop of smut and bugs enough to satisfy him of the correctness of my theory.

Lands that produce smutty wheat are not cleaned of smut in one year, as the eggs of the smut-bugs are left in the soil, to some extent; but if wheat does not follow wheat (which it never should do,) they will soon disappear, if pure wheat is sown. Smutty wheat may be prepared so as to produce pure wheat, but the better way is to procure seed wheat from a district where the smut-bug is not known. [N. Y. Chronicle.

TRAINING COLTS.—We like the plan of "A Farmer" in the *Country Gentleman*. He halter-breaks them while they are quite young, believing that to be the best time to effect the object most readily. It can be done then without the aid of the whip. He thinks it unwise to tie a colt to anything which will not *give*, should he attempt to pull backwards. He don't believe in letting him pull himself down and then whip him up again, and so repeat it till he is cured.

We agree to all this. A colt should have the most careful handling until thoroughly broke. A whip should be seldom used. One of the commonest faults in breaking colts is the frequent use of the whip, and we may add another—harsh language, in a loud and exasperated tone, by which the animal is frightened, and rendered incapable of receiving instruction.

CANKER EGGS.—Now is the time to rid young trees, and such branches of older ones as can be reached, of the eggs of the canker-worm. They are found in patches of all sizes, up to as many as one or two hundred in a patch. They are attached to the stem and twigs, particularly in the crotches of the boughs, and can be readily detected by the eye, aided by the strong light from the snow beneath. They may be scaled off with the fingers and destroyed. If thrown on the ground they are apt to hatch, and the worms thus find their way up the trees. Hundreds and even thousands of eggs may be removed in this way with very little trouble, and in a very few minutes.

VARIETY.

The Moon, in her passage eastward around the earth, continually passes between us and the fixed stars or planets, which lie in her path, and obscures them from our view. The instant of the disappearance of a star behind the moon, or the occultation of a star, as the phenomenon is called, can be noted by observers widely separated from each other, and hence this phenomenon becomes a ready means of determining the difference of longitude between two places. The telescope may be of moderate size, and require an accurate adjustment.

At the great Industrial Exhibition, wood screws from all parts of Europe were submitted in competition, but none were so much commended as those from New England. The latter are so sharply and perfectly cut, with a point so fine and faultless, that they may be driven with great ease and rapidity, obviating the necessity for boring that was formerly experienced. They range from a quarter inch to six inches in length, and from the size of a small knitting-needle to nearly half an inch in diameter—the smallest being as perfectly cut and finished as the largest.

To show how mechanical skill and labor add to the value of raw material, the British Quarterly Review gives this instructive calculation: A bar of iron valued at $5, worked into horse-shoes, is worth $10 50; needles, $355; penknife blades, $3,285; shirt buttons, $29,480; balance springs of watches, $250,000. Thirty one pounds of iron have been made into wire upwards of one hundred and eleven miles in length, and so fine was the fabric, that a part of it was converted, in lieu of horse hair, into a barrister's wig.

"When Æschylus, the Greek poet, was condemned to death, his brother, an orator and hero, was summoned to plead his cause. While the audience were gazing with intensity of interest to hear what would be said, he silently lifted up the stump of his dismembered arm, which he had lost in the service of his country, and said not a word. The multitude burst into shouts of applause, and the poet was saved. The dumb eloquence of that limb spoke more powerfully than words that burn."

An Englishman named Hand has patented a process for preserving animal food, any length of time, without sugar or salt, exclusion from air, or any of the common modes of preservation. The substance to be preserved is placed in an atmosphere which deprives it of its decomposing properties, and undergoes no apparent change.

A traveler recently visiting the abode of Linnæus, found among the relics preserved in his house an ingenious an singular contrivance—a "floral clock." In a half circle, round the table of the great botanist, a number of plants were arranged, which opening their flowers at a certain moment, told the hour with unerring exactitude.

The *Scientific American* says that a pencil which would give a clear, black stroke, and inscribe indelible characters upon paper, so as to supply the place of pen and ink, would be a fortune for the inventor. It has no doubt such an invention will yet be made.

M. Leverrier states, in a letter to the French Minister of Public Instruction, that he is firmly persuaded that a great number of small planets are situated between Mars and Jupiter, and that before 1860 nearly 100 will be discovered.

Dr. Franklin was once endeavoring to kill a turkey by an electric shock, when he received the whole force of the battery himself. Recovering, he good-humoredly remarked, that, instead of killing a turkey, he had nearly put an end to a goose.

Great men never swell. It is only your three-cent individuals, who are salaried at the rate of two hundred a year, and dine on potatoes and dried herring, who put on airs and flashy waistcoats, puff, blow, and endeavor to give themselves a consequential appearance.

Intense mental activity, steadily directed to some leading pursuit, is the source of distinction.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by DR. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

JEHUISM—AGAIN.

The excitement respecting Kansas has afforded quite a favorable opportunity for a display of much which passes for anti-slavery. Now, while it is freely admitted that there is some true anti slavery spirit in this Kansas excitement, still I think it will be found that much of the opposition to slavery being admitted into that Territory has its origin more in dollars and cents than in a just conception of the exceeding sinfulness of slavery *per-se.* For, until the sin of enslaving our fellow men is classed with others of a similar character, we do not see the thing truly. Not until man-stealing and man-stealers are treated, especially *by the church*, as it would treat horse-thieving and horse-thieves, is there much hope of purging away this "sum of all villanies." A correct view of slavery, as a sin, a crime, that can receive no sanction or apology from Christianity, is necessary in order to a proper use of the right means for the putting away of the sin. To undertake the removal of one sin by another, is of but little use.

Such, according to my view, is the supposed rightfulness of war as an exterminator of slavery. Admitting the non-extension-of-slavery zeal to have its origin in an opposition to slavery, as a sin and crime, still I do not admit the Christian to have the right to put it away by the sword or rifle. And I cannot but deprecate the enthusiasm manifested, as that which a pure Christianity can not sanction. Said a clergyman in Massachusetts, in a letter to me:—

"I agree with you, that there is more Jehuism than Christianity in the church to day; but still I rejoice that the Kansas boys have and know how to use Sharp's rifles. If I was there, I would certainly join them in this work, not as a Christian, but as simple D. F."

The above shows that the clergyman admitted that the Christian could not fight with carnal weapons. His view seems to differ widely from that of the clergymen and others who became perfectly enthusiastic in the Kansas meeting held in New Haven, Ct., a report of which I hereby forward, taken from the New York *Times*:—

Bible and Rifles—Kansas Meeting in New Haven.

A large meeting was held in the North Church, New Haven, on the evening of the 26th ult., to raise money for fifty Sharp's rifles, for the equipment of a company of one hundred men, with their wives and families, who are going out to found a free city in Kansas. Speeches were made by the Rev. Henry Ward Beecher and others, and afterwards the subscriptions commenced.

Prof. Silliman, of Yale College, then rose and said, that he did not hope Sharp's rifles would be put to the fullest use of which they are capable; but self-defense, especially in the cause of freedom, is a sacred duty. He deprecated the necessities of the time which demands such precaution on the part of settlers in Kansas; but he believed in meeting manfully the present exigencies, bad as they might be. He said he desired to head the list for the procuring of a number of weapons of defense for the party setting out, and that therefore Mr. Lines might put down on the paper, "*B. Silliman, one Sharp's rifle.*"

[The price of a rifle was $25.]

Mr. Russell and Rev. Mr. Dutton rose both at once. Mr. Russell speaks first: "Put me down for one."

Rev. Mr. Dutton (pastor of the church)—One of the deacons of this church, Mr. Harvey Hall, is going out with the company, and I, as his pastor, desire to present him a Bible and a Sharp's rifle. [Great applause.]

F. P. Pie—I will give one.

Stephen D. Pardee—I will give one for myself, and also one for my wife!

Mr. Beecher—I like to see that; it is a stroke right and left! [Great laughter.]

Charles Ives—Put me down for *three.*

Thomas R. Trowbridge—Put *me* down for *four!* [Continued laughter.]

Dr. J. I. Howe—I will subscribe for one.

A gentleman here stated that Miss Mary Dutton would give one.

Mr. Stephen G. Hubbard—One.

Mr. Beecher here stated that if twenty-five could be raised on the spot, he would pledge twenty-five more from Plymouth Church; fifty being a sufficient number for the whole supply. [Clapping of hands all over the house.]

Prof. Silliman now left Mr. Beecher to speak for the bid, and sat down to enjoy the occasion.

Mr. Killam—I give one.

Mr. Beecher—*Killam!* that's a significant name in connection with a Sharp's rifle. [Laughter.]

Prof. W. A. Norton—One for me!

Mr. Vining—Another for me!

Mr. Moses Tyler—I will pledge one of Sharp's rifles from the *Junior Class in Yale College!* [Great applause.]

Prof. Silliman (rising in his seat, and sweeping the galleries with his eye)—*There are four Classes in Yale College!* [Immense sensation.]

Henry Trowbridge—One!

John G. North—One!

Mr. Beecher—I think Kansas will now know that there is a *North.* [Great cheering.]

William Kingsley—One for me!

Lucius L. Olmstead—One!

Mr. Dunlap—I will pledge one for the *Senior* Class in Yale College!

It was now ascertained that instead of twenty-five, twenty-*seven* rifles had been subscribed, the cost of which, together with the amount received at the door for admission fees, made the collection for Kansas in the North Church, *one thousand dollars.*

Now, while the above meeting may have been in accordance with the spirit of the world, and its patriotism, I must deny its being so with the spirit of that religion taught by Jesus. To believe that Jesus, Paul, or John, would have thus acted, instinctively shocks one's feelings. The applause, and laughter, and cheering, and clapping of hands, all over the house, shows the spirit of that meeting to have been any thing else than that of Jesus Christ. I trust we shall not soon hear of the desecration of the Lord's house by abolition or fanatical lectures. With all this so called anti-slavery zeal, manifested in the North Church in New Haven, I venture to say, that no colored man, be he ever so pious and good, would even now be permitted to sit promiscuously with the congregation, but that the "nigger pew" is the place for the colored folks.

And for what was this Kansas meeting, but to aid a colony to emigrate to and settle in Kansas, the right of which I do not question? But I do question the right of *Christians* to go to Kansas, or elsewhere, to found a colony by force of arms. The worthies mentioned in the 11th of Hebrews, dwelt in dens and in caves, having no abiding place. They had no idea of taking possession of any territory at the expense of human life, or the violation of the teachings of Jesus. Christ himself had no place where to lay his head; and although the rightful owner of the whole earth, yet he would not accept of an inch of it at the expense of moral principle, much less by invasion by force of arms.

But I ought not to extend my remarks farther, and perhaps I ought to apologize for trespassing thus far. But the importance of the subject, and a sense of duty, impels me to speak out, when there seems to be an effort made that Christianity ought to sanction almost any means to accomplish a good end.

S. S. G.

RECIPE FOR SPIRITUAL HEALTH.

Both bodily and spiritual health are desirable. Both are exposed to injury from many causes. When the injury is not too deep and extensive, both may be recovered. What is the course to be pursued in order to secure *spiritual* health?

1. You must take *exercise.* You must *walk* daily in the vineyard of God's Church. You must *work* in the vineyard of God's Church. You must *bathe* in the fountain of redeeming blood. In a word, you must *exercise* all the graces of the Spirit.

2. You must pay attention to your *diet.* You must be careful about your *food.* Bread and water are sufficient; the bread of life and the waters of salvation. These satisfy and sanctify; they make healthy, and keep healthy. You must take sufficient. A little will keep you living, but much is necessary to health. This food you must take *regularly*, for regularity is important. You cannot prosper and be in health unless you live upon Christ, and live upon him every day.

3. A little *medicine* is necessary; in some cases a good deal. This is made up of the bitter herbs of disappointments, losses, crosses, temptations, bereavements, troubles, and trials of various sorts. The medicine is very unpleasant, but very profitable. Unless taken, and taken pretty freely, you will be laid up with idleness, carelessness, anxiety, pride, or selfishness. Your heavenly Father *prepares* this medicine. Divine Providence *presents* it. You must take it, and expect benefit from it.

4. You must keep your mind free from *anxious trouble.* In order to this you must live in peace with God; be content with your lot, and trust the promises.

WONDERS OF CREATED UNIVERSE.

What mere assertion will make any one believe that in one second of time, in one beat of the pendulum of a clock, a ray of light travels over one hundred and ninety-two thousand miles, and would, therefore, perform the tour of the world in about the same time that it requires to wink our eyelids, and in much less than a swift runner occupies in taking a single stride? What mortal can be made to believe, without demonstration, that the sun is almost a million times larger than the earth; and that, although so remote from us, that a cannon ball shot directly towards, and maintaining its full speed, would be twenty years in reaching it, it yet affects the earth by its attraction in an inappreciable instant of time? Who would not ask for demonstration, when told that a gnat's wing, in its ordinary flight, beats many hundred times a second; or that there exist animated and regularly organized beings, many thousands of whose bodies, laid close together, would not extend an inch? But what are these to the astonishing truths which modern optical inquirers have disclosed, which teach us that every point of a medium through which a ray of light passes is affected with a succession of periodical movements, regularly recurring at equal intervals, no less than five hundred millions of millions of times in a single second! That it is by such movements communicated with the nerves of our eyes that we see; nay, more; that it is the difference in the frequency of their recurrence which affects us with the sense of the diversity of color. That for instance, in acquiring the sensation of redness, our eyes are affected four hundred and eighty-two millions of times; of yellowness, five hundred and forty-two millions of millions of times; of violet, seven hundred and seven millions of times per second. Do not such things sound more like the ravings of madmen than the sober conclusions of people in their waking senses? They are, nevertheless, conclusions to which any one may most certainly arrive, who will only be at the trouble of examining the chain of reasoning by which they have been obtained.

[Herschel.

SEED-TIME.

"Cast thy bread upon the waters,"
Sow in faith the little seed;
Be not idle, faint, or weary;
God's eternal promise plead:
With the old man and the stripling,
With the rich and with the poor;
Think that, when to-morrow dawneth,
Seed time MAY be thine no more.

"Cast thy bread upon the waters,"
Sow in faith the little seed;
Wind and drought, and rain and sunshine,
Still each other shall succeed.
In the morning, in the evening,
Scatter still with bounteous hand:
Here and there, some grain, forgotten,
Germinates in fruitful land.

"Cast thy bread upon the waters,"
Sow in faith the little seed;
Be of great results expectant,
For the harvest is decreed.
Now thou knowest not the issue,
Now thou must confide in God;
He can cause thy work to prosper,
Guiding all events for good.

"Cast thy bread upon the waters,"
Sow in faith the little seed;
Oft an unseen blessing hallows
Some unthought-of word or deed.
God shall give thee sweet rejoicing
After many anxious days;
And thine everlasting anthem
Shall declare the Master's praise.

HEALTHFUL SLEEP.

A blessed thing it is to be able to say with the Psalmist, "I will both lay me down in peace and sleep." How many lie down upon the couch which should be to them a place of repose, but to pass tedious hours of wakefulness, disquiet, and anxiety. "Tired nature's sweet restorer" brings no relief to their wearied bodies and jaded minds. Whilst others are bathed in the Lethean waters of calm and gentle slumbers, they are a prey to the horrid demon of eternal wakefulness. Fain would they close the door of their busy minds against the retinue of thoughts which come trooping in, and hold unwelcome festals in the throbbing brain; but rest they cannot. The plans of the day will compel admission; The past trifles of the moment will return, and magnify themselves amid the night-gloom and stillness, to mountains, weighing down with care the distressed and anxious spirit. Hours seem to linger in their flight as the note of their departure is eagerly listened for from the bell of the alike sleepless clock; and far off seems the dawn of the much longed for morning. The little intervals of slumber which do relieve the dreary hours of wakefulness, are but themselves a mockery of real slumber, since the demons which haunted the waking thoughts, now assume fantastic and hideous guises, and come in fiendish spite to fright away the gentler visitant.

> "Their slumbers—if they slumber—are not sleep,
> But a continuance of enduring thought."

Overtasked powers will take vengeance for the injustice done them, by condemning the aggressor to nights of sleeplessness as a penalty for days of too much toil. Business men who, in their grasping after riches, will burden themselves with more than they can properly manage, must lay out their accounts for racking their brains to determine how they can avoid the vortex to which they have brought themselves in the hours between midnight and morning; and students who cannot tear themselves away from their favorite books long enough to inhale heaven's fresh, pure breezes, and stimulate their blood to healthful circulation by genial exercise, and who, meanwhile, overload the stomach and drug themselves with narcotics, need not doubt but that they will ponder many weighty questions, and strive in vain to entangle nice points, when that portion of mankind who live rationally, are refreshing themselves with the luxury of sweet and dreamless slumbers. In some cases it is doubtless true, that hereditary peculiarities of constitution, and infirmities which are the result of no special violation of our nature's laws, drive sleep from the eyes and slumber from the eyelids, until the approaching night is looked forward to with dread, and the hour of retirement as the beginning of a season of suffering.

Without composed and somewhat unbroken sleep, it is impossible to continue long in vigorous health. The question of how much, is another affair. Like Sir Isaac Newton or John Wesley, one may sleep but a few hours, and yet soundly. A Dissenting minister, whose life has been published in England, attributes great results to a single phase of advice. Being often kept awake by a vexatious conscience, he asked two ministers what was good to insure sleep; one of them answered, ease of mind. It was well said. It is far better than counting a thousand, repeating verses, or any of the devices mentioned by Wordsworth in his well-known sonnet, or Richter in his chapter on this particular topic. But the pinch of the whole thing is just here—how to ease the mind in order to rest.

A friend long intimate with the habits of the late Dr. Alexander, has lately given us a piece of information respecting this excellent man, who, as he grew older, seemed to learn more fully the art of refreshing sleep. The statement is made with confidence in its accuracy. Dr. Alexander was often heard to say in substance as follows: "Clergymen, authors, teachers, and other men of reflective habits, lose much health by losing sleep, and this because they carry their trains of thought to bed with them. In my earlier years I greatly injured myself by studying my sermons in bed. The best thing one can do is to take care of the last half hour before retiring. Devotion being ended, something may be done to quiet the strings of the harp which otherwise will go on to vibrate. Let me commend to you this maxim, which I some where learned from Dr. Watts, who says that in his boyhood he received it from the lips of Dr. John Owen—very good pedigree for a maxim: 'Break the chain of thoughts at bed time, by something at once serious and agreeable. By all means break the continuity, or sleep will be vexed, even if not driven away. If you wish to know my method, it is to turn over the pages of my English Bible, alighting on a passage here, a passage there, backwards and forwards, without plan, and without allowing my mind to fasten on any, leaving any place the moment it ceases to interest me. Some tranquilizing word often becomes a divine message of peace.' 'He giveth his beloved sleep.'"

Nothing could be further from Dr. Alexander's intention and habit than to recommend this as a mode of reading the Scriptures; he read the Word of God statedly, laboriously, and with profound attention. It was rather the laying of the blessed volume beneath his pillow.

[Presbyterian.

THE LAMB OF GOD.

The most significant and remarkable type introduced into the divine ordinances, as well as into Israel's history and ritual, was the lamb. It even meets us at the threshold of Paradise in the sacrifice of Abel, as an object particularly acceptable in the sight of God. Later on, the lamb with its blood consecrates the commencement of the history of the Israelites. The sprinkling of the door-posts with the blood of lambs was the means of Israel's preservation in Egypt from the sword of the destroying angel, and the departure of the people from Pharaoh's house of bondage. From that time the lamb continued to be the most prominent figure by which God typified the future Messiah to the children of Abraham. Henceforward it acquired an abiding footing in Israel's sacrificial rites in general, and in the yearly passover in particular. In the latter, each house was enjoined by the Mosaic law to bring a male lamb, without blemish or infirmity, to the sanctuary, there solemnly confess their transgressions over it, then bring it typically burdened with their sins, to the court of the temple to be slain; and after it was roasted, consume it entirely, in festive communion, with joy and thanksgiving to Jehovah. That which was prophetically typical in this ceremony was so apparent, that even the most sinful mind could not mistake it. Every one who was only partially susceptible of that which was divinely symbolical, felt impressed with the idea, that this divine ordinance could have no other aim than to keep alive in Israel, along with the remembrance of the promised Deliverer, the confidence and hope in him.

John the Baptist appears in the wilderness; and the first greeting with which he welcomes Jesus, which was renewed whenever he saw him, is, "Behold the Lamb of God, which taketh away the sins of the world!" thereby directing the attention of the whole world to Jesus, as if there were thenceforward nothing else worth seeing in heaven or on earth than this Lamb of God; and by so doing he certainly directs us to the greatest and most beautifying of all mysteries, and to the pith and marrow of the entire Gospel. For if Christ had been only the 'Lion of the tribe of Judah," and not at the same time "the Lamb," what would it have availed us! As "the Lamb," he is the desire of all nations, the star of hope to the exiles from Eden, the sun of righteousness in the night of sorrow to those whom the law condemns, and the heavenly lamp to the wanderer in the gloomy isle of death.

[Krummacher.

JERUSALEM AT THE PRESENT DAY.

A correspondent of the N. Y. *Observer* gives a graphic account of his impressions of the holy city:—

"Walk about Jerusalem," is a divine injunction, and we were literally obeying it. In some respects we found it at once widely differing from any of the oriental cities we had seen, and by no means answering any of the expectations we had formed of the city of the Jews. And very rarely are our expectations answered when we for the first time set eyes on a man or a place or a picture which we have heard of often, and earnestly desire to behold. To stand within the gates of Jerusalem, has been the longing of the Jewish and the Christian heart from youth to old age, as an exile longs to see his native land before he dies. And the desire excites the imagination, until we are in expectancy of seeing something other than the reality, when we come to enter its narrow streets and wander among the heaps on heaps that still distinguish the city, as if the curse of the rejected Messiah still hangs upon it. As we look down upon the town from our tent door on Mount Olivet, it appeared to us nearly a plain with a slight declivity to the East. But now we are constantly going up and down as we thread our way, ascending mountains of rubbish on which houses are built, twenty or thirty feet above the original level. The streets are not so wide as the sidewalk on Broadway in New York, and indeed rarely exceed eight or ten feet in breadth, and some times the houses actually meet, and stranger still, they accomplish the apparently impracticable feat of standing on both sides of the road at the same time. For as the pathway leads under them, they are supported by arches, and the dwelling thus occupies the space over the street as well as on each side. The same plan of building I have noticed in Nablous and other Eastern cities; and as in Cairo the sun was excluded altogether from some of the streets by coverings thrown across from one house to the other, so here in Jerusalem, an awning is made, sometimes of mats and sometimes of boards, rendering the streets gloomy, but inviting a current of air that refreshes one in hot weather, and compensates fully for the loss of the sun.

These streets generally are at right angles, are wretchedly paved, with a gully in the middle for the passage of animals that prefer a softer path than this broken causeway of irregular stones. The limestone that abounds in this region affords the material of which the houses are built, and as there is no lack of stone, the walls are substantial. It is a novelty to observe that windows are rarely seen towards the street, and the few that are so situated for the purposes of light and air, are strongly protected by casements. The inner court, on which the windows and doors open, is surrounded by a wall, which forms part of the house, and the whole edifice, so far as is possible, is constructed without the use of wood, which is too expensive to be employed where any other material will answer the purpose. The floors and stairs are of course made of stone. All the timber that is in use must, even at this day, as in the days of Solomon, be brought from Mount Lebanon, and the means of transportation are not so good now as they were in those days.

The water that falls upon the roofs is carefully led into cisterns under ground, often cut out of the solid rock, and every house has at least one of these, on which the people must depend for all their culinary purposes. Many of those now in use have doubtless served the Jews of far distant ages, and as some of them are immense, and in the rainy season a supply is taken in sufficient for six or eight months, to be resupplied from a source that no enemy before the gates could cut off, it is plain that Jerusalem could not be easily made to suffer for want of water in the midst of the most protracted siege. The house of one of the missionaries has four cisterns, the largest of which is thirty feet square and twenty feet deep. Other cities in this country are similarly provided, as fountains and streams are rare, and from the very earliest times of which we have record, wells were among the most valuable and cherished kinds of property. These facts heighten the beauty and propriety of those figures of Scripture so often drawn from the fountain, the well, the cistern with its wheel, the water, the river, the rain, all of which are associated in the Eastern mind with the most precious of the gifts of Providence, and are therefore the most beautiful emblems of the gifts of grace.

FOUNDER OF BAYLOR UNIVERSITY.

Mr. Baylor, though an unconverted man, was a warm friend to ministers of the Gospel; and being a fine rhetorician, sought every opportunity, in a deferential and gentlemanly way, to give them lectures on elocution. We well remember the modest and delicate manner in which he asked our permission to give us a lecture, remarking, "that he loved ministers of the Gospel, that it had often been suggested to his mind that he might be a minister some day, if it should please God to convert him."

Soon after this interview, Elders Chilton, DeVotie, Welch, and the pastor, held a protracted meeting; and among the many converts we will mention two—Mr. Baylor and an old negro, Mingo, who belonged to brother J. G. Eve. When the door of the church was opened for persons to join, Baylor and Mingo went forward. Baylor related his experience first. There was nothing remarkable in the experience of the lawyer; but the negro related the work of grace on his heart in a fluent manner, so much so, that the rhetorician was confounded and looked on with amazement. As soon as they were received, the lawyer embraced the old servant and wept like a child; and declared that if Mingo had related his experience first, he could not have the courage to relate his—it was so eclipsed.

The love of Christ constraining him, he immediately commenced warning sinners to flee from the wrath to come. He felt an impression to go to Texas, then a wilderness. Chilton, Welch, and ourself remonstrated. We were not willing to see so young a convert, and so young a minister, go into a wild region. But he was firm and decided, that it was the will of God. He was right, as the sequel proved.

He went, and the prayers and sympathies of many warm hearts went with him. Soon he was heard from, and, like the Harbinger of our Lord, his voice resounded in the wilderness, "Repent ye." Rejoiced were his friends. Again the news reaches us that he is *Judge* Baylor. Has he laid down the ministry for a judgeship? Nay; he presides in court during the day, and preaches at night and on Sabbath days. Time goes on. What of Baylor now? He has founded a University at Independence, Washington county, Texas; and those who assisted him have very properly called it "Baylor University." How cheering was such news to his friends, particularly those ministers who tried to prevent his going to Texas! They saw, and acknowledged with gratitude, "that God's ways were higher than their ways."

Since the foundation was laid, all the income of Mr. Baylor, above the wants of his family, goes to the endowment of that Institution. He also observes rigid economy to this end.

[S. W. Baptist.

WEALTH *versus* HAPPINESS.

Many suppose that wealth and happiness are inseparable companions; but a glance at the inner life of men exulting in boundless wealth, soon dissipates this delusion. There was a great significance in the Saviour's remark, "A man's life consisteth not in the abundance of the things which he possesseth." The following sketch of the English Rothschild is in point:—

"The insufficiency of mere wealth alone to confer happiness is strikingly illustrated in the life of Nathan Myers Rothschild, the Jew, who died in London some years ago, 'one of the most devoted worshipers that ever laid a withered soul on the altar of Mammon.' For years he wielded the purse of the world, opening and closing it to kings and emperors as he listed; and upon certain occasions was supposed to have more influence in Great Britain than the proudest and wealthiest of its nobles—perhaps more influence than the Houses of Parliament taken together. He once purchased bills of the Government, in a single day, to the amount of twenty millions, and also the gold which he knew the Government must have to pay them; and with the profits of a single loan, purchased an estate which cost him seven hundred and fifty thousand. But with the clearest and widest comprehension in money matters, with the most piercing insight into all possible effecting causes in the money market, and with ingenuity to effect the profoundest, most subtle, and most unsuspected combination—an ingenuity before which all the other prodigies of calculation that have from time to time appeared, sink into nothing—he was, withal, a little soul. He exercised his talents and calculating powers, not only for the accumulation of millions, and the management of national creditors, but also for the determination of the smallest possible pittance on which a clerk's soul could be retained in connection with his body. To part with a shilling in the way of charity cut him to the heart.

"One of his grand rules, 'never to have any thing to do with an unlucky man or place,' which was also one of John Jacob Astor's principles, however shrewd in a worldly point of view, was the very quintessence of selfishness and Mammonism. He was, in short, a thorough-going Mammon worshiper—his whole soul converted into a machine or engine for coining guineas, and every noble emotion, immortal longing, dead within him. Guineas he did coin, to a sum that seems almost fabulous; but with all his colossal wealth, he was profoundly unhappy; and with sorrowful earnestness, once exclaimed to one congratulating him on the gorgeous magnificence of his palatial mansion, and thence inferring that he was happy: '*Happy! ME happy!*'"

PROLIXITY OF EDWARD IRVING.

Irving was noted for long prayers no less than eloquent sermons, and instances are related of his saying grace over hot suppers at evening companies, when the guests lost their patience and the supper its virtues. Dr. Chalmers, in his letters and journals, tells some strange stories of his eccentric friend. "He was once," says Chalmers, "at a supper party at the house of a friend, who requested him, before the repast commenced, to read the Bible and expound. Some of the guests had to walk three miles after the meal. Irving began his discourse. Midnight approached, and there was no sign of a termination. When the clock struck twelve, the master of the house suggested, with the utmost gentleness, that it might be desirable to draw to a close. 'Who art *thou*,' he replied, with prophetic energy, 'who darest to interrupt the man of God in the midst of his administrations?' Continuing his commentary for some time longer, he at last closed the book, and waving his long arm over the head of his host, uttered an audible and deliberate prayer that his offense might be forgiven." This prolixity was a frequent source of annoyance to Dr. Chalmers. He had been requested by Mr. Irving to open his new chapel in London, and then ensued what follows: "The congregation, in their eagerness to obtain seats, had already been assembled about three hours. Irving said he would assist me by reading a chapter for me in the first instance. He chose the very longest chapter in the Bible, and went on with his exposition for an hour and a half. When my turn came, of what use could I be in an exhausted receiver? On another similar occasion, he kindly proffered me the same aid, adding, 'I can be short.' I said, 'How long will it take you?' He answered, '*Only one hour and a half.*' 'Then,' replied I, 'I must decline the favor.'"

RULES FOR HOME EDUCATION.

1. From your childhood's earliest infancy you must inculcate the necessity of instant obedience.

2. Unite firmness and gentleness. Let your children always understand that you mean exactly what you say.

3. Never promise them anything unless you believe that you can give them what you promise.

4. If you tell your child to do something, show him how to do it and see that it is done.

5. Always punish your children for willfully disobeying you, but never punish in anger.

6. Never let them see that they can vex you or make you lose your self-command.

7. If they give way to petulence and temper, wait till they are calm, and then gently reason with them on the impropriety of their conduct.

8. Remember that a little present punishment, when the occasion arises, is much more effectual than the threatening of a great one, should the fault be renewed.

9. Never give your children anything because they cry for it.

10. On no account allow them to do at one time what you have forbidden, under like circumstances, at another.

11. Teach them that the only sure way to appear good is to be good.

12. Accustom them to make their little recitals with perfect truth.

13. Never allow tale bearing.

EXCHANGING ONE SIN FOR ANOTHER.—Growth in grace is not a state wherein a man exchanges one sin for another which is more decent or conducive to self-interest, but renounces every sin and becomes "a fellow-worker with God," to root out all evil from his heart, allowing himself no reserve of carnal pleasure, no clancular lust, no private oppressions, no secret covetousness, no love to this world, that may discompose his duty. "For if a man prays all day," says Jeremy Taylor, "and at night is intemperate; if he spends his time in reading, and his recreation be sinful; if he studies religion, and practices self-interest; if he leaves his swearing, and yet retains his pride; if he becomes chaste, and yet remains peevish and imperious—this man is not changed from the state of sin into the first stage of the state of grace; he does at no hand belong to God; he hath suffered himself to be scared from one sin, and tempted from another by interest, and left a third by reason of his inclination, and a fourth for shame or want of opportunity; but the Spirit of God hath not planted one plant there. God may make use of these accidentally prepared advantages; but, as yet, the Spirit of God hath not begun the proper and direct work of grace in his heart."

A man discovered America, but a woman equipped the voyage. So every where—man executes the performance, but woman trains the man. Every effectual person, leaving his mark on the world, is but another Columbus, for whose furnishing some Isabella, in the form of his mother, lays down her jewelry, her vanities, her comforts.

UNSUITABLE FOR A CHRISTIAN.

A correspondent suggests the importance of "an article on the impropriety of gambling, or buying and selling lottery tickets;" and adds, that "some of the members of our churches have bought and are selling such now, though they get a finger-ring, or a newspaper, between them and the law."

Something like a year ago, we were prompted to say a few words on this subject, as it was told us that professors of religion were, in some instances, guilty in the matter. We could hardly believe, at that time, that Seventh-day Baptists, who believe that He who said, "Remember the Sabbath day, to keep it holy," said also, "Thou shalt not steal," could be chargeable with such a violation of the Eighth Commandment as lottery speculation implies; and we think we so expressed ourselves. We are not willing to believe it now, notwithstanding the veracity of our informant; we prefer to think he has been wrongly informed, or is laboring under a mistake of *some* sort. What! Seventh-day Baptists gamble! Too conscientious to conform to popular belief regarding the Sabbath, yet so covetous that they cannot wait to get money in an honest way, but must "make haste to be rich" without rendering any equivalent for what they gain!

Certainly, argument is not needed to show the dishonesty of lottery speculations, as well as of all other forms of gambling. The merest child can see, that the winner, in such cases, takes from somebody else, without rendering a just compensation; and any transaction which involves this, no matter by what name it may be called, is dishonest; it is what a Christian should be ashamed of. "Let him that stole steal no more, but rather let him labor, working with his hands the thing which is good, that he may have to give to him that needeth." (Eph. 4: 28.)

Say, reader, did you ever consider the import of this language of the Apostle? It teaches, that to give to the needy is making the right use of what Providence bestows upon us. If this is the principal motive which stirs up your endeavors to accumulate, you will not, probably, be in such *haste* as to resort to gambling. You will hardly make a pretense of benevolence to the needy with one hand, while with the other you are despoiling your neighbor. "Robbing Peter to pay Paul," they say, is not very creditable. Let Paul himself teach you, on this point; for, according to what he says, if you wish to have to give to him that needeth, you must acquire it by *labor*, working with your *hands*, not with craft and cheating. And as to the *kind* of labor which you must apply your hands to, the Apostle is quite particular; it must be the thing which is *good*, not that which tends to evil, for he that says, "Let us do evil that good may come," incurs a "just damnation." (Rom. 3: 3)

With this passage of the Apostle before us, we could not resort to gambling, even in the form of buying and selling lottery tickets, for the sake of having something to give to the poor, or for building a church, or for raising missionary money, or for endowing a hospital, or for any other purpose, however benevolent. We should naturally conclude, that God requires our benevolence to be exercised only to such an extent as the avails of honest, useful labor, will allow; that any thing beyond this would only be cultivating one good trait at the expense of another, and would therefore be sinful.

We are not sure that we understand our correspondent's language about "a finger-ring, or a newspaper, between them and the law;" but we have a suspicion that he alludes to the *Gift Enterprise*, or that contrivance by which the proprietor of a picture, a show, or something else which he wishes to sell, induces people to venture the hazard to obtain it; the thing differing from a common lottery, only in the fact of there being no actual blanks in the wheel. The adventurer gets *something* for his money, (as "a finger ring, or a newspaper," for example,) though he does not get that for which he advanced his money; on the contrary, in nine cases out of ten, he receives that which to him is utterly worthless. We see nothing but gambling in any of it. The show of an equivalent for money paid, is a mere ruse to evade the law which makes the lottery enterprise an indictable offense. It is so intended by the contriver; it is so understood by those who allow themselves to be imposed on by it. The professor of religion who is lured by such a decoy, either is guilty of the rashness of not inquiring into the nature of the thing, or gives evidence of a looseness of principle with regard to money-getting which ill befits one whose motto is, "Godliness with contentment is great gain."

We append the following form of prayer for the use of the money-loving professor: "O Lord, thou hast told me to take heed and beware of covetousness; and, having food and raiment, to be therewith content. Thou hast required me to seek the kingdom of God first; and I have pledged myself, in most solemn covenant, to do so. Thou hast told me to put my trust in thee and do good, encouraging me that so I shall dwell in the land, and be fed. Thou hast given me the most positive promise that thou wilt never leave me nor forsake me, and hast declared, by thy servant of old, who had himself proved the truth of it by experience, that the righteous were not forsaken, nor their seed allowed to go begging bread. But, Lord, I am not contented with the moderate portion thou allowest to thy saints; I think it rather hard to be denied of the comforts and luxuries with which my neighbors of the world are favored, who, having more than heart could wish, are not in trouble as other men, neither are they plagued like other men; and, not believing that a little more than I now have would be the least injury to me, I pray that thou wouldst increase my substance. And as the way is now open for me to possess myself of a prize, through a lottery soon to be drawn; and as the amount of injury to my neighbors, in the event of my success, however large in the aggregate, will be but trifling in detail, being divided among so many; I pray that thou wouldst, for this once, intermit the law requiring me to love my neighbor as myself, allowing me in my great self-love to hate each of my neighbors a little. And now grant me success in this my lottery speculation, and let thy blessing rest upon me. Do not let my neighbor have success in this thing, for if he is successful, I must be disappointed; prosper me, but send a blast upon him. And notwithstanding the seeming mockery of thus asking thee to deny thyself and belie all thy word, to say nothing of the hypocrisy of going so contrary to the teachings of Him who died for me, I trust thou wilt consider mine an urgent case, and grant all my request, for the sake of that Saviour who said, 'Ye cannot serve God and Mammon!'" T. B. B.

SPIRITUAL DIGNITY.

The dignity, the grandeur, of spirit, in its essence, its relations, and its destiny, is a subject truly worthy of a few passing thoughts. Manly stature, manly strength, manly proportions, manly beauty, manly force, manly dignity, are terms common-place and familiar. What is it that gives significance and import to these familiar terms? Is it not dependent upon a subtle spiritual essence, lying back of, pervading, energizing and exalting the physical embodiment? Yes, it is spiritual worthiness, spiritual dignity—in other words, spiritual manliness—that gives grandeur and sublimity to our being.

There is beauty and grandeur and sublimity in the material world, but not like unto that in the spiritual world. You have seen the gentle, timid, delicate flower, opening its meek eye, and turning its blushing face heavenward. There was beauty there, but not like that of the meek and gentle spirit lifting its eye confidingly towards God.

There is grandeur in the sun, as it bringeth day to a slumbering world; but not like the grandeur of a new-born spirit, just beginning its course of light.

There is glory in a quiet sunset scene, as the sun leaves the sky flecked with golden clouds, and fills all nature with a subdued gladness; but it is not like the glory of a spirit that has shed a radiance along its pathway on earth, and now is about to take its departure for brighter worlds.

There is majesty when storms are abroad in the heavens, and wind and cloud are careering wild and free—

> "When the lightnings, quick and clear,
> Across wide heaven in grandeur gleam,
> Rousing along the fields of air
> The growling thunders from their lair."

But it is not like the majesty of some genius spirit, rising far above the heads of common men, making the regions of pure spirit "the play-ground of his deathless thoughts."

There is grandeur in the eagle, as he spreads his pinions to

> "Rise through tempest—shrouded air,
> All thick and dark, with wild winds swelling,
> To brave the lightning's lurid glare
> And talk with thunders in their dwelling;"

but not like the grandeur of that spirit which, unmocked, uncontrolled by man, rises above the murky atmosphere of this lower world, and the wildly swelling winds of passion, and holds converse with deity.

There is a gorgeous richness bursting from nature in tropical climes; but richer far the burstings forth from a noble, a generous, a great heart, when developed under the genial rays of the sun of righteousness. On the other hand, there are hearts bearing the stunted vegetation of the frigid zones. There are hearts filled with dark, cold, deathful caverns. There are spirits like those cities and temples long since deserted of God—through whose courts and corridors, dark spirits, elf-born, flit and beat about, bat-like—satyrs peep and rail and dance there—and vultures and cormorants hover there. Yet our spiritual being, though fallen and in ruins, is grander in its ruins than Babylon, or Nineveh, or Persepolis, or Meroe, or Karnack.

The essential element of spirit far transcends in nobility that of matter. In its powers, it is noble. In its relations, it is noble, being connected to all other created spirits, and to the all-creative, the all pervading Spirit. In its destiny it is also noble. When Niagara's voice shall have long been hushed in death—its anthems forever ended—and even its very name almost blotted from our memories—our spirits shall break forth in new strains of rapture or wo. When Mount Blanc shall long have ceased to drop its avalanches on the vales below, and its sublime proportions vanished away, our spirits *may* live on, developing in grander, sublimer proportions.

If there is, indeed, this dignity, this grandeur of our spiritual being, the inquiry arises, what are we to do in view of the premises? What harmonizes with, what detracts from, the *dignity of our natures*? How shall we guard and develop this spiritual worthiness?

We reply, there must be a distinct and full realization and appreciation of the worth of spirit, as spirit. It is necessary that we be fully impressed with the great truth, that our spirits far transcend in dignity and majesty the whole material universe. As we walk forth among our fellows, there should ever be present with us a sense of the spiritual worth and grandeur around us. We are also to be ever pervaded by the idea, that we are in the presence of an all-pervading spiritual presence, the creator and preserver of all other spiritualities, to whom they all sustain intimate and individual relations.

From a due appreciation of these great and all-pervading truths, there will naturally arise a proper self-respect, pervaded and modified by a due respect for every human being—for humanity as such. But while we respect every representative of humanity, for the inherent splendor and majesty of his being, the true dignity of our natures forbids all servility, all fawning, all idolatrous reverence, all slavish reposing in the shadow of those high in rank or station, all leaning on them for support, having our thoughts and wills guided and controlled by their beck. The true dignity of our natures bids us respect ourselves too much, and humanity too much, to bow down abjectly before power, or station, or riches, or birth, or lineage. All of these things sink into utter insignificance before the majesty of pure unconditioned humanity. True dignity, true ground of respect, depends, not on nationality, or parentage, or station—not on the complexion, whether florid, or pale, or sallow, blonde or brunette, white or black—not on the hair, whether crisped or straight, black, or brown, or red, or auburn, or flaxen, or grey, or white—not on the size, whether tall or short, slim or stocky.

I am well aware that we are prone to pay our devoirs to the almighty dollar, rather than to real spiritual worth. The golden calf and ceremonies appertaining to its worship seem to be in especial favor. There is a general proneness to humble our spirits in the dust before broadcloth and brocade, and cry guilty and unclean. There is an insatiable hungering and thirsting for place and office, and an intense begging for the crumbs that fall from political tables, whether of Presidents or Pathmasters. There is an obsequious bowing and scraping and reaching out of trembling hands, begging for one favoring look, one approving smile, from those whom dame Fortune has granted the slightest favor beyond what we enjoy; while those that have been less fortunate than ourselves are utterly contemned, though in true genuine merit and dignity they stand as far above ourselves, as we do above those around whom we are playing the sycophant and craven. On the other hand, there may be an overweening self-esteem, an arrogancy and vanity, a vaunting and puffing up of one's self, that is belittling to the agent, and insulting to the true dignity of humanity. All pompous shows—all parade—all assumed airs—all signs hung out of "Dignity to Let," are always indicative of rooms rather than dignity to let—rooms situated in the upper story, front—rooms unswept and ungarnished, and to be fitted entirely at the expense and risk of the lessee.

Again, true dignity is opposed to all ridicule, nonsense, vulgarity. Vulgarity not only bemeans the agent, but it is an insult, an indignity, to humanity. It belittles and corrupts all that it comes in contact with. It writes eternal characters, that shall live and gleam forth their lurid light forever. It is believed by metaphysicians, that no impression upon the mind is ever permanently forgotten. Every thought, emotion, desire, make ineffacable impressions—and the books of the Judgment are the unfolding of the leaves of memory to our mental gaze, whereon we may read our past, all written out. If so, how careful should we be in writing on these leaves! That individual who is vile, not only corrupts his own spirit, but also insults and corrupts all within reach of his moral miasma.

Again, pure honest-mindedness is another requisite of true spiritual dignity. All duplicity, and double-dealing, and double-ends—all trimming, and time-serving, and Janus-facedness, and deception, and fraud, and falsehood, are degrading to our humanity.

Did you ever, for instance, meet a wire-working, log-rolling politician? If so, did you not feel that he was a degraded being? Did your souls not despise him, abhor him? Did you ever meet the man who tried to influence you by special pleadings—to gain you to his cause by sophisms? Did you not turn with loathing from such an one? Did you not feel that he had offered insult to your manhood? Did you ever meet the tradesman, who, by false signs hung out, and deceptive colorings, and winning words, tried to drive a good bargain with you, or palm off some worthless commodity upon you? Was there not in such cases an indignity offered to your honesty, your uprightness of character? On the other hand, who ever stood in the presence of a man who always walked forth in a sincerity that was frank, open, and free—a sincerity above all of the mean artifices of the double-dealer, or the tricks of trimmers—who ever stood in the presence of such an one, I say, and did not feel that he was in the presence of the noblest work of Deity? Who does not feel his spirit elevated and ennobled in the presence of such an one? Who does not feel a respect almost bordering on reverence?

Again, *self-control* is another requisite and element in true dignity of character. We may realize something of spiritual dignity; we may feel something of our own individual worthiness—our responsibility; we may have great honesty of purpose; yet we may have no self-control—no power to resist temptation—no manliness in adversity and affliction. Instead of the tree in broad pasture lands, with strong branches bravely swinging in the wind, we may be like some lithe sapling, writhing in the storm, and our topmost boughs eating the dust. There must not only be self-control, but this self-control must be harmonious, proportional. The higher faculties of our being must not be brought into servitude to the lower. This is abject—this is degrading. Piety is the only polar star around which all the other faculties can revolve, and find themselves in their proper spheres, and their action free and natural and dignified.

All intemperance, in whatsoever form it may appear—all avarice—all peevishness, complaining, and fretting, and scolding—all frivolity and nonsense—is not only insulting to humanity; but it is also degrading, brutifying, stultifying to the agent.

In short, *beauty*, *truth*, and *goodness*, united in full and ample and harmonious proportions, lie at the foundation and give true dignity of spirit. *

THE WEST.

In looking at the West as a field for missionary effort, the influence of emigration should claim our attention as a consideration of paramount importance. An effort has been made to find an eligible location, for the purpose of inducing Sabbath-keepers who emigrate West to concentrate at that point. With all due deference to the superior wisdom and experience of the projectors of this plan, I trust I may be allowed to make a few suggestions with reference to it.

There is no doubt that the plan *might* be feasible *under certain circumstances*. But is there sufficient unity of feeling and interest—are the cords of sympathy between the different portions of our widely scattered people sufficiently strong—to induce that harmony of interest and action indispensable to the carrying out of such a plan? Let us see. During the past winter Eld. V. Hull, with several other brethren, made a trip west of the Mississippi, and selected a point in Clinton Co., Iowa, which was highly recommended as a location for a Seventh-day Baptist settlement. Now mark the result. Instead of leaving their present scattered settlements to center there, some of our brethren are going to Dacota, some to Burr-Oak, some to Northern Iowa, while others are scattering away from any Sabbath-keeping settlement; and there is an emigrant company forming in the vicinity of Milton and Albion, to go to Minnesota the coming season. I make this statement with no invidious design, but to show that, under existing circumstances, the plan proposed is *simply and clearly impracticable.*

Again, were such a system of emigration practicable, would it be advisable or desirable? Would it best subserve the cause of truth? True, it might be more convenient, and minister more to the ease and comfort of the settlers; but is it for this that the Christian lives? Is it for this that he should labor? On the contrary, should he not lead a life of devoted self-denial for Christ's and the truth's sake? And in what way can the truth with regard to God's holy but long-neglected Sabbath, be better promulgated than by little communities of earnest, faithful, devoted Sabbath-keepers? Not the half hearted, worldly-minded, time-serving kind of Sabbatarians which we too often meet, especially at the West, but true Christians, whose hearts glow with an ardent love for the truth, and a burning zeal for its promotion—these, and such as these, will hold up the light of truth to an erring world; and a community of such, though small, will wield a powerful influence in drawing the attention of the Christian world to the peculiar truths which distinguish us as a people. For one I would rejoice to see *such* communities multiplied a thousand fold, and scattered all over the Mississippi valley. A. A. LEWIS.

ALBION, March 31, 1856.

THE EDUCATION SOCIETY.

The Executive Board of the Seventh-day Baptist Education Society held a Quarterly Meeting on the 8th and 9th inst., at the house of T. B. Stillman, No. 80 Seventh-st., New York.

The following members were present: T. B. Stillman, Geo. Greenman, Lucius Crandall N. V. Hull, J. M. Allen, Geo. B. Utter, Jas. Bailey, W. B. Gillette, A. D. Titsworth, David Dunn, H. H. Baker, and W. C. Whitford.

After the reception of reports from the Treasurer, Corresponding Secretary, and General Agent, the Board proceeded to the consideration of the reports of Special Committees, appointed at its session at Leonardsville, N. Y., Sept. 9, 1855.

The Committee to obtain a person to deliver a Literary Address at the next Annual Meeting of the Education Society, reported in favor of the appointment of W. C. Kenyon, and J. M. Allen alternate. The report was adopted.

The Committee on College location reported:—

Your Committee appointed to take into consideration the question of College location, would respectfully submit the following report:

The Committee entered upon the discharge of its duties, having a general line of procedure marked out by the previous action of the General Conference upon the same subject. Conference had caused an expression of the opinion of the Denomination to be taken in reference to a location, which expression, though not as full and complete as the importance of the subject would seem to demand, yet your Committee recognize in it a general concurrent sentiment worthy of respectful consideration.

The general sentiment seems, by the votes cast upon the subject, to be in favor of Alfred as the preferable place of location. Your Committee, after maturely considering the subject, in their opinion, find this prevailing sentiment justified by the following considerations:

1. That at Alfred there is a well-established school in respect to its hold on the public confidence and patronage, and possessing many facilities for study, such as buildings, apparatus, teachers, &c.
2. That in the surrounding country are various churches of our Denomination, to which the Institution may be of great use, and from which it may derive support.
3. That the location is easy of access from different parts of the country, being on the line of the New York and Erie Railroad.
4. That the location is favorable to health, and one where the cost of living will be comparatively light.
5. That it is a region not preöccupied by any Institution of the kind proposed, though as capable of affording support to such an one as other sections of the country where similar institutions flourish.
6. That being a retired and rural district, it is favorable both to study and morals.

We therefore report in favor of locating the proposed Institution at Alfred Center, provided the Trustees of Alfred Academy, after freeing it from all indebtedness, will donate to the Seventh-day Baptist Education Society one undivided half of their corporate property, and provided, also, that the Western Association will raise at least fifteen thousand dollars for the permanent fund of the Education Society.

THOS. B. STILLMAN, }
GEORGE GREENMAN, } Com.
LUCIUS CRANDALL, }

This report, after a full and thorough consideration, was unanimously adopted.

The Committee to consider the question at what time the interest on the several subscriptions shall commence, and what shall be the amount on which each subscriber shall be expected to pay interest, reported a recommendation, that new subscriptions be made in place of the old ones. The report was adopted.

On motion, a Committee of five, consisting of N. V. Hull, L. Crandall, W. B. Gillette, T. B. Stillman, and Jas. Bailey were appointed to nominate the Faculty of the Institution.

On motion, it was voted, first, that subscriptions for the permanent fund of the Education Society in the Western Association, shall commence to draw interest when the conditions of location shall be complied with; secondly, that subscriptions obtained in other Associations shall commence to draw interest at the next Annual Meeting; and, thirdly, that all subscriptions obtained after the Annual Meeting shall commence to draw interest at their date.

The Board adjourned to meet at Plainfield, N. J., on the second First-day in July next.
W. C. WHITFORD, Rec. Sec.

AN INTERESTING CEREMONY.—It was our privilege, says an editor of the New York *Times*, to witness a ceremony Sunday, which, though not uncommon in the city, is quite novel and curious to Gentile eyes. It was upon occasion of the "*berith*," or "naming," of a grandson of the distinguished Rabbi Raphall, at the Rabbi's residence. At 12 o'clock, the invited guests, mostly friends of the family, (Mr. Cheine M. Levy) and men of high standing in the several synagogues which they represented, gathered into a large room where the Rabbi, seating himself upon a table, firmly held the infant boy in his lap. A surgeon—Dr. Levy—performed the operation of circumcision, the name was formally announced, a chant sung, and then followed a sumptuous breakfast to which some forty people sat down. Speeches were made, toasts drunk, and all sorts of good wishes uttered. Among others, a distinguished traveler present proposed the lad's health, and the hope that he would live to see the restoration of the Holy City, and Jerusalem rebuilt according to its past magnificence. This he said he had very good reason to believe was not an extravagant wish, nor its fulfilment improbable. This rite of circumcision by which the male children of the Hebrews are admitted under the Covenent of Abraham is performed—unless forbidden at so early an age for medical reasons—upon the 8th day after birth, and the occasion is always one of high festivity.

PRINCELY MUNIFICENCE.—Peter Cooper, Esq., is erecting a massive edifice, 150 feet square, and six stories high, at the junction of the Third and Fourth Avenues, New York, "for the advancement of Science and Art." He is building it at his own expense, fire-proof, with the utmost care, and at a cost of several hundred thousand dollars—the direction of the whole to be ultimately placed in a Board of Trustees, and the entire income of such parts of the building as may be rented, to be devoted to the support of the institution. No charges are to be made for instruction, and it is to be open to all young men of correct and moral habits. The costly offering is not to be made to the city of New York, nor to a Board of Trustees, appointed by the Legislature. Mr. Cooper's design is more comprehensive. It will prove to be little less than a University, admirably located, in the immediate vicinity of the Astor Library, and with an endowment that will produce $30,000 a year. The entire cost to Mr Cooper will probably reach half a million of dollars, which he has the satisfaction of appropriating for the benefit of young men, desirous of making superior attainments in science and art.

LEGISLATIVE APPROPRIATIONS TO LITERARY INSTITUTIONS.—The New York State Legislature, during its present session, have made the following appropriations to literary institutions: Genesee College, $6,000, Elmira Female College, $10,000, Alfred Academy $7,800.

AN EXAMPLE OF LIBERALITY.—The following incident, from the *Banner of the Cross*, illustrates the highest style of liberality:—

"A Christian traveler relates that he attended upon the service of a Protestant church, on Easter Sunday, in the city of Lyons. After the celebration of the Lord's Supper, many of the members advanced forward to the minister and laid down their offerings to aid in the erection of a sanctuary. Among the number was a soldier, who, with gushing tears of gratitude, presented all his earnings for the last three months. The minister, knowing this circumstance, and fearing that he might have given more than he could afford, asked him if he were certain he could spare so much. With much emotion, he replied, 'My Saviour spared not himself, but freely gave his life for my redemption, and surely I can spare one quarter of my year's earnings for the promotion of his glory on earth.' This is the spirit which is needed to meet the demands of the present age in behalf of benighted millions pleading for the gospel. If one-half the church were ready to make such sacrifices, how speedily would the gospel advance over the earth! what companies of faithful missionaries would go forth to reap the moral harvest of the world! what a full and overflowing treasury would be the Lord's!"

RELIGIOUS TOLERATION IN TURKEY.—The London correspondent of the *National Intelligencer* informs us that "the firman has been read in one or two other cities, and promulgated in the presence of the ecclesiastical, civil, and military dignitaries. Strange to say, the Greeks and other Christian subjects of the Porte, to whom so much has been granted, are dissatisfied because they have not received more. The *old* fanatical Turks say little, but look daggers. The success of this movement will depend very much upon the men on whom will devolve the arduous task of realizing its promises. It is not to be expected that so great a measure will be free from difficulties in its progress; one has already arisen. The prohibition of the foreign slave trade has excited discontent on the Circassian frontier, and serious tumults on the shores of the Red Sea. If the divan succeed in suppressing this traffic, and restoring order in the Red Sea ports, we shall have in the result an omen of the success that is likely to attend their other reforms."

RELIGIOUS INTELLIGENCE.

Dr. A Wayland, of Clark County, Mo., a prominent elder in the Presbyterian Church, proposes to endow a Professorship in Westminster College. In a late correspondence on the subject, after stating that he had been considering the subject for some time, he says: "I will guarantee the sum of twenty thousand dollars to be provided during my life-time, or soon after my decease, to endow a Professorship in Westminster College, at Fulton, Mo., provided any other person or persons will secure a similar sum, to be applied for a similar purpose, in the same college."

It is proposed to raise an additional endowment of $150,000 for Andover Theological Institution. This, says a correspondent of the *Evangelist*, is found necessary from the increased cost of living. The salaries of the professors, which were at first ample, are now quite insufficient for their support. There is also needed a fire-proof building for the library of the institution. The sum needed for these purposes is said to be $150,000.

The American Baptist Missionary *Union* holds its coming annual meeting in the meeting-house of the Oliver Street Baptist church, New York, on Thursday, May 15th, 1856, at 10 o'clock, A.M. The annual sermon will be preached by the Rev. Robert W. Cushman, D. D., of Massachusetts, or by the Rev Nathaniel Colver, of Michigan, alternate.

A Washington correspondent of the *Pennsylvanian*, says:—"I have every reason to believe that the Senate will subscribe for ten thousand copies of Dr. Kane's forthcoming work, and thus convey to the distinguished explorer the delicate and only compliment desired by him from his country. Money as a testimonial for his services, he would scorn.

The donations to the treasury of the American Baptist Missionary Union, in the month of March, amounted to thirty-seven thousand dollars. This makes the aggregate for the year, including amount paid for liquidation of debt, about one hundred and twenty thousand dollars.

The Methodist Tract Society are about to publish a monthly paper, beginning in April entitled "*Good News*," to be edited by the Corresponding Secretary. It will include four large pages, beautifully illustrated, and be sold very cheap.

Singularly enough, the law of Sweden allows freedom to the press, while it denies freedom of speech. The efforts of Christians are thus mainly directed to the formation of Tract Societies, and the circulation of religious periodicals.

Among the passengers in the steamer Canada, which sailed last week for Liverpool, are the Rev. William Butler, wife and two children. Mr. Butler goes out to India as the representative of the Missionary Society of the Methodist Episcopal Church.

A Convention of the Baptists of the South or Southwest, is to meet in Augusta, Ga., in April, to consider the question of establishing a great central Theological School for that denomination in the South.

The first sheet of Dr. Sprague's Biography of Distinguished Ministers, on which he has spent years of labor, has been put to press. The work is to be published by the Messrs. Carter, of New York, and will be looked for with much interest.

The *Puritan Recorder* says some gentlemen connected with the Rev. Mr. Sewall's congregation, in Lynn, have recently made their pastor a surprise visit, together with a present of a thousand dollars.

The New York Jews have introduced choral singing into their worship, and among other pieces give part of "I know that my Redeemer liveth," from the Oratorio of the Messiah.

Three hundred and sixty thousand dollars have already been subscribed to the University to be located at Greensboro', Ala., and its friends say they will start it with $400,000.

The Southern Baptist Publication Society are engaged in an effort to raise $25,000. A meeting of the Baptist churches in Charleston was recently held in aid of this object.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, APRIL 7.

In the **SENATE**, a resolution was reported from the Committee on Foreign Relations, to the effect that no further legislation is necessary in order to put an end to the treaty with Denmark in relation to the Sound Dues Mr. Cass presented a memorial from what he termed the "self-styled Legislature of Kansas," and a discussion was had on its reference, but the subject was not disposed of. Mr. Geyer, of Missouri, then addressed the Senate on Kansas affairs.

In the **HOUSE**, the Constitution of Kansas was presented, together with a memorial of the new Legislature on the subject, which was referred to the Committee on Territories. A bill was reported from the Committee on Commerce, and referred to the Committee of the Whole, authorizing the President to cause to be procured a suitable steamer to be stationed at this port, to afford relief to distressed vessels. Some preliminary action was taken in regard to the engagement of American vessels and citizens in the Cooly trade.

THIRD-DAY, APRIL 8.

In the **SENATE**, a bill to remit and refund duties on goods, wares and merchandise destroyed by fire was passed. It is the same bill which passed the Senate last Session, but which failed in the House for want of time. Mr. Geyer concluded his remarks on Kansas affairs, and Mr. Seward obtained the floor.

In the House, the Deficiency Appropriation bill was pending in Committee, and a variety of speeches were made on a variety of subjects.

FOURTH-DAY, APRIL 9.

In the **SENATE**, the question of printing the memorial of the Kansas Legislature was brought up, but the subject was postponed, and Mr. Seward addressed the Senate on Kansas affairs.

In the **HOUSE**, the Deficiency Appropriation bill being under consideration, Mr. Shorter made a long speech on the Slavery question, denouncing Massachusetts for her action relative to the Fugitive Slave law, and declaring that the only guarantee for the perpetuity of the Union will be the success of the Democratic party in the next Presidential campaign.

FIFTH-DAY, APRIL 10.

In the **SENATE**, the proposition to print the memorial of the Kansas Legislature was taken up. The Pro-Slavery members fought hard against it, finding all manner of excuses for opposition. The last dodge was to deny its authenticity, because it was a copy with the names of the signers in one hand-writing Mr. Hamlin made a pungent comparison of this application to be heard with the petitions sent by our Fathers to Parliament which were kept out by Lord North. Mr. Butler replied that Lord North did his duty in opposing such petition. The debate was very sharp and at times highly exciting. Finally the memorial was referred to the Committee on Territories, and then Gen. Cass asked and obtained leave to withdraw it.

In the **HOUSE**, the resolution of the Committee on Elections declaring Mr P. B. Fouke not duly elected from the 10th Congressional District of Illinois was adopted, only five voting against it. The resolution declaring Mr. Marshall, sitting member from the IXth District, same State, was adopted.

SIXTH-DAY, APRIL 11.

The **SENATE** passed passed forty-eight private bills, including one for the relief of the officers and soldiers of the Army who sustained losses by the San Francisco and Winfield Scott steamboat disasters. Adjourned till Second-day.

The **HOUSE** passed the bill to compensate John S. Pendleton for extra diplomatic services, together with a number of other private bills. Adjourned till Second-day.

European News.

We have European news to March 29th, the substance of which will be found below.

The British Admiralty have in accordance with an appeal addressed to them through *The Times*, decided upon sending two steamers in search of the missing mail steamship Pacific. The ships are the Desperate and Tartarus, and were immediately dispatched.

The probabilities of peace have, since our last intelligence from England, received a check which it was feared would delay the conclusion of the negotiations for some days. It was presumed that the meeting of the 22d ult. would have been the last, but according to *The Times'* correspondent unanimity did *not* prevail and the discussion was not so amicable as had been anticipated There is every probability, however, of the differences being arranged, although it is not positively known by what they were caused. The same authority defines the cause to a demand put forth by the Prussian Plenipotentiaries to be admitted to sign the treaty of peace on the same footing and in the same character as if Prussia had been a party to the alliance throughout, as if she had accepted all the obligations involved in it, had joined in the ultimatum and declared that she would abide by all its consequences. It is also said that Russia supports Prussia in these pretensions.

Intelligence from Paris states that the City of Parma and the surrounding country has again been laid under a state of siege, which arose from renewed attacks of assassination. The Auditor of the War Department had been stabbed in the back while walking with another officer. The Government had become greatly alarmed at cattle murrain which was said to be spreading over the Continent.

Accounts from the Crimea state that the Allies have commenced the demolition of the incloseure around Sebastopol.

Sir Henry Pottinger died at Malta on the 18th of March. This officer had rendered great service in his administration of public affairs in India, China and Africa.

Three days later news was received after the above was in type, by telegraph from Halifax. It is now stated that the difficulties alleged to have presented themselves in the Paris Conferences are understood to have been removed, and it was confidently expected that the treaty of peace would be signed within a few days.

ART OF PRINTING.—Mentz, in Germany, is entitled to the honor of being the birth-place of printing. Strasburg and one or two other cities have laid earnest claims to the preference, but historians now generally concede it to Mentz. Guttenburg invented, and first used separate letters or moveable types in 1442. As early as 1423, he had printed with lines cut on wood, but this was a small mechanical advance on what had been done for many years. Xylographic printing, or the taking of impressions from wooden tables on which letters or figures were engraved, had previously been practised in Germany, and was an eastern invention. Guttenburg at first took impressions from his types by fastening them on a table, coloring them with writing ink, spreading the paper over them and pressing it with a rubber of horn. Faust invented printing ink, and Guttenburg constructed a rude printing press. Iron presses were earliest employed by Lord Stanhope of England.

A State in Contumacy.

About two years ago an alleged fugitive from Slavery was arrested at Milwaukie in Wisconsin, and was rescued from the custody of the federal authorities, who claimed to hold him under the act of 1850. Mr. Booth, a Wisconsin editor, was implicated in the rescue of the man, and was prosecuted and convicted upon that charge, in pursuance of the criminal provisions of the same act. The case of Mr. Booth was brought up before the Supreme Court of that State, by *Habeas Corpus*, and the law of Congress under which he was convicted was pronounced unconstitutional, and the prisoner was discharged.

This case has assumed a new and very interesting form. It has been complained to the Supreme Court of the United States, that grievous error was committed by the Wisconsin tribunal in discharging Mr. Booth, and some six months ago a writ was issued calling up the cause for revision, and *commanding* the Supreme Court of the State to send up its record. To this command the Wisconsin Court responds by ordering its Clerk not to certify the record—that is, it denies the right of the Federal Court to make the demand, and refuses to appear or to enter an appearance. It is true that the appeal can be argued and decided at Washington as well without this certified record as with it, but the course pursued by the State Court is still an important incident in the progress of the struggle between Federal usurpation and the rights of the States, as represented on either side by the Judiciaries of the State and National Governments.

It is understood to be the desire of the aggressive party in this struggle not to precipitate a determination in Mr. Booth's case. It is not necessary to push matters to extremity now. It may be better to wait a year until the agitation of the public mind on the sectional questions embraced in the Presidential election shall have passed away. We do not, therefore, consider it probable that such a judgment as the United States Supreme Court is certain, ultimately, to render against the State of Wisconsin, will be thrown out to alarm the Free States at such a period as the present. The argument of the cause then, it may be supposed, will go over to the December term of the Court.

SLAVERY IN NEW JERSEY.—A correspondent of Fred. Douglass' paper, writing from Long Branch, N. J., speaks of some of the few slaves yet living in New Jersey. He says:—

"There are yet in this State many of the remaining relics of the peculiar institutions in the person of its victims. I have taken occasion to converse with several of them about the past. The history of those times is indelibly impressed on their memory. One died here last week whose recollections carried him back as far as 1732, and it is said he was one hundred and twenty-four years of age, or thereabouts. An old comrade of his yet remaining, whose birth he recollected, he being at the time about twenty, is an old lady now about one hundred and four. She, too, retains vivid recollections of Revolutionary times and those who figured in them. She is yet able to wash, iron, sew, knit, and scold her children, grand children, and great grand-children, and grand children's children, as vigorously as in days of yore, and is as ready to threaten, box and spank the oldest as the youngest of them. From her I learned many important facts of the past, which the historian would count a rich treasure. She is yet not only vigorous in mind, but healthy and fleshy in body, and with care looks as if she might remain long enough to hail the arrival of the fifth generation. Her name is Lavina Butler. The name of the old gentleman alluded to was Jacob Brown."

CUTTING SCIONS FOR GRAFTS.—Now is the time for cutting scions for grafting. Any time in the Winter or Spring before the buds burst will answer, but they will soon shrivel and dry up, if it is delayed till they are much swelled. Shoots of medium size of well-ripened wood, of the last year's growth, from the extremities of bearing branches, should be selected. These will bear earlier than the water sprouts or suckers, which from their thrifty growth are sometimes used. The wood of these is usually softer and the buds not as well developed as those from the extremities of the branches. If wood of more than one year's growth is taken, flowers are often produced, and sometimes fruit, the year of insertion, while very little growth is obtained. Grafts from thrifty young trees are better than from old ones which have begun to decay. Where no suitable scions of a favorite variety are found, they may be obtained for another year by shortening in some of the smaller limbs, which will then push out vigorous shoots. Some claim that scions should only be taken from the topmost branches, that we may obtain an upright growing head. It is thought the lower limbs, showing a disposition to grow downward and crooked, will give their characters to the new tree. We doubt this theory, but as we usually get the best ripened wood and straightest shoots from the top, where there is plenty of light and air to develop them, it will pay for a little climbing.
[Homestead.

The moon, in her passage eastward around the earth, continually passes between us and the fixed stars or planets which lie in her path, and obscures them from our view. The instant of the disappearance of a star behind the moon, or the occultation of a star, as the phenomena is called, can be noted by observers widely separated from each other, and hence this phenomena becomes a ready means of determining the difference of longitude between two places. The telescope may be of moderate size, and requires an accurate adjustment.

COLOR-BLINDNESS.—Color-blindness, or Daltonism, as it is often called, has of late attracted great attention. Sir David Brewster, Dr. George Wilson, Prof. Wartmann, and others, have investigated the phenomenon with surprising success; and the North British Review has a paper on the subject, in which it is said: "Till within a few years this affection of the eye was supposed to be confined to a small number of individuals; but it appears from the calculations of various authors, that one person out of every fifteen is color-blind." According to the experiments of Dr. Wilson upon 1,154 persons at Edinburg in 1852–53, one person in every eighteen had this imperfection.

1 in 55 confound *red* with *green*.
1 in 60 confound *brown* with *green*.
1 in 46 confound *blue* with *green*.

Hence one in every 17·9 persons is color-blind.

TO MAKE A BALKY HORSE DRAW.—The *London Times* gives a remedy which proved successful. After all sorts of means had been tried and failed, it was suggested that a simple remedy used in India should be tried—that is, to get a small-rope and attach it to one of the fore feet of the stubborn animal, the person holding the end of the rope to advance a few paces, taking with him the horse's foot, when as a matter of course, the horse must follow. The suggestion was at first ridiculed, but at last a rope was brought and applied as described, when the horse immediately advanced, and in a few minutes was out of sight, much to the amazement of the crowd. The experiment is simple and worth a trial.

SUMMARY.

Mr. Joseph Curtiss died at his residence in Lexington-avenue, New York, on Saturday evening, after an illness of four days. Mr. Curtiss was born in Newtown, Conn., in 1782. At the age of sixteen he came to this city. He has taken an active part in most of the benevolent enterprises which have been undertaken here from that time to this. For twenty years he belonged to the Fire Department, and he introduced the use of the torch and hose carriage. He was one of the founders of the House of Refuge. Long time a trustee of the Public School Society, he was present at the laying of the corner stone of the first Public School building erected in the city, and heard the address delivered by De Witt Clinton on that occasion. Since the reorganization of the schools he has been a school officer, and until last year was a member of the Board of Education.

The steamer Plymouth Rock, since being relieved from the protracted detention at City Island, has been placed on the large Balance Dock, foot of Market street, and there received a most thorough overhauling. Every part of the hull in the least injured, having been removed and entirely renewed, while additional fastenings, new kelsons and braces give increased strength to the massive and substantial frame. The engines and boilers were found not in the least affected by the accident. The steamer has been repainted and regilded, the furniture and equipments renewed and refitted, so that the Plymouth Rock, to all intents and purposes, is now a new steamer just ready for service. She has resumed her trips on the Stonington line, under command of Capt. Joel Stone.

Governor Robinson of Kansas, just previous to his departure from Boston, April 8th, met a number of gentlemen, members of the Legislature and others, at the rooms of the Emigrant Aid Society. He expressed very decidedly the opinion that the safety of Kansas as a Free State depends upon defeating Mr. Douglas' bill for a new Constitutional Convention. Under the present administration, and its bogus laws, there would be no chance of securing a fair election. Mr. Atchison, who, he said, is President, as far as Kansas is concerned, is reported to have three million dollars at his command to force slavery into Kansas.

The bituminous coal found in the Arctic regions is said by the explorers to crop out within a few feet of the shore, in the side of a hill, the strata being from four to five feet thick. The samples brought home contain small pieces of crystalized naptha, of a color as bright as the finest specimens of gum arabic. On being exposed to the action of our atmosphere it is found to lose weight rapidly. The analysis of the article is as follows: Specific gravity, 1 3848; volatile matter, 50.6; coke, common, 9 84; fixed carbon, 39 56.

The Coroner's Jury in the case of the *New Jersey* disaster upon the Delaware, have rendered a verdict of censure against the Boiler Inspector for his inefficient performance of duty, and against the Ferry Company for culpable negligence. The Jury say that the ferry-boat was unfit and unsafe for the transport of passengers, and that the company and their Superintendent are blameworthy because of their omission to equip the craft with proper means of escape in case of accident. The immediate officers of the New Jersey are exculpated.

The telegraph brings us intelligence of the first seizure under the law recently passed by the Virginia Legislature, authorizing the search of vessels leaving the waters of that State. The captain and crew of the schooner *Maryland* of New York, have been seized and consigned to prison, and the vessel taken from Hampton Roads to Norfolk, on a refusal to submit to a search for slaves. Great excitement existed, as it was believed there were slaves concealed on board.

The proprietors of one of the Cincinnati oil mills have commenced the manufacture of oil from cotton seed imported from Memphis. Cotton seed oil is also made to some extent in New Orleans and some other places; but a hundred tons of oil goes to waste in the seed where there is one pint manufactured and saved. Cotton seed weighs more than three times as much as the lint, and is as rich in oil as sunflower seed, which it resembles very much in its general appearance.

The Connecticut Election has resulted in the triumph of the Opposition over the Democrats, according to the latest dispatches received. Returns from all the towns in the State, except one, give the Opposition 127 Representatives against 99 for the Democrats; while of the 21 Senators, 12 are stated to be Opposition and 9 Democrats—thus insuring the former a clear majority on the joint ballot.

President Pierce has pardoned Charles Kerman, the captain of the slaver Glamorgan, captured on the coast of Africa in 1854, and brought to Boston. Capt. K. was fined $1,000 and sent to prison for three years.

From a recent communication from the Secretary of State to the House of Representatives, we learn that the total number of passengers arrived in the United States for the year 1855 was upward of 230,000. Over 160,000 of these arrived in New York. Germany furnished 66,000, Ireland 49,000, and England 39,000, in round numbers. The total number of passengers arrived in this country since the 30th of April, 1843, is 3,400,000.

For some time past a religious revival has been in progess at the South Fifth street Methodist Episcopal Church, Williamsburg. The meetings which have been held every evening are numerously attended, and a large number of persons have been converted under the preaching of the pastor, the Rev. H. J. Fox, and other ministers of the Methodist Church.

A dispatch dated St. Louis, Wednesday, April 9, says: A Committee from Kansas is in this City, delegated by a number of the business men of that Territory, to take steps for the establishment of a line of steamers from Alton, Ill., to Kansas, for the transportation of Northern emigrants and merchandize. The Committee will proceed to Chicago, Cincinnati and Pittsburg, for the purpose of perfecting the arrangements.

The Bowyer Bible, in 45 vols. folio morocco, illustrated with 6,000 rare and valuable engravings after the first masters, by the ablest engravers, English and foreign, and contained in a richly-carved antique oak cabinet, was knocked down at the recent sale of the effects of John Albinson, deceased of Bolton, England, for £550; a sum very far below its value.

The Mount Carroll, Ill., *Republican* of the 28th ult., gives the particulars of a painful case of death from the bite of a rabid dog that occurred in York township. The victim was a child of Mr. Horace Melendy—an only child—a bright boy, about six years old. He was bitten on the 5th of March, very severely, there being three serious wounds and a number of scratches on the face.

It is calculated that the number of children born in France on the 16th of March, to all of whom the Emperor and Empress are godfather and godmother, must be about 2500. Each child is to receive a gift of 3000 francs; all the boys must be named Louis Eugene, and all the girls Eugenie Louise.

In the interior of Asia Minor and Armenia this winter has been one of unusual severity. In the vicinity of Koniah, a caravan of eighty persons was buried by a snow-slide. Fifty of them were rescued alive by those who hastened to their assistance; the remainder were beyond recovery.

The City of Philadelphia was visited by a destructive tornado on Saturday night, April 12th, which is said to have unroofed no less than one hundred and fifty houses, and, strange to say, no lives were lost thereby. Among the buildings unroofed were two churches and three factories.

Joseph McKeen, L. L. D., who, until a recent period, occupied the position of Superintendent of the Public Schools of New York, died on Saturday morning April 12th, at 8 o'clock, at his residence in this city, after an illness of a fortnight's duration.

The prospects in New Jersey of a large yield of peaches were never better than at the present time. The buds are generally uninjured, and the lingering cold weather will prevent them from swelling until the season is so far advanced as to have them suffer from high winds or frosts.

On board the Cunard steamers, divine service is read every Sunday morning. A passenger, one Sunday, asked one of the crew: "Are you obliged to attend public worship?" "Not exactly obliged, sir," replied Jack, "but we would lose our grog if we didn't."

There are 70,000 gipsies in Wallachia; and their emancipation has been decided upon in a council by a vote of eleven voices against ten. Their proprietors will receive from the State an indemnification.

In the United States District Court, on motion of Hon. John McKeon, the schooner Falmouth, with her tackle, cargo, &c., was ordered to be sold forthwith by the United States Marshal. Her value is estimated at $10,000.

According to the Buffalo Commercial, the tunnage of lake steamers now on the stocks is 17,775, and of sailing vessels 31,183, all of the value of $2,720,500. Vessels were lost last season whose tunnage amounted to 20,850.

The Legislature of Kentucky has passed an act prohibiting billiard and Jenny Lind tables and ten pin alleys in that State, which only awaits the signature of the Governor to become a law.

A memoranda of the dates on which the ice in the Hudson River has broken up, for a period of thirty-nine years past, shows that only five years within that time has it remained closed till April.

A bill imposing heavy fines and penalties upon gamblers and lottery policy dealers, has passed both Houses of the Legislature of Maryland, and is now a law of the State. The provisions are stringent in the extreme.

Associate-Justice Burrill, of Kansas, is said to be in Washington for the purpose of consulting the Executive authorities relative to the course to be pursued toward the officers of the Kansas Free-State Government.

Benjamin Marshall, Esq., of Troy, N. Y., offers to give six acres of land for the purpose of securing the erection of a suitable building in that city for the treatment of patients afflicted with infectious diseases.

The mullen, that very useful weed with a tall and elegant flower stalk, which roots itself at ease along the highways of New England, and which we strive to eradicate, is cultivated in old England as the "American velvet plant."

The Chippewa Indians in Minnesota, according to the Sauk papers, are more contented and peaceable than they have been for many years. White costumes and habits are in vogue.

The American State Council of Wisconsin have thrown Fillmore overboard, and recommended Speaker Banks for the Presidency.

A new Free State paper has been started at Topeka, Kansas. It is called the "Kansas Daily Tribune."

The Hebrews lately in session in Cleveland, have resolved to found a University at Cincinnati, for the education of their people.

Mrs. Mary Channell, a member of the United Society of Harvard, and who was one of the choir singers that welcomed Gen. Washington to Boston, died in that city a few days ago, in the 91st year of her age.

The world is a hospital—be kind, humble, and patient; it is a masquerade—be prudent; it is a battle-field—be bold.

New York Markets—April 14, 1856.

Ashes—Pots $6 62; arls 8 25.

Flour and Meal—Flour 6 25 a 6 50 for common to good State, 6 37 a 6 75 for Indiana and Upper Lake, 6 87 a 7 12 for Ohio, 8 00 a 9 50 for extra Genesee. Rye Flour 4 00 a 6 00. Corn Meal 3 31 for Jersey.

Grain—Wheat 1 60 for red Southern, 1 85 for white Southern. Rye 1 00. Oats 38 a 40c. for Jersey, 41 a 43c. for State, 44 a 47c. for Ohio and Chicago. Corn 60 a 66c.

Provisions—Pork 15 50 for prime, 16 62 for mess. Beef 8 25 a 8 75 for prime, 9 25 a 10 75 for country mess. Lard 9½ a 10c. Butter, 15 a 18c. for Ohio, 18 a 25c. for State. Cheese 5 a 10c.

Seeds—Clover 14½ a 15½c. Timothy 3 50 a 4 00 per bushel for reaped.

Tallow—10 a 10½c.

MARRIED,

In Albion, Wis., Jan. 12th, 1856, by Eld. T. E. Babcock, Mr. STEPHEN B. COON, of Milton, to Mrs. JENETTE P. COON, of Albion.

In Allowaystown, Salem Co., N. J., March 15th, by Rev. W. B. Gillette, at the house of Mr. L. H. Wright, Mr. CHARLES H. BROADWAY, of Elsenborough, to Miss RUTH ANN POWELL, of Salem.

Near Shiloh, N. J., April 4th, by Rev. W. B. Gillette, Mr. EPHRAIM E. SHEPPARD, Jr., of Bridgeton, to Miss CINDERILLA M. BONHAM, of Stoe Creek.

In Adams, Jefferson Co., N. Y., April 3d, 1856, by Eld. Jas. Summerbell, Mr. GEORGE W. GARDINER, of Verona, to Miss DELIA POTTER, daughter of Charles Potter, of the former place.

In Nile, on the 5th inst, by Eld. L. Andrus, Mr. JAMES W. YOUNG, of Genesee, to Miss CAROLINE D. BABCOCK, of Nile, all of Allegany Co., N. Y.

DIED,

In Christiana, Wis., on the 20th of Jan., 1856, of typhoid fever, Mr. STEPHEN W. WELLS, aged 33 years

At DeRuyter, on the 3d inst., of disease of the brain, WILLIAM M., infant son of Jason B. and Cornelia P. Wells, aged eight weeks.

At South Brookfield, N. Y., April 3d, of disease of the brain, IRA LEMONDE, son of Ira B. and Lucy P. Crandall, aged 1 year, 9 months, and 10 days.

In the village of West Edmeston, N. Y., April 9th, 1856, LEVI HOLT, aged 71 years.

LETTERS.

H Cornwell, B F Chaplin, M A Fisher, D Loomer, Charles Miller, Albert Babcock, P L Berry, John Sheldon, H S Berry, Charles Potter, T E Babcock, Joshua Clarke, A W Davis, L M Cottrell.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

Rogers' Hotel and Dining Saloons,

KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.

☞ Rooms to let by the day or week.

CLARKE ROGERS } Late of Fulton Hotel.
HENRY ZOLLVER }

Eastern Association—Executive Committee.

THE Executive Committee of the Eastern Association are requested to meet at the lecture room of the Seventh-day Baptist meeting house in Pawcatuck Village, R. I., on Wednesday, the 30th inst., at 10 o'clock A. M. Those churches which have not reported to the Corresponding Secretary how much they will raise for missionary purposes the present year, are requested to do so previous to said meeting.

S. S. GRISWOLD, Clerk of Ex. Com.

Hudson River Railroad.

ON and after Monday, Jan. 21, 1856, the trains will leave Chambers-st. station as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Through Way Train, 12 M. Express Train 5 P. M. For Poughkeepsie, 9 A. M. and 3.30 P. M. For Peekskill, 5.30 P. M. For Sing Sing, 4 P. M. The Sing Sing, and Peekskill Trains stop at the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. NO TRAIN on SUNDAY.

M. L. SYKES, Jr., Superintendent.

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M, for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Savery's Temperance Hotel

AND

TELEGRAPH DINING SALOON,

LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid.)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest.

NO. 11—Concluded.

The next day we reached the Devil's river, and stopped at an old camp-ground which was covered with the feathers of wild turkeys that had been slaughtered here. There was a pond of water near by, but the head of the stream was yet ten miles below. My bad success as a hunter did not deter me from another trial at the turkeys. I repaired to the deepest part of the thicket, where a large button-wood tree (sycamore) threw its branches far over the water, and around which were abundant signs of turkeys. Concealing myself in the roots of an upturned tree, I waited patiently for two hours, until it was almost dark, when the intrusion of a couple of riflemen dissipated my hopes of roast turkey. It was strange that they would not come back to roost there, such a secluded place as it was, and so perfectly safe. Clowd came in soon after with eight that he had killed with his rifle, and he said that the ninth had escaped him. It was delightful to find one's self once more in the wooded bottoms of this river, amongst the pecans and live oaks, through which we journeyed the next day, and camped on the bank of the river where the road leaves it for the high lands again. It was early in the afternoon, and after bathing in the limpid water, we gathered pecans, which were very abundant, notwithstanding the large number of turkeys, wild hogs (Peccaries,) and bears, that subsist upon them. They were so abundant that in an hour I gathered a half bushel, but in the deep shadow of the trees the poison-oak *(Rhus toxicodendron)* covers the ground, and notwithstanding the lateness of the season, and its leaves were livid red with their approaching fall, I was again severely poisoned. The scene at this crossing is the most picturesque that I had seen on the route. A broad sheet of blue water surrounded by the dark green foliage of the oaks overarching the road, and the cliffs of limestone beyond, above, and surrounding all, and shutting out the winds, and the beams of the declining sun, conspired to throw a spell of wild beauty about the place, that caused me to sit there until the sober shadows of night gathered upon it all. Darkness found me there, seated alone upon a rock, with my feet in the water, listening to its music among the stones below, and wondering why the Mocking-bird, the Cardinal, and all the tuneful train of birds had left it for other regions. Their departure more than any thing else, reminded me that another autumn with its yellow melancholy was at hand, another season of vegetable repose. That night was very dark, and I was roused from a sound sleep by the Doctor, who said the Indians were stampeding the animals. I could hear a great commotion in camp—the hailing of the sentries, and the mules jerking at their chains, but I comforted myself with the consciousness that I had no horse more to be stolen, and I had no relish for having a wooden skewer run through my vitals without some adequate consideration—and I was lying not far from the grave of a man who was killed a year before, by his fellow traveler mistaking him in the dark for a Comanche. Quiet was soon restored, when it was found that a stray mule had been loafing about the camp, and had alarmed the other animals. The next two nights were spent on the table-lands, where water was found only in holes, and stagnant. The rear guard came into camp one night with a bear that they had killed near one of these water-holes after we had left it. A ham from it was sent to our mess, but its meat was so poor and tough, that it was impossible to eat it.

A journey through the wilderness, over a road that you have traveled before, even with the luxury of a good horse, and entertaining companions, is fatiguing, and one hears the order to halt with more interest than any other word during the day; and there is a longing for the end, when the travel-worn may again rest under the friendly shadow of a roof; I looked, therefore, with more interest upon my old camp ground on the Piedras Pintos, the first I made after leaving Fort Clark three months before, than any object since. We could easily have gone on to the fort the same day, but it was necessary to "fix up;" faces must be shaved, and clean shirits and collars, and sometimes entire changes were necessary. This was my last opportunity for a hunt, and without waiting for dinner, I took my gun and started up the creek. I wandered long through the dry grass and thickets of shrub oaks, blasted by prairie fires; a solemn stillness reigned through all the solitude, and I was startled by the crackling of the dead twigs beneath my own feet. I discovered a pile of noble turkeys in the edge of the thicket close to me, but before I could fire they had disappeared. I could hear them one by one fly across the stream, which was here widened into a lagoon three miles long. I went around it, and having crossed the stream, was slowly making my way through the grass, nearly breast high, watching more carefully for Indians than any thing else, when a prodigious rushing noise, not more than six yards from me, was so suddenly made as to throw me entirely off from my propriety, and before I could satisfy myself that I was not a murdered man, a huge gobbler had taken wing, and was making for a thicket. I raised my piece but it would not go off, and I found too late that I had pulled the wrong trigger. What vexation! Why do I write of it, but as a lesson to those who would aspire to be Nimrods. So I returned to camp after an afternoon of hard toil, faint with hunger, without having fired a shot, and had the satisfaction of finding that the Major had killed a splendid turkey without having left the camp, and with his spectacles on his nose. The next morning we rode into the Fort and finished our long sojourn in the heart of the Indian country. I shook hands with old Major Simonson, Doctor Norris, and the other officers, as with old friends, and felt it was a great relief to be among the abodes of men, although I was still five days' journey from San Antonio, and two from the nearest settlement. I felt relieved from that incessant watchfulness that becomes a habit in a hostile region. And here I will close my "wanderings."

In these letters I have endeavored to give a truthful impression rather than a captivating one. I have avoided any generalizations, based upon limited observation. I have avoided narrating any thing of which I have not myself been an observer. I went to Texas to satisfy my curiosity, and to study its resources and natural history, and I am confident that those who have felt interest enough in these letters to read them all, have a truer picture of that country than can be found in any other quarter. Of its political, social, and religious condition, I have not written. For the most part, I have avoided the settlements, and found my companionship in the solitudes of the untrodden wilds, and have never felt alone where nature displays so many charms; to her lovers she needs no artificial coloring. To such every region possesses an interest, which those who worship at a false shrine can never appreciate. If I had been disposed to suppress a part of the truth, and give play to fancy, no country that I have ever visited affords a better field. Nowhere have I seen nature display so much of chastened beauty, or rugged grandeur, as in the regions I have attempted to describe; nowhere have I seen realized, in so high a degree, the charms of the classical *Arcadia* as in the rolling grassy regions of Western Texas. Its landscapes ever varying, yet always beautiful; its sparkling waters bursting at once from their rocky caverns into the glad sunlight; its sunny skies and healthful breezes breathing a perpetual inspiration of strength to the invalid, all invite him and the thousand homeless ones to its bosom. In few countries will one find so much done by nature to prepare the ground for the settler, and so little by art. It is in the raising of stock that the chief wealth of the country will in the future consist. Cattle require no other attention than is necessary to keep them from straying too far; and marking, to enable the owner to identify them; and no occupation can be more healthful to the tuberculous invalid than the care of them. Mexican herdsmen can be employed at from five to ten dollars per month and rations, and often make better field hands than negroes, and the loss is not so great if they run away, which, from the vicinity of the Mexican frontier, the negroes are prone to do; so that as a general rule few of them are employed there for such purposes. Stock cattle can be bought for seven dollars a head, and any one who is at all acquainted with the business can calculate their rate of increase better than I. It is sufficient to say that those who are in the business are becoming rapidly wealthy. To any one desirous of visiting the country, and spending a few months in investtigating the resources of the country, for the purposes of settlement, or pursuit of health, or enjoyment of nature in her "visible forms" and primitive loveliness, I would recommend to leave the steamer at Indianola and take the mail coach to San Antonio. The time occupied is forty eight hours. At the latter place, one can purchase a pony enough cheaper to pay the fare (fifteen dollars) in the coach, and making that place his head-quarters, he can suit his journeyings to his convenience. A saddle made in San Antonio is the best, and most saleable when he has no longer use for it. His travel may be extended alone in perfect safety, South and East, and in small parties, well armed, in any other direction. He should be provided with a good fowling-piece, which, taken all in all, is the best weapon for that country, and the sooner he learns to sleep on the ground with a blanket and his saddle, the better. He will save many a half-dollar otherwise spent for a worse bed, and the invalid who has strength to ride, may do so with perfect impunity, nay, even with benefit. And if he knows how to use his gun he will need but few stores that he cannot carry in his saddle-bags. He will find settlements, if he chooses, sufficiently frequent to meet emergencies, and if, through any mischance, he should find himself "hard up," he will find friends according to his merits, as generous and hospitable as in any part of the world, and more than one can realize who has been dragging out his existence among the cold, calculating conventionalisms of our old towns and settlements. He will learn that happiness does not consist in the amount of luxuries which may be heaped about him, nor in the approbation of the purse-proud and soulless creatures, who know not God except in their prayers, and who see nothing in the face of all His magnificent creations to admire but themselves and the work of their own hands. He will return from his wanderings a healthier, wiser, and a better man. J. D. B. S.

Fat Meat as Food.

The prevailing fashion and taste are against the use of fat mutton and beef. At hotels, and in private families, the fat meat to which persons are served, is usually left, and the lean only eaten. Those who purchase meat, of course, select the lean instead of the fatter pieces, and butchers, accommodating themselves to the demand, kill all sorts of lean and ill-fed animals.

The losses resulting from this are many. In the first place, it is contrary to public economy, the number of lean animals sacrificed to secure a given weight of meat being twice as great as would be required, if all the animals slaughtered for food were well fattened. The cost of raising animals far exceeds the cost of fattening them, and therefore a pound of lean meat costs more to the producer than a pound of fat, besides the unnecessary waste of animal life involved. Another disadvantage resulting from the use of lean meats exclusively, is in the fact, that lean meat, whatever the quantity used, will not supply the place of the fat, especially in winter. Food is required for two purposes—one is, to supply materials for the growth of the body, and to repair the waste which labor, and all our activities, occasion; the other use is to supply fuel for the maintenance of animal heat, the amount required for the latter purpose being much greater in cold regions, and in the colder portion of the year. The fat of animals is, in many respects, for man, the best and cheapest of all the heat-producing articles of diet. In high latitudes, there is no substitute for it, or possibility of doing without it; and the same thing is true, though not to the same extent, in temperate climates during winter. Strangely enough, in this variable climate, our diet is made comparatively uniform by fashion and habit, instead of varying with the changes of temperature. In summer, we use too much of carbonaceous, or heat-producing food; and liver diseases, and various fevers, are the consequences; while in winter, a sufficiency of such food is not supplied, and hence the prevalence of pulmonary affections.

Life and health are much more involved in this matter than some imagine. In the last January number of the Ohio Medical and Surgical Journal, there is an excellent article, that was read before the American Medical Association, by Dr. Hooker, which shows conclusively, that persons abstaining from fat meat, are much more liable than others to lung diseases, and especially consumption; while those who are in the constant habit of using an abundance of fat meat, are almost untouched by this terrible destroyer. Multitudes of facts, within the knowledge of every one, are referred to by the writer, in support of his conclusions, placing the matter, one would suppose, beyond doubt.

What, then, is the conclusion of the whole matter? Just this: Let farmers see to it, that the animals designed for the butcher are properly fattened; let butchers who have a regard for their reputation, buy only good animals, and let those butchers be discountenanced, who will continue to murder such as are unfed; let consumers use a due proportion of fat meat with the lean, and let the proportion be larger in winter than in summer; and especially let those who have constitutional tendencies to consumption, learn to eat good fat meat; and if their present tastes are averse to it, let them struggle to overcome this aversion, as though life depended upon it. How much better is good fat beef, than cod-liver oil! How much better it is, to use the beef while you are well, and keep so, than to use quarts of the oil when it is too late. And finally, let all who are interested in the health and vigor of our whole people, use their endeavors and influence to disseminate right views, and to establish right habits in relation to this important matter.

Acid in the Soil.

The presence of free uncombined acids in the soil, affords one of the most insuperable barriers to successful and profitable cultivation by which the efforts of the farmer can possibly be opposed. How these acids act, is sufficiently explained by Mr. Ruffin, in his essay on "Calcareous Manures." The presence of acids, he says, "by preventing or retarding putrefaction, keeps the vegetable matter inert, and even hurtful on cultivated lands; and the crops are still further injured by taking up the acids with their nutriment. A sufficient quantity of calcareous earth, that is, earth where lime is present mixed with the soil, will immediately neutralize the acid and destroy its powers; the soil, released from its baneful influences, will be rendered capable, for the first time, of exerting the fertility which it really possesses. Calcareous earth has also the power of altering both the texture and absorbency of soils."

On all lands where there is a growth of red sorrel, acids of some kind abound in a free and uncombined state, and it is only by adopting some emendatory powers of culture, or by the application of neutralizing substances—such as lime, ashes, &c.—that they can ever be rendered fertile in the production of valuable crops.

On lands were sorrel seemed determined to overpower every other plant, we have eradicated it effectually, by the use of lime and ashes, but at the same time giving the soil a more generous manuring, and more careful cultivation with the hoe. We have, therefore, no doubt of the correctness of the statement by Mr. Ruffin, who is a very careful and experienced cultivator himself.

It is important that the farmer observe very closely what the natural prevailing product of his soil is, as this will indicate more correctly, perhaps, than any thing else, what sort of a corrective is required. If sorrel greatly abounds, or wormwood, or the daisy, or bulbous-rooted grasses, state the fact at the farmers' club, and discuss it, drawing out the experience of each, or, if necessary, get an analysis of the plant, and learn what the character of the soil is in which it flourishes so well; then, perhaps, the proper correctives may be applied. [N. E. Farmer.

The Asparagus Bed.

"How shall I get an asparagus bed?" asks one of our subscribers. We will try and give the information desired.

To begin with the beginning—the seed may be sown in autumn, or early in the spring, in a good loamy soil. Select good and ripe berries, put them in water, and when slightly fermented, the seed can easily be washed from the pulp and dried. One ounce will grow a thousand plants. Sow in drills an inch deep, about one foot apart, and cover with fine soil, pressed down lightly. Keep the weeds out, stir the soil often, and thin the plants to six inches apart in the drills. At one year old select the best and thriftiest plants to form your bed.

The asparagus bed should be open to the morning sun; and it is better if protected from the north and east, yet open to light and air. It should be very rich, and on this, more than any thing else, depends the amount and value of the product. Dig up a loamy, porous soil, two feet deep, intermixing largely and thoroughly with manure to within six inches of the top; this should be filled with garden loam. Then take the young plants from the seed bed, injuring them as little as possible, and carefully set out in rows two feet apart, one foot apart in the row. Then cover the bed two inches deep with dark-colored soil, made by a mixture of charcoal dust and muck, and sprinkle salt until the surface is white again. This will keep down the weeds and promote the growth of the asparagus, which, it should be remembered, originated on the sea shore.

In autumn remove the dead stalks and cover the bed three inches deep with stable manure, to be forked in the spring, with another dressing of salt. Let the stalks grow the first and second year without cutting, that the roots may get well established; the third year the asparagus will be fit to cut, and will, with similar treatment each fall and spring—with perhaps a slight addition of earth to prevent the roots from coming too near the surface—continue to yield well for many years.

Remember, room, a rich, warm soil, moist, but well drained, and salt enough to prevent the growth of weeds, are peculiarly beneficial to the asparagus plant. With these, and good care, one cannot fail to have that inmate of all good gardens, an asparagus bed.

[Rural New Yorker.

THOUGHTS FOR INEBRIATES.—Hyrtl, by far the greatest anatomist of the age, used to say that he could distinguish, in the darkest room, by one stroke of the scalpel, the brain of the inebriate from that of the person who had lived soberly. Now and then he would congratulate his class upon the possession of a drunkard's brain, admirably fitted from its hardness and more complete preservation for the purposes of demonstration. When the anatomist wishes to preserve a human brain, for any length of time, he effects his object by keeping that object in a vessel of alcohol. From a soft pulpy substance, it then becomes comparatively hard. But the inebriate, anticipating the anatomist, begins the indurating process before death—begins it while the brain remains the consecrated temple of the soul—while its delicate and gossamer tissues still throb with the pulses of heavenborn life. Strange infatuation, thus to desecrate the god-like! Terrible enchantment, that dries up all the fountains of generous feelings, petrifies all the tender humanities and sweet charities of life, leaving only a brain of lead, and a heart of stone!

Density of Different Seas.

Vessels going directly to Sebastopol, take smaller cargoes than when they are going only to Constantinople, or else they generally diminish their cargoes at this latter place before entering the Black Sea. The reason of this is, that the density of the water of different seas is more or less considerable, and vessels sailing in them sink more or less deeply in the water, according to that density. The density arises from the quantity of salt contained in the water, and consequently the salter the sea is, the lighter the vessels float on it. Moreover, as a vessel penetrates into the water more or less, according to the quantity of sail she carries, it follows that the salter the water is, the greater is the quantity of sail that can be carried. Now the Black Sea, being sixteen times less salt than the Mediterranean, a vessel which leaves Toulon or Marseilles for Sebastopol, must take a smaller cargo than that which only goes to Constantinople, and a still smaller one if it is to enter the Sea of Azoff, which is only one-eighteenth part as salt as the Mediterranean. This latter sea is quite as salt as the Atlantic, and twice as much so as the Caspian. The Dead Sea, which is 1,300 feet below the level of the Mediterranean, contains more salt than any other sea; it is said that two tons of its water yield 589 lbs. of salt and magnesia. So buoyant are its waters on this account, that, according to Bayard Taylor, "with a log of wood for a pillow, one might sleep as well as on a patent mattrass.

Cultivation of Hemp.

SOIL AND PREPARATION.—Hemp should never be sown on foul or worn land. Such land will never yield hemp of a uniform length and quality; but the land should be clean, dry, light, and rich; these are requisites that must always be considered, or much labor will be spent in vain.

Hemp is frequently permitted to follow hemp on the same land, when a similar course with almost any other crop would not be tolerated by a good farmer. Hemp is said to be less exhausting to land than the cereal grains, and it leaves the ground in more perfect order for the same crop than any other. If hemp is to be sown on ground that produced hemp the year previous, the plowing should be done as early in the spring as the condition of the land will admit of thorough preparation. Under no circumstances should land for this or any other crop be worked unless it is so dry as to pulverize well.

If hemp is to be sown on sod land, it should be broken up in the fall. On clover, and more particularly timothy seed, it is better to plant one year in corn before sowing with hemp; if the corn has been well cultivated, the land may be put in fine condition for this crop. For no crop does a thorough preparation pay better than for hemp. The first ploughing should be deep, according to the depth of the soil. Let it lie in this condition until about the time of sowing, then it should be well harrowed with a heavy harrow, and then well rolled. The use of the roller, unless upon very mellow land, should be regarded as indispensable in preparing land for this crop. After it is well rolled it should be cross ploughed, again rolled, and then harrowed

QUANTITY OF SEED PER ACRE.—In regard to this, as in most other crops, there is a diversity of opinion among farmers, but we believe the experience of a majority of them is in favor of sowing from four to five pecks of seed to the acre, according to the quality of the soil—the richer the land the greater quantity of seed should be sown.

The seed should be sown upon freshly harrowed land; after the seed is cast it should be again harrowed and then cross harrowed. If the previous work has been well done, the soil will be open to a free circulation of the warm air to the full depth the land had been ploughed, inviting the roots to penetrate uniformly and deeply, beyond the casualty of drouth.

TIME OF SOWING.—The time of sowing this crop varies according to the opening of the season and the strength of the land upon which it is to be sown. Strong land will bear the earliest sowing. If sown too early, the growth is apt to be short; if too late, it is at the expense of the quality of the lint. Between the degrees of latitude of 38 and 39, the proper time of sowing will generally range between the 20th of April and the 15th of May.

[Valley Farmer.

Strawberries.

Attention can hardly be given too early in the spring—at least after the ground has begun to moisten from the warmth of the atmosphere—to the management of strawberry beds, and to preparations for the culture of this delicious fruit. Mr. Pardee, the author of the "Manual of the Strawberry," strongly urges the necessity of an early beginning, and assigns as a frequent cause of failure too long a delay. The directions to be given are few and simple. Select a place well exposed to the air and sun, dig it up to the depth of eighteen inches, and finely pulverize the soil. Let this be delayed no later than the first day when the ground will work well. Drain the soil, if necessary. Apply one bushel of ashes, one peck of lime, and three quarts of salt to a plat of ground twenty feet square. If the soil be in good condition for corn, it will need no other manure. At the end of ten days dig it up again, and thoroughly mix and pulverize it. Then level it off, and set out the plants from ten to twelve inches apart, in rows separated by eighteen to twenty-four inches. Hovey's Seedling, Burr's New Pine, and McAvoy's Superior, are good varieties of pistillate, or female plants; while a few of Longworths' Prolific, or large early Scarlet Staminate, or male plants, near by, will be needed to fructify the pistillate. But on no account should any varieties, whether staminate or pistillate, be allowed to intermix with each other. This will require especial care. A slight covering of the beds with half an inch of tan bark or saw-dust will keep the roots moist and prevent the growth of weeds.

The beds must then be kept clear of weeds, which should be done mostly by pulling them by hand, for the use of the hoe among the plants after they have attained any marked growth will destroy numerous fibrous roots, and damage the whole.

If the plants get a good start early in the spring, a few berries will be ripened in June, though generally not a great quantity. After the first of July numerous runners will be thrown out, which will rapidly fill the grounds so closely set as to prevent a crop of fruit for the next season, unless removed. Thus a large number of young plants will require to be transplanted or destroyed. If they are allowed to remain in crowded beds, they will produce but scantily. When they are one year old they may be expected to produce the largest and fullest crop. [Independent.

Ill-using Horses.

Mr. Gavin, V. S., a contributor to the London *Veterinarian*, offers the following remarks, on *ill*-using horses, which are adapted to our meridian as well as that of London:

Allow me to draw the attention of your readers to a subject, which, although at first sight may appear a very unimportant one, yet, on a second view, seems to contain largely the tendency to mischief and misfortune; and the veterinary profession, I think, may safely be looked to, as likely to exercise a considerable influence in obviating the evil. I allude to the practice so common at horse-fairs, dealers' yards, &c., of rattling a stick and hat together, with the avowed object of frightening horses. It seems very questionable whether it be judicious, on the contrary, to teach a horse to be afraid at all; but, to associate in the animal's intelligence, terror on the one hand, and an article which may accidentally, at any time create terror, on the other, appears very thoughtless. I have known many a case of tumble and run away, from just so simple a thing as a hat coming clattering to the ground. Not many horses will *stand it.* But what else can we look for? The last time they heard the sound, it, in all probability, was in connection with whips and sticks, fright, &c.

I have frequently heard it very gravely recommended by very knowing horseman, to under-feed horses that are difficult to break. I suppose, on the presumption hunger will tame a lion. I doubt if mere *hunger* ever tamed any thing; starvation might, but even then, the tameness, apparently, is more the result of the subsequent kindness than the previous cruelty. From a trial of my own, I infer the practice to be a bad one. That "an angry man is a hungry one," is proverbially true, this being one of the laws of organization; hence the soundness of British philosophy, in celebrating everything with a dinner; and I can see how an organization, disqualified to perform well the alimentary functions, should be attended, as often as it is in horses, with a fretful, bad temper, *vide* what we call weakly animals.

Horses, however, on the whole, get pretty severely punished for being made this way. Others of them, from careless breaking, riding, or disease, get a habit of stumbling, to which the punishing is applied very often as a remedy; and, although I never saw it do any good myself, and perhaps nobody else ever did either, yet I suppose it is impossible to allow such aggravated disobedience to go unpunished.

Horses frequently come under the rod for shying, as if they had no right to be frightened without leave. It seems hardly fair, but opinions differ. He may be going past a lime quarry, for instance; there is a noise, he gets uneasy, and then punished, to get more uneasy still; the next time he sees the same object, and a further punishment only settles him more firmly in the belief, that there is some unfortunate connection between a quarry or animal leap and the whip and spur. I have every faith in the efficacy of kindness, and none whatever in cruelty. This, however, is at the consideration of your readers, for their own individual adoption as a principle of action in the treatment of animals.

I am your very obliged servant,

WILLIAM GAVIN.

Making Candles of Lard.

All kinds of fatty matter consists essentially of an oily liquid, united with a solid substance, the former called *elaine*, and the latter either stearine or margarine. By exposing olive oil (sweet oil) to a low temperature, a portion of it becomes solid. This may be separated and subjected to pressure so as to entirely remove the liquid part, and leave a permanently solid mass, which is called *margarine.* This is white, hard, and brittle, and resembles spermacetti. Almond oil, linseed, and many other vegetable oils, produce the same results. In like manner, butter, human fat, the fat of the goose, and some other animals, by a somewhat similar process, yield the solid margarine. The fluid portion is called elaine. The margarine melts at 118° (Fahrenheit) and when pure it is not affected by the atmosphere, if kept for any length of time.

The fat of the ox, the sheep, the horse, the hog, the goat, &c., in like manner, yield a liquid and a solid, the former called also elaine, while the latter, or solid part, is named *stearine.* Stearine is a hard, brittle, colorless fat, and melts at 129°. Both margarine and stearine are found in small quantities in most animal fats, but one or the other greatly predominates. In the fat of man the solid part is margarine alone.

The hard candles now so common in the market, under the names of "stearine candles," "adamantine candles," &c., are chiefly stearine, obtained from tallow or lard, especially from the latter, in the process of lard oil manufacture. In separating this on a large scale, pressure is used. Various chemical processes have been proposed for obtaining the stearine without the intervention of pressure or low temperature, but none of them have succeeded well, we believe, unless the method detailed by a correspondent of the New England *Farmer* prove to be a good one. He professes to take all the stale fat, dirty grease, &c., found about the house—whether lard or tallow—and transform them into good stearine candles, and says those made from lard stand the heat of Summer even better than those from tallow. His directions are, to take for each 12 lbs. of soft grease, 1 pound of saltpetre and 1 pound of alum—mix and pulverize the saltpetre and alum, and dissolve them in a gill of boiling water; then pour in the lard or grease in a nearly melted state; stir the whole well together while heating to boiling, and skim off what rises to the top. Keep the mass simmering until all the water is evaporated, or until it ceases to throw off any steam. Pour off the melted grease as soon as it is free from water, and clean the vessel while still hot. If the candles are to be run, the work can be commenced immediately with the warm liquid; if to be dipped, let it cool to a cake, and treat it afterwards just as in the ordinary process of making tallow candles.

[N. Y. Times.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.

$4 if not in advance.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

CHRISTMAS IN GERMANY.

Read at a Public Exercise in Alfred Academy, by a German lady.

Would it weary you, kind hearer, to accompany the humble stranger on a five-minutes visit to her own native country? No; methinks I can read the ready consent in your smiling eyes. Let us then take wings for our airy trip, and with more than lightning's speed fly away, leaving behind us America's blessed soil, and crossing the boundless plains of Old Neptune's realm, alight in one of Germany's neat thriving towns. It is the day before Christmas—a day of immense preparation, of extensive business. The spacious Square of the place has been converted into one great bazaar, where booth on booth, in endless rows, exhibit all the imaginable varieties of articles that administer to man's comfort, or that ingenious fancy could construct to please the sense of luxury. Yonder, huge cart-loads of young evergreen trees offer an ample supply of the most indispensable thing for the coming event, the celebrated Christmas-tree; here confectioners have arranged their stores most temptingly; eatables in every shape and quality are exposed to view, calculated to satisfy the numerous wants of the wealthy epicure, as well as to supply the humble table of the needy day-laborer and the frugal mechanic.

While hundreds and thousands are crowding here, admiring and criticising, buying and selling, we will take a walk through the streets. There is a certain air of expectation on every countenance that meets us, most so on the happy faces of those little boys, who, freed from school, wander about in groups, with beaming eyes, and roses on their cheeks, that bloom only the more gaily in the biting December frost. The ice-sheeted river, where the joyous skaters' shouts have been daily resounding, is vacant and still to-day; the merry boys have other interests at present to occupy their attention. But where are their sisters? Do not think it is the cold weather that keeps them at home around the stove, when there is so much splendor to be seen abroad. Such are not our German girls; yet, if you could look into the interior of their dwellings, in some unobserved corner, some back room, you would find them, their little hands busily stitching away on some piece of needlework, that is to pass to-morrow evening as a gift of affection into parent's, brother's, or sister's hand. All are so eager, not only to enjoy the pleasure of receiving, but also to taste of the higher bliss of making others glad.

But we wander on. Now and then we pass a baker's house, known by the atmosphere of sweet spicy odors lingering around it. Here is to-day the place of common resort for anxious housekeepers, who, having mixed and prepared the rich Christmas cakes, with due care and attention, now are watching, pale with excitement, the experienced master of the oven, till his momentous, "It is done," causes their hearts to leap with satisfaction, in seeing the heated vault give forth its contents, fragrant and feather light, and deliciously gold-brown, but modifies their pride when their work does not come out perfect from the fire proof. You may smile, ladies, at the importance attached to so simple an affair as the baking of sweet-cakes, but let me tell you, that Germany's sons and daughters are not nourished generally by so sumptuous meals as this land affords, where milk and honey flow, and only during the preparation for festivals like this, the skill of housekeepers in the higher branches of baking is called into exercise.

However, we cannot stop! Day has been sinking, meanwhile. Leaving the crowding throng before the lighted market houses to its excitement, we will enter some family circle. The supper table has just been cleared; the mother, looking weary with the day's toil, is reposing in an easy chair, patting a couple of little flaxen heads resting on her knee, the older boys and girls standing aside, with knowing looks and mysterious whispers. All at once a rap at the door starts the little company—another, and the door flies open, and a being enters. Ah! that cannot be human, draped in shining robes, sparkling and glittering with golden stars, flowing tresses, adorned with a dazzling crown or flowery wreath. All this is too bright to belong to man or woman. O, and there! Now we discover the large snowy wings! Why, it must be the herald of the Holy Christ, announcing his coming. With gentle words, and a melodious voice, that sounds after all very much like aunty's, whose absence from the circle is hardly noticed, the angel steps up to the little ones, and admonishing them to be good children, distributes between them the sweet things contained in a little basket on her arm; then, advising them to go to bed now, disappears again, the children to obey and withdraw with throbbing hearts to their couches. And now begins, for mother, father, and aunty, who has made her appearance again, another task, that of embellishing the Christmas-tree. Box after box, full of gilded apples and nuts, of rosy, green and blue wax candles, of candy formed in stars and crosses, of little bright-colored silken nets containing some pretty trinket, and many other things, is emptying its riches upon the green branches, until, finally, long after midnight, when all is disposed of, the splendid tree is taken into the parlor, the door locked, and its key safely entombed in mother's pocket. Then all retire. The next morning finds the younger inmates of the house up bright and early, with the difficult task before them of spending the hours until night, not knowing how. More than twenty times their tiny feet are tripping up to the parlor door, where ma is so everlasting long in cleaning the room, as she told them; but vain are their endeavors to get admission into this sanctuary, and they must go back without relief for their restless impatience, while the good mother within is passing to and fro, ordering and arranging the various gifts for each in their proper place; there adding some pleasing present; here setting forth to better advantage some valuable piece. Only when a final view shows her that all is very good, she leaves the room; and now servant girls and boys must be fleety messengers to fulfill her biddings, for one basket after another, loaded with red-cheeked apples, sweet cakes, and some useful article of apparel, is sent away to the hut of the poor, or even into the dungeon's cell, to light up with its rays of joy the mournful night of their unfortunate inmates. O! if she had the power, she would not have one eye to-night bedewed with tears of sorrow for its forlorn, friendless situation. With weary body, but a heart rejoicing in the work of charity, the call to the supper table greets her ear with welcome sound, yet the tempting dishes displayed there are not fully appeciated to-night by those who at other times were their most enthusiastic admirers, for, as soon as the last morsel is hurriedly swallowed, the children hasten away to Christmas meeting. Provided with lanterns of colored glass in fantastic shapes, the joyful throng, swelling from house to house, is floating on towards the old gothic church, which, illumined brightly from base to top of the steeple, is calling aloud with its brazen voice for its youthful visitors. On entering, an ocean of light streams through the interior of the majestic temple; its many galleries, to the giddy height of the uppermost one, are trimmed with an unbroken line of lamps and beaming countenances; its towering pillars entwined by garlands of evergreen. Now the organ commences, with its deep tones, gradually swelling into triumphant anthems, to send out the sentiment of joy that is thrilling every heart; a chorus of voices, silver, clear, and pure, is warbling again the glorious message of Heaven to Earth, that message which eighteen hundred years ago came softly down over the moonlit hills of Palestine, proclaiming, "Peace on earth, and good will towards man!" and after being thus prepared to receive the word of the gospel, the congregation is now addressed from the pulpit by the pastor, who in short and simple discourse, adapted to the capacities of his youthful hearers, reminds them of that great event which this day is to commemorate—how the principle of Love Divine came down from Heaven to live with sinful, wretched men, to drive away darkness and strife, and regain for earth's tenants their lost home in the blessed mansions above. He exhorts them to sincere faith in the doctrines of that Jesus, in whose worship millions of voices are now chanting praises, to love to man and action obedient thereto—then a closing hymn—and the audience is dismissed.

But in passing through the portals of the church, its radiance seems to wander with them, for without, too, is a flood of light, breaking from every window, every house, and the lighted Christmas-trees, as signals for waiting joys, provided by their earthly parents, invite the children to their respective homes, while at the same time they are spellbound by glorious tones of music, pouring down from the steeple's gallery upon the night air, softened by the distance. Finally, they die away, like angels' whispers, and now the feet of the little men cannot carry them fast enough for their wishes; they hasten, faster, faster; they seem to fly; now rushing up the steps, breaking through the door, and they stand before the splendor! All is brilliancy! All is joy! Its beams are reflected from the children's faces upon their manifold gifts. Triumphantly stands, in the midst of all, the magnificent tree, with its golden fruits; the infant stretches out its hand longing after its brightness, while the others are yet wondering at the magic scene, hardly venturing to come nearer. But the mother invites, and now they examine, and now they find, and swarming through the room, each prizing his portion the best, make it resound with their shouts. Grandpa, looking on smilingly, seems to grow young again with the children; on his knees the girls are trying their splendid playthings or dressing their pretty dolls, while the boys are pointing out to him proudly the merits of their presents. In the joyous commotion pervading the whole circle, the father even forgets to think over any more calculatingly the greatness of the sum spent in buying all these riches. All are so happy! Finally, when the first outburst of delight has subsided, the children come, joined together, uttering their thanks to the givers of so much good, and timidly present the humble tokens of their love to "Pa" and "Ma," rewarded by their kisses. Long after the usual hour for retiring, the merry band is kept up by the excitement, and even when stretched on their beds, bright plans for the enjoyment of the holy-days flow through their souls and beautify their dreams.

O for the merry, merry Christmas, shining like morning's rosy lustre upon the dreary night of winter!

THE GRAVE WATCHERS.

I love the stars, for they alone
Will watch our graves when we are gone;
Through the lone midnight, still and deep,
When mortal eyes are closed in sleep,
And gloom and darkness hover round
The little unprotected mound,
'Neath which, neglected, rests our head,
Our hopes, our fears, our fancies fled;
Then they each night will wake and bend
Above our graves, like watchful friends.

There, planted by some friendly hand,
Perhaps a weeping tree may stand,
Or fragrant flower, whose falling leaf
Emblems our life—as frail, as brief—
Or marble slab, with snowy page,
Telling the sleeper's name and age
To heedless strangers loitering nigh,
Who'll read it with no tear, no sigh,
And lightly from the mound depart,
That swells above our once warm heart.

Though friends awhile may dress the spot,
They too will die and be forgot;
The snowy slab, with moss o'ergrown,
By rolling years will be o'erthrown—
The sheltering tree, so wide and high,
Affection planted there, will die;
Nor mound, nor aught be left to show
Where silently we sleep below.

Then, when have fled long changing years,
Nor stone, nor tree, nor mound appears,
To turn the busy feet away
That trample on our voiceless clay;
When not one soul on earth so wide
Shall know that we have lived and died—
Then those same stars on which we gaze,
Still in the heavens, as now, will blaze;
Still, from the midnight deep so blue,
Our unmarked resting place will view—
While time endures, each stilly night
They'll look from yonder azure height
On our forgotten graves, and bend
Above our sleep, like faithful friend.

From the Christian Watchman and Reflector.

IS SPIRITUALISM A NEW GOSPEL?

Has Spiritualism revealed a new gospel to man? Have its teachers outgrown in wisdom the disciples of the Nazarene? Will a brighter future open in the social and religious history of the race, if Judge Edmonds and Prof. Hare supplant Paul and John as new apostles sent by God, and invested with higher authority?

Such questions occur to every thoughtful man, as he listens to the confident tone and sanguine predictions of this newest school of philosophy. They are pertinent questions, whose direct significance cannot be overlooked, or evaded. If the professed revelations of spiritualism are reliable, it is a *new* gospel, as unlike the gospel of Jesus as is the Koran of Mahomet, or the Shasters of Brahminism. The only point of perfect harmony between them is the existence of a spiritual world. If these revelations are reliable, the apostles are convicted of teaching radical error; they were either impostors or enthusiasts; and the Christian world has been long misled by false doctrine, and can only hope to enter upon a general social reformation when relieved from the fatal incubus by the light of the new faith. It is useless, it is dishonest, to shuffle over this issue, or attempt to put the new wine into the old bottles. The Bible and the oracles of spiritualism are in open and hopeless contradiction—as wide asunder as the poles; patch-work between the two is impossible. "No man can serve two masters," and a candid mind must either abandon the Bible or the "New Harmonias."

What then, one asks with solicitude, are the credentials of the new religion? What is the substance of its doctrines? What are its fruits? It may not be wise to refuse it a hearing, or to scout its pretensions without examination. It claims to unfold important truths, to convert skeptics to an unwavering faith in a spiritual world, to enforce a lofty philanthropy, and proclaim a universal brotherhood, and it appeals to wonderful physical phenomena in proof of its authority. Nor can it be denied that it has gathered a large band of disciples, many of them persons of large intelligence and high cultivation, whose earnest convictions demand respectful consideration.

Of the physical phenomena we express no opinion. They have greatly multiplied, both in numbers and variety, since their first beginning in the faint knockings of Rochester, or the malicious pranks of the Stratford spirits. If they have a spiritual origin, we must conclude, either that the spirits improve in capacity and facilities of manifesting their presence by long practice, or that a new tribe of spirits more intelligent and powerful have supplanted the old, as the genii of the lamp were mightier than the genii of the ring, in the Arabic fable of Aladdin. The new spirits achieve singular feats. They lift heavy tables and living persons to the ceiling without hands; take bedsteads and pianos to pieces in a breath; play on musical instruments, (in the dark,) and write philosophy, theology, poetry, and fiction, without apparent mental effort on the part of the human medium. We will not question the reality of such phenomena, or their seeming supernatural character, though we have never witnessed them, but accept the evidence of numerous and reliable witnesses. Nor do we attempt to explain them, but place them in the same category as the mysteries of Egyptian and Indian magic, and of Salem witchcraft. Their origin *may be* purely physical, the manifestation of subtle laws yet unknown, and we await in patience a wider and more accurate induction, and a thorough scientific analysis.

But of the docrines emanating from the new school, we are free to speak. We have not been hasty in our judgment, nor condemned them unheard, believing with Gamaliel, that if the work and counsel were of God it would stand, and if not, it would come to nought. After long and patient waiting, after listening to numerous utterances from the hierophants of the system, purporting to speak in the name of the eminent dead, it is not presumptuous or immodest to express a decided opinion of their nature and tendency.

1. *We do not believe in their professed origin.* We have not the smallest faith that any of these utterances came from the spirits in whose name they speak. Every cultivated mind rejects with instinctive horror the belief that men like Bacon, and Newton, and Webster, and Franklin, should become in the world of spirits mere puppets for a showman like Barnum, and dance attendance upon the call of every needy adventurer, who makes a trade of spiritualism to retrieve his broken fortunes. If the spiritual world furnishes no better employment than rapping on tables, or spelling out names with solemn tediousness to gratify human curiosity, we should prefer annihilation to immortality. For every convert to a spiritual faith made by such painful exhibitions, ten intelligent minds would be driven into the grossest materialism.

2. *These spiritual communications reveal no new truth.* They can tell people's ages with singular accuracy, and call up reminiscences that have long lost distinctness in the memory. They give at times curious expositions and illustrations of old and familiar truths, but into the vast and dim region of unexplored truth, from which they might be expected to draw largely, they shed no ray of light. Whenever they have attempted to make known facts, which admitted of verification, as in the case of Sir John Franklin or Dr. Kane, or to declare occurrences transpiring at the moment in distant lands, they have forfeited all confidence, and have proved false prophecies, emanating from lying spirits. If the revelations capable of being tested, are worthless, who can place confidence in those that are beyond such scrutiny?

3. The communications professing to come from distinguished spirits *are of the most driveling character.* We have read scores of revelations purporting to come from the eminent dead, but have never found one worthy of a second reading. They do not contain even a grain of wheat in a bushel of chaff. Philosophers, like Bacon and Franklin, noted for clearness of thought and terseness of style, degenerate into unintelligible mystics; and preachers, like Edwards and Calvin, conspicuous for nervous and compact logic, indulge in empty rant and jargon. The chirography of these communications is often a perfect fac-simile of the hand of the departed; but the sentiments embodied are a libel upon their memory, and if sent from the spirit world, only indicate a strange imbecility, and an entrance upon second childhood.

4. *The revelations are contradictory and unreliable.* These revelations vary strangely in precise accordance with the temperament, and religious faith, or wishes, of the medium through whom they are transmitted. An orthodox believer generally receives replies of the most orthodox character, even if he interrogates the spirits of Swedenborg or Channing, Hume or Tom Paine; while a skeptic proclaims the wildest heresies from the lips of Calvin, Luther, and Augustine. Nay, two mediums of opposite religious belief may interrogate successively the same spirits, and receive replies diametrically opposed. Every sect in existence can obtain confirmation of its peculiar tenets by utterances from the spirit world. The spirits either aim to please their questioners, or take a malicious pleasure in perplexing them, or there are many lying spirits everywhere present, and palming themselves off as the shades of great men, and answering in their stead. As the most eminent spiritualists have been often imposed upon by these deceivers, and even Judge Edmonds confesses it is impossible to detect their falsehoods, those who rely upon their guidance are liable to the fate of blind followers of the blind, and will probably be bemired in the ditch.

But this tampering with the mysteries of the unseen world has not only failed of good results, it has yielded a plentiful harvest of pernicious fruits.

1. *It has sapped the faith of many Christian disciples.* The process has been gradual and almost imperceptible. A morbid curiosity has lured them on with a singular fascination. They neglected the Bible to pore over spiritual papers; have become more interested in the meetings of the "circles" than the meetings of the church, and have formed habits of daily intimacy with spiritualists rather than with their brethren and sisters. They anticipated no harm, until startled by discovering their want of faith in truths always revered and held sacred, and then drifted slowly into open unbelief.

2. *It has driven many into insanity.* God has wisely erected impassable barriers between the world of living men and the world of spirits, and has forbidden the indulgence of that morbid curiosity which seeks to pry into the mysteries of the future. His word condemns all resort to witches, sorcerers, or the like spiritual mediums, and His providence clearly confirms and seals this prohibition. There may be found in many homes darkened by an ever-present sorrow, and in asylums for the insane scattered through our land, the distinct hand-writing of God upon the wall, testifying that they who will be wise above what is written, must incur the peril of shattered minds, wrecked by their unhallowed curiosity.

3. *It tends to licentiousness.* The voluptuous tendencies of the system are already visible in the lives of some of its disciples. With them the flower has matured to fruit, and they have excited general public odium by their daring violation of divine laws and social morals. The doctrine of elective affinities, more bluntly called free love, removes all barriers to sensual indulgence, and opens the floodgates of licentiousness. The force of habit, good character long established, and the pressure of public opinion, may preserve the great body of spiritualists from the inherent tendencies of the system, but we have no doubt that a large community, isolated like the Mormons of Utah, removed from the restraints of civil law and of Christian society, and composed like them of rude and uncultivated minds, would soon fall into the same excess of rioting as that ill-fated community.

Our advice, therefore, to all Christian families, and to our readers generally, is, *let these things alone.* Touch not, taste not, handle not the fatal delusion—in total abstinence is the only safety. God has shed all needful light upon the secrets of the future world, and it is perilous to pry into mysteries over which he has drawn the veil. Until spiritualism unfolds a coherent system of truth superior to the revealed word, and resting upon better evidences, until it repudiates with loathing the lax social morals involved in the tenets of free love, every healthy mind and pure heart should shun its embraces as the contagion of a moral pestilence.

LAST OF JOHN WESLEY.

The Rev. John Mitford says, that in the last drive he ever took with Samuel Rogers, when returning by the city road, the poet pulled the check-string opposite to the Bunhill fields burying-ground, and then desired his friend to go out, "You see that chapel opposite; go and look carefully at the house which stands there to the left of it, and then come back and get in." This duly performed, he said: "When I was a young man in a banking house, and my father lived at Newington, I used every day, in going to the city, to pass by this place. One day, on returning, I saw a number of respectable persons of both sexes assembled here, all well dressed, in mourning, and with very serious looks and behaviour. The door of the house was opened, and they entered it in pairs. I thought that without impropriety I might join them, so we all walked up stairs, and came to a drawing-room, in the midst of which was a table; on this table lay the body of a person dressed in a clergyman's robes, with bands, and his grey hair shading his face on either side. He was of small stature, and his countenance looked like wax. We all walked round the table, some of the party much affected, with our eyes fixed upon the venerable figure that lay before us; and, as we moved on, others came up and succeeded us in like manner. After we had gone the round of the table in our lingering procession, we descended as we came. The person that lay before us was the celebrated John Wesley, and at the earnest request of his congregation, they were permitted to take this pathetic and affectionate farewell of their beloved pastor."

RELIGIOUS LIBERTY IN TURKEY.

We subjoin a few extracts from the Imperial Firman of the Turkish Sovereign, guarantying liberty of opinion and worship to all his subjects. This extraordinary decree marks an era in the history of the Turkish empire. If duly sustained, it will effect a moral revolution. It was published in Constantinople on the 18th of February, placed in the hands of the Sultan's principal officers, and measures were taken for translating it into the different languages spoken in Turkey, and circulating it in every part of the kingdom. In this firman the Sultan says:—

"By the efforts of my subjects and those of my Allies, the external relations of my Government have acquired a new force, and I wish now likewise to augment its strength in the interior, and to make all my subjects happy, for, united, as they are, by their common sacrifices and their patriotism, they are all equal in my eyes; my will is, therefore, that the following points be rigorously enforced:

"I confirm all the assurances given by the Hatti Sheriff of Gulhane, as to the security of the lives, the property, and honor of all classes of my subjects, without distinction of rank or religion, and I will that these assurances be minutely observed.

"A council chosen by the clergy and laity of the Christian and other communities, will be entrusted with the direction of the national affairs of the community.

"No objection will be made to repairing the churches, schools, hospitals and cemeteries in the different towns, villages and hamlets, according to the primitive design which may still exist. If it becomes necessary to erect new ones, and the patriarchs or chiefs of the communities approve it, the plan will be submitted to the Sublime Porte, in order that I may give my sovereign approbation for its erection, or else that the objections to which it is open might be made against it.

"If in some places there is a community quite isolated—that is to say, without people belonging to another religion—such a community may celebrate publicly its religious ceremonies. But in places inhabited by people belonging to different religions, each may in its own quarter, adapting itself to the above named principle, repair its proper churches, schools, hospitals and cemeteries.

"As to building a new edifice, the Patriarch and Synod will demand the permission of the Sublime Porte, which will be accorded if there are no internal political considerations which prevent it. But whatever is done in these matters, should always be done in a spirit of charity and tolerance.

"Energetic measures will be taken to insure the freest possible exercise of every religion.

"All epithets and distinctions which could tend to show a difference between one class of my subjects as the lower, and another as the higher one, are for ever abolished from all the documents of my Imperial Chancellery. It is likewise strictly forbidden to officials and private individuals to use offensive and dishonoring terms, and the offenders will be punished.

"As all religions can be exercised freely, no one will be molested on account of his religion, and no one forced to change his religion.

"As the choice of those employed depends on my Imperial will, all my subjects will be received for officers according to their capacities, and if they satisfy the conditions demanded by the regulations of the Imperial schools—namely, if they are of a proper age, and pass the prescribed examinations, they will be admitted likewise into the military offices.

"Besides, each community is free to erect schools for arts and sciences.

"In order to combine humanity with justice, the state of the prisons and other places of detention will be ameliorated, and regulations made as to the detention of those condemned for smaller crimes."

FONDNESS OF GREAT MEN FOR CHILDREN.

Richter says that the man is to be shunned who does not love the society of children. Henry IV. was passionately fond of them, and delighted in their gambols and little caprices. One day, when crawling round his room on all fours, on his hands and knees, with the Dauphin on his back and the other children about him, urging the King to gallop in imitation of the horse, an Embassador suddenly entered and surprised the royal family in the midst of their fun. Henry, without rising to his feet, asked:

"Have *you* children, Mr. Embassador?"

"Yes, sir."

"In that case I proceed with the sport," replied the King.

The Duke of Wellington was extremely fond of children, and was a general favorite with them. He enjoyed their gambols, took part in them, and was constantly presenting them with little keepsakes and presents. The opera was his chief amusement, and he was a frequenter of both houses, as well as of the ancient and first class concerts.

Leibnitz used to pass months together in his study, engaged with his laborious investigations. At such times his only relaxation consisted in collecting about him in his study children of both sexes, whom he watched, and sometimes he took part in their frolics. Seated in his easy chair, he delighted to observe their lively movements, to listen to their conversation, and to observe their several dispositions; and when his soul had sufficiently enjoyed the innocent spectacle, he would dismiss the children with sweetmeats, and return to his studies with renewed energy.

Louis Racine says of his father, that he took part in all the children's sports. "I remember a procession we once had," says he in his Memoirs, "in which my sisters played the part of the clergy, I was the curate, and the author of Athalie, singing in chorus with us, carried the cross."

Napoleon, like Wellington, was fond of children. He used to take the infant King of Rome in his arms, and standing in front of a mirror with him, there made the oddest grimaces in the glass. At breakfast he would take the child upon his knee, dip his finger in the sauce, and daub his face with it; the child's governess scolded, the Emperor laughed, and the child, almost always pleased, appeared to delight in the rough caresses of his father. Those who on such occasions had a favor to solicit from the Emperor were almost sure of being favorably received.

SELFISHNESS AT HOME.

The following extract from the *N. Y. Evangelist* contains much wholesome truth:—

"Many people who are liberal and generous in large things, are very mean and selfish in small ones. They do not notice the fault in themselves, and so they think that others do not see it. Perhaps they are not guilty of any gross wickedness. Yet, in a thousand little ways, they show that they think chiefly of their own comfort, and very little of the comfort of others. For example, such a man will require the domestic arrangements to conform to his convenience. The meals must be ready at the hour which suits his pleasure. All the family must wait for him, but he waits for no one. He must have the best room in the house, must sleep in the best bed, sit in the best chair, and have the first reading of the newspaper!

Many a man, who passes for a very respectable character, seldom thinks of the comfort of his wife. So long as she does not complain, he takes it for granted that she is happy. Of course she must be. She has a home, and what more does a woman want? Though her life passes without one word of affection or tenderness; though her mind is left without education, and her heart without that sympathy which is to it the water of life—still he cares not, so long as he has his newspaper and his cigar! That quick perception of her secret, unexpressed feelings; that delicate attention to her slightest wishes, which makes the poetry and the happiness of life, he dreams not of.

Children, too, he finds a great encumbrance. They are in the way. He is willing to pay money to send them to school. But to have them always about him, taking up his time when he is absorbed in business, is too much. He never pauses to think whether they are well or badly educated. Thus he is wrapped up in his selfish schemes and projects, and makes no real sacrifice of time or thought for the improvement of those whom he is bound to love and cherish."

Christ and Him Crucified.—"I want to know more about Christ," said a guilty man, lying in our city prison under sentence of death, to a minister of the Gospel who visited him. "Tell me all about Christ," said he with great earnestness. As what passed at this interview with the murderer was related on the same evening at a prayer meeting by the minister who visited him, the solemn inquiry was suggested to the writer, "Do ministers of *Christ* in these days preach enough about *Christ*? Do they glory in preaching *Christ crucified*?" It would be well if these questions were allowed to produce such an effect as would cause reform in this matter. True, all who are sinners are not like this guilty man, under the condemnation of violated human law, but they are of the Divine law, from which they cannot escape, unless they know about Christ! How will they know "except they are taught?"

CONFLICTING VIEWS OF CHRISTIANS.

In that memorable battle which resulted in the delivery of the Israelites from the hand of Jabin, king of Canaan, (see 4th and 5th chaps. of Judges,) the tribe of Reuben seems to have had no participation, but to have "abode among the sheep-folds, to hear the bleatings of the flocks." It was probably not from want of good will to the cause that this tribe withheld its assistance, but because of internal divisions. A tribe, or nation, is in a poor condition to go to war, when disunion afflicts it. But how did the other tribes feel on the occasion? "For the divisions of Reuben there were great thoughts of heart." (Jud. 5: 15.) The margin reads, "great IMPRESSIONS of heart." We may infer that the matter created a profound sensation with the other tribes, when it came to light that the divisions of the Reubenites were so serious as to hinder them from doing their duty in the cause of God; and that it could hardly fail to start the inquiry, whether the other tribes were not, in some manner, responsible for such a state of things—whether they had not themselves contributed to it, in some degree—or whether, as friendly mediators, they had done what they could to heal the trouble. Accordingly, it follows in the next verse, "For the divisions of Reuben there were great SEARCHINGS of heart."

And are there not great "thoughts of heart" for the divisions of the Christian world? Are not these divisions a great calamity? Are not the energies of Christian professors to a great extent expended in the discussion of them, instead of being united in aggressions upon the Prince of Darkness? The subject is one which has troubled the friends of Zion, and not seldom caused "great *searchings* of heart."

We think, nevertheless, that there is progress in the right direction. Every age does something to narrow the limits of controversy between Christians, and we are not without hope that the future will be still more productive of good in this respect. Real Christians are substantially agreed on important points; and if discussions sometimes spring up between them, and are carried on with some degree of warmth, it is as often the result of a misunderstanding of one another's views, as of any thing else. Not unfrequently, they find language to be too meager to convey the exact ideas they would fain express. The different stand-points from which they view the subjects of discussion, moreover, give rise to asperities for which there is no justification in the subjects themselves. With what acerbities the controversies about the Freedom of the Will, the Atonement, Justification, the Trinity, and many other points, have been conducted, is known to all. Yet we suppose that, on most or all of these points, the actual difference between true Christians is very small; and as the world progresses, we trust the Providence of God will raise up men, who shall succeed in harmonizing conflicting interests—men in whose writings shall be found clear and consistent statements of vital theological doctrines, in which earnest Christian believers can agree.

We have been led to these remarks by seeing, in some of our exchanges, a notice of the appointment of Dr. Huntingdon to the Plummer Professorship in Harvard University. Dr. H. is a Unitarian in name; but his Unitarianism, as defined by himself, is of a character not repulsive to those who make Jesus Christ all in all. Our readers will be interested in a few extracts from his writings, which we subjoin. They are taken from the *Monthly Religious Magazine*, edited by Dr. H. The Rev. Mr. Dutton, of New Haven, had preached the annual sermon before the Concio ad Clerum, upon *the atonement in relation to holiness*, with which Dr. H. was so well pleased that he transferred it entire to the pages of the Magazine. This led to a review by Dr. Hall, of Providence, and the extracts subjoined are from Dr. Huntingdon's reply to Dr. Hall. Of course, we do not submit them as expressive of our own views exactly, but rather as proof that the Christian world is advancing towards a language which shall harmonize the views of those who have been so long at variance.

Concerning the Trinity he thus expresses himself:—

"The Father and the Son are completely and altogether at unity in the redemptive plan. It is no more peculiar to the one than the other. Whatever popular representations of the doctrine an inadequate rhetoric may have been driven to adopt, it is not really held that the Son proposed, and the Father agreed—that the Son made an overture which the Father accepted; but that both are one, in the design and the consummation. And they have always been one in this. Christ's mediatorial and reconciling office was an element in the everlasting providence and grace for mankind. It was not a contrivance sought out, or got up, for an emergency. It was, from the beginning, in the counsels and the foreseeing compassion of the self-existent Father, and of the only and eternally-begotten Son dwelling forever in his bosom. Nor is this belief necessarily confined to any Trinitarian sect. It belongs to all who put this depth and width of meaning to the Saviour's words: 'I and my Father are one.' To deny, therefore, the indispensableness of Christ's atonement, on the ground that it transfers power or sufficiency away from God, is impertinent as an argument addressed to them that believe in that indispensableness. Orthodoxy has not fallen into so superficial a fallacy, and is not likely to be affected by a reiteration of this familiar criticism."

Concerning the doctrine of the Cross he says:—

"What has been most offensive to Unitarians in the Calvinistic doctrine of the cross, is its idea of *substituted penalty*. Such an idea is conspicuously absent from Mr. Dutton's sermon.

"In any shape which would conflict with the divine equity, or with personal responsibility, or with the obligations of righteousness, such a notion, we venture to say, is emphatically rejected by the most enlightened and effective class of Orthodox thinkers in New England. They do not employ the word *vicarious*, nor accept the philosophy. One object we had in reprinting a discourse from one of the New Haven school of divines was to display this fact. If any one supposes the old Calvinistic ground is held, on this subject, by the minds which best indicate the tendencies of the Orthodox Congregational body, it must be because he has failed to keep himself acquainted with the course of thought in that body for the last twenty-five years."

In his closing remarks, he adds:—

"Without undertaking Mr. Dutton's defense, we should be glad to bespeak for the system he represents a new and unprejudiced inquiry among liberal people. The idea may be briefly stated, we think, thus: Christ died for the world because it was not consistent with the rectitude, the wisdom, and the mercy of the divine government, that those who had broken its laws should be treated as if they had not broken them, without such a suffering; while the divine method, including such suffering and such a Sufferer, opens a consistent way for the pardon and acceptance of the sinner, with no detriment to the sanctities of law, and no danger of loosening the foundations of a righteous judgment, and, at the same time, affords a signal and glorious manifestation of spiritual love.

"Now, as one ponders the singular force and directness and agreement of passages, concerning sacrifices, and very many more of the same import, and marks their cumulative power as they resound through the New Testament, we submit that it will not be strange if he feels that on those who believe with the author of the 'Letter' (Dr. Hall) rests the burden of explaining how, according to the Bible, the death of Christ is *not* the divinely ordained and essential ground of human salvation, and that *something* possessing vitality, energy, and power, has been left out of the system which confines the efficacy of that death to the noble but incidental influence of a consistent martyrdom. There is some reason to think that passages like those referred to have become comparatively unfamiliar to Unitarian ears, by having been dropped out of Unitarian preaching, under a natural persuasion that they do not harmonize with the Unitarian theory."

"Why should we not bow with silent and joyful gratitude before the plan, instead of caviling and doubting? We know not how others may be struck with the testimonies of history; but for ourselves, as we turn back on the line of holy witnesses since the first age, as we take up biography after biography, study life after life, follow saint after saint to his victory and his rest, and thus grow intimate with the great fellowship of wise, strong, unyielding, and mighty gifted thinkers and believers of the church, and listen to the almost undivided voice of confession and faith coming up from the innumerable company, declaring Christ Jesus and him crucified the ground of their hopes, and his sufferings the great pledge of pardon—with only here and there a different doctrine, falling in cooler accents from some exceptional tongue—we readily own that we must reconsider whether there is not some element of blessed power here that Unitarianism has overlooked or thrown away."

"The liberality," says he, "which is liberal only to the side of laxity, but bigoted towards the ancient forms of faith, is a kind we do not covet. If there are any of our readers who are displeased the moment the infallibility of Channing, or of a sect, is called in question, we must wish them well, and pass on. Whenever the instructors of the Unitarian churches refuse to admit that there can be any other view of the reconciliation than that which makes it consist in the exemplary and incidental value of a consistent termination of a blameless and miraculous career in a human Christ, many of those they have been called to teach will turn elsewhere for spiritual nourishment, as some are already doing. Indeed, in proportion as the heart is impressed more and more deeply with the two great facts which create the necessity of mediation and redemption—viz., the immaculate holiness and sovereignty of God, or the irreconcilable hostility of the divine nature to sin, and the intense hatefulness and hideousness and heinousness of human disobedience and self-will—just in that proportion will the above-mentioned doctrine of reconciliation prove as incompetent as it is unevangelical."

Translations of Scripture.—A late number of the *Bibliotheca Sacra*, one of the ablest quarterlies published in the world, has a candid notice of the Translation by Prof. Andrews Norton, of Cambridge, England. The writer admits that the Translation is written in a pure and chaste style, and in many cases gives the meaning of the original more accurately than King James' version, but says:—

"In our opinion, however, it is less correct than our received translation; and still more freqently its deviations from the style of that venerable text seem to be needless, and are consequently unpleasant. We are often pained, as we miss some beautiful word or phrase, sacred in its associations, and fascinating by its artlessness, and find, as a substitute for it, something which, at the best, is no better than what it has displaced, and which appears, in comparison, rigid and forced. There are turns of expression for which our language is indebted to our English Bible, and which are now indispensable to the perfection of the language itself. We can never feel at home in reading any translation which exchanges those simple idioms for novel and stiff phrases. We doubt whether a lover of the good old English literature can read a page of Prof. Norton's Translation, without admiring the Professor's exact terminology, and at the same time feeling an occasional wish that he had sacrificed it to the equally exact, but far more charming terminology of our familiar version. As innovation is not always improvement, so in many instances, a needless imitation is, on the whole, a serious damage. An inferior version, however, may not be altogether useless, as it directs especial attention to the superior, and illustrates its neglected excellencies."

LETTERS FROM PALESTINE—NO. 24.

The town of Jidy, the port of Mecca, on the Red Sea, has, according to report, been made the scene of revolution and bloodshed. The English Consul there has fallen a victim to the fury of the mob, and the pasha has been driven away. The latter passed here a few days since, on his way to Constantinople. The cause of this sad affair is said to be the erection of a Christian chapel in the place. The pasha was accused of favoring the Christians. If this be true, according to my informant's opinion, the English will take summary vengeance on the place. It is plainly intimated that this is but another sign of the speedy downfall of Islamism.

The following is illustrative of the subjectivo state of the Moslems in this place, and the great change that is coming over them. A Mohammedan entered the store of a merchant, who is also a native, but a Catholic, and under French protection, and began to behave so rudely that Mr. —— ordered him away. The intruder refused to go; whereupon the merchant, slipping off a shoe, a practice quite common in the East, and to which there is allusion in the Bible, gave him a few strokes, which had the effect to drive him into the street. He complained to the judge, who came to reprimand our man of the shoe, telling him that it was a shame to strike a follower of the Prophet with a *shoe*; if he wished, he might use a stick. To this Mr. —— replied: "Be off, or I will give you the same that I gave him." The poor astonished Mahommedan obeyed instanter, murmuring as he went out, "Our time is at an end."

It is very evident that the French are fast extending their influence throughout Turkey; and this, instead of exciting jealousy among foreigners, seems to meet with their approval. "Any thing," say they, "for a change; any thing for the better." Should they (the French) "spoil Turkey through kindness," it is not apprehended that any danger or damage will come to religious liberty, but rather, that it will be insured on a firmer basis, not through any intention of the French, but by the balancing influence of Protestant powers.

Cheering news comes to us from Constantinople. While the French are there in great and increasing power, and seizing every opportunity to make their influence felt, the gospel is being proclaimed in some seven or eight languages, and now, even to Mahommedans. These have purchased hundreds of copies of the Scriptures; it is thought that the death penalty will be of no avail in case any one of them becomes a Christian. The Scriptures are sold to the French soldiers, the priests forbidding, and the officers countenancing their prohibition of the sale of the blessed volume. Thousands of the Scriptures will thus find their way into Papal countries. Truly, "the Word of God is not bound," but has "free course and is glorified;" and what is deeply interesting to missionaries here in the East, is the disposition of Mahommedans to read and to hear the glad tidings of salvation. W. M. J.

JAFFA, March 2, 1856.

STATE OF THE CHURCH—NO. 2.

In my former article, I intimated my design in contrasting the church in the present age with that of the past. In doing so, I am forcibly impressed with the language of the prophet Isaiah, in chapters 58 and 59, commencing with the exhortation to "cry aloud, spare not, lift up thy voice like a trumpet, and show my people their transgressions, and the house of Jacob their sins." The church in the present age is entitled to some credit—perhaps as much as the Israelites at the time the prophet received these instructions; but it is evident, (to me, at least,) that the church has departed from the path of rectitude. The poor and the oppressed are too much forgotten. The Spirit says by the prophet, "Is not this the fast that I have chosen, to loose the bonds of wickedness, to undo the heavy burdens, and let the oppressed go free, and that ye break every yoke? Is it not to deal thy bread to the hungry, and that thou bring back the poor that are cast out to thy house, coverest the naked," &c? These appear to have been the active duties of the Christian. There was a tendency then, as well as now, to omit these duties, and substitute long prayers and other sanctimonious services. Our Saviour informs his disciples, "The poor ye have always with you; when ye will ye may do them good." The performance or neglect of this is the only subject to which our attention is called by our Saviour in his illustration of the day of Judgment. The final decision of the Judge is based on our action with reference to this important duty. The motive that prompts to the performance of this duty has much to do with it, all will admit; but it must not be neglected.

This, however, is not the only departure from our Saviour's instructions. I have often been shocked by the wide departure from his instruction in regard to prayer. To be sure, prayer is the sincere desire of the heart, always known to God; but at the request of his disciples, Christ gave them a short but comprehensive form of prayer, saying, "After this manner pray ye: Our Father who art in heaven," &c. The Scriptures inform us that God is in heaven, we on earth; therefore let our words be few; use not vain repetition, as the heathen do, for they think they shall be heard for their much speaking. Our Saviour informed his disciples that what they asked the Father in his name should be granted. If there is not a wide departure from these instructions, by the church of the present age, I am grossly deceived. We are commanded to exhort each other daily, and so much the more as we see the day approaching. Instead of this, most of the time in our social gatherings is spent in long and formal prayer, as if trying to see which could make the greatest display of words or heartless form. These requests have been made for forty years, and not one has been answered in a manner that we have any evidence that God answered the request referred to. The same form commences the meeting, continues and closes it. In this I do not wish to be understood to refer to all the prayers offered, but only that in which public meeting formality has taken the place of spirituality, in most, if not all our exercises. The Apostle, in giving his instructions for conducting such interviews, shows us the propriety of all participating in the exercises. Of course all must be brief. He says, "If any thing is revealed to one that sits by, let the first hold his peace." There are no doubt many members in the church, who have talents that would be useful, if there was an opportunity to call them out; but there being no such, they bury themselves in the world, or engage in other pursuits. There is but little time spent in the house of worship, most of which is occupied by the minister and deacons, it being expected that the minister must occupy an hour or more, whether he has any thing worth hearing or not—often the same thing over and over again. The singing, too, instead of being the bursting out of the warm heart in praise to God for his goodness, is given up to a few young persons, to make a display of their attainment in the musical science of the day. Thus ends what is called the public worship of God. Is it strange that infidels make a mock at religion—that the members go back into the world, and often indulge skeptical views on the subject of religion? If the Bible is a revelation from God, let us conform our views to its teachings of God and his character, and take its instructions for a guide in all the duties of a Christian life, and let the world follow its maxims, if they will, and reap the consequences. L. P. B.

A NEW PHASE OF THE SLAVE TRADE.

A new form of slave trade has lately sprung up. Its victims are the poorer classes of Chinese, who, it is said, are entrapped or kidnapped, by fraud or violence, on board of fast-sailing ships, and transported to Peru, where they are virtually sold as slaves, to be worked to death under circumstances of great cruelty, in the guano islands. The following extract from a letter dated Swotow, China, Dec. 10, 1855, will give an idea how this business is done:—

"We have now bent our sails, and expect to sail for Callao in a few days. We have now on board 700 Coolies, and expect to take 200 more. I suppose, if God preserves our lives, we will arrive in about 75 days. I will try to explain what our cargo consists of, viz., men—Chinamen, of course—who are called Chinamen Coolies. As you have been to Russia, you had a sample—the same as serfs, or as our Southern negroes; but, poor things, they are torn from their parents and friends, and sent on board of our ship, and many other ships of our own country, as well as English. They kidnap them and take them to the junk, as we call it, and stay there one or two weeks, till the captain thinks proper to take them on board our ship. They are bought for fifteen and twenty dollars per man. We have twenty men armed on sentry night and day. The Coolies have several times tried to rise; and if it had not been for two or three Coolies who made it known, they would have taken the ship. We have plenty of ammunition on board, and three guns, which are lashed so as to bear on the slaves if they should rise. A ship took some from here, and sold them for $250 each. This ship expects to stay out here about two years."

The Spirit of the Men.—At the great Kansas meeting in Milwaukie, Mr. Charles T. Hotchkiss, one of the young men most active in getting up the movement, subscribed $25 to the fund.

"He said that although there was not a great deal of him, (being rather under the medium stature,) what there was should go to Kansas, and he would give $25 beside. 'Last summer,' said he, 'I visited the tomb of Washington. The boat landed at the foot of the ravine which leads to Mount Vernon. I walked up to the sacred spot, and through the gate which inclosed the vault, viewed the coffins of George and Martha Washington. Turning to the left a few steps, I beheld a man—for I conversed with him, and found him to be a man in feeling and in sympathy, and well informed on many subjects—this man,' said Mr. H., 'was *selling canes to purchase his freedom!* This was in sight of the tomb of Washington! [Cries of 'Shame!' 'Shame!'] From that moment I determined henceforward to exert every influence or power I might possess on the side of Freedom for ever.'"

Liberty of Conscience in Prussia.—The *Elberfield Gazette* publishes a letter from Nordhausen, which exhibits the position of Prussian dissenters as one not to be envied. It concerns a decision issued, on the 26th of November last, by an officer of the temporal executive, against Edward Baltzer, a clergyman of a free congregation. By this decision, adverse to his plaint, he is bound, although a minister of religion, to send his children to receive religious instruction in the public school of the place, or otherwise from duly qualified private teachers. The reason of this is, that the religious instruction he himself may impart to his children is not recognized as able to replace the religious instruction which the authorities require in the name of the law.

St. George's Church.—New York has the reputation of being one of the "dark places," and such it no doubt is, viewed as a whole. But even here there are some bright spots, as they know who study the city with a liberal spirit. The following notice, (which we copy from the *Independent,*) of the exercises at St. George's Episcopal Church, on Sunday, April 13th, is a good illustration:—

"On that day, Rev. Dr. Tyng, rector of this church, entered upon the twelfth year of his labors in this parish. In the morning he preached a discourse on the Divine Character and Responsibility of the Christian Ministry, and gave the results of his own labors during the last year. *Thirty* communicants have been added, *nine* have been lost by death, and *three* by removal; the present total number is 850. Among the large congregation of this church but *six funerals* have occurred during the year—a striking proof of the mercy of Divine Providence. The benevolent contributions for 1855 amounted to $23,000. Of this sum about $6,000 were given for foreign missions, and nearly $3,000 for domestic.

"In the afternoon the several Sunday-schools connected with the church held their seventh anniversary. The floor of the large edifice was completely filled with children and their teachers, numbering in all 1700, while the galleries were crowded with spectators. An address was made by the rector, in which he said, that the expense of maintaining the schools had been found to be about *one dollar a year* for each scholar. The libraries number 5000 volumes. Each class is a distinct missionary society, and at the anniversary brings its missionary collections for the year—the amount thus presented on that day being $3,270."

The Colored Churches in Washington.—The *National Era* publishes an account of the congregations of the people of color in Washington City. The number of colored people is 10,000, which is about one-fourth of the number of whites. They own eleven places of worship, the aggregate value of which is nearly $40,000, or $4 each to the people. The whites, 40,000, with all their wealth, offices, and government favor, have $325,000 in church property, which gives a little over $8 to each. Ten of the colored congregations pay their pastors on an average $650 each, besides marriage fees and other perquisites—making a total of $6,500 yearly for the maintenance of a preached gospel, over and above the expense of keeping the houses, fuel, repairs, etc. There are above 1,000 children in the Sunday-schools, who are mostly taught by members of the several congregations.

How to get Warm Sermons.—A brother in Indiana says, through the *Central Christian Herald*, that his people are accustomed to meet to replenish his wood-shed with good sound beech and maple as often as it is found empty. He thinks this wood produces heat differing essentially from common caloric. It not only warms the body externally, but communicates a genial glow to the heart. It makes an excellent fire to write sermons by, and such sermons seem to be good conductors of heat. If any congregation is served with cold sermons, it might be well to look into their minister's wood-house, and give him a gentle hint by replenishing it.

Ordination.—Bro. Wm. C. Whitford was ordained to the work of the Gospel Ministry, at New Market, N. J., on First-day, April 13, The examination was held at the meeting-house in the forenoon, and was conducted by Eld. James Bailey. The ordination services were held in the afternoon, when a sermon was preached by Eld. W. B. Gillette, after which the consecrating prayer was offered by L. Crandall, the charge to the candidate was given by G. B. Utter, and the hand of fellowship by H. H. Baker. Bro. Whitford will graduate from the Union Theological Seminary in New York early in May, after which he expects to visit and labor for a while with the church at Milton, Wisconsin.

Baptist Anniversaries.—The third anniversary of the American Baptist Historical Society will be held in the Calvary Baptist Church, 23d street, New York, on the evening of May 10th, commencing at 7½ o'clock. The annual address will be delivered by Rev. R. B. C. Howell, D.D., on the Early Baptists of Virginia.

The American Baptist Publication Society will hold its 23d anniversary in the Oliver st. Baptist Church, New York, on Second-day, May 12th, at 9 o'clock, A. M. Among the speakers expected are Revs. H. C. Fish and J. Wheaton Smith, and Drs. Dowling and Samson. The annual sermon is to be delivered on the day previous, in the meeting house of the Strong Place Baptist Church, Brooklyn.

"The Obligation of the Sabbath."—Calvin Blanchard, 82 Nassau st., New York, has issued in book form the discussion between Rev. J. Newton Brown, D.D., and William B. Taylor, on the obligation of the Sabbath, This discussion appeared originally in the columns of the *Christian Chronicle*, a Baptist paper published in Philadelphia, from which we copied portions at the time. Mr. Taylor takes the anti-sabbatarian view of the question, while Mr. Brown maintains the perpetuity of the law of the Sabbath. Both treat the subject and each other with commendable candor and courtesy.

The Wisconsin Almanac and Annual Register, for the year 1856, furnishes a large amount of valuable information. In addition to the usual Calendar, it gives a description of Wisconsin, its surface, climate, products, government, education, commerce, &c.; a description of each County, with the boundaries, area, &c.; a list of State Officers for 1856; Annals of the Legislature, with names of all of the legislators since 1836, &c., &c. In the list of legislators we notice several names familiar to onr readers, among which are Joseph Goodrich, Charles R. Head, and Lewis N. Wood.

The Children's Aid Society.—The third annual report of this Society is lying before us. We learn from it that the receipts last year were about $10,000. This money was expended in exploring the "dark places" in New York city, gathering the filthy and ragged boys and girls into schools where they can be taught to read and to work, sending a portion of them to homes in the country, &c. Five industrial schools have been maintained, whose pupils during the year amounted to 1071. The Society has a lodging-house for newsboys, and another for homeless girls. In the former, the number of lodgings for the year was 7,509, and the number of lodgers 373. Nine hundred and thirty-six persons were provided with places in the country, of whom 424 were boys, and 393 girls.

Rum-selling in Farmington, Ill.—A letter from Bro. Dennis Saunders, of Farmington, Ill, informs us that rum-selling is at a discount in that town. He says that three tippling houses had been in operation there for some six months past, until they had become a perfect nuisance. The temperance people had in vain attempted to put a stop to the nefarious business. Finally, the ladies determined to take the matter into their hands. Accordingly, they turned out in a body, marched to these dens of iniquity, rolled the casks into the street, knocked out the heads, and let the liquid poison run. Some of the poor inebriates were so anxious to save the coveted beverage, that they scooped it up from the gutters, and drank it with an avidity which showed that they thought the last chance would soon be past.

Liquor Laws in New York.—Great doubt exists in relation to the Liquor Laws at present in force in the State of New York.—Since the action of the Court of Appeals, annulling the principal features of the Prohibitory Law, some think there are no legal restrictions whatever on the sale of intoxicating liquors. Others think that all that part of the law which was not specifically declared to be unconstitutional is still in force—especially that part which punishes drunkenness. If this view of the case is correct, we have still in force what is nearly equivalent to a Prohibitory Law. It is said that steps have been taken in Buffalo to bring this question before a proper tribunal, and have it decided what is and what is not now law in relation to the sale of intoxicating liquors in the State of New York.

RELIGIOUS INTELLIGENCE.

We have information (says the *Independent*) of a revival of religion existing in several of the evangelical churches in Cincinnati. In the Ninth street Methodist Church, no less than *one hundred and sixty* have been recently converted. In the Seventh street Congregational Church, of which Rev. Henry M. Storrs is pastor, a great interest has been awakened, and many recent converts are waiting to make a full profession of faith at the next communion season. Weekly meetings are held at this church, and a work of great power is in progress. The prominent feature of the revival is its comparative fruitfulness. Very little excitement is observed, but then *by the* blessing of God, grand results are to be accomplished.

The pastor of a New London (Ct.) Church writes to the Vermont Chronicle: Last November God began graciously to quicken his people, and awaken some souls. Two presented themselves for instruction and prayer that they might be saved. Since that time, God has begun to work among seamen in the Bethel church, and a good number of sailors have been affected by the truth. In other congregations in the city there are gracious influences diffused. Christians are refreshed—some are coming into the liberty of the Gospel, and others still are saying, "What shall we do to be saved?"

The Independent says that a company for Kansas is now being collected in the northerly part of New Hampshire; Messrs S. W. Cone & Co., of Haverhill, N. H., being the agents, and the object being to build up the settlement around Millard City, said to be a very desirable location on the Kansas river, near the Republican Fork, one hundred and forty miles west of the Missouri, and is beyond the reach of border ruffians. It is on the United States military road from Leavenworth to Santa Fe, opposite to Fort Riley. A press is secured to publish a Free State paper, called the *Kansas Times*.

Sydney, a quiet farming town in Delaware County, N. Y., has had three feeble churches—Baptist, Methodist, and Congregational—and all in a low religious state. But last summer the Rev. A. B. Earle commenced occasional labor at Sydney Centre, and within a few weeks a protracted meeting, and, "as the fruit of this work," says a correspondent, "more than one hundred are *now* rejoicing in the hope of eternal life, through our Lord Jesus Christ. Many of these are heads of families; some are past middle life, some of every age, from the child of ten to a man of sixty years.

The Lockland (Ohio) Presbyterian Church has been gathering the fruits of an interesting revival. Nineteen persons were recently added to the church. The pastor says:—"Among those admitted were five husbands with their wives, fourteen were connected with heads of families, and two were our own children, who came forward for the first time to commemorate the dying love of the Saviour of sinners."

In pleasing contrast with the gloomiest of winters, a marked degree of religious interest has appeared during the past season in many of the churches of Iowa. An agent of one of the benevolent societies recently remarked, that at no period during the five years of his labors in this field, had he met so interesting and general state of religious feeling as in the course of the past winter.

There is awakened attention to religion in Washington, Pa. A work of grace with power, is manifestly in progress. Between seventy and eighty express a hope in Christ, as recent converts; of whom about thirty are College students.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, APRIL 14.

In the SENATE, a petition was read from Col. Lane in relation to Kansas matters, the discussion of which occupied the whole day. The petition states that the General Assembly of the Provisional State of Kansas appointed a committee to draft a memorial asking Congress to admit Kansas into the Union with the Tobeka Constitution. The committee reported a rough draft which unanimously passed each house, but though correct in matter of fact, it was deemed by members as crude and prolix in phraseology, and to remedy those defects it was referred to a committee with power to revise, modify and correct it, and to prepare three copies, one for each house of Congress, and one for the people of the United States. Such revision was accordingly made. Mr. Lane prays the Senate to receive the memorial, being the same as that heretofore submitted by Mr. Cass. The petition was laid on the table.

The HOUSE spent the whole day in considering the Deficiency Appropriation bill.

THIRD-DAY, APRIL 15.

In the SENATE, a bill was reported from the Post Office Committee to encourage new steam navigation lines to provide for the transportation of mails by sea.

In the House, a bill to facilitate the obtaining of proof in claims against the Government for horses and other property lost in military service, was passed. The Senate's amendment to the Deficiency Appropriation bill, appropriating $300,000 for continuing the Washington Aqueduct, was rejected.

FOURTH-DAY, APRIL 16.

In the SENATE, Mr. Seward presented joint resolutions, providing that uninhabited islands, lying beyond the maritime jurisdiction of nations, which have been or may hereafter be discovered and taken possession of by American citizens, shall become part of the territory of the United States; but the right of property in deposits of guano, etc., shall be vested in the persons who shall have made the discovery. It was referred to the Committee on Foreign Relations. The bill proposing to remove from circulation the smaller Mexican and Spanish coins, and establishing their value in receipt for Government dues, also providing for the coinage of a new description of cents, was passed.

In the HOUSE, a joint resolution was passed by a small majority, to purchase 15,000 copies of Dr. Kane's narrative, at five dollars per copy, for distribution among the members of Congress, and authorizing the Secretary of the Navy to have appropriate medals prepared. An ineffectual effort was made to have the vote reconsidered.

FIFTH-DAY, APRIL 17.

In the SENATE, on motion of Mr. Sumner, the Committee on Commerce was directed to inquire into the character of the Cooly trade. The Bounty Land bill was considered, but was not disposed of.

In the HOUSE, the President was requested to have prepared statements, showing the appropriations and expenditures made during each session of the last three Congresses.—The Senate's Fortification bill was tabled, on the ground that it improperly originated in that body.

SIXTH-DAY, APRIL 18.

In the SENATE, the Post Office Committee was instructed to inquire into the expediency of establishing uniformity of postage throughout the United States. The Committee on Patents were instructed to inquire into the expediency of allowing the inhabitants of the British Provinces the benefits of the Patent Laws, on equal footing with the people of the United States. The bill to authorize the Executive to facilitate the construction of a Railroad and Telegraph line to the Pacific, was advocated in a speech by Mr. Weller, and postponed to the 29th inst.

The HOUSE received the report of the Committee on Elections, against the right of B. B. Chaspman to a seat as delegate from Nebraska Territory, and in favor of H. P. Bennett. The Deficiency Bill was reconsidered, without final action.

Both Houses adjourned over to Second-day, to allow members an opportunity to visit the new war steamer Merrimac at Anapolis.

European News.

The U. S. Mail Steamer Baltic, with European news to April 3d, arrived at New York on the 17th.

The Baltic brings the news that Peace was signed at Paris on Sunday, the 30th of March. The event was announced in Paris and London by salvos of artillery. Paris was illuminated, and in England the church bells were pealed. Three or four weeks must elapse ere ratifications of the treaty can be exchanged. Details of adjustment are referred to a Commission. The great event of peace has swallowed up all minor subjects of news.

The Africa arrived at Liverpool at 4 P. M. of Monday, March 31. When off Holyhead, the Africa made a signal to the shore, "No tidings of the Pacific," an announcement which was immediately telegraphed to Liverpool and London, and served to extinguish the hopes of the most sanguine in regard to the safety of the missing ship.

Three Days Later.

The steamship Africa, with three days later news from Europe, arrived at New York on the 19th inst.

The Peace Plenipotentiaries have had one or two informal meetings to settle details.

Paris has again been illuminated to celebrate the restoration of peace.

The London evening paper the *Sun* was seized at the French Post Office, in consequence of its appearing with a black border as a token of mourning for the peace, which it considers disastrous and disgraceful to England. The *Daily News* and *Morning Advertiser* were also seized.

Accounts from Cronstadt assert that a squadron was ordered to be got ready by the middle of May, but for what purpose was not publicly known. It was rumored that its object was to convey the Emperor of Russia and one of his brothers on a visit to France and England. This report was strengthened by the fact that orders had been given to engage pilots well acquainted with the coasts of both those countries.

A Brussels journal says that the coronation of the Czar will take place about the 31st of August, and with great pomp.

Advices from the Crimea state that on the night of March 17, a shocking accident occurred on the slope above Kadikoi, in the burning of some wooden huts occupied by men of the commissariat works corps. Notwithstanding prompt assistance, 16 men perished in the flames. They were, doubtless, suffocated by smoke. Their bodies were charred past all chance of recognition.

California News.

The steamer George Law, with nearly half a million of dollars in gold dust on freight, arrived at New York on the 16th inst., bringing two weeks later news from the Pacific coast.

The intelligence from California is meagre. On the 5th of March the Democratic State Convention met in Sacramento city, and elected delegates to attend the approaching Cincinnati Convention. The Convention declared that James Buchanan was their first choice for the Presidency.

Indian troubles still continued to a great extent in Oregon and Washington Territories, and another attack on Seattle was anticipated.

On the 15th of March, a party of native Californians and Mexicans started with wagons from San Jose to emigrate to Mexico. They numbered several hundred persons.

The San Francisco Herald says that Guam was visited, on the 23d of September last, by a most terrific tornado or typhoon, accompanied by a slight shock of an earthquake. The storm commenced in the morning, and kept on increasing until 11 P. M., when it burst upon the place with all its power. No tongue can tell nor pen describe the perils of that night. In less than twenty minutes more than eight thousand persons were left without a house or roof to protect them from the fury of the storm. All the houses upon the Island of Guam, with the exception of ten or twelve stone buildings, were destroyed and scattered in every direction. The rain fell in torrents, and as it touched the lips it tasted as salt as though it came from the ocean. Thousands of cocoa-nut trees, (which is a very tough wood,) laden with fruit, were crushed like so many slender weeds, torn up by the roots and thrown into all shapes. Nearly everything that carried its head above ground was destroyed; and now it is impossible to obtain even an orange, where only a few weeks ago every kind of fruit that grows in a tropical climate was in such profusion that it might have been had for the plucking. It will be a long time before the Island will recover from this severe blow.

FIGHTING IN NICAARGUA. — Immediately after the declaration of war by Costa Rica against Nicaragua, General Walker sent Col. Schlessinger forward with about 400 men, with instructions to enter the Costa Rican territory. It seems now that about the 20th of March this advance detachment encountered a Costa Rican force, numbering some 500 men, under General Mora, and that after a sharp contest of some fifteen minutes' duration, the Nicaraguans were defeated with a loss which has been variously estimated at from twenty to a hundred men. It is also alleged, that nineteen prisoners who fell into the hands of the enemy were immediately shot.

The foregoing is the Costa Rican version of the matter. On the other side, it is asserted in New Orleans, by the agent of the Government of Nicaragua, that the story of the rout of Col. Schlessinger by the Costa Ricans is a falsehood. He says the account received from head-quarters is, that Col. Schlessinger had only two hundred and fifty men; that he was attacked by nearly three thousand Costa Ricans, and that he retreated to San Juan.

CONGRESSIONAL EXTRAVAGANCE.—The business of book printing by Congress has at length reached a point of intolerable extravagance, both as to the number and costliness of the documents published. The officers of the army and navy, who are employed on any public service, seem to understand that the most satisfactory proof they can give to Congress of their faithful performance of duty, is in the voluminousness of the reports they present, and the number and beauty of the pictorial illustrations they require. Mr. Nichols, of Ohio, Chairman of the House Committee on Printing, has exhibited three documents in illustration of the wanton excess to which this folly has been carried. The Pacific Railroad Reports, detailing the explorations of the several routes, make six 4to volumes, of which 23,920 copies have been ordered by the two Houses, and the distribution of them will encumber the mails. The whole expense is estimated at $557,588, of which $239,200, or 43 per cent., is for the cost of engravings. Commodore Perry's report of the Japan Expedition is to be printed in four quarto volumes, at an expense of $368,000 for 18,420 copies, of which $233,400, or 63 per cent., is for engravings. Lieutenant Gills was sent to South America for an astronomical and scientific examination, and his report is to make six volumes, costing $152,863 for 5,920 copies. [Independent.

INDIAN TROUBLES IN OREGON.—Among the official documents received from Oregon, is a letter from Joel Palmer, Superintendent of Indian Affairs, who, confirming the statements of Gov. Curry, says "the present difficulty in Southern Oregon is wholly attributable to the acts of the whites," adding:—

"I cannot but feel it is our duty to adopt such measures as will tend to secure the lives of these Indians, and maintain the guarantee secured by treaty stipulations. The future will prove that this war has been forced upon these Indians against their will, and that, too, by a set of reckless vagabonds for pecuniary and political objects, sanctioned by a numerous population who regard the Treasury of the United States as a legitimate object of plunder. The Indians in that district have been driven to desperation by acts of cruelty against their people. Treaties have been violated and acts of barbarity committed by those claiming to be citizens, that would disgrace the most barbarous nations of earth. If none but those who perpetrated such acts were to be affected by this war, we might look upon it with indifference; but unhappily this is not the case."

CHINA NEWS.—We have received, via San Francisco, some late and interesting intelligence from China. Sir James Sterling has issued a decree, dated at Hong Kong, by which merchant vessels of all nations shall for the future be protected by British men-of-war in passing from port to port. This move is one of great importance to trading vessels, and it is the only way by which these piratical depredations in the China Seas, of which there have been lately so many examples, can be effectually crushed. It is announced that the prosecution against the U. S. Consul Keenan, for liberating a prisoner, has been abandoned by the Government. Dr. Parker, the U. S. Commissioner, had arrived at Hong Kong, and had commenced his duties by taking a determined stand against the trade in Coolies. A terrible fire had occurred at Macao. Thirteen hundred houses were burnt, at an estimated loss of over a million of dollars.

HANDLING AQUAFORTIS.—From the Boston papers we learn that as some workmen in the employ of Mr. W. C. Carlton, No. 12 Beach street, were in the act of filling a vessel from a carboy of nitric acid or aquafortis, the vessel was accidentally broken, spilling the contents on the floor. Instead of leaving the room, the workmen remained and attempted to absorb the fluid by throwing sawdust upon it. They soon became so affected by inhaling the noxious effluvia, that they were obliged to leave the room. They subsequently repaired to their homes, without making any special complaint, and nothing further was heard of the matter at Mr. Carlton's shop until the following morning, when it was reported that two of the men were dead, and others had become seriously affected.

SUMMARY.

The clipper schooner Falmouth, which was a short time ago seized while passing through the Narrows, by Deputy Marshals De Angeles and Nevins, and brought back to the Navy Yard, on suspicion of being a slaver, has been condemned as such, and will be sold, together with her cargo, stores, furniture, sails, rigging, &c., at auction on the 24th inst., for the benefit of the Government and the officers who made the seizure. Her nautical instruments, of which she had a complete set, will also be confiscated. These latter consisted of a superior chronometer, estimated worth $500; telescope, $28; with four mariner's compasses—two of them extra; quadrant; sextant; metal frame octant; log glass and slate, and charts of the North and South Atlantic Oceans, and West India Islands, and a Bowditch Navigator.

A very remarkable trial lately occurred in Liverpool, in the course of which it was proved that a respectable merchant, or rather, a merchant of respectable standing in Manchester, named Brennan, having a house in New York, had, for many years, been in the habit of smuggling silk goods into New York in hampers. It seems that he had made an arrangement with a clerk in the employ of the agent of one of the lines of passenger ships, through whose connivance he had been enabled to carry on a very successful business. Three of the hampers having failed to reach their destination, the Manchester merchant brought a suit against the clerk to recover the value of their contents, but was nonsuited, the Judge declaring that he could not assist anybody in defrauding the Government of the United States.

A dispatch dated Philadelphia, Monday, April 14, 1856, says: Accounts from towns in the vicinity of this city give additional information of the ravages of the tornado. A lady was killed at Westchester by a shutter striking her head while she was endeavoring to close the blinds. An innumerable number of dwellings and barns have been unroofed in every direction. A train of loaded freight cars, standiug near the depot of the Pennsylvania Railroad, in West Philadelphia, was blown from the track. Ten loaded cars on the Reading Railroad were driven a hundred yards from the place where they were left, and five of the number were thrown off the track.

The Cincinnati Commercial says that there are rumors of a disagreeable outcome to the recent fugitive slave cases in that city, and the opinion is getting abroad that some people have done considerable "more than their duty" in the premises. The enormous cost of the proceedings has, it is said, startled the Secretary of the United States Treasury from his propriety, and a special agent of the department has arrived in the City, and is opening up what is thought to be a pretty extensive mine of corruption.

The Cincinnati Gazette of April 10, mentions the arrival of a company of 78 men, 8 women, and several children, on their way to Kansas, under the direction of S. N. Wood, Esq., of Lawrence. They were to leave the next day on the mail boat for St. Louis, and thence to Lawrence. "Each male was provided with an ordinary rifle and other arms. They go to Kansas as Free State men, determined that the present government established in that State shall be upheld and defended."

The schooner Maryland, taken at Norfolk on account of the refusal of the captain to submit to a search of his vessel under the inspection law, as already stated, was released, the agent in Norfolk having secured the payment of the fine of $500 to the State. The Alexandria *Sentinel* says that one of the coal and iron companies who have their depot in that city, and whose vessels are searched as they go out of the Potomac, intend to test the constitutionality of the new law at the next term of the Court.

Ironsides, the pedestrian, started at five minutes after 4 P. M. on Friday the 14th inst., for the fifth milestone from Penazee to the Helstone road and back, which he was to repeat thirteen times in twenty-six hours; he finished his performance at ten minutes after 4 P. M. on the 15th inst., thus accomplishing the distance, 130 miles, in twenty-four hours and five minutes, which gives nearly an average of 5.12 miles for twenty-four consecutive hours.

The donations to the treasury of the American Baptist Missionary Union, in the month of March, amounted to $37,000. This makes the aggregate for the year, including amount paid toward liquidation of debt, about $120,000.

Mrs. Sarah Pryne, of Troy, lately deceased, bequeathed five hundred dollars to the New York State Colonization Society, and an equal amount to the Bible and the Foreign Missionary Society.

A dispatch dated Philadelphia, Monday, April 14, says: Colonel Hughes, Special Agent of the Post Office Department, arrested this morning George W. Townsend, who broke jail at Newcastle while waiting sentence for stealing a letter from the Wilmington Post Office. He had three revolvers on his person and every barrel in them charged. When he escaped from prison he liberated seven other prisoners. Townsend is about twenty years of age.

The Central Committee of the Mount Vernon Estate, Richmond, Va., have invited Mayor Wood to deliver an address in that city, at such time as he may specify, in aid of the purchase of the Mount Vernon property. He has accepted the invitation, and will deliver the address early in May. His subject will be the "Character and Genius of Alexander Hamilton."

The dry season is a subject of universal complaint among the farmers in Virginia. Less rain has fallen in the vicinity of Fredericksburg, in the last three months, says the Herald, than during the same season for years past. The Herald, speaking of the effect of snow upon the wheat, says, that experience has shown that the usual advantages derived therefrom are not apparent at present in the wheat lands.

On Sunday morning, April 13th, 1856, the most destructive fire that ever happened in Nashville occurred. The Court House, Nashville Inn, H. & B. Douglas', Scovall's, and Strickland & Ellis' houses were totally destroyed, besides several other buildings being greatly injured. The loss is estimated at two hundred thousand dollars, upon which there is an insurance of one hundred thousand dollars.

The Geneva *Gazette*, of Friday, April 11, says that the Seneca Lake is still covered with ice a mile and a half from its foot and entirely across the shore. On the 9th inst., Mr. Daniel Morse did what will probably not be done again in many years. He walked across the Lake, to near the eastern bank, returned to near the centre, and then strolled southward to a point nearly opposite Milk Point Ravine, and thence back to Geneva.

Important news from Mexico has been received. The rebellion has been crushed. The city of Puebla, which had been for some time held by the rebels, had capitulated to the Government forces. The rebel officers were reduced to the ranks, fifty of them went into voluntary exile, and several were shot. President Comonfort, having overcome the enemy, made a triumphant entry into the Capitol.

A dispatch dated Albany, Sunday, April 20, 8 P. M., says: We have had a severe storm of snow and sleet here all day—the wind strong from the northwest. The snow now covers the ground to the depth of three inches on an average. At 7 1-2 o'clock this evening the thermometer here indicated 30° above zero.

A dispatch dated Philadelphia, Sunday, April 20, says: Townsend, the mail robber who was arrested a few days since, and confined in Newcastle Jail, made an attempt to escape to-day, but was shot by the Sheriff while he was climbing over the wall, was recaptured and brought back severely wounded.

The Methodist General Conference (it meets but once in four years) will commence at Indianapolis on the first of May. The distance from Buffalo is 464 miles; the fare from Buffalo $11,50. The time required to travel between Buffalo and Indianapolis is one day and one night.

The Rochester Union has it on reliable authority, that Judge Selden has stated that the recent decisions against the Prohibitory act in no wise affect that portion which makes street drunkenness an offence punishable by fine or imprisonment. And he has further assured the police authorities that they can safely enforce that provision.

The Milwaukie Agriculturist publishes letters giving the stock of Wheat and Flour at Milwaukie, Chicago, and other ports on Lake Michigan, Detroit, Cleveland, Cincinnati, Rochester, Oswego, Toronto and Buffalo. The whole amount is stated to be 1,501,770 bushels of wheat and 319,257 barrels of flour.

A writer in a New York paper speaks of a lady who wears upon one dress *a full mile of fringe trimmings!* Another young lady in New York has adorned a single dress with *seven hundred and fifty yards of ribbon.*—Truly this is carrying extravagance in dress to *great lengths!*

In Tuscany, the Government has given notice that 10,000 persons have left the Catholic Church. This fact has stimulated the authorities to renewed persecution, and criminal prosecutions on the ground of religion, are multiplying.

Mr. Kennedy, of Carrollton, has gone to look up a location for about thirty substantial farmers of Carroll Co., who have resolved to remove to Kansas. Quite a number of farmers in Jefferson Co. are also about to settle in Kansas. So says the *Ohio State Journal.*

The first Company of Kansas Emigrants, under the auspices of the New York State Kansas Committee, started for Kansas City, April 16th. Their route is via Suspension Bridge, Detroit, Chicago and St. Louis.

To get the use of the Academy of Music in New York, for a lecture that promises to draw well, or for an anniversary meeting, costs $250; the Broadway Tabernacle, for a like purpose, costs $55.

It is said that upward of 1,200 congregations will be represented in the General Conference of the Methodist Episcopal Church, which will assemble next month at Indianapolis, Ind.

During the last ten years, more than ninety-nine thousand dollars are said to have passed through the hands of Rev. Dr. Tyng, of this city, collected from his congregation for religious purposes.

The Erie Canal is reported to be in such condition between Buffalo and Lockport, as to preclude the possibility of opening it before the fifth of May.

Rev. N. Colver, of Detroit, late of Boston, has accepted a call of the First Baptist Church in Cincinnati, and is hereafter to make that city his home.

The Allen Street Presbyterian Church, of New York, of which Rev. Mr. Lucas is pastor, have voluntarily resolved to add $300 to their pastor's salary.

In Durhamville, Oneida Co., N. Y., an interesting work of grace has been some time in progress.

A dispatch dated Nashua, N. H., Tuesday, April 15, says: A carriage containing Rev. Mr. Jewett, wife and son, was run down by a train of cars this afternoon. The son died this evening, and Mr. Jewett is not expected to survive. Mrs. Jewett may possibly recover.

Advices from Kansas to the 12th of April, furnish but little news of interest. The Committee, appointed by the Free State Legislature to prepare a code of laws, are in session at Topeka. Their report will be presented to the Legislature in July.

On Saturday morning, April 12th, a serious collision between two passenger trains occurred on the Pennsylvania Railroad, three miles west of Johnstown, which resulted in the smashing up four or five cars and injuring six persons on board. No one was killed.

New York Markets—April 21, 1856.

Ashes—Pots $6 62; Pearls 8 25.

Flour and Meal—Flour 6 25 a 6 37 for State, 6 12 a 6 50 for Michigan, Ohio, and Upper Lake, 7 00 a 9 25 for extra Genesee. Rye Flour 3 87 a 5 50. Corn Meal 3 31 for Jersey.

Grain—Wheat 1 70 a 1 72 for prime red, 1 85 for good white. Rye 92c. for Pennsylvania, 94 a 95c. for Northern. Corn 62 a 66c. for Yellow and White.

Provisions—Pork 15 87 for prime, 18 00 for mess. Beef 7 50 a 8 00 for country prime, 8 25 a 10 00 for country mess. Dressed Hogs 8½ a 9¼c. Lard 9½ a 10c. Butter 14 a 18c. for Ohio, 17 a 22c. for common to very good State, 22 a 24c. for choice. Cheese 5 a 10c.

Hay—75c. a 1 12 per 100 lbs.

Hops—7 a 10c. per lb.

Potatoes—1 00 a 1 25 per bbl. for Western Reds, 1 12 a 1 62 for Jersey Mercers, 1 87 a 2 00 for Carters.

Seeds—Clover, 18 a 18½c. per lb.

MARRIED,

Near Mt. Vernon, Ritchie Co., Va., March 20, 1856, by Eld. Asa Bee, Mr. ASA BEE, Jr., to Miss CATHERINE M. EHRET, all of the above named place.

DIED,

In Waterford, Conn., April 7th, Deacon OLIVER MAXSON, aged 75 years. In the death of Bro. Maxson the church has lost one of its pillars, and the world a good man; for few were more entitled to that name than Dea. Oliver Maxson. His piety was of that stamp which cheered and blessed all within its reach. He has left a rich legacy behind him in those works which follow them who die in the Lord. COMM.

At Albion Center, Dane Co., Wis, April 11th, Miss MARY BURDICK, daughter of Dea Samuel P. and Polly Burdick, in the 52d year of her age. She embraced religion at the age of 11 years, evinced her attachment to the cause of Christ by a devoted life, and a peaceful and happy death. She gave, in her last moments, $50 to the China Mission, and $50 to the Palestine Mission. S. V.

LETTERS.

S S Griswold, D Clawson, T E Green, D P Curtis ($3 Jan 30,) T G Bailey, Z Campbell, A R Cornwall, F F Randolph, S Vincent, P L Berry, W A Babcock, H H Baker, N M Burdick, M M Ellis, Henry R West, W W Crandall, B Church.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

Ebenezer Knapp, Clear Creek	2 00	13	46
John Williams, Verona Mills	2 00	13	46

WILLIAM M. ROGERS, Treasurer.

OUR ACCOUNTS.—Six numbers more will complete the current volume of the Sabbath Recorder. A good many subscriptions for the present volume, and some for previous volumes, remain unpaid. Bills have been sent to all who owe us, so that no one need be in doubt as to the state of his account. Let each delinquent consider himself earnestly solicited to pay up before the volume ends. It should be borne in mind, that pay for its publications is the only source of income to the Publishing Society; and this is barely sufficient to meet current expenses from year to year. Any neglect on the part of subscribers to pay promptly what is due, is exceedingly embarrassing. It is hoped that only a few, if any, of our subscribers are willing to be accessory to such embarrassment.

Rogers' Hotel and Dining Saloons,
KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.
☞ Rooms to let by the day or week.
CLARKE ROGERS } Late of Fulton Hotel.
HENRY ZOLLVER }

Eastern Association—Executive Committee.

THE Executive Committee of the Eastern Association are requested to meet at the lecture room of the Seventh-day Baptist meeting house in Pawcatuck Village, R. I., on Wednesday, the 30th inst., at 10 o'clock A. M. Those churches which have not reported to the Corresponding Secretary how much they will raise for missionary purposes the present year, are requested to do so previous to said meeting.

S. S. GRISWOLD, Clerk of Ex. Com.

Hudson River Railroad.

ON and after Monday, Jan. 21, 1856, the trains will leave Chambers-st. station as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Through Way Train, 12 M. Express Train 5 P. M. For Poughkeepsie, 9 A. M. and 3.30 P. M. For Peekskill, 5.30 P. M. For Sing Sing, 4 P. M. The Sing Sing, and Peekskill Trains stop at the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. NO TRAIN on SUNDAY. M. L. SYKES, Jr., Superintendent.

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)
ROBERT SEARS, Publisher,
181 William Street, New York.

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M., for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c. D. C. McCALLUM, General Sup't.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid.)
ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Miscellaneous.

The Value of Manures.

From an address delivered by the Hon. Augustus Drum, before the Indiana County Agricultural Society.

ANIMAL MANURE.

Although the nature and efficiency of mineral and vegetable manures ought to be at this day, partially at least, known to most of our farmers, it is a rare case that you see other descriptions used than the ordinary animal manure, and that, too, applied with little more regard to the object to be attained than it was a half century ago. The manure pile lies throughout the whole year by the side of the barn, exposed to every change of weather, reeking out its precious fertilizing properties, with no aid to assist its decomposition, and no attempt to fix or retain in it the powerful volatile essence which gives it value. It is then hurried away to the fields, and spread upon the top of the ground, where it is allowed to lie until the little good it possesses as a fertilizer has left it before it is mixed with the soil, and expected to operate like a charm upon the next harvest. I take it upon me to say, that it has little more effect than to deposit so much barren straw, and that it is a mockery of the gladsome earth that so tenderly feeds her children.

Every body knows the value of manures to land, and it is not so necessary that they should know why they are so valuable as that they should be informed what substances constitute efficient fertilizers, and how they should be applied.

The very general use of animal manure, in form, at least, proves how extensively beneficial it might become, if applied with a proper regard to the qualities it contains. Its essential fertilizing principle is a gas termed ammonia, combined during decomposition, from the nitrogen of the air and the hydrogen of the water, and it is precisely the same element which we undertake to manufacture when we plow down clover and rot it for the purpose of manure, which unhappily is too seldom done. This active principle is also exceedingly volatile, and it will readily be seen that the substance that contained it possesses no longer a single quality of fertility. With every pound of it that evaporates it is said a bushel of wheat is lost, and this is the reason why the ordinary method of making and using manure in this country is of so little value, compared with what it might become; for, in the first place, before the ammonia is engendered at all, the substance must have passed through its regular process of decomposition and fermentation. The clover of the manure pile must have perfectly rotted. This process, it is true, will take time, but it may be greatly hastened by the use of other caustic substances, of which I believe quicklime is one, with little trouble and scarcely any expense. Now, how seldom is this trouble taken, or this expense incurred!

SHELTER FOR THE MANURE HEAP.

But after the ammonia is at once present and fairly transfused through the heap, it is of course vitally important that it should be kept there until the manure is put under the ground. To secure this, I have already mentioned how necessary it is that the pile should be carefully sheltered from the summer's sun and the winter's rain. But, in addition to this precaution, chemistry has furnished us with another and cheap expedient in the oil of vitriol or sulphuric acid, which, when diluted with water, and occasionally sprinkled on the heap, enables it to retain its valuable essence, and thus imparts the quality so highly beneficial. How much of these things is done by us in the preparation of our most familiar manure?

But even in the article of stable manures, our economy is mere wastefulness when contrasted with what it ought to be, and with agricultural economy as it is practiced in other countries. It may be fairly estimated, that one-half of the amount of the refuse of the barn and stable, and that by far the most valuable part of it, the liquid manure, is allowed by sheer carelessness to be lost. The application of this would add immense fertility to our acres; and I can conceive of nothing more easily done than so to construct our buildings, that this wasteful neglect would be obviated. It is regarded as of so much value, in Flanders and Switzerland, that they build large tanks and cisterns to receive it, and their buildings are carefully adapted to its preservation. Why should we not do so too? Can any one say?

COMPOST HEAP.

There is another way of preparing a very highly fertilizing manure, which no farmer should be without for a day. It is the compost heap. The cost of the structure in which to build the heap would be about one-half the cost of a respectable hog-pen, and every pound of waste vegetable and animal matter about the farm should be gathered together and deposited in the heap. The scrapings of dishes and gardens, the offal of the kitchen, the stalks of vegetables, decayed leaves and wood, all waste straw, even a superannuated pair of boots; in short, everything that now goes to loss on a farm, should be thrown into the pile, and left to rot and fester until it becomes a fertilizer of the most extraordinary power. It will soon engender all the acids and alkalies that form the essential elements of vegetation.

A distinguished man once said, in reference to the compost heap, that "the careful farmer should allow nothing to run away in the form of a fluid, or fly away in the form of a smell." In the old agricultural countries of continental Europe, a heap of this character is in every man's barn-yard, and I confess that to me it is wonderful that it is not so here. In forming the heap, all that is necessary is to mix a due proportion of soil with the other heterogeneous substances, then add quicklime in the proportion of about one-tenth or about one fifteenth; but, as some chemists deem lime to be injurious when animal manure is present, it might be as well to use the sulphuric acid, or a strong solution of potash. The heap is once or twice mixed with the spade, to make it fit for the field, and as a manure it cannot be surpassed.

Among the most beneficial substances that can be incorporated in such heaps are the bones of animals, hundreds of pounds of which yearly go to loss on the farm. They contain a substance called phosphate of lime. the tendency of which to stimulate vegetable growth cannot be exceeded. But animal bones are also frequently collected by farmers and burnt like lime, in which state it is camputed that one hundred pounds of it contains as much of the phosphate as is found upon analysis to be contained in two hundred bushels of wheat.

BONE DUST.

A gentleman who cultivates two or three acres of ground, recently told me, that this year he had grown more corn upon two acres than he had been accustomed formerly to raise on his farm. It is, I believe, not generally known, that immense exports of it are made from our eastern cities to England, where they well understand, and act as if they understood, the incalculable importance of these concentrated fertilizers.

Why, some years ago England was on the point of going to war with Sicily—as she actually did, on a simple pretext, with China —for laying an export duty on the sulphur, which was to be largely obtained from the volcanic regions of Sicily, and which the English converted into sulphuric acid for manufacturing and agricultural purposes.

MARL.

In European countries, they go to enormous expense also to obtain marl as a manure, excavating it in France sometimes from pits eighty or ninety feet deep. Now, all this, as the result shows, pays, and pays well; and I have called your attention to the subject of such fertilizers as are most convenient to us, with the earnest hope that we may all be induced to make proper use of the advantages we possess.

LIME AS A MANURE.

I might, if I had the time, speak to much purpose upon the use of lime in its several combinations, as quick lime and plaster, as a fertilizing substance; for, peculiarly adapted as they are to our soil, and now that we are to have the means of cheap transportation through a great portion of our country, there will be no excuse for not procuring it and using it in large quantities for manure. It will of course cost money, but let no one be deterred by that circumstance, for we may be well assured that the judicious application of it will more than repay the expense.

Whatever may be the various opinions respecting the use of lime generally, I imagine there can be now little question of its perfect adaptation to stiff, cold and clayey soils, which need not be dressed with it except at intervals of four or five years. It is a substance, however, subject to rapid chemical changes, and should be spread upon the land very shortly after it has been burnt, and followed at once by the harrow. To obviate such changes, indeed, it is often slacked with salt water, and sprinkled by means of a watering cart upon the land, by which method it is said that ten bushels can be made to do the work of fifty or one hundred bushels used in the ordinary way. The reason of this is, that that solution appears to be essential to induce chemical action. But, used even in the manner that is most common among us, I have little doubt of its great benefit to the soil luxuriant with vegetable life and infested with insects, by decomposing its organic matter and destroying its vermin; to the thin gravelly soil, to be used in far less quantities, by its great capacity in attracting moisture, and by its effect in giving to such earth a much greater consistency; to the cold and clayey soil, by rendering it mellow, warm, and friable; and even to the sandy soil, by acting as a powerful solvent, and thus setting free elements in the soil itself which are most nutritious to vegetation.

Discovery in Oregon and Washington Territories.

Dr. Herman Ellenborgen, a German naturalist of distinction, and lately attached to Gov. Stevens' expedition, communicates the following to the San Francisco Herald:

Among the discoveries of the expeditions organized by Government for the survey of the railroad routes to the Pacific coast, those in natural history are among the most interesting. Indeed, had no other result been obtained than the contribution to science, the expense would still be amply repaid.

* * * * * *

Most of your readers have, I presume, laughed over the story of the Yankee who advertised for exhibition those extraordinary quadrupeds, the Prock and Gyascutus, but I suspect that very few ever heard of the origin of his description as founded on fact. If I recollect right, the first person who made mention of them, although not by name, was Capt. Jonathan Carver, whose voyage to the Rocky Mountains in 1665, is quoted by Mr. Greenbow, and in whose book the name of Oregon was first given to the river now known as the Columbia.

Carver, in his appendix, describing the various animals inhabiting that region, states that: "In the country of the Osnobions (Assinobions) there is a singular beast, of the bigness of a horse, and having hoofs, whereof two legges on one side are alwaies shorter than the other, by which means it is fitted to graze on the steep slopes of the mountains. It is of amazing swiftness, and to catch it the savages doe head it off, whereby it cannot run, but falls over and is so taken." And further: "I was also told of one I did not see. This is like to a bear in size, but covered with a shell as is the tortoise, with many horns along its back. It has great claws and teeth, and is exceeding fierce, eating man and beast."

* * * * * *

The recent scientific examinations connected with the Northern Pacific Railroad exploration and survey, have finally put at rest the question of the existence of these two animals, and my acquisition of perfect specimens has demonstrated their entire accordance with the usual laws of nature and their singular adaption to the circumstances under which they live.

The Prock (*Perocktus Oregoniensis*) is about the size of a mule, and like the quagga and zebra, is properly to be included in the genus equus, having entire hoofs. Its structure differs, however, from that of any known animal in the mode of articulation of the shoulder and hip joints. This peculiar formation allows to the limbs a degree of lateral motion, enabling the animal to elevate or depress them at will; thus when standing upon a sloping surface giving it the appearance of obliquity, as described by Carver, and enabling it to run with singular swiftness along steep mountain sides, where otherwise an animal of its size would find no foothold. In fact. it is hardly supassed in agility by the Bighorn or Rocky Mountain goat. I need scarcely say that the tradition of its being unable to turn, and the consequent method of capture, are mere inventions. It was to this mistake however, that it owes its Greek appellation, derived from the verb to run round, as it was supposed to encircle the mountains in its course.

The Gyascutus, (Gyascutus Washingtoniensis Nobis,) was believed by Carver to be a beast of prey. It is, however, a rodent, partaking also of the characteristics of the Tardigrada, to which belong the Sloths; and notwithstanding its great strength and terrible appearance, is perfectly harmless, its food consisting chiefly of the roots of the *camassia esculentia*, which its powerful nails allow it to dig with great facility. This extraordinary animal is about three feet high, and nine in extreme length, its corrugated tail being about one foot. Its back is covered with a shield, composed of scales, or rather plates, of an osseous substance imposed upon a pachadermatous hide; forming a flexible but secure armor, and having along the dorsal plates a row of short and powerful horns, slightly recurved, which extend from the shoulders to the loins. From these the carved dishes and spoons so common among the Indians of the North are manufactured, and it was these also that suggested the name of the animal itself. Your classical readers will at once recall the "fortis Gyas, fortisque Coanthus" of Virgil, and the description given in the fourth book of Æneid of the buckler carried by the former in battle. It was the *Gyas scutos*, or shield of Gyas, formed of the scales of some poetic monster, from which Geoffrey derived the appellation of this animal, to which I have now added the specific designation.

Shrubbery Planting.

The *Floricultural Cabinet* contains the following practical remarks on this subject, which should interest every one who owns a spot of ground:

The shrubbery may be deemed to be the link which connects the mansion and the lawn to the flower garden or the other parts of a residence, and is most generally planted either for shelter or shade, although often as a screen to hide disagreeable objects, for which the plants which compose it are better suited than for forest or other trees. The shrubbery is often a matter of utility as well as of ornament, in which case it gives the highest satisfaction when formed for the purpose of shutting out the offices or the kitchen garden from the view of the house; for sheltering the latter, or the garden, or for connecting the house with the garden and orchard, the shrubbery becomes useful and interesting.

Sometimes shrubbery is formed merely for the purpose of growing rare shrubs, and for obtaining agreeable walks; in this case it is necessary to be at more pains, and to display a greater degree of taste in the laying of it out than in the formation of the useful shrubbery; in the former case, a tasteful arrangement of plants is a matter of much less importance than the choice and disposition of kinds that will soonest afford shelter, and ultimately become thick screens.

In planting shubberies for screens to hide disagreeable objects, evergreens should form the principal mass, as affording a permanent blind, and giving a cheerful appearance even in winter. A few deciduous shrubs of the most showy sorts, may, however, be with propriety added, which will give relief to the more sombre appearance of the evergreens, particularly while the former are in flower; but from their nature of actually shedding their leaves, and consequently becoming thin in winter, they are not so well calculated for a permanent blind.

In the disposal of shrubs, the tallest should be planted furthest away from the walk or front side, and the lower in stature in front, but if an immediate effect be desired, it is better to elevate the ground than to plant trees of too great an age; it is also a matter of importance that they be planted thickly, as it is an easy task to thin them out when required. Little taste has generally been displayed in the formation of shrubberies as to the production of picturesque beauty; they are planted too generally in the form of sloping banks, without the least natural beauty whatever, although in this way they may answer the purpose of blinding disagreeable objects, that are of little merit when seen from their best side.

Great attention should be paid in their planting, to give them a somewhat natural appearance, and not that of a surface so regular as if they were clipped with garden shears. Straight lines should be avoided as much as possible, and if the margin of the shrubbery should be broken with deep indentures or sinuosities, these should be neatly turfed over and kept mown. The walks which lead through this department should not be to any great distance in a straight line, if it can be avoided, neither should they be too much twisted. There is something so pleasing in a fine, gentle sweep or curve in a road or walk, that few are insensible of its beauty. The breadth of the walks should be regulated according to the length and scale of the place, as too narrow walks for principal ones have never a good effect; they should scarcely, under any circumstances, be less than five feet wide, and unless for terrace walks of great length, should not be more than eight; if of greater breadth, they assume the appearance of a carriage-drive, and if narrower, they dwindle in appearance to a mere foot path.

Grape Cultivation in the United States.

The Philadelphia *United States Gazette* thinks that "there is a probability that greatly increased attention will be given this Spring in several of the Southern States, particularly in Tennessee, Georgia and South Carolina, to the culture of the grape. The soil and climate in that part of the country are eminently adapted to the successful growth of the vine, as is already proven by the actual experiment. The most valuable wine grapes known in America, the Catawba, is indigenous to the State of North Carolina, and thrives with equal luxuriance throughout that isothermel belt of country. The efforts of Messrs. Longworth, Buchanan, and other gentlemen in Cincinnati, backed by the large amount of capital at their disposal, have awakened very general interest in the new department of agriculture, and imparted to it an impetus which augurs important results.

Added to this, the repeated disastrous failures in the European wine crop, and the annihilation of vineyards before the progress of disease, suggests the possibility of having to rely on home production. Prices are stimulated, and the demand for a pure article, under the increased temptation to adulterate and imitate, becomes more urgent. The culture of green-house grapes, within twenty miles of Boston, is quite extensive, and the amount of money invested in houses for their growth must be reckoned by hundreds of thousands of dollars. There are several growers who have annual crops of from one to five tons, commanding a price of $1 to $3 the pound, varying with the season in which the crop is ripened. Many varieties are grown, embracing all the most delicious kinds cultivated in the East and in tropical climates in the open air.

Swiss Courting.

When a girl has arrived at marriageable age, the young men of the village assemble by consent on a given night at the gallery of the chalet in which the fair one resides. This creates no manner of surprise in the minds of her parents, who not only wink at the practice, but are never better pleased than when the charms of their daughter attract the greatest number of admirers. Their arrival is soon announced by sundry taps at the different windows. After the family in the house has been roused and dressed (for the scene usually takes place at midnight, when they have all retired to rest,) the window of the room prepared for the occasion, in which the girl is first alone, is opened. Then parley commences, of rather a boisterous description; each man in turn urges his suit with all the eloquence and art of which he is possessed. The fair one hesitates, doubts, asks questions, but comes to no decision. She then invites the party to partake of a repast of cakes and kirsch wasser, which is prepared for them on the balcony. Indeed, this entertainment, with the strong water of the cherry, forms a prominent feature in the proceedings of the night.

After having regaled themselves for some time, during which and through the window she has made use of all the witchery of woman's art, she feigns a desire to get rid of them, and will sometimes call for her parents to accomplish this object. The youths, however, are not to be put off, for, according to the custom of the country, they have come here for the express purpose of compelling her, on that night, there and then, to make up her mind, and to declare the object of her choice.

At length, after a further parley, her heart is touched, or at least she pretends it is, by the favored swain. After certain preliminaries between the girl and her parents, her lover is admitted through the window, where the affiance is signed and sealed, but not delivered, in the presence of both father and mether By consent of all parties, the ceremony is not to extend over a couple of hours, when, after a second jollification with Kirsch wasser, they all retire—the happy man to bless his stars, but the rejected to console themselves with the hope that at the next tournament in love-making they may succeed better. In general, the girl's decision is taken in good part by all, and is regarded as decisive.—*Heathland's Switzerland.*

Cultivation of the Pine.

In a recent number of the *New England Farmer*, the editor of that paper, Hon. Simon Brown, while answering the inquiries of a correspondent in regard to the cultivation of the Pine, alludes to a thrifty young plantation of this valuable forest tree of our planting, which he noticed during his visit here last season, and asks for some information in regard to our mode of cultivation. We are happy to give the method we pursued in the planting of a tract of about ten acres—if thereby we shall encourage even one individual to attempt a similar enterprise, which, when properly begun and carried out, is sure to return an hundred fold.

In the spring of 1845, we fenced off half a tract of about twenty acres of land almost exhausted from its manner of cultivation in many former years. The half we selected for planting had not been used for grain or other crops for several years, the soil being light, and sandy, and from the high location of the ground, difficult and expensive to cultivate. It was at the time we speak of mostly covered with mosses and whortleberry bushes. We began its reformation from a brown, bleak, and almost useless pasture, as it then was, to a very thrifty and beautiful plantation of Pines, as it now is—the admiration of all eyes capable of appreciating "woodland beauties"—by first having shallow furrows plowed to the depth of about five inches, and four feet apart. The hills for the pine seed were then prepared in these furrows in the same manner as for corn, into which three or four seeds were dropped and covered with about half an inch of soil—the hills were four feet apart. A man and boy planted in this way about four acres a day.

Not more than two-thirds of the seed came up after the first planting, and did not grow over four inches during the first season. The first shoots much resemble those of an onion and are nearly as tender. In the autumn and spring following this first planting those portions of the ground where the seed had failed to germinate were replanted, and in due time were seen the tender shoots of the Pine, which now covers the entire ground with a dense and thrifty body of trees.

During the first three years, their growth was quite slow, but after that period, they averaged an annual increase of more than a foot in height, and at the present time, many of the trees are twelve feet in height, and the majority will average about nine feet.

Others in this vicinity have been equally successful, by a similar mode of cultivation. Amos Otis, Esq., of Yarmouth, has planted about two hundred acres, and is one of the most experienced cultivators of the Pine in this section of the State. He planted upon land of a light loamy or sandy soil, which was for the most part exhausted, and of but little value for any other purpose. The experience of our cultivators has shown that land worn out and too poor to sward over thickly, is best adapted to the growth of the Pitch Pine. The months of March and April are considered the most favorable for planting, although Mr. Otis says he has planted in every month in the year—the summer months excepted.

Where a small lot of land for experiment is taken, a plow may be run through the land, making parallel furrows about six feet apart, then take a common planting machine, such as is used far planting beets or onions, and run it along in the *bottom of the furrows*, dropping three or four seeds in a hill, about a foot apart, covering them not more than an inch deep. If all the seed vegetate, there will be a much greater number of trees than can grow on the land, but they will die out in the course of a few years.

Large tracts of worn-out land in Barnstable county, that were worth comparatively nothing, have been planted, within the past fifteen years, with the Pitch Pine. In most cases these experiments have been very successful.

The seed can be procured by gathering the cones of the Pine in the autumn, and keeping them in a *warm, dry place*, until a leisure season in the winter, when the seeds, which have a small wing attached to each, can be easily rubbed out. When planting by hand it is not necessary to rub off this wing, which must be done, if the seed is dropped by a seed planter.

The growth of wood upon the ten acres we planted in the spring of '45 has been so rapid as greatly to increase its value. The value of the ten acres, at that time, was less than $75. Within a few months, $300 has been offered and refused, for the same land.

We know of no way in which the many thousand acres of poor, sandy lands in this State, can be made so valuable, as by planting them with White or Pitch Pine seed. Such was the favor with which the Barnstable County Agricultural Society viewed the experiment we made in planting the seed of the Pitch Pine, that a liberal premium was awarded therefor in 1853. We trust similar experiments to our own will be made by many others, and with equal success.—*Barnstable Patriot.*

Potatoes.

Butt Ends *vs.* Seed Ends.—John Brown, of L. I., communicates the following to the *Granite Farmer*: "Last spring I planted four rows of equal length, side by side, with two varieties of potatoes. In one row I planted none but the seed ends, so-called, including about one-third of the potatoes, and in the next row I planted the butt ends of the same potatoes. I had one row of seed ends and one row of butt ends of a variety called Peach Blows. The yield of these four rows was as follows: Pink Eyes, butt ends, 217 pounds; seed ends, 170; Peach Blows, butt ends, 225; seed ends, 179. The potatoes from the butt ends were much larger than those from the seed ends, and appeared to be from a week to ten days earlier. This result corresponds with that of my former experiments. Had the whole field been planted with butt ends, the yield would have been more than five hundred bushels to the acre. I also planted two rows next to the above; in one of which I put only large potatoes, half a tuber in each hill, cut lengthwise so as to divide the eyes equally, and in the other row I dropped only small potatoes, one in each hill. From the former I dug 181 pounds, and from the latter 134 pounds. I should add, that the average yield of the field was about 180 pounds to the row; and that large (not the very largest) potatoes were used for seed cut lengthwise, with a half of a tuber in each hill."

Subsoiling vs. Draining.—There is no doubt but a soil made deep and mellow will resist both drought and deluge better than a thin, hard soil. The reason is obvious. If you have two inches of soil on a board, or in a box, half an hour's rain will make it complete mud, and a half-day's sunshine will convert that mud into hard lumps, especially if the soil is clay, or any considerable part clay. But if instead of two inches it is two feet, it will take a long rain to wet it through, and no part of it will be mud, until there is water enough to make it all mud, and then in drying, no part will be very dry until the whole is dry. A deep mellow soil will bear a larger amount of rain without destroying its loose, porous character to such a degree as to exclude the air. So far as we have observed, a piece of dry, gravelly soil, if plowed deeply, will stand a drought better than wet clay soil if plowed shallow, and underlaid by clay or hard pan.—*Culturist and Gazette.*

Ivory.—Few of our lady readers, while they peep so bewitchingly over the tips of their ivory fans, or ply their fingers so nimbly and gracefully over the white keys of the piano, are wont to cast a thought toward the manner in which this material is procured, the quantities of it that are annually sold, and the number of noble animals which are yearly slain for the purpose of supplying the constantly increasing demand. Mr. Dalton, a celebrated Sheffield manufacturer, estimates that the annual consumption of ivory in the town of Sheffield alone, is about 180 tons, equal in value to $30,000, and requiring the labor of 500 persons to work it up for trade. The number of tusks to make up this amount of ivory is 45,000; and according to this, the number of elephants slaughtered every year for the supply of the Sheffield market is 22,000.

Saltpetre for Butter and Meat.—What office does saltpetre perform in the preservation of meat and butter that is not as well performed by the use of common salt alone? This is an important question, because if saltpetre exerts no special preservative influence not to be found in common salt, then it should not be used in butter nor in the brine of meat, because it has a bitter taste, and it must impart more or less of it to the butter especially. We have been assured by those who have packed butter with and without saltpetre, that it is much better not to use it for this purpose. The best plan for salting butter is to use the purest salt only; heat it on the fire before using it, to drive off all the moisture, and apply it warm, when working the butter.

During the year ending June 30, 1855, Great Britain and Ireland bought of the United States property to the value of $150,000,000, exclusive of what was taken by British colonies and dependencies; France and her colonies took more than $33,000,000; Austria $1,903,600; Russia less than half a million.

Daniel Webster once said that "the sin of America was the sin of suretyship." There is written in mournful letters in the history of every man the record of suffering by endorsements. It would make the most extraordinary chapter in human experience if the incidents of this feature in business were written.

The purification of sea water is one of the most important desiderata with science. According to Cards, it may be entirely deprived of its nauseous taste by infiltration through powdered charcoal. A siphon-shaped vessel is recommended—the coal to occupy the long arm.

If you act a part truly great, you may expect that men of mean spirits, who cannot reach you, will endeavor by detraction to pull you down to their level. But posterity will do you justice; for envy will die with you.

The *Worcester Spy* says that at a recent auction sale in Spencer, Mass., potatoes were sold at prices ranging from 17 to 26 cents a bushel, and that they can be bought in any quantity in that vicinity for 33 cents a bushel.

The Indian depredations in Northern Mexico continue without abatement. Col. Senagua surprised a party of Lipans, killed forty, and took one hundred prisoners.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and *revulsion in the system as to more* than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

NOW.

There's a thought forever in the soul,
And we cannot drive it away;
It comes in the stillness of the night,
And amid the scenes of the day.
We revel in dreams of future bliss,
And at Memory's altar bow,
But a voice is about, where'er we stray—
'T is the voice of the phantom Now.

Our life is bright with the beautiful loves,
And the joyous hopes of to-day,
Yet we linger in tears 'mong the wrecks of the past,
That are scatterred over our way;
Forgetting the bow in the sky above,
To the darkness of earth we bow,
Unheeding the smile that would cheer our hearts,
The smile of the angel Now.

We gaze at the golden meed received
By the spirit that labors long,
And sigh for the voices that herald his name,
From the lips of a brilliant throng.
Yet carelessly toward the fancied isles,
We are speeding our onward prow,
Forgetting that fame can only be reached
Through the waves of the ocean Now.

The world is about us, the beautiful world,
And we long for its active life;
Like spirits brave, that have passed before,
To do and dare in the strife.
We mourn, that by souls of immortal mould,
The golden chains should be riven,
That bind man's heart to his fellow man,
And the brotherhood to Heaven.

Would we carry among these tangled scenes
The germs of a holier love,
And plant a tree by the surging streams,
That shall scatter fruit from above—
Let us seek for the beautiful and true,
While at virtue's shrine we bow,
And list to the voice that is ever near—
The voice of the phantom Now.

RESPECTABILITY OF LABOR.

An Address delivered before the Farmers' and Mechanics' Club of New Market, N. J., January 7th, 1856, by Nathan Vars. Published by order of the Club.

GENTLEMEN:

Useful labor was the primitive employment of man. Even in his state of primeval innocence and glory, as he came pure and spotless from the hand of his Creator, he had the duty assigned him of keeping and dressing his own paridisiacal home. We do not, however, suppose his business to have been very laborious, but sufficient to afford that employment so necessary to the mind of man. But after his rebellion, and consequent expulsion from the garden in which he had been placed, what before served to occupy his thoughts as a pastime, became a stern necessity. The earth, suffering under the malediction of the Creator, no longer brought forth her fruits unaided by the directing hand of man; and with those fearful words sounding in his ears, "Cursed be the ground for thy sake; in sorrow shalt thou eat of it all the days of thy life; thorns also and thistles shall it bring forth to thee; and thou shalt eat the herb of the field; in the sweat of thy face shalt thou eat thy bread;" he went forth to battle amid the scenes of life, and to obtain his subsistence as best he might. The effects of that curse are still distinctly seen and felt. While we have spanning the horizon that beautiful bow of promise, giving the assurance that another deluge shall not again destroy the inhabitants of earth, but that summer and winter, seed time and harvest, shall continue to the end of time; so we have in the spontaneous springing up and growth of thorns, thistles, and the multifarious noxious weeds, a standing memento of the fallen condition of our race. Labor then became necessary to provide for the wants and to supply the necessities of man's nature; and the cultivation of the earth, as to her alone man is indebted for his means of support, was his first employment. It was soon found that to till the soil with ease and success, something more was necessary than simply man's physical nature; and mechanical aid was called in to provide utensils of husbandry and comfortable dwellings. From these humble sources have arisen all that is necessary in nature, desirable in luxury, or beautiful in art, which have since blessed individuals, communities, and nations. From these, as a fountain far back in the history of the world, has issued that stream, which, with continually increasing onward and ceaseless flow, has brought to our nation, to our homes, to our firesides, all that has so much contributed to the comfort of our persons, the enjoyment of our minds, or the gratification of our senses.

In the early history of man, before he had forgotten or outgrown his sense of dependence on the common arts of industry for comfort and support, distinctions in rank were unknown. It was not until some, by the exercise of certain powers of mind they possessed or cultivated in a greater degree than others; or, what is more probable, by the exertion of a superior physical power, obtained an advantage over their more feeble associates, that these distinctions were introduced. But after their introduction, the ancients appear to have exercised more judgment than has been exhibited in more modern times, with all the boasted improvements. Formerly, and even down to the time of the Greeks and Romans, and perhaps later, a man's rank was not measured so much by the number of his acres, or pounds, as by his morality, or rather by his attainments in science or art, or by the number and character of his achievements. But man's ambitious, unsatisfied mind, was not content to enjoy the advantages of life equally, and in common with his fellow. Some, by superior prowess, sought out and obtained an undue advantage over those in every circumstance of birth their equal. These were employed in what began to be considered the more menial duties of life, while those who were enabled to exercise this power over them, spent their time in luxurious or riotous living, or in efforts to farther accomplish their ambitious ends. In the scramble for power, they soon ceased to rely on their own individual efforts exclusively, but brought to their aid those they had gained to their interest, or reduced to their control. The more successful at length established themselves as kings and potentates, while others less so were content to remain petty princes or feudal chiefs, owing something of an allegiance to a superior power, but still having rights and an authority of their own, which they exercised over those in subjection to them. The effect of this is still severely felt in nearly every country of the old world; elevating to power a titled nobility, having no respect for the rights or happiness of the people by whom they are sustained and supported. Having no qualifications of body or mind to commend them to distinction, they are indebted for their position to the mere accident of birth, by being able to trace their descent from one who far back in the ancestral line was perhaps a half savage bloody usurper. One result has been to disparage and degrade labor, while it has elevated to wealth and authority those who have no particular qualifications for the stations they hold; and, in many cases, through a long line of degenerating influences, are really inferior to the intelligent laboring man of the present day. This is seen in the weak, crooked, perverse counsels, which, from time to time, have prevailed in the eastern courts, and in the management of the recent sanguinary war. It may safely be said, there could be found in the United States a congress of ladies who could conduct an undertaking of even that magnitude more wisely, not perhaps in directing operations in the field, they not being accustomed to a scratch on so large a scale, but in regulating the counsels at home.

Although, in the more enlightened nature of our institutions, and in the more correct opinions which here prevail, we have no titled nobility, yet public sentiment is not free from error, even here. In the estimation of many, wealth is made the measure of a man's respectability, and is considered as conferring a degree of rank which enables its possessor to look down with a feeling of self-superiority, if not contempt, on the hardy sons and daughters of toil, and has served to establish degrees of rank, or caste, in society, from the millionaire who rolls through Broadway in voluptuous magnificence, down to him who is possessed of his thousands, or even hundreds. This spirit is too generally prevalent to have escaped general notice. How many a belle, arrayed in all the gaudy trappings of art, and floating amid etherial visions of her own personal attractions, inflated with that consequential importance which wealth is supposed to confer, considers it pollution to come in contact with the humble, yet oftentimes more virtuous and intelligent daughters of the honest tradesman or mechanic. And now many a matron confines the intercourse of herself and family to a select few, considered upon an equality with herself, and thinks it degrading to exercise the common acts of courtesy towards those she falsely considers her inferiors in rank, either because they do not possess the requisite amount of wealth to render them respectable, or are the subjects of honest labor, and that too to administer to her own comfort, and to relieve her from those duties she would otherwise have necessarily to perform. But this feeling is by no means confined to the ladies. Man himself, with all his boasted faculties, instead of relying for the consequential position he seeks to maintain, upon the powers of his mind, the virtue of his character, or the benevolence of his position, depends upon his wealth to give him respectability and influence. This division of society into caste, on account of the different degrees of wealth, or the different degrees of respectability attached to professions and employments, is arbitrary, unreal in its character, and deceptive in its influence; and the idea that honest labor is of all employments the most degrading, is a total subversion of the first principles of justice and a sound philosophy. If distinctions in rank are allowable, would not truth and justice yield the preëminence to those who contribute most to individual happiness and national prosperity.

Labor is respectable, then, for its antiquity, for having been the primitive employment of man. It is also respectable as being an honest and legitimate means of personal comfort and support. Who so justly entitled to his living, and to the necessaries, and even luxuries of life, as he who earns them by the labor of his hands; and how much to be preferred, by the honorable and high-minded, to the low arts of cunning and deceit, by which many, too lazy or self-important to work, seek to obtain theirs. As it is said of "the *rest* of the laboring man," that it "is sweet," so also of all his enjoyments of body and mind. What he enjoys is rightfully his own, because the reward of his own toil; and is there not much of respectability and also of satisfaction in all this?

Again, labor is respectable, as it affords an employment for the mind that is really salutary in its influence. The human mind is characterized by a restless activity, which can not be fettered nor subdued. If it is not employed in the contemplation of subjects exalting in their nature, and wholesome in their effects, it will seek out others less virtuous, and of a debasing tendency. The man with no regular employment, is never long contented. He roams from place to place, and from scene to scene, in search of something to occupy his thoughts, without which he is ill at ease. A vacuum in nature is not more difficult to maintain, than a mind free from thought. Theaters, gambling saloons, drinking houses, and all the multiplied machinery of crime and debauchery, in a great measure owe their erection and support to this quality of the human mind. In want of something, he knows not what, to drive off the ennui he feels stealing over him, he frequents those places of public resort and recreation, and thus, in his efforts to kill time, is brought under those demoralizing influences which destroy both body and soul. Thousands have been ruined for want of some regular healthful employment for the mind. While a man's business, during his hours of toil, requires a portion of his thoughts, he is not a slave to his employment. Ample time is yet afforded for profitable thought; and in his hours of relaxation he can go to his studies and investigations with a zest to which others are strangers. Allow me, in this connection, to express the opinion, that owing to the influence the employment exerts over the mind, for open-hearted benevolence, disinterested philanthropy, and all the noble qualities of the mind and heart, the laboring portion of community justly stand preëminent. Whenever, in order to obtain a living, or accomplish his ends, a man's business leads him to drive a close bargain, to occasionally take a little advantage, be a little deceptive, tell a few white lies, mixed with others of a darker hue—temptations to which the dependent on honest labor is less exposed—it will necessarily, and almost without his own knowledge or consent, exert a controlling influence in the formation of his character.

Labor is also respectable, as affording a state of the most complete independence. The provision for the support of nature is in the hands of the farmer. It is his, by proprietorship—it is his by right. But owing to the mutual dependence, existing between the farmer and mechanic, the latter comes in for his share of the products of the earth; while, on the other hand, the mechanic and artizan hold first in their possession the articles of convenience, of taste, and of luxury. Thus it is seen, that the proprietorship of the means of comfort and support, is first in the hard hands of toil. Their necessities are first to be supplied, and the surplus, if any remains, is turned over to others. Should a famine, like that in the days of Joseph, visit the land, who would be the first to suffer from its effects? Surely, not the thriving farmer, nor the industrious mechanic. Thus will more fully appear, what has before been stated, the dependence of all classes upon industrial pursuits. Then why not yield to those individuals the position so hardly earned and honestly maintained. Let those who refuse this, be consistent, and while they affect to despise labor, let them dispense with its products altogether. But let them be deprived only for a day of the supplies from one of the many sources of comfort, and let that be the farmer, and their overflowing confidence in their own immaculate persons and condition will be very much shaken. At the time of the morning meal, let the delicate Miss, by whom the carpeted earth is scarcely good enough to be trodden; and the flaunting dandy, who sports his cane, his mustache, and Havana, have brought in, and laid upon the table, heretofore laden with the products of the farm, the delicate fabrics, hats, laces, jewelry, &c., &c., and the fine vests, broadcloths, shirt collars, and cravats, with which they are wont to adorn their persons; let the matron have spread before her the equally rich and scarcely less gaudy trappings—her cards of invitation, and marks of distinction from the honorable sources with which she stands connected; let the professional man, who regards labor a menial employment, have set before him his books and authors; the man of literary turn, his manuscripts and periodicals; and the man of wealth, who esteems riches the only source of greatness, his gold and silver, his bonds, notes and securities; and then let them set down to a repast. Perhaps, if, as is often the case, they had spent the previous night in a debauch, or as is common, had kept very late hours, and partaken to a surfeit of the dainties of the table, they might sit and gloat over the evidences of their own greatness, and enjoy it finely. But let the accustomed hour to dine arrive, and let them again take seats around the board thus profusely laden, and the calls of nature becoming more imperious, they begin to realize something of the aching void which these things for display, upon which they so much pride themselves, can never fill; and they turn with an anxious eye to the door to see a servant—who by this time would be a most welcome visitor—enter laden with dishes smoking with the bounties of mother earth. Failing to find satisfaction here, let them arise and pace their marble halls, and march with stately tread through the lofty and sumptuously furnished rooms, or review their splendid equipage—but still finding nothing to satisfy the cravings of an appetite now well sharpened by abstinence. The mind turns away to the comfortable home of the farmer, and his plenteous board, laden with the healthful, satisfying products of his own independent labor; and a mortified sense of dependence begins to steal over the bending, yet still haughty spirit. But time passes on, and the time for the evening entertainment arrives. Again seated around the now hateful board, and the calls of nature becoming too imperious to be longer silenced, it is made fully to appear to the crushed and sinking spirit, that they are possessed in common with others of a physical nature, dependent on the commonest laborer for its support. On the other hand, grant them the contributions of the farmer, and deprive them of those of the mechanic; divest them of their finery, and turn them defenseless in the streets, with plenty of food, but that in its crude, unprepared state, and what a pitiful spectacle would they present; deprive them of both, and no creature, not even among the beasts that perish, so helpless as they.

Lastly—labor is respectable as being the source of national wealth and prosperity. Having seen that labor was the primitive employment of man, being necessary to his happiness and support, it is not difficult to discover the truth of this last proposition. But the best argument on this point may be drawn from actual observation. Let the mind then, in one expansive flight, take a survey of our own flourishing country. Visit our cities; view their stately edifices and costly mansions; pass through their streets, and marts, and consider the innumerable articles of taste and luxury for the comfort and convenience of man; look in upon their markets teeming with the more substantial articles of consumption and support; glance over New England, cold and sterile as she may in places appear, and see the landscape dotted with factories and manufacturing villages; listen to the hum of machinery, the whiz of the spindle, and the rattle of the loom; continue through northern New York, and list to the lowing of the herds, the bleating of the flocks, and see them contributing their portion in the richly flavored cheese, the golden butter, and the fleecy wool; pass along through New Jersey, not forgetting even New Market, humble it is true, in her pretensions, and witness, having in remembrance the munificence of the past, the fields of grain, the towering corn, and busily employed inhabitants; and still on, along our seaboard, and through the Southern and central portions of our Union, and witness the abundant rewards of labor; and then, if not already satisfied, turn your attention to the growing and luxuriant West, rich in every thing desirable on earth; and see the results of labor; cities rising above the plain, as if by the hand of magic; the broad prairies covered with the waving grain, and yellow harvest. And then, once again, turn to our canals, railroads, and marine, all requiring labor in their construction, and see them laden to overflowing with the products of toil. Bring all this before the mind, and consider it the result of labor; labor, it is true, combined with capital, without which much of it could never have been accomplished; still, in the fact of their production and construction they are the results of labor; and then say, if you can, that labor is not respectable—yea, more, that to be one of the producing class, to form a part of this massive power-wheel upon which all the arts of trade, the advantages of commerce, the sources of wealth and prosperity, even all the comforts of our earthly existence, depends, is not really a post of honor.

Thus much we have at present to say concerning the respectability of labor, more perhaps than some may think the subject to call for, particularly in that portion in which we have taken occasion to speak of the divisions of society. It is with great pleasure admitted, that here in New Market these distinctions are hardly known, but a few hours' ride will take us where they do exist, in a degree far beyond our feeble powers of description. They exist in no particular location, and are confined to no particular employment; wealth, however, being understood, with some rare exceptions, to be the crowning glory of a man's excellence, so much so, that the same erroneous views have invaded the ranks of toil; the rich farmer, who can number his acres by hundreds, being often considered a little more respectable than his neighbor by his side, who cultivates his little patch of earth. In the introduction and perpetuation of these distinctions, the fault rests not alone with those familiarly called the higher class. Those in the more humble walks of life have been too ready to yield to claims thus arrogantly made, and to assent to opinions so philosophically unsound. The laboring community have too long looked up with a kind of reverential awe, to those who have taken the chief seats. We would have them respected; we would give to all the consideration which their real worth or station in life merit; but while we would be friendly to all, we are disposed to adopt the sentiment of the Friends, and "pay homage to no man." In this we would degrade none, but elevate all. We would not be understood to advocate an indiscriminate level, irrespective of character, as virtuous or vicious, but we zealously contend, that a man's employment, providing it is an honest one, does not militate against his respectability. There is, and ever ought to be, a distinction between the good and bad, between virtue and vice, between gentlemanly bearing and lady-like deportment, and brutish insensibility and indulgence. We appreciate, as highly as any, the refinements of society, the beautiful graces of the mind and heart, flowing out through every act of life; but these are not necessarily the outgrowth of wealth and station, but are open to all. In fine, on this point, we would place the claims to respectability on a rational basis; and let him who is the most virtuous, most distinguished for piety, for sterling integrity and moral worth; in short, who has most of heaven in his composition, be the greatest, and that too, in the spirit of that word which says, "Let him who would be greatest among you be your servant."

But lest I should be thought to incline in an opposite direction, a few remarks on this, and I have done. Far be it from me to cast any unkind reflections or speak disrespectfully of any. I respect all, at least so far as the morality of their characters or business will permit. Neither am I contending for a standard of preëminence on the side of labor, though I am honestly of the opinion, for reasons before stated, and many more which might be mentioned, that the balance of argument preponderates on that side. Nor would I be understood that unassisted labor could be really prosperous. All classes of society, all the different professions and trades, bear a mutual relation to each other, and a state of dependence exists between them; all are equally entitled to consideration. We could not do without the minister to direct our wayward feet in paths of obedience; without the teacher to instruct ourselves and children; the physician to prescribe remedies for the diseases of our bodies; the lawyer to defend our rights; the merchant to effect the interchange of commodities; the capitalist to furnish means to carry on the various enterprises; and the getleman of fortune, whom a train of successful business has placed beyond the necessity of further active employment; we want him for the means he is from time to time bestowing in charities and for public purposes, for his cheering presence and gentle encouragements, and for the beauties so grateful to the senses which his means and taste present in his splendid mansion, his neat cottage and pleasant grounds, which, though his individual property, are yet in a sense a common stock, contributing as they do to the beauty of the scenery, affording pleasure ever in their contemplation, without which earth would lose many of her charms. Through all the net-work of society, all are useful, all necessary, except the rum seller, whose business, so far from being beneficial, is eminently a curse, and that nondescript caricature on humanity, called a loafer, who, with nothing to do, and nothing to do it with, seems formed for no earthly purpose, but, like the drone in the hive, to eat up and to consume the labor of others.

THE SAINT'S GLORIFIED BODY.

We shall be like Christ *in those spiritual bodies* in which we shall arise. The Scripture does not leave us in uncertainty on this point. Hear the chief apostle, "Our conversation is in heaven, from whence also we look for the Saviour, the Lord Jesus Christ, who shall change our vile body'—how the assurance begins to make his speech glow—'our vile body, that it may be fashioned like unto his glorious body, according to the working whereby he is able,' (is he not speaking of an omnipotent power?) 'able to subdue all things unto himself.' Did not 'that other disciple,' whom Jesus loved, mean to include this same transcendent change, when he also looked forward to the consummation of all things—saying, 'Beloved, now are we the sons of God, and it doth not yet appear what we shall be, but we know that when he shall appear, we shall be like him, for we shall see him as he is.'

'Whom he did foreknow,' declares Paul again, 'he also did predestinate to be conformed to the image of his Son, that he might be the first-born among many brethren.' Is it altogether of a moral likeness that this Scripture discourses? Why is it then added, in such significant language, 'that he might be *the first born among many brethren*?' This is language that refers to Christ's resurrection—as he was *the first fruits of them that slept*, his resurrection in the body, delivering the corruptible dust from the power of the grave. And as a prelude to this sublime assertion of God's eternal purpose to make us like his Son, it is the Apostle himself that sighs forth this long desire and expectation—'we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body.' It cannot be doubted, then, that this is a Scripture hope—a revealed and accredited truth. And we see a new meaning, thus, in that final resurrection argument of Paul, which is not so much a piece of reasoning, as a flash of Heaven's own light, a sunbeam of inspiration—'We shall not all sleep, but we shall be changed. * * * For this coruptible,'—of what is he speaking, the soul or the BODY.—'must put on incorruption, and this mortal'—is the soul mortal—must put on immortality.'

Jesus rose from the dead with his rescued body; from the Mount of Ascension he went up with that body, the disciples being witnesses, through the parting heavens, till a bright cloud, his chariot of glory, received him from their sight, and with that spiritualized, glorified, deified humanity, sat down at the right hand of Majesty. Our body is to be '*like unto his own glorious body.*'

Something of that '*gloriousness* he designed once to reveal to mortal eyes. Three chosen followers stood with him on Mount Tabor—they knew not for what august display of his power or his grace. And while they waited with palpitating heart and quickened breath, he *was transfigured before them.* They saw for a little, as long as their dazzled vision could bear the overpowering splendor—*his glorious body*—the model of that with which they too should be clothed, when they should finally and forever see him as he is. And what was it they saw? The record is, 'his face did shine as the sun, and his raiment was white as light.' Was not this the same form that one of them gazed upon again in the Apocalypse, and sketched it on that wonderous canvas, that we too might behold at least the portraiture? 'Being turned,' he says, 'I saw one like unto the Son of Man.' And this is the sketch his pencil drew. 'His head and his hair were white like wool, as white as snow, his eyes were as a flame of fire, his feet like unto fine brass, as if they burned in a furnace, * * his countenance was as the sun shineth in his strength.' And he could gaze no longer, but fell at his feet as one dead.

So shall our vile body be changed. From this handiwork of God, all the grossness of 'flesh and blood' shall disappear. Every infirmity shall be gone. That which is mortal in us the grave shall hide forever. No more shall there be any inlet to disease or pain. No more wasting of strength and vigor—no more withering of bloom and beauty. No quick, declining youth—no fleeting of prime manhood—no weary brain—no quivering nerves—no tired sinews—no aching loins—no encroaching old age. There shall be no lame—no halt—no blind—no deaf—no hectic flush—no feeble knees—no pallor on cheek or lips. There shall be needed no couches for outworn frames, no opiates for restless pulses, no panacea for fleshly ills, no more bondage unto the fear of death, no ghastly coming of the pale, remorseless king, no ignominy of burial. The last enemy, whose all-obtruding, everywhere-haunting presence has shadowed the life that now is in all its years, is vanquished forever. Forever invulnerable shall we be to mortality. This vile body, where the fevers lurk, whose humors so clog the soul, whose chills shake us in winter's reign, whose beaded drops pay tribute to the firey summer sun, wrapt now in furs, and now cooled by sea baths or mountain airs, breaking down in some of its forces with every strain, obliging us to stop and repair, against whose weakness we contend all life through, by-and-by to be food for worms—*our vile body*, vile in the charm of its utmost symmetry, softness and grace, because mortal and corruptible—the grave's odor hanging around it, however decked and beautified and scented—shall be fashioned like unto his glorious body. And there we shall walk the pave of the city, visible to all the gathered residents, like the King's Son. The angels will not be like him thus—the immigrants from other shores of starry worlds will not, be like him thus—*we only*. He took on him the seed of Abraham. This will be our distinction, unshared—seen of all the heavenly hosts—like the glorious body of the Master. Each of us will have his own individual face—on which will shine and speak the lineaments of his own individual soul. Paul will be Paul, grand and heroic—John, John tender and loving—Peter, Peter ardent and eager—we shall be our own sanctified selves, but all will be clothed and garmented in Christ's glorified humanity—that external nature, of which the Bible speaks in parodox—that '*spiritual body*.' Surely, surely—we shall be satisfied with this. The sense of beauty—the sense of vigor—the sense of elastic and joyous health—the sense of lightness, and swiftness, and strength—the sense of an unincumbered matchless vehicle for the soul, immortal as the soul, instead of this groaning, crumbling, burdensome, panting earth-work—and patterned after that to which no other creature may aspire—we 'shall be satisfied when we awake with this likeness.'—*Congregationalist.*

FATHERS IN THE MINISTRY.

Our readers have doubtless heard often of Dr. Nott, of Franklin, Conn., whose long pastorate quite outran that of his venerable cotemporary of Franklin, Mass., the sturdy and eccentric Dr. Emmons. An interesting sketch of this patriarch, who was spared to a green old age, and almost looked upon his second century, we take from the *N. Y. Times*:

On the 13th of March, 1782, Samuel Nott, a young graduate of Yale College, was "ordained in the ministry" over the First Ecclesiastical Society in this place. He was the third pastor of the Society, to which each of his predecessors had ministered about thirty years and then died. The new minister, according to the custom of our ancestors, who were less ambitious of change than we are, was settled for life, on an annual salary of one hundred pounds, Colonial currency—or three hundred and thirty-three dollars and thirty-three cents. He was evidently an industrious and faithful pastor.

We have before us his sixtieth anniversary sermon, delivered in 1842, which is 'most affectionately addressed to the children, grand-children, and great grand-children of those who invited me to settle with them in the gospel ministry.' Here, reviewing as an old patriarch, the events of the last sixty years past, he quaintly says that he has "not been kept from the house of God during that long period but eleven Sabbaths—six of them by the lung fever, in 1812, and five by breaking a little of the skin on the back of my right hand."

On the occasion of this sermon, the church choir sung the same hymns, and in the same old familiar tunes of *Lenox* and *Stockbridge*, that were sung at the ordination, sixty years previously. But there were none of that old choir now in the singers' seats. They were all dead but two; two infirm old ladies, seated near the ancient pulpit, insensible to that music which they sang before the rose color of life was blanched, and straining their dull ears to catch the old pastor's story.

It is remarked that the Senior Deacon of the Church, at this time, was an infant in arms when Dr. Nott was ordained.

Dr. Nott continued his pastoral labors in Franklin, unaided until 1849, on the same yearly salary of $333 33. He had long since passed the three-score years and ten. All his first parishioners were dead, and he stood alone. For several years he had been intermarrying the third generation of those that settled him. He had likewise married four of his own children, and, what is more remarkable, had married his own father to a second wife. His life has now extended from the old contented into the modern and changeable state of society; and the time had come when the church naturally desired a new minister.

Some facts are narrated concerning the manner in which they accomplished their desires, which do not generally travel beyond the bounds of so small a parish. The old doctor held that he was "settled for life." But as he continued to live far beyond the ordinary limits of his race, and contrary to the example of all his old parishioners, the young folks were troubled, and found it necessary to make some compromise. After mutual consultation, they succeded in arranging the matter according to their own satisfaction; agreeing to continue the old pastor on half-pay, and to settle a new pastor, as colleague, on a yearly salary of $400, which was to be increased to $500 as soon as the old pastor should die! It was a regular Yankee bargin—"a cute one" on the part of the Society—and smacks very strongly of the land of warming pans and wooden clocks.

Dr. Nott died in May, '52, at the ripe old age of ninty-eight years—of which he had preached nearly seventy years from the same pulpit. He had accumulated a small property by economy, by a little farming, and by preparing young men for college—after the custom of Connecticut clergymen of the old school, who were the best educated men in the country.

After the doctor's death, the executor of the estate found that he had never received any of the half-pay, on which he was retired from regular service, three years before. The executor, of course, made claim of the Society; but the Society declined payment. The matter was protracted through two or three years; and, at last, the executor, anticipating no amicable settlement of the claim, called to his aid that mysterious master—the law. The fore-casting shadow of a law suit started the ecclesiastical society of Franklin to their feet. They desired to compromise—genuine Yankees, that they were—and, after many weary caucuses, and much running to and fro, they offered to settle by paying one-half of the claim. The executor desiring to avoid the labyrinths of the law, accepted the offer, and the payment, we learn, has just been made! and so the contract formed in 1782 is just completed and closed.

We apprehend that many of our readers, in country parishes, can appreciate this bit of financial history. Such experiences are, to the shame of parishioners, very common,

MANNER IN WHICH DIVINE TRUTH IS REVEALED.

Every one has observed that doctrinal truth, instead of being stated, in the Scriptures, in a systematic form, is presented incidentally. The Bible contains nothing like a Body of Divinity, a Creed or Confession of Faith. There is no laying down of articles, or propounding of dogmas, one after another, to be subscribed to by the people of God. The Epistles to the Romans and the Hebrews come the nearest to anything like systematic theology, of all the books of Scripture.

Some have from this derived an argument against the use of Creeds and Systems of Divinity, maintaining that the Holy Spirit would have furnished some formula of doctrine for the churches, if it were right to have any. But we do not think the argument warranted. It were as wise to object to a system of botany, because the flowers, plants and trees of the earth are not grouped together in classes, but are scattered over the earth in endless variety. Indeed, as a system of botany does not alter the *actual position* of the products of nature, but leaves them where the Creator placed them, to declare his glory, so neither does a systematic arrangement of doctrine alter the actual position of divine truth in the Scriptures. And when we contemplate the position of divine truth, or the manner in which it is communicated in the Scriptures, we can hardly fail to confess, that the Bible is from the same Hand that formed the earth and its glories. But we are in no more danger of coming to this conclusion with respect to a Creed, than we are with respect to a system of botany; and though we may have greater reverence for the one than we do for the other, it is only because we set a higher value upon the subject of which it treats. "Thou hast magnified thy WORD above all thy name." (Ps. 138 : 2.)

In regard to the manner in which the Scriptures communicate divine truth, there must be some reason for it, whether we can tell what it is, or not. We suggest this thought:—That all God's intercourse with mankind is through a Covenant. The great burden of the Inspired Book, accordingly, is the history of the covenant in its different stages of development. That which the inspired writers teach is, not so much what God's character is in the abstract, as what He has pledged himself to be in covenant. The infinite mercy of God, whereby he pardons and saves sinners, is not simply an element or attribute of the Divine nature which the Prophets have discovered—an attribute inherent in God, and working to the salvation of mankind, whether made known or not—it is rather the promise of a covenant, and what the profoundest gift of inspiration would fail to discover, were it not for the covenant which pledges it.

The sum of all theology would, therefore, seem to be the knowledge of that covenant, by which sinners are saved. This being granted, what is the most natural supposition with regard to the manner in which God would communicate his word? If our hope of salvation rested merely upon what God is in the abstract, it might not be an unreasonable presumption that He would give us the knowledge of himself in some systematic form. But as it rests upon the promise of a covenant, it seems much more likely that He would simply develop this covenant, leaving it to this development to make him known "as a just God and a Saviour."

A little farther observation will show, that the development could not well be other than *historical*. If developed at all, it must be developed in its application to those who are saved by it; in its application to them under all the deversified circumstances of life. Accordingly, it was an early arrangement of the Almighty, to separate from the rest of mankind a people for himself. To them, and through them to the nations of the earth, he manifested his gracious purpose to save those that believe. He manifested it through a covenant, in which He pledged his perfections that in Abraham's seed all the families of the earth should be blessed. Owing to this arrangement, the whole system of divine revelation is but the history of this covenant in its various stages of progress and development; in recording which history, doctrinal truth becomes evolved, in incidental statements bearing upon the facts narrated.

On the whole, the communication of divine truth in the peculiar manner characteristic of the Scriptures, seems to be a matter of necessity, growing out of the covenant form in which God reveals himself to his peope. We do not now recall to mind *any* truth, presented for our acceptance in the form of a naked proposition. The being of God, his perfections, his Moral Government, and Accountability of Rational Creatures, the Depravity of Man, the Atonement, important as they all are, are never stated otherwise than incidentally, or in some practical connection. It seems to be taken for granted, in the Bible, that the character of God in the abstract is sufficiently declarad by the work of creation; thus leaving it for the inspired writers simply to draw out the history of Christ and his people in their relation to that covenant which unfolds the everlasting love of God, and on which the hope of eternal life depends.

T. B. B.

ASSOCIATIONAL MEETINGS.

The time hastens when our Associations will convene, to deliberate upon the interests of the Redeemer's kingdom. We look forward to these seasons with great pleasure. We anticipate meeting our friends, and having our minds enlightened, and our hearts cheered. At these gatherings we rejoice to see the business conducted in order, to listen to the discussion of the reformatory measures of the day, and to know that our churches are in harmony, and that some have been blessed with the revival spirit. But we are not satisfied with this only; nor is the Association answering the end for which it was organized, unless it is extending its influence, and gathering sinners from the ranks of the adversary. An army in a foreign field, that labor only to sustain themselves in their entrenchments, will either be overpowered or starved out. The Association is an army, organized for the express purpose of making vigorous onsets upon the enemy's camp. Unless this labor is kept distinctly before the mind, we may not hope to enlarge our borders or increase the number and power of our churches.

The Association may look for an increase in the number of its churches, upon the same principle that the church looks for an increase in the number of its members. Churches do not rise without an effort on their part, neither will the Association gain strength without corresponding effort. Many of the churches that are now independent, or able to aid others, were once occupied as missionary fields. We have no reason to doubt that it would be pleasing to God, and add greatly to our individual happiness, if the Association would sustain the most efficient man in it to travel as an evangelist, to look up the scattered members of Christ's flock; and to carry the message of mercy into fields unoccupied. The Lord has always blessed such labor, and we may be assured He always will. Nothing would more endear our annual meetings to our hearts, than the report of such labor. It would give life and power to all our exercises. Even the trials experienced in the prosecution of such work, would lead us to appreciate our privileges at home, while the overflowing gratitude from hearts benefited by such kindly aid, would be to us a stream of holy joy. And as the wants and condition of those for whom Christ died were portrayed before us, our sympathies would be enlisted, our prayers more earnest, and our contributions more liberal.

Who would not anticipate our annual gatherings as missionary meetings, and feel, as they go, that they are going up to Jerusalem to meet the Lord of Hosts, assured that He will pour out His Spirit upon us, while we are all of one accord in one place? We may never hope to see the Association taking a deep hold upon the minds of the people, or exhibiting truly the light of the world, unless at our annual gatherings the conversion of sinners is made the all-absorbing theme.

L. M. C.

WHY ANXIOUS TO BE RICH?

Perhaps few have any justifiable reason to give for the absorbing desire for wealth which characterizes both the church and the world. Individuals try, sometimes, to make benevolence appear to be the great motive for their wishes. They would do so much good to the poor and miserable, and above all, make their riches tell upon the interests of the church and the cause of God in the world. Some have families they wish amply to provide for, and endow with fortunes, at least enough to give them an equal place in society with others of wealth and distinction. They do not wish them to enter upon life as they did, and toil on amid difficulties and disadvantages to acquire respectability and make some important station their own. Some few labor to get rich from a mere sordid desire for wealth. They get all they can, and keep it and hoard it—perhaps bury it. To use it, either for themselves or others, is a thought that never troubles their brain, and it would seem, from their intense love of their treasure, that they only regret that they cannot take it with them when they die. There are some selfish souls, who aim at riches from a mere personal regard—that they may have a place with the rich—that individuals in humbler life may look up to them as their superiors—that they may have all they crave at their command—and have no care for the future.

We have no wish for a place among the classes of money-cravers above mentioned. Very few among the first class, if God allows them to get rich, prove so benevolent. It may be that riches have eaten up, like a canker-worm, the good intentions or pretension of their hearts, and wealth obtained and increased has made them less generous, and increasingly so, until all that is given for any good cause—the cause of Christ not excepted—is given with a niggardly hand and an unwelcome heart. The rich, as a mass, do not support the various benevolent and religious interests of the day, but those whose means are moderate and daily obtained by habits of industry and care. From these, though in small and limited portions, flows the constant supply for the carrying on of the cause of Christ and benevolence. It may be that the wealth of the higher classes, as they are called, flows in an indirect manner into the great reservoir of Christian benevolence, for that wealth is circulated and made use of for purposes of usefulness in the church by those who have received it for labor or in trade; but no thanks, either from man or God, to the rich.

As to those who are anxious to acquire riches for their families, however they may be prompted by parental affection, perhaps no greater mistake can be made, of a temporal kind, spiritually considered. Let those who love their families give them something better than wealth—educate them for common and useful life, as far as possible—educate them religiously, and instil into their minds the great principles of truth and righteousness, enforced by a living example—teach them habits of industry—put them in possession of some lawful means of living—and you have given them a greater fortune than ten thousand dollars. After a proper foundation is laid for a child's temporal interests and a useful life, it is better to use your own property for the general good than hoard it in iron chests, or banks, or land, to make your children aristocrats or profligates when you are dead. There is a passage of Solomon, in the 5th of Ecclesiastes, 13th and 14th verses, which men would do well to read who are hoarding wealth for their children—yea, ponder it well, and see, too, if striking illustrations and proofs of it cannot be seen frequently in human life. "There is a sore evil which I have seen under the sun, namely, riches kept for the owners thereof to their hurt. But those riches perish by evil travail; and he begetteth a son, and there is nothing in his hand."

The person who belongs to the third class of money-cravers and obtainers, is almost too contemptible for remark. Shall we style him a man, or even human? Is he not too low in the scale of intelligences to own as our fellow? Has he not lost every thing that demands either respect or pity? A miser—despicable creature! He has gold and wealth locked up from every one; he uses it not for himself—much less for others; it answers no reasonable purpose; it will not shield him from the cold; it will not satisfy his hunger; it will not comfort him in affliction; it will do nothing but curse him, both for time and eternity. It may be that a more fearful retribution awaits this man than others. He has locked up God's property, which ought to have been enjoyed by himself, and scattered abroad for the carrying on of business, for the produce of the earth, for the relief of suffering humanity, and the diffusion of divine truth. He has excluded God from his soul, and wrapped up that immortal principle in a heap of shining dust, until it has become as hard and as cold as the dust itself, and the coffer that holds it. This may be a picture of the extreme miser, but we must remember, that a hoarding spirit is miserly, and may terminate in as sordid a soul as ever clutched his gold with his dying grasp.

In regard to the man who aims at wealth as a source of enjoyment and gratification, and expects to find in its possession satisfaction to his soul, his soul must be a very little one, if he realizes his expectations. Riches bring satisfactory honors and pleasures! Riches fill an immortal mind! Strange delusion! Folly in the extreme! A moral impossibility! Was a soul ever made happy by the possession of wealth? Let the voice and decision of the world universal settle the question, Who is the happiest man? Common sense, and the experience of mankind, point out the man who obtains by his industry and honest trading a fair and comfortable livelihood for himself and dependents, and eventually sends out into the world a well-disciplined and religiously trained family, of industrious habits, and possessed of qualifications to carry on the various enterprises of the world and the church, and thus prove a blessing to themselves and others. More emphatically and supremely happy is he who looks upon riches as vanity and dust, and looks up to heaven as his final abode and portion. If we want satisfactory good, let us look in a very different direction from that of wealth, or disappointment is certain. Upon the whole, there is no sound reason to be adduced for an anxious desire to be rich.

"Come heaven, and fill my vast desires;
My soul, pursue the sovereign good;
She was all made of heavenly fires,
Nor can she live on meaner food."

GEO. R. WHEELER.

SALEM, N. J.

"SELF-DEFENSE."

In reply to the queries of "One of the Subscribers," upon my article headed "Jehuism," I would suggest, that he write over his own signature, that we may know who it is that we are to answer. He wishes an explanation of the following:

1. "Does the writer regard the Old Testament doctrines abolished?" I answer, Most assuredly, yes, if they conflict with the teaching of Christ. Does my querist advocate the eye for an eye and tooth for a tooth doctrine, or polygamy, now. Many things were permitted in the Old Testament, because of the hardness of men's hearts, which are forbidden in the New Testament. When will he learn, that we are not now under law, but under grace?

2. "Does he (S. S. G.) deny that all men are born with certain inalienable rights, among which are life, liberty, and the pursuit of happiness?" I do not. But what then? Does that give me the right to kill mine enemy, and bury him in the sand, as Moses did? Or am I to die praying for him, as *Christ* did? I pause for a reply.

3. "Suppose thieves break into your house at night," &c. I would endeavor to convince them of their wrong, and if I failed, I would seek to inquire whether they actually needed some of my property for their own use, and if they did, I certainly ought to assist them. If they still insisted on not only taking my money, but my life also, I hope I should lay down my life for the Christ principle, and like Stephen pray for them. What does my opponent suppose Christ would have done in a similar case?

4. "Suppose 50,000 Indians from the Rocky Mountains," &c. I believe it would be murder in the first degree. Does my opponent suppose that Christianity sanctions robbing the red man of his lands, and then his murder by a set of hired soldiers, whose duty as such is to kill and butcher those whom their masters shall say? Christianity knows no United States troops.

5. "Would suffering death," &c. Yes, if it was done for the purpose of demonstrating the Christ principle of non-resistance. Did not Christ suffer death at the hands of thieves and robbers? Will my opponent read the history and character of the Jews, as drawn by their prophets and Jesus Christ? Does my opponent suppose national thieves and robbers better than individual ones? I wish he would come out and openly define and defend his position.

S. S. G.

OUR YOUTH—WHY DO THEY APOSTATIZE?

It has long been a matter of reflection and inquiry, especially in our denomination, why our young men should be so subject to apostacy. Those who have been blessed with Christian parents, and early led to embrace the truths of the Gospel, and hope in a Saviour's dying love, are turning traitors to these immortal truths, and drinking with carnel glee the dregs of skepticism. Parents, whose happiness has been almost complete, in anticipating the future usefulness and influence of a devoted child, are now made to mourn in the bitterest disappointment, because of his change of principle, and newly adopted infidel sentiments. Churches, who have been looking forward to some promising young man as the embodiment of the sentiments of our people, in hopes of his becoming a zealous champion for truth, are made sorrowful, as they learn of his sad shipwreck of faith; while the world looks on with contempt, and point the ever ready finger of scorn at his forsaken religion.

For every effect there *must* be a *cause*; and it is the duty of every individual, on learning of the presence of a moral evil, to seek, first the *cause*, then the *remedy*.

With respect to the subject in question, the cause, or causes, at the foundation of this apostacy, perhaps, may not be definitely known. Yet I fear that a candid investigation of the *facts* will indicate a cause *nearer home* than many are apt to imagine, and be productive of a charge, at the 'final day of accounts,' which none will be willing to meet. In almost every society and church, there are young men of strong intellectual capacities, with aspirations high and noble, who at a certain period of life may by a little *encouragement* be easily led on to great usefulness; or, by *discouragement* at this period, may be unsuspectingly thrown from their integrity, and hurled into the yawning abyss of spiritual death and eternal ruin. There are also, in nearly every society and church, evil disposed individuals, who hypocritically act under the cloak of religion as Satan's agents in prowling around the precincts of Zion, destroying the 'lambs of the flock,' by drenching them in floods of calumny, thus casting a reproach upon the cause of Christ, and effectually blocking the wheels of Christianity, by crushing the youthful hopes and aspirations of an innocent victim. Show me an individual who despises the young simply because of their *youth*, and who takes unwearied pains to trumpet each youthful inconsistency into the ears of every one disposed to listen; and I will show you, either an *intentional* enemy to Christianity, or a *weak minded* soul, who indulges the 'unruly member' to a harmful extent. Such reckless gossipers do far more injury to religion than its open opposers; and it is to be feared that very many of the young will, without hesitation, point to *them* as the first cause of this apostacy. If such be the case, how deep must be their repentance before they can even *hope* for pardon! And unless forgiven, what burning shame and anguish will follow them to their final doom!

'But,' says one, 'it is a good way to *try* them—if such trifles will kill them, they would never succeed in after life.' Ah! a sad mistake—a dangerous and too often fatal experiment! Moral strength, like *physical* strength, is to be *acquired*. Exercise is good, and productive of health; but overdoing is an evil, and results in many ills. So with our mental and *moral* culture; sufficient amount of exercise is beneficial, but *more* than this is highly injurious. *True*, the young should press on in the *right*, never heeding the false accusations of their calumniators, yet, being unaided by experience, and perhaps naturally diffident, they are easily thrown off their guard, and soon embrace that doctrine, or *ism*, which seems most likely to throw off responsibility, and render life a dreary pastime.

O that we might all respond with a hearty good will to the holy injunction, 'Love thy neighbor as thyself,' and that we, as a people, might not in any way 'bear false witness against our neighbor,' or our neighbor's *children*. Then would 'brotherly love continue;' heralds of mercy would stand on Zion's walls, peace reign within, and truth prevail.

L. E. L.

ENGLISH THEOLOGICAL EDUCATION.—Rev. J. C. Ryle, the popular author, who is a clergyman of the English establishment, thus characterizes the average theological education of the clergy of that body:

"I must in fairness concede, that there are probably no Protestant mininisters on earth so badly trained for the work of preaching as the clergy of the Church of England. The great majority of us were never trained at all! We are sent forth to do the most difficult work in the world, to address large bodies of men in a popular style, about the most important of all subjects, the salvation of their souls. But we are never taught how to do it. We receive no instruction about the composition of a sermon. We get no hints about style, manner, elocution, and the like points, on which an university degree is no help at all. Our sermons must necessarily be nothing better at first than experiments."

DAMASCUS.—Rev. J. L. Porter, an Irish Presbyterian missionary, stationed at Damascus, gives the following description of the city so memorable in Scripture history:

"Graceful minarets and swelling domes, surmounted by gilded crescents, rise up in every direction from the confused mass of terraced roofs, while in some places their glittering tops just appear above the deep green foliage, like diamonds in the midst of emeralds. In the centre of all stands the noble pile of the great mosque, and near it may be seen the massive towers and battlemented walls of the castle. Away on the south the eye follows the long narrow suburb of the Medan, at the extremity of which is the 'Gate of God,' where the great pilgrim caravan, on each returning year, takes leave of the city. The buildings of Damascus are almost all of snowy whiteness, and this contrasts well with the surrounding foliage. The gardens and orchards, which have been so long and so justly celebrated, encompass the city, and extend on both sides of the Barada some miles eastward. They cover an area at least twenty-five miles in circuit, and make the environs an earthly paradise. The varied tints of the foliage, and of the blossoms and fruit in their season, greatly enhance the beauty of the picture. The sombre hue of lhe olive, and the deep green of the walnut, are finely relieved by the lighter shade of the apricot, the silvery sheen of the poplar, and the purple tint of the pomegranate; while lofty cone-like cypresses appear at intervals, and a few palm trees here and there raise up their graceful heads. The variously colored foliage thus surrounding the bright city and the smooth plain beyond, now bounded by naked hills, and now mingling with the sky on the far distant horizon, and the wavey atmosphere that makes forest, plain, and mountain tremble, gives a softness and an ærial beauty to the whole scene that captivates the mind of the beholder. The moment the traveler leaves the environs and enters the gate of Damascus, the illusion is gone!"

COSTLY BIBLE.—At a recent sale in England of the library of a deceased gentleman named John Albison, of Boston, a Bible was sold which cost originally, with the oak cabinet containing it, the sum of four thousand guineas. It was sold under the hammer for $2,750. It consisted of forty-five volumes, elegantly bound, and illustrated by at least six thousand engravings, executed by about six hundred of the most celebrated engravers, and from the works of eminent artists from the year 1450 to the time of its completion. Mr. Bowyer, a publisher, commenced the work of getting up this edition of the Bible, in London, in the year 1800, and spent more than twenty-four years at it. He produced two folio copies, one of which is in the British Museum, in seven volumes. It does not contain the engravings mentioned, but the magnificence of its printing, illuminating, binding, etc., makes it a curiosity. The other copy is the one sold as above stated. The cost of the engravings was $16,500. It is contained in a richly carved antique oak cabinet, which cost $750. This splendid work is known by the name of the Bowyer Bible.

THE ONLY REPRESENTATIVES OF RELIGIOUS LIBERTY.—A Prussian correspondent of the *London Christian Times*, writing of the German Baptists, says:

"The only really free churches we have are the Baptists. Without belonging to them, I highly esteem and love them, as the only representatives of religious liberty, and the only Associations where the spiritual gifts of laymen are cultivated. It is not one of the least bitter fruits connected with the establishment, that those gifts are not only grossly neglected, but even kept down among laymen, in consequence of which, though we have many Christians, we have no Christian society. This is the principal point of view under which I desire that the Baptist churches may multiply and spread in Germany. With respect to practical and vital Christianity, they leave, I think, all our Christian churches and associations far behind them."

THE SUNDAY LAW.—The last attempt of which we have heard to take advantage of the Sunday Law, was before the Court of Common Pleas in New York, in the case of Joseph Nathan *vs* William Welsh. This was an action to recover compensation for losses suffered by the plaintiff on account of the negligence of the defendant. It appeared that on the 10th of June last, the latter hired from the former a horse and buggy waggon, which were to be returned in good condition the same night to the stable of the plaintiff. The property not coming home, search was made for it on the following day, when the horse and wagon were found in a bad plight; the latter was broken, and the horse had been over-driven and very badly treated—lame, and suffering from the whip. On the part of the defence it was set up, that as the contract for the hire of the horse and wagon was made *on a Sunday*, the plaintiff could not recover. His Honor said that this action was not based on a contract, but was for the ill-treatment of the horse and the damage done to the wagon. The Jury awarded the plaintiff $225 and costs.

THE PASSOVER of the Jews occurred last week, and was observed with the usual ceremonies by those residing in New York. Commencing with the 20th of April, it closed on the 28th. The first two days, and the last two, were observed with great rigor and numerous significant religious ceremonies.

☞ A postscript to a letter received just as our paper is going to press, informs us of the death of Eld. HIRAM CORNWELL, of Bolivar, Allegany Co., N. Y. It occurred on Fifth-day last, April 24th.

SENSIBLE ADVICE.—A man does not need to live long in New York to learn that many of his friends in the country wish they were with him in the city. The editor of the *N. Y. Tribune* appears to have considerable experience in that line. One of his articles on the subject closes with the following sensible advice:

"We have no fanatical preference for farming over other pursuits; he who has a good trade and can find work thereat should follow it; but let him not hang about the great overcrowded cities in idle quest of it, and hold up his dish for soup next Winter because a million of people cannot find work on a few square miles of paving-stones. If you have work where you are, stay there and do it, carefully saving the means of seeking it elsewhere whenever this opportunity shall be foreclosed. If you have a large family of young children, and find yourself barely able to support them in good times, by reason of the high rents and dear food of cities, try to make your way to some Western village or settlement where bread is cheaper and a shelter may be bought or built for about the cost of a year's rent in this seaside Babylon. GET LAND, as soon as possible, all of you who have it not; for he who owns only an acre near enough to his work to serve him as a homestead, can always find himself in employment for a month in which it is denied him elsewhere. Cities are factitious, and wages precarious; but he who lives in his own house, though a humble one, and tills his own land, though but a garden, may thank Heaven for the rudiments of a solid and virtuous independence."

ASSOCIATIONAL MEETINGS.—The next annual meeting of the Seventh-day Baptist Eastern Association is to be held with the Church in Shiloh, N. J., commencing on Fifth-day, May 22d. The Central Association meets with the Church at Adams, N. Y., on Fifth-day, June 12th. The Western Association meets with the Second Church in Alfred, N. Y., on Fifth-day, June 26th. Official notices of these meetings will probably soon be furnished by the Secretaries of the several Associations.

RELIGIOUS INTELLIGENCE.

A number of young men of the Roman Catholic churches in New York and Brooklyn held several meetings, a few weeks since, to organize an association for mutual improvement, supposing not only that they had a right to form such a union, but also that there would be nothing wrong or wicked in the enterprise. Several priests, on hearing of the proceedings, remonstrated with the young men, and discouraged the movement. The organizers, however, were proceeding to perfect their scheme, when suddenly they received the bishop's mandate to stop, drop their tools, and retire from the field. He denounced and prohibited the undertaking.

The receipts of the American Home Missionary Society for the financial year ending April 1st, were $193,544 37—exceeding the receipts of the preceding year by $13,411 68. The receipts have been more than doubled since 1842. The total of receipts for the thirty years since its organization, is $3,102,048·77. The number of its missionaries has increased, during the same period, from 169 to more than 1000; and their fields of labor are to be found in every State and Territory of the Union.

A correspondent of the *Presbyterian Herald* is authorized by a gentleman who headed the first subscription for Danville Seminary with $1000, to say that he will be one of fifty to give $500 for the purpose of endowing another Professorship, the subscription to be filled up within one year; and that he will be one of thirty persons to pay to the Institution fifty dollars per annum for five years to employ another Professor.

A correspondent of the *Independent*, writing from Jerseyville, Ill., says: "The Presbyterian church here is enjoying a very precious revival. Over sixty have attended our inquiry meetings, most of whom are now indulging hope in Christ. Not far from two hundred have been present from day to day in our morning prayer-meetings, and these have been seasons of deep interest."

The Elkton (Ky.) *Banner* says that the will of L. B. Leavell, deceased, one of the wealthiest citizens of our country, was recorded on Monday last. After providing for the emancipation of several of his slaves, he disposed of the entire residue of his large estate, said to be worth at least $100,000, to three or four of them, who, by the provisions of the will, are to be carried to the city of New York as soon as practicable.

Rev. Cyrus Hamlin is expected to pay a visit to his native country soon. He has been connected with the mission in Constantinople for eighteen years, and during this period has been eminently successful in his labor. He will bring with him his two eldest daughters, to be educated in this country.

The Charleston (Va.) *Advocate* learns that by the will of the late Capt. Jos. Terrell, who died in this place last Tuesday, eighty or ninety very valuable free negroes are emancipated, and ample provision made for their removal to Liberia, or to some one of the free States.

Of eighty clergymen who died in the year 1855, one-half had passed "three score and ten," thus confirming the generally received opinion of statisticians that "theologians are the longest lived of all the members of the human family."

The treasury of the Baptist Missionary Union was, during the month of March, replenished beyond expectation. The amount of the receipts exceeded $35,000, thus reducing the debt about $25,000. The receipts for the financial year will be about $120,000.

The Church on Lee-avenue, Brooklyn, has been enjoying a revival. Twenty-six were recently added to that infant church on confession, the majority of whom were connected with the Sabbath-school.

Rev. Dr. Smith, of Connecticut, who is rapidly traveling on towards ninety, preached at the Capitol lately for Rev. Chaplain Waldo, aged ninety-four. It would be difficult to say which is the most alert of the two.

The Rev. Henry Highland Garnet, Colored Missionary of the United Presbyterian Church of Scotland, is lecturing in Boston, on "Jamaica and Freedom."

The people of Leonardsville, Madison Co., N. Y., are making an effort to raise $400 for the purpose of placing a Bell and Town Clock on the Seventh-day Baptist meeting-house.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, APRIL 21.

In the Senate, the correspondence of Gov. Stephens of Washington Territory with the Secretary of War was called for. The Judiciary Committee reported against the bill to amend the Naturalization Laws. Mr. Clay then commenced a speech on the Kansas question. His remarks were chiefly in vindication of the course of the President.

In the **House**, the Senate's amendments to the Deficiency bill were all disposed of. The amendment appropriating $300,000 for continuing the Washington Aqueduct was not concurred in.

THIRD-DAY, APRIL 22.

In the **Senate**, the House bill amending the Bounty Land law of 1855 was passed. It provides for the admission of parol testimony in all cases where no records exist.

In the House, a memorial was presented from Capt. John Graham, and others, praying for compensation for injuries resulting from the detention of the steamer United States, charged with being connected with the Kinney Expedition. The greater portion of the Senate's amendments to the Deficiency Appropriation bill were rejected. About fifty bills for River and Harbor Improvements, and for Post Office and Custom House purposes, were reported. Memorials were presented from citizens of Pennsylvania and New Jersey, praying that the provisions of the steamboat law be extended to ferry boats.

FOURTH-DAY, APRIL 23.

In the **Senate** the Three Million Armament bill was considered, Messrs. Bell, Weller, Hale and Cass taking part in the discussion. The matter was finally postponed, and the subject of the Naval Board was taken up, when Mr. Houston made a humorous and sarcastic speech in condemnation of its action.

In the **House**, Mr. Thurston moved a reconsideration of the vote by which the Senate's amendment to the Deficiency bill, in relation to the Public Printing, was adopted. The motion was tabled, after debate. Mr. Stanton made a speech against Slavery extension.

FIFTH-DAY, APRIL 24.

In the **Senate**, a resolution was adopted, calling on the Secretary of State for information relative to the Cooly trade, and the sacrifice of human life attending the traffic.—The Three Million Armament bill was discussed, but was finally laid aside, and Mr. Houston resumed his remarks condemnatory of the action of the Naval Board.

In the **House**, the Senate bill for remitting or refunding duties paid on goods destroyed by fire, was reported from the Committee on Commerce, and referred to the Committee of the Whole. Mr. Ritchie made a speech in favor of the Constitutional right of Congress to legislate on the subject of slavery in the Territories.

SIXTH-DAY, APRIL 25.

In the **Senate**, a resolution was adopted instructing the Committee on Judiciary to inquire into the expediency of repealing the act of June, 1848, amending the Naturalization act of 1813. Several private bills were passed, including one for the relief of Geo. P. Marsh, after which the Senate adjourned till Second-day.

The **House** spent the whole day upon the bill to remit or refund the duties on all goods or merchandize in original packages, destroyed by fire. Adjourned till Second-day.

European News.

One week later news from Europe has been received.

That portion of the news which, on this side of the Atlantic, possesses the greatest interest, is the intelligence that the two vessels dispatched by the British Government in search of the *Pacific*, had returned without finding any trace of the lost steamer. One of the searching ships spoke the American ship *Jacob Badger*, from Calcutta for London, leaking badly. He pumped her out and lent a Midshipman and eight men to navigate her into port.

The political news from Europe has some features of interest. Two of the most important questions yet discussed are at present under the consideration of the Paris Congress. One is the organization of the Principalities, which, according to the Vienna programme, must be in conformity "with the wishes, wants, and interests of the people—acknowledged by the contracting powers, and sanctioned by the Sultan." Another and still more important matter is that of the condition of Italy, brought under the consideration of the Congress by the Sardinian Plenipotentiary. The boldness with which Sardinia has laid bare the corruption of the Italian Governments, and the tyranny, political and religious, beneath which the people are groaning, will draw forth the admiration of all free nations.

Letters from St. Petersburg mention that the Russian Government has permitted the exportation of native produce, so that the trade between the late belligerent nations may be considered as re-established. Peace, it is said, has been hailed by the citizens of St. Petersburg with great demonstrations of joy.

A British Order in Council raises the blockade of all the Russian ports, and permits the free resumption of commerce in all articles.

A considerable reduction of the French army, as soon as all matters are arranged, is contemplated. There will still be in possession of France 610,000 effective men; this number will be brought down to 400,000 directly after the treaty of peace is signed.

A Ukase has been issued by the Czar, to the effect that the two fleets hitherto maintained by Russia in the Black Sea and the Sea of Azoff, are not to be reinstated. The whole Naval Administration for that quarter seems to be suppressed.

Copenhagen advices state that the English Cabinet have officially notified to the Danish Government their refusal to agree to the capitalization of the Sound Dues, and the determination of Great Britain to await other and more acceptable propositions. Russia and Oldenberg set the example a few weeks since. The question of the settlement makes no progress, and will probably stand over till it is seen what action the United States will take.

The Supreme Court.

A case has recently been argued, and is soon to be decided, by the Supreme Court of the United States, growing out of the following facts. A slave in Missouri was taken by his master to Rock Island, in the State of Illinois, and from thence to Council Bluffs, in Iowa. The slave married a slave woman. A child was born to this couple while in Council Bluffs, and one also upon the Missouri while in transit, over the free waters of the country. When back in Missouri the slaves claimed their freedom. The Washington correspondent of the *Independent*, speaking of this case, says:

"Under the former decision of this Court, the voluntary taking of slaves to a free State by the master, gave them freedom. The Court, I understand, by a majority of Judges, has overuled all its previous decisions, and has decided that the persons are still slaves, *i e.*, the law of a slave State holds a slave in bondage *while* in a free State. This is the gist of it."

We believe that cases are numerous in which slaves, *while* in Free States, having been taken thither voluntarily by their masters, have claimed and been awarded their freedom. Whether the Supreme Court has ever decided that the law of the Free State operated upon the slave so that, after his return to a slave State, he could still claim his freedom, we are not aware. If the Court has now gone to the length stated in the above extract, and decided that the law of a slave State holds a slave in bondage *while in a Free State*, it revolutionizes the whole theory and practice of our Government. It destroys everything like State Sovereignty, in the *Free* States, and subjects all law, State and National, to the law of Slavery. That the unchecked course of the Slavery Propaganda would eventually lead to this, we have never doubted; but we were not prepared for so early a decree of the Supreme Court, establishing Slavery as the supreme power in the Republic. Such decisions discourage the hope, which prudent men have cherished, that the contests growing out of Slavery might have a peaceful solution. They point unerringly to black and bloody issues.—*N. Y. Times.*

New York School Law.—An important act amendatory of the School Laws was passed by the late Legislature of New York It abolishes the office of Town Superintendent, and substitutes that of School Commissioner. By the requirements of the new law all the duties heretofore imposed upon the Town Superintendent—such as forming, altering, consolidating and abolishing School districts, building School-houses, selling district property, and attending to the interests of the Schools generally—are to be performed by the new-made Commissioners. The first election of the new officers will be made in June next, by the Boards of Supervisors; after which they will be elected by the people at the general election. The salary, to be paid out of the income of the U. S. Deposit Fund, is fixed at $500 per annum, although it can be increased by the Board of Supervisors—such increase to be charged upon the district and to be assessed *pro rata* upon the town. The expenses of the Commissioners, for which allowance may be made by the Supervisors, are limited to $100.

The Rush to Kansas.—A letter from Kansas to the N. Y. *Times*, dated March 24th, says:—

"Emigration from the Southern and Eastern States has already commenced—a few drops before a plentiful shower. Two gentlemen arrived to-day from the State of Virginia, who report that 1500 will emigrate from that State to this some time during the present season. A few gentlemen from Kentucky report a larger numbe just on the eve of departure from that State destined for Kansas. A gentleman from Wisconsin states that about 2000 families will emigrate to Kansas from that State, and so on. All prophesy a tremendous emigration to this State from different quarters of the Union before next January."

SUMMARY.

Mr. Lemuel Shattuck, the Statistician, has addressed a memorial to the Boston Council on the subject of the small pox, and the very general neglect of vaccination for its prevention. He shows that during the 26 years prior to 1837, the small pox caused the death in that city of 37 persons only. During the 12 years ending 1849, since the repeal of the act compelling vaccination, it caused the death of 533 persons. The remedy which Mr. Shattuck proposes is a *general, compulsory* vaccination of the whole of the inhabitants, *enforced* by the authority of the city and conducted by a staff of medical men, to be appointed for the purpose.

A complication of troubles has grown out of the Cincinnati slave case. The *Columbian* states the number of certificates issued to deputy marshals for the full term of the slave trial to be 301, each of which entitled the holder to $56, amounting in all to $16,856. Besides these, there were from 200 to 300 other deputies, who drew certificates of from five to eighteen days' service, the sum total of which may be computed at $4,600; thus making a draft on the United States Treasury, for deputy marshals alone, $21,456; and the whole expense of the trial at from $30,000 to $40,000.

The Olean *Journal* says that the good people of that section of the country are just now making the acquaintance of about the *tallest* water ever seen in the valley of the Allegany. The river is eight or ten feet high for a good rafting "stage," and the water is still rising. All the lowlands along the river are under water. The only communication between that village and Portville is by means of boats.

A Philadelphian has invented a new steam engine, consisting of four cylinders, each 3 feet 6 inches long, 10 inches in diameter, and each containing a piston weighing 250 lbs. Each two opposite pistons connect with rods. No cross heads, piston rods, cranks or slides are required, but merely a pully for the band, which is placed at the end of the shaft.

The new State Agricultural Society of Kentucky, incorporated at the last session of the Legislature, has commenced its organization. The State is divided into three agricultural districts, in which annual exhibitions are to be held in rotation. Ten thousand dollars are appropriated for the benefit of the enterprise.

Alexis St. Martin, noted in the annals of medical science as the soldier who accidentally shot himself at Mackinaw in 1816, in such a manner as to expose the entire process of digestion to scrutiny—upon which Dr. Beaumont made a valuable series of observations—is now in New York, in company with Dr. Bunting, of Montreal, who has brought him hither in the interest of physiology. St. Martin has resided for many years past in his native village, near Montreal. At the office of a distinguished surgeon, several of the faculty were permitted to see Mr. St. Martin, and examine his wound, which remains in precisely the condition it was when Dr. Beaument's experiments were made.

By the arrival of the steamer *Charles Morgan* at New Orleans from San Juan, we have dates from that port to the 16th of April. She brings a confirmation of the news received by the *George Law* of the defeat of Colonel Schlessinger and the rout of his command, the cause of which is attributed solely to his gross neglect and cowardice. The remnant of the party had arrived at Rivas, and were loud in their complaints against Schlessinger. It is now reported that another battle had taken place at Arcopoka, between but *fourteen* of Walker's men, under Capt. Baldwin, and *two hundred* Costa Ricans, in which the latter were defeated, with a loss of thirty killed, while Walker's men lost but two.

A gentleman in New Haven has invented a process which furnishes a complete safeguard against counterfeiting in any of its forms. The face of the bill is first covered with a chemical preparation of a light yellow tint, leaving the denomination of the bill in letters of the original color of the paper.—The plate printing is done with bluish black ink, which has the peculiarity of penetrating the paper, and of being translucent when held between the eye and the light. The composition of this ink is known only to the inventor, and prevents the possibility of counterfeiting by means of a new plate.

It has been officially ascertained that forging and counterfeiting of certificates or warrants for bounty land, to defraud both the public and the Government, has been extensively carried on, and doubts have arisen whether this is an offence for which punishment can be inflicted under existing laws. The Pension and Land Bureaus have prepared a bill, which is now before the House Judiciary Committee, declaring such acts felony, to be punished by a fine not exceeding $5,000, and imprisonment to hard labor not exceeding ten years, at the discretion of the Court.

The Boston *Atlas* has a notice of the new enterprise of a line of steamers between New York and Boston. It is proposed to build two first class steamers, of 850 tons each, in the most substantial manner, iron braced throughout, with water-tight compartments, paddle-wheels, and with sufficient power to make the trip in thirty-six hours. The steamers are to be placed on the route about the 1st of next October, and it is intended to leave Boston twice a week, and take freight at such a rate as will induce large shipments.

The Sultan sends every other day to the French Embassy for news of the Empress. It is the custom in Turkey to make a present to the person who first announces a piece of important news anxiously expected. His Highness wishing, therefore, to testify all the satisfaction he felt on learning the birth of the Imperial Prince, made a present to M. Scheffer, first dragoman to the French Embassy, who announced the event, of a snuff box, valued at from 6,000f. to 7,000f.

Mr. Henry Grinnell has just received a letter from Lady Franklin, in which she expresses a desire that Dr. Kane should visit England, for the purpose of taking charge of another Arctic Expedition. She still hopes that some survivor of Sir John Franklin may be found living among the Esquimaux, from whom might be obtained the particulars of her husband's fate. She proposes to fit out a propeller at her own expense, and give the command to Dr. Kane.

The Presbytery of New Brunswick held its semi-annual meeting in Trenton, N. J., recently. This ecclesiastical body was organized 118 years since, and, though now confined to a comparatively small territory, numbers fifty ministers and about thirty churches, with some 5,000 communicants. The contributions to various religious and benevolent objects for the year ending in April last, amounted to more than $33,000.

It is stated that the "South Carolina Joint Stock Pro-Slavery Emigration Aid Company" exacts of every one of its emigrants the following pledge, which certainly sacrifices their political independence: "We agree to go to Kansas Territory and locate there *until* it be declared whether it shall be a pro-slavery or anti-slavery State; and we further agree to support, *when there*, the pro-slavery party."

Bochsa, the celebrated harpist, died in Australia on the first of January last. It is some eight years since he came to this country, accompanied by Madame Anna Bishop, the wife of Sir Henry Bishop, the celebrated composer. Bochsa was an old man, probably over seventy years of age; he was a native of Switzerland, and was a musical notoriety in the days of the first Napoleon, with whom he is said to have been a favorite.

The Londoners are still trying to stop the adulteration of food and drugs with which they are so universally afflicted. Nor is it entirely without success. Before the Parliament Committee now in session, Jacob Bell, a wholesale druggist, said that several drugs which were formerly very much adulterated, could now be obtained in a purer state.—Among these were milk of sulphur, scammony, &c. Opium could be obtained pure if required; it was chiefly a question of price.

Instructions have been issued by the Commissioner of the General Land Office for the survey of the lands ceded to the United States by the Chippewa Indians, under the treaty of the 30th September, 1854, situated north of the St. Louis river, and along the north shore of Lake Superior. The work is to be commenced early next month, with a view of accommodating settlers after the Indians shall have been satisfied for the rights accruing to them under the above-named treaty.

A dispatch dated Philadelphia, Thursday, April 24, says: "Yesterday, the Directors and the Superintendent of the Camden Ferry Company, and the officers of the steamboat *New Jersey*, with the Inspectors of Boilers and Machinery, were all arrested by the Sheriff of the city of Camden, and released on bail in the sum of $3,000 each.

Small-pox is prevailing quite generally throughout the South—in Carter and Washington Counties, Tenn., and Madison and Buncombe Counties, North Carolina. In Greene County, Tenn., its ravages have been alarming; and Greenville, the county seat, is guarded by armed men, to prevent communication with the infected district. The town of Jonesburg, Tenn., is guarded by armed citizens. In Sumner, S. C., the disease has made its appearance, and in the lower counties of Virginia.

Townsend, the mail robber, who was shot and severely wounded while attempting to escape from Newcastle jail, a few days since, succeeded in scaling the wall again, but he ran only three miles, when he fell from exhaustion, and was retaken to prison. His escape was discovered about 1 A. M., and his course easily followed by the blood from his wounds, which reopened in the efforts he made to scale the wall.

Prof. Silliman has written a letter in which he vindicates the recent emigration from New Haven to Kansas from the calumnies so liberally heaped upon it by the Pro-Slavery press. He asserts the right of every man to go armed, and says that self-protection absolutely requires it in countries, where, as in Kansas, the inhabitants are exposed, not only to the attacks of savage beasts, but to those of still more savage ruffians.

Dr. Lover, the eminent lecturer on Natural Philosophy, states that the Oxydate Lamp, invented by Mr. Nibbs, of Bakewell, gives forth such a pure and steady light from a very thin and perfectly white sheet of flame, that it is applicable to the copying of collodion photographs by night, and is also well suited to the microscope. This is an entirely new feature in the history of artificial light.

Hon. John M. Niles, late U. S. Senator from Connecticut, is quite sick in this city. The Hartford *Times* says: "Mr. Niles went to New York some two or three weeks since, to procure the aid of a cancer doctor in that city, a cancer having appeared on his cheek. The case has taken an unfavorable turn, and Mr. Niles is now considered in a very dangerous situation."

Mr. Wheatstone has solved the problem of a method of secret correspondence, easy of application and undiscoverable. He has invented and patented an instrument—the *Cryptograph*—by means of which any two persons may intercommunicate without fear of betrayal. It is said that the instrument is very simple and of small cost.

The Sandusky (O.) Register of April 19th says that seven "chattels" passed "over Jordan" the previous evening. Six of them were from Henry County, Ky.; a father and his two brothers were *half brothers to their mistress-owner*; the mother was *daughter of her own master*. She had three brothers and one sister, all children of their master!

A satisfactory experiment with a coal-burning locomotive, has been made on the New Jersey Central Railroad. The high price of wood and the difficulty in obtaining a supply, has rendered necessary some mode by which a cheaper material might be used for purposes of fuel on railroads.

The sum of $175,000 has been subscribed in Covington for the building of the bridge over the Ohio. This includes the city subscription of $100,000. As soon as $300,000 of the stock is taken, it is the purpose of the Directors to begin the work and urge it on to a speedy completion.

The following is the weekly report of deaths in the City and County of New York, from the 19th day of April to the 26th day of April, '56: Men, 83; Women, 53; Boys, 128; Girls, 108; Total, 372. Adults, 136; Children, 236; Males, 211; Females, 161; Colored Persons, 21.

The Syracuse Standard states that a gentleman of that city, who has just returned from Kansas, expresses the opinion that there is no danger whatever of the success of the Pro-Slavery party. It thinks there are two obstacles in their way, viz: nature and self-interest.

The citizens of Bridgeport, Ct., where P. T. Barnum resided until his late disastrous downfall, recently held a meeting to express their esteem for him, and their sympathy in view of the present condition of his financial affairs.

India Rubber Springs, used on the railroad cars in Michigan, became frozen and rigid during the cold weather last winter, and caused the strap bolts to break. This experience has led to the abandonment of the rubber and the substitution of steel springs.

A private dispatch from Rock Island (Ill.) says the first passenger train of cars passed over the bridge, across the Mississippi, at that point, April 22d. This bridge perfects the railroad connection between Chicago and Iowa City.

A Boston doctor reports a case of gout in a boy 11 years old. Another Boston doctor reports the case of a girl 16 years of age, who, until 13, had not all the temporal teeth, and who now has but four of the permanent set.

The Northampton *Courier* says that during the past two years, *seventy* men, quite a number of them heads of families, have emigrated, or have made arrangements to emigrate, from Southampton to the West.

The death of the late Governor Stevens, of Maryland, has recently been announced, as also his magnificent bequest of $36,000 to the American Colonization Society for the purpose of procuring a ship to run regularly between this country and Liberia.

In Rochester lately two or three instances of the murder of children by their parents have come to light. In one instance a child died at 6 P.M., was buried at 7, and the parents started East at 8 o'clock the same night, and have not since been heard of.

Colonel Schlessinger has been court-martialed, on charges of treason and cowardice. The result of Schlessinger's engagement with the Costa Ricans is stated to be a loss of ninety men, including the missing.

The steamer Cuba, plying on the Alabama river, was destroyed on Sunday, April 24th, by the explosion of her boiler. Several passengers were killed. The boat was so much shattered by the explosion that she sunk.

The Hydropaths have formed an association for the purpose of raising $1,000 to build a monument in Greenwood to the memory of the late Dr. Shew.

They are suffering with fever and ague in the vicinity of Paterson, N. J.

The imprisonment or fining of street drunkards is still kept up at Utica. A Justice last week sent a fellow up for 30 days in lieu of $10 fine.

Riots have been renewed in Erie, Pa., growing out of the railroad question. The mob destroyed on Friday last the newspaper office of The Constitutional.

A person named Reuben P. Davis has absconded from Waltham, after committing forgeries to a large amount.

Dr. Laratte late City Attorney, of New Orleans, is a defaulter to the amount of $300,000.

News by telegraph from Chicago states that Gov. Shannon had ordered out the military to repress an armed resistance in Kansas.

Hon. Jere. Clemens is said to be writing a historical novel, founded upon the revolutionary history of the South.

The Erie Canal is to be opened on the 5th of May.

New York Markets—April 28, 1856.

Ashes—Pots $6 75, Pearls 8 37.

Flour and Meal—Flour 5 50 a 6 00 for mixed to good Western, 5 75 a 6 00 for common to good State, 6 00 a 7 00 for Western, 7 00 a 8 75 for extra Genesee. Rye Flour 4 00 a 5 50 for fine and superfine. Corn Meal 3 25 for Jersey.

Grain—Wheat 1 60 for mixed, 1 78 for white Southern. Rye 88 a 92c. Corn 60 a 61c. for Northern yellow, 63 a 65c. for white, 61 a 62c. for old Western mixed.

Provisions—Pork 15 62 for prime, 18 75 for mess. Beef 7 50 a 8 00 for prime, 8 00 a 9 50 for country mess. Lard 9¾ a 10c. Butter 14 a 18c. for Ohio, 17 a 22c. for common to good State, 22 a 24c. for choice. Cheese 5 a 10c.

Hay—75c. per 100 lbs.

MARRIED,

April 12th, at Milton, Wis., by Eld. V. Hull, Mr. Elery H. Burdick to Miss Phebe I. Babcock, both of Lima, Rock Co., Wis.

By the same, at the same time and place, Mr. Ervin L. Babcock to Miss Delia M. Sweet.

DIED,

In Watson, April 5, 1856, of consumption, Marion Elizabeth, daughter of Daniel S. and Almeda Andrews, in the 15th year of her age. She left satisfaction with her friends that her change was for the better.

In Westerly, R. I., April 12th, of diabetes, Henry, son of Joseph and Emeline Crandall, aged 17 years and 6 months.

"I would not live alway; no—welcome the tomb;
Since Jesus hath lain there, I dread not its gloom:
There sweet be my rest, till he bid me arise,
To hail him in triumph descending the skies."

LETTERS.

D S Andrews, S D Titsworth, N McDevitt, A B Burdick, V Hull, D B Hull, D C Green, L M Cottrell, E G Champlin, L E Livermore, A B Spaulding, R Lippincott, D Clawson, J H Wilcox, J M Allen, A R Cornwall, Z Campbell.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

J H Wilcox, Westerly, R I	$2 00 to vol.	13	No. 42
I S Dunn, Plainfield, N J	1 00	13	52
Joseph S Crandall, Utica, Wis	5 00	15	26
Perry Sweet, Milton, Wis	5 00	13	26
Hull & Green, Stevens' Point, Wis	2 00	13	39
R Lippincott, West Union, Iowa	2 00	13	52
Nancy Spaulding, Leonardsville	3 00	13	39

WILLIAM M. ROGERS, Treasurer.

Our Accounts.—Five numbers more will complete the current volume of the Sabbath Recorder. A good many subscriptions for the present volume, and some for previous volumes, remain unpaid. Bills have been sent to all who owe us, so that no one need be in doubt as to the state of his account. Let each delinquent consider himself earnestly solicited to pay up before the volume ends. It should be borne in mind, that pay for its publications is the only source of income to the Publishing Society; and this is barely sufficient to meet current expenses from year to year. Any neglect on the part of subscribers to pay promptly what is due, is exceedingly embarrassing. It is hoped that only a few, if any, of our subscribers are willing to be accessory to such embarrassment.

Receipts for Missions.

The Treasurer of the Seventh-day Baptist Missionary Society has received the following sums since his last report through the *Recorder*:—

For General Purposes.

Ch at Scott, toward L M	$19 35
Ch at Lincklaen, toward con D C Burdick L M	7 39
F Tallett, Otselic	1 00
M Fifield "	1 00
Ch at Alfred, to con A Lewis L M	11 00
3d Ch and society of Brookfield, to con Paul B Burdick L M	17 00
1st Church Brookfield	3 00
L M Cottrell, 3d Brookfield	5 00
Richard Ford, Green Brier Run, Va	1 00
Harriett R Ford "	1 00
Esther F Randolph "	1 00
Rachel B F Randolph "	1 00
Silas F Randolph "	50
Judson F Randolph "	50
Wm F Randolph "	1 00
Ch at New Market, Monthly Col	23 79
Hannah Bowen, New Market, for L M	25 00

For China Mission.

A P Saunders, Darien	$1 50
Noyes Spicer, Indianapolis, to con L M, and to print tracts	25 00
From Ladies in Waterford, Ct, to print Tracts in China	20 00

(Contributed by the following persons:)

Mrs Julia A Wescot	25	Mrs D Rogers 2d	50
Mrs Nathan Rogers	25	Mrs David Rogers	5 00
Mrs A Utter	40	Mrs B F Clarke	1 00
Mrs D B Irish	50	Mrs O Maxson Jr	50
Mrs G Potter	25	Mrs E Brooks	25
Mrs Geo Stillman	1 00	Mrs E Darrow	2 00
Mrs Mary Rogers	50	Mrs D P Rogers	5 10
A Friend	1 00	Mrs P L Berry	50
Miss Josephine Lester	25	Miss Mary Brooks	25
Miss Elizabeth Berry	50		

For Palestine Mission.

Ladies' Sewing Soc, Waterford, Ct ($13 16 of the above was from sale of curiosities that came from Mrs Saunders.)	$18 00
A P Saunders, Darien	1 50
Nathan Lanphere, Alfred	10 00
Fem Miss Organization of 1st Ch Brookfield	15 00
Manlius Bush, Clear Creek	2 75
V M Burdick, Elgin, Ill	3 00
Dividend Market Bank stock, from estate of B W Rogers	64 00
Interest on Note, from estate of B W Rogers	35 00

A. D. TITSWORTH, Treasurer.

Rogers' Hotel and Dining Saloons,
KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.

☞ Rooms to let by the day or week.

Clarke Rogers } Late of Fulton Hotel.
Henry Zollver }

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room. ☜

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Miscellaneous.

Care and Study in Farming.

There is hardly an occupation among men in which the extremes of careful and of careless management are more widely separated than in the profession of Agriculture; and as a natural result, the labors of agriculturists meet with every grade of varying success, from failure to fortune.

If the lack of activity and enterprise which marks *thousands of farming districts* in almost every part of the country, were suddenly transferred to a commercial city, and made to pervade it from beginning to end, men of business would be compelled in one year to shut their doors and put an end to their vocation! Bankers, brokers, tradesmen and dealers would be driven into bankruptcy, and a financial panic would ensue. If any single manufacturing or mercantile business should receive the shock of so much mismanagement—or what is often worse, the *neglect of management*—as agriculture is continually experiencing, *it could not live a year.* This is not a statement ventured without knowledge. It is based upon the foundation, not only of our own personal observation, but upon the experience and the statements of hundreds of competent witness all over the country.

The business of manufacturing and trading is carried on with skill, carefulness, and economy; for they who engage in it know that they must be shrewd and cautious, or they will fail and be ruined. The business of cultivating the soil, as a general rule, and which admits too few exceptions, is conducted in a manner so loosely, uneconomically, and even indolently, that nature, which affords the materials of agriculture, though it is really richer than Art, on which manufactures chiefly rely, will not yield her fruits with so great an abundance, or so rapid increase.

Every business, whatever be the comparative strength or depth of its elemental resources, must be made to stir with life, if it would be carried to success. Men now who would get rich must be active. If they are enterprising and agile, there is a chance—no, not a chance, but almost a certainty—that they will rise to competence or wealth; if they are slow and inert, the best that can be expected for them is that they will sink *slowly* to poverty.

Neglectful farmers are everywhere to be found. The indications of neglect are visible throughout every part of the farm; in the dwelling, in the barns and buildings, and in the fences and fields. The gates are left standing open, inviting the cattle of the road to the freedom of the place. The house gives token of an intention to fall into willful dilapidation. The barn and out-buildings are in still worse condition. The garden is a small patch with many large weeds. The tools are instruments, not so much to *mend with*, as *to be mended.* The implements of husbandry are left to rust, and soon fall out of order. The plow is rough enough to be the embodiment also of a harrow. The borders of the fields are overgrown with bushes and briars, which being broad strips of useless growth, actually rob the farmer of a good part of his best land. The atmosphere of abusive use and early decay pervades the farm perceptibly from beginning to end.

The true farmer is—not a *nobleman*, but what is better, a *noble man.* He is a man not only of honesty and integrity, but of industry and enterprise. He is a man of sagacity, and so of prudence; of observation, and so of experience. He is a man of patience with slow growths, yet of ingenuity to quicken them to maturity. He is a man in advance of the seasons, as every philosopher and statesman should be in advance of his time. He is a man who looks upon germs—not as the simple seeds or grains which he scatters with thousands of others from his hand, but as stalks bending in the months of harvest in fields waving with wheat or corn.

But how many farms can be counted which represent such farmers? When an artist paints the picture, or a story-teller sketches a pen-portrait of a farmer, does he bring out the idea of such a man? The habits and practices of a large class of farmers would afford almost exhaustless resources of caricature, both for the pencil and the pen—a stout good natured brown-faced man smoking a pipe, or rolling a cider barrel, or feeding a Shanghae, or cutting name and date upon a tortoise, or patting a pig. There are more pictures of farmers in these characters than in any other!

Farming, as it is widely practiced, is a dull and heavy occupation, in which men labor unambitiously, doing much hard yet bad work, and accomplishing but little by it.

But the pursuit of agriculture has in it an inherent nobility which should be impressed upon the minds of all who engage in it, never to be forgotten. Every farmer should have an abiding consciousnes of the dignity of his profession. He should set before him an elevated ideal of the *capacities and possible developements* of agriculture; and should strive to realize, in the results of his own labors, more and more successful embodiments of this ideal. An artist studies with enthusiasm to attain greater and greater skill in his art, that he may reproduce upon the canvas with increasing accuracy and fidelity the conceptions of beauty which fill his mind. The study of Agriculture, embracing, as it really does, the wide range of soils, grasses, plants, trees, fruits and flowers, affords a scope for the exercise of judgment, taste and skill, hardly inferior to the great field of Art—if indeed agriculture, whose great aim is the *development of nature,* can be exceeded in comprehensiveness by art, whose province is to *idealize and imitate it.*

Agriculture summons more sciences to its aid than any other common pursuit. Its roots extend into almost every field of learning. It levies a simultaneous tax upon chemistry, geology, mineralogy, botany, meteorology, and upon all the arts and sciences that blend with these. It is therefore most successfully pursued only when diligently and deeply studied. *Theories* of practice, without practice itself, are rife everywhere, and in almost every profession. But agriculture, as it is pursued by a majority of farmers, is a *practice without a theory.* Yet nothing but great research into physical capacities, which as yet are only meagrely measured and understood.

A man may plant corn in the spring, and in due season gather the crop into his barn, without having ever read a book, or even knowing the alphabet. Yet *knowledge*—and such knowledge as can be conveniently imparted only by books—is necessary to an intelligent understanding of the various influences of atmosphere, sunlight, rain and soil, which operate to cause growth. Many things may be done ignorantly, and yet successfully. The succession of the seasons—one of the *sublimest* operations of nature—is also one of the *simplest* to be understood; they never fail long of their promise to come, and everybody knows that he may expect something from them. Even the least will be much, but vastly more may always be received. Nature's treasures, which are as precious as fine gold, are also, like fine gold, *hid in the earth;* and if they would be found, they must be sought. The secrets of successful seeking have been written in books, as the results of the fairest trials and the best experience.—The farmer who can plow his corn-field without a manual of agriculture, may need a treatise on fructification to caution him against breaking off the tassel of the stalk and carrying it as a plaything.

Carefulness of cultivation will do much, but it will not compensate for want of information and intelligence. What then must be the results, in such comprehensive occupation as the cultivation of the earth, of *careless practice without knowledge.*

The two great lacks in agriculture, as it is ordinarily practiced, are requisite *information* and *carelfuness.* But the most pressing and immediate deficiency is the latter, the remedy of which cannot be too strongly enforced upon the attention of farmers and cultivators every where. Heedfulness may take a sure step towards success; negligence walks slip-shod to poverty. [Independent.

Ladies and Liquor.

The decision of the Supreme Court, which opened the doggery door and bid Misery, Poverty, and Crime walk out and abroad through the land, has brought back that condition of things which evoked the demonstrations of 1854. Helpless against the terrible enemy that seduces husbands and sons from wives and mothers, the women have again risen in rebellion against the laws which sanction its existence. And this time the war threatens to become a war of extermination.

At Greensburg, Decatur county, two weeks ago, the doggery of a couple of fellows named Wilson, was visited by the ladies, and they requested them to abandon their business. One of them insulted the women with the most indecent language, and pouring out a glass of whisky offered it to them. Another, whose wife was of the party, abused her and offered personal violence. The citizens, provoked at this conduct, assembled in a large body, and proposed to buy out the doggery, if they would quit their business. One of the brothers agreed, and the stock was invoiced and taken away. The other, who was absent when the trade was made, came home drunk, and refused to stand to the bargain—tried to get a replevin served, but nobody would do it. The liquor was taken into the street and destroyed.

About the same time, the ladies of New Marion, Ripley Co., after requesting the keeper of a low doggery to quit his business, and meeting insults and defiance, assembled in a body and "cleaned him out" in short order.

On Friday, the 14th, the ladies of Williamsport, Warren county, after enduring the evil as long as they could, assembled, marched in good order to a doggery, broke open the doors, which were barred against them, rolled out six barrels of whiskey and several kegs of other liquors, and poured their contents into the gutter. They then formed ranks again, marched to an Irish doggery, overpowered the keeper, who "showed fight," and utterly destroyed everything in the house. They next assailed another establishment of the same grade, and there destroyed six barrels of whiskey. Next they cleared out a second Irish doggery Next they took a drug store, with liquor for "medicinal purposes," (of course,) in hand, and purified that. Then they marched to the county agency and destroyed all the liquor there, and then searched the cellar of a suspected dry goods store, and finding a barrel of liquor there, destroyed that. They actually cleared out the town, leaving not a drop of liquor available for selling purposes in the whole place.

On Tuesday, the 25th, the ladies of Eagle Village, Boone Co., destroyed the stock of one Wiley Brooks, and on Wednesday they "did likewise" for that of a Mr. Fred Smith. The fellows fought—one of the ladies received a severe blow on her nose—but fighting was no use. The women would have their way, and they did.

On Saturday, the 22d, the ladies of Princeton, Gibson Co., met, and visited six doggeries, destroying all the liquor they could find One of the keepers resisted, and was cut on the arm with a hatchet. A correspondent of the Evansville Journal gives the following account of the affair: Three o'clock came, and all at once, almost unexpectly to every male, a large concourse of ladies issued from one of the churches, and took up their line of march in the direction of one of the dens of iniquity, most generally denominated a grocery. The keeper of the first grocery they attacked made a resistance, but his efforts were feeble, and he was driven back, his doors and windows opened, and every article that could hold liquor, from a whiskey barrel down to a pint flask, was utterly demolished, and its contents spilled on the floor. At the second house they met with greater opposition. The owner made threats that he would shoot, and presented a gun as if in the act of doing so, but he was forced back and his house entered. Before it was left, the beer, wines, brandy and whiskey, mixed promiscuously, were full three inches deep on the floor.—Every hand worked energetically. When they had finished the second house, all the church bells began to ring, and the little army of women, which had been greatly augmented since its starting, again took up its line of march. Their next point of operations was one whose property was one of their own sex. Here they rolled the barrels into the street and burst them open. The liquor in many places was over shoe top, and ran half a square. At the fourth place they made a compromise. The owner of the fifth, a little shanty in the suburbs of the town, declared he had no liquor, and threw open his doors for the inspection of his rooms; none was visible. But they presently discovered the track of a cask, on the ground, and following it, found two of them in a pig pen some distance back of the house; these they demolished, when they passed to their sixth battle. Here they soon discovered the object of their search, and doomed it to the same fate the others had met with.

We see an account of a similar demonstration by the ladies of Farmington, Fulton county, Ill. A lady whose husband had been brutalized at a doggery, went to the keeper and remonstrated. She was insulted. The other ladies took up the matter, assembled to the number of thirty, and armed with hatchets entered and "cleaned out" four establishments in the most cool and business-like manner.

There is a deep significance in these acts. Can our Supreme Judges give us the interpretation of them. [Indiana State Journal.

Letters for the Pacific Coast.

The following plan to insure the delivery of letters sent to persons on the Pacific coast whose post-office address is not known, has the sanction of the Post-Master General, and is recommended by J. B. Weller, Senator from California; J. W. Denver and R. T. Herbert, Representatives from California; Joseph Lane, Delegate from Oregon; and J. P. Anderson, Delegate from Washington Territory:

To Persons Mailing Letters for California and the Territories of Oregon and Washington.

Thousands of letters sent to the Pacific coast become dead letters. To remedy this evil, the Post-Office department, under the authority of Congress, has adopted, as an auxiliary to its operations, the following plan for simultaneously publishing at each and every post-office in the Pacific region, in a list called the "Pacific Mail List," the names of persons to whom letters have been sent by mail to post-offices in California and the Territories of Oregon and Washington. By this system a letter may be sent to any post-office in the Pacific region for a person whose location is unknown save the mere fact that he is *somewhere* in California or the Territories of Oregon and Washington; yet, if the letter be published in the "Pacific Mail List," its ultimate reception by the person for whom it is intended will be rendered highly probable. To enable those who may desire to extend to their Pacific correspondents the advantage thus offered, the following illustration is given:

Suppose it is wished to send to the Sacramento Post Office a letter for George Wilson, who emigrated to California from Pike County, Missouri, but it is feared he may have changed his location, and hence may not receive the letter. In this case, direct the letter to George Wilson, (late of Pike County, Missouri,) Sacramento, California. Then in order to publish the letter in the "Pacific Mail List," copy the address of the letter upon a piece of paper or card, and enclose the card with a three cent postage stamp, in an envelope and direct the envelope to the "Pacific Mail List," New York. Deposit the letter, *as usual,* in the mail for California, and at the same time drop the envelope containing the card to *publish the letter,* in the mail for New York. From the address on the card thus received at the New York Post Office, the name George Wilson will be entered in its appropriate place in the "Pacific Mail List," which list is printed and sent by each mail to each and every Postmaster in California and the Territories of Oregon and Washington, and by them posted in a conspicuous place in their respective offices. The list being thus distributed over the entire Pacific region. George Wilson may at once learn from it that a letter for him has been sent to the Sacramento post office. No person of a name similar will receive the letter, for the address on it points out that it is intended for George Wilson, late of Pike County, Missouri. Thus *many* letters will be received that would otherwise be sent to the dead letter office.

The envelopes containing the advertising cards, sent to the "Pacific Mail List," pay postage like ordinary mail matter, and *must* be prepaid. The addresses of letters copied on pieces of paper or cards should be written in a plain and distinct manner. The three cent postage stamps inclosed in the envelopes defray the expenses of publication, and must not be pasted on the cards, but simply enclosed with them. In the absence of postage stamps, three cent coins may be substitued.

It is believed that this circular has been drawn up so explicitly as to require no explanations; but should this prove not to be the case, Postmasters will take notice that all interrogatories must be addressed to the "Pacific Mail List," New York, and not to the department.

The first of this series of lists will accompany the mail of May 5, and will be forwarded by each succeeding mail.

OLIVER EVANS WOODS.

Madame Pfeiffer on American Women.

In the private schools for girls—seminaries, as they call them—all manner of arts and sciences, including the Latin and Greek languages, are taught, or said to be taught. When I asked what was the use of teaching the girls these dead languages, the reply was that they might more easily learn the languages derived from them—Italian, French, &c.; and one might therefore suppose the ladies of America would be especial proficients in the latter; but this was very far from being the case, for I think I have in no country found fewer who were familiar with foreign languages.

This one-sided education, in which what is most peculiarly feminine is entirely neglected, is, I think, one great cause of that uneasy longing for what they call emancipation that characterizes American women.

They might begin, one would suppose, by emancipating themselves in their own houses. Domestic occupations must, after all, be attended to by somebody; and surely it had better be by the women than the men. It is not necessary that they should perform the offices of servants; but, if they do not understand how work of the domestic kind ought to be done, the servants of the house will, ere long, become the masters. The girls in my own country also study foreign languages, music, history, and so forth; but they find time, too, to make themselves acquainted with womanly duties.

I remember once going to visit a lady in New York, and finding her from home, was informed by the servant that they were going to move, and that the mistress had gone into the country till it was over, and the new house put in order.

And who in the world, I thought, is to superintend the moving? Doubtless the husband, though he had his business to attend to. I should not be surprised to hear that the ladies here required their lords and masters to teach their nursery-maids how to wash and dress the children.

It is, I imagine, because the American women are so fond of emancipating themselves from the trouble of housekeeping, and the men have really sometimes too much to do, or are not inclined to perform the duties of their wives as well as their own, that married people get into the abominable custom of living in boarding houses; a custom that draws all kinds of evil consequences after it. A young and handsome woman is thus often brought into the society of people whose character is far from the best, and this must be so much the more dangerous as she has no household duties to occupy her mind, and her children are sent when only four years old to school. It is by no means uncommon, even for unmarried girls, who find the life in their parents' houses too quiet, or otherwise not to their taste, to leave them and go into boarding houses.

There is, however, one domestic duty, it is but fair to mention, which is more generally fulfilled by American women than by mothers in the continental countries of Europe, namely, that of suckling their infants themselves. Except in the slave States, this office is scarcely ever intrusted to a hired nurse, and may Heaven grant that it may never be.

In the exceptional cases, where girls have at the same time an aversion to feminine employments and a strong vocation toward some art or science, and are likely to carry it to perfection, they should be allowed to pursue it; but then they should not do so by halves, but, if they desire to become doctors or professors, renounce all thoughts of being wives also; for it is difficult, if not impossible, to perform at the same time the duties of man and woman; and let the advocates of this kind of emancipation not forget, that there is no sphere of action more beautiful and noble than the one they have turned away from. In the hands of every mother lies one of the most precious treasures of every state. It is the mother who must inspire her child in its tenderest years with the love of duty and virtue, and first lead it in the way by which it may become a worthy and perhaps a great and important member of the social body. A wise and thoughtful housewife, and a rational and loving mother, will, after all, remain the ideal of feminine perfection.

There are in the United States such extra ordinary numbers of poetesses, authoresses, female composers, and so forth, that, if I were to mention the names of all who have been introduced to me as such, I should fill whole pages with them. Doubtless there are among these many highly gifted; but whoever has written a few verses or a little essay, or composed a waltz or a polka, immediately assumes the high sounding title of a poetess, composer, thinking, I suppose, to make up for the insignificance of the work by the grandeur of the name—and names certainly do go very far in the United States.—[Madame Pfeiffer's Second Journey Round the World.

Culture of the Strawberry.

As no garden is complete in its appointments, without it has a bed or two of this delicious fruit—this luxurious and healthful source of enjoyment—we shall lay down a plan of culture, in the hope that it may attract the attention of gentlemen whose gardens are without them, to a necessity of planting one or more beds. A bed thirty feet square would yield an ample supply for a family, both to be eaten with sugar and cream and for preserves. Where the supply is desired to be prolonged, one bed should be selected with a southern exposure, the other with a northern one;—these differences in the exposure will continue the supply fully two weeks longer—a matter of importance with a fruit at once so grateful to the palate, and so health-giving to the system, in its indulgence.

Selection of bed.—For an *early* supply, select a bed with a southern exposure—for a *late* supply, select a northern exposure.

Soil.—The strawberry delights most in a moist soil—it is not material whether it be deep sandy loam, or a deep clay loam, so that it be moderately moist, *but not wet.* A clay loam, of proper texture, would probably produce most fruit, but not so early as a sandy loam. What we mean by a proper texture of clay loam, is, one that is not very tenacious, but is friable, easily worked, and susceptible of being put in first rate order.

Preparation of the Bed.—Let the bed be trenched to the depth of twelve inches at least. When thus dug, a dressing of a compost manure must be spaded in. As the spading progresses, let the soil be thoroughly pulverized with a rake. This done, put on a full dressing of compost, formed of four parts well-rotted dung, three parts wood's-mould or other rich mould, and one part slacked ashes; spade this in half spade deep, taking care to rake as the spading progresses, so as to bring the soil in fine tilth, and complete the work by passing the garden roller over the bed.

Laying off the bed.—Your bed having been prepared as before directed, divide it into compartments or beds, four feet wide, with alleys two feet wide between each, for the convenience of working, weeding, and gathering the fruit.

Distance of planting the Vines.—Make three rows of strawberries in each bed, and place vines twelve or eighteen inches apart in the rows, according to the size of the variety.

Time of setting out the Plants or Vines.—In Spring, this can be done in March, in the Southern States; in April and May, in the Middle States, and in May in the North and East; in Summer, any time after the middle of August; in Autumn, during all September and October; and if the fall be a very mild one, the planting may be continued till the middle of November. Beds set out in the fall or early in the spring, will bear crops the first year—those set out later, will bear the succeeding year.

Management of Newly Planted Beds.—After your vines are set out, place long straw or tanner's bark between the rows, to preserve moisture, and be careful to give the plants waterings every few days, until they take root, or a rain occurs. Beds planted in spring must be watered in times of drouth, throughout the season, as the vines require moisture, and are injuriously affected by long continued dry weather, unless thus assisted.

After Culture.—During the first two seasons, cut off the runners, before they have a chance to root. While the fruit is being formed on the vines, the vines in dry weather must be watered; but after they are in bloom, the utmost care must be observed not to wash off the farina of the flowers, as, should you do so, you will inevitably prevent the formation of the fruit. To avoid this, the nozzle of the watering-pot must be held down to the ground, and the water suffered to escape moderately therefrom, so as not to splash upon the flowers. Early, each spring, strew a mixture of equal parts of plaster and salt over the bed, so as to whiten the soil.

After the vines have borne fruit the first year, say the month of July, remove the straw and weed the plants, remove all dead leaves, and give the vines a working with the hoe. This done, dig in with the fork a slight dressing of well-rotted manure or compost, a few inches in depth, say about four; rake the ground, and leave it thus, till, when long straw or tanner's bark, or both, must be replaced between the rows. The treatment, each succeding year, must be as before advised, with the exception that the runners must be permitted to grow the fourth year to supply the plants for setting out a new bed, as the power of yielding fruit, abundantly, only lasts four years. Indeed, they begin to decrease after the second year. Some permit the runners to root the third year, place manure on the old vines, dig them in, and rake, leaving the rooted runners to form the bed of runners for the ensuing three years. If pains be taken to give proper direction to the runners, in rooting, this plan saves the labor of transplanting, and answers very well during one course. In manuring, ashes must not be forgotten in the compost, as the inorganic, as well as the organic matters carried off to the crops of fruit, must be restored by the soil. [American Farmer.

The Farmer's Home.

We have really but few farm houses and farm barns that approximate that style of architecture or utility of arrangement so essential to pleasing effect and to the highest comfort and convenience of the occupant.

I would not urge the farmer to an extravagant outlay for a house to live in, but I would have him keep in view neatness of appearance, comfort and convenience.

Every one knows, who has them, what inconvenient houses and barns are; but once built, it is no easy matter to improve them; if ever undertaken, they are seldom put right. It is in building, as in every thing else, always cheapest in the end to begin right.

Every man's house should be a *house* in the broad and best meaning of that word;—neatness and order should be the presiding divinity of the place. This cannot be, unless each part shall have a correspondning fitness to every other part.

The grounds should be more ample and better arranged than is generally common, admitting of such an arrangement of out-buildings as will add to the convenience and general appearance of the whole.

No farmer's house is a comfortable home if crowded to the line of the highway in front, or closely stacked by pig-styes and bird lofts in the rear. There should be room, also, for ample shade. Sylva is the fair goddess that sheds her choice blessings on him who leads a rural life, little less than Ceres, the annual draught from whose horn is so grateful.

The barns of the farmer should be constructed after the most utilitarian model. While it needs a combination of utility and nice taste to plan and construct a home that shall be worthy of the name, it requires not a less combination to construct a set of farm-barns. The health and thrift of the stock will depend much upon the comfort and convenience of the stable arrangement. Facility for performing the labor in and about the barns will be greatly increased, by constructing every part only after the best model. Housing of manures is an important consideration with every farmer, and should not be overlooked in laying plans for farm buildings in which stock of any kind is to be kept.

In short, everything about farm buildings should be commenced right from the foundation, if we would have what is really desirable, and what shall best subserve the purpose intended.

A MAN OF BONE.—In the Museum at Dublin, Ireland, there is, or was, the skeleton of one Clark, a native of the city of Cork, whom they call the Ossified man, one of the greatest curiosities of nature. It is the carcass of a man entirely ossified in his lifetime, living in that condition for several years. Those who knew him before this surprising alteration, affirm that he had been a man of great strength and agility. He felt the first symptoms of this surprising change sometime after a debauch; till, by slow degrees, every part grew into a bony substance, except his skin, eyes, and intestines; his joints settled in such a manner that no ligament had its proper operations; he could not lie down or rise without assistance. He had at last no bend in his body, yet when placed upright like a statue of stone, he could stand, but could not move, in the least. His teeth were joined and formed in one entire bone; therefore a hole was broken through them to convey liquid substances for nourishment. The tongue lost its use, and his sight left him sometime before he expired.

LITHOTYPING.—A new method of stereotying, or *lithotyping* as it is called, has been lately introduced in this city, by the "American Stereotype Company." The process was invented in Indiana, and has been employed upon the *Congressional Globe* for over a year. The plates are made of a substance resembling and possessing many of the properties of stone, and astonishingly durable; being capable, it is said, of sustaining half a million of impressions by an Adams Power Press, without wearing out. Wood cuts, and the finest type, can be produced in all their original beauty. The moulds can be taken from type set up at any office, with the common low spaces, quadrats, &c., which are indeed preferred. The type receives but very little injury, in the process, and the plates give a sharper and clearer impression than type metal does. The materials are cheap and abundant, and books can be stereotyped by this method more cheaply than in the usual way.

PRUNING.—In pruning trees, men are as irregular as in correcting their children—they suffer both to go so long that they hardly know when or where to make correction. They cut off large limbs that will never heal, and inflict wounds that will never be forgotten. This excessive pruning is at times carried to extremes among all operators. We find people delaying to prune fruit trees from year to year, till the limbs are too thick to produce fruit. Then the other extreme is adopted, and large limbs must be cut to let in the light. In this connection, the *Massachusetts Plowman* takes the ground that young bearing trees may be trimmed at this season of the year as at any other. No large limbs should be cut on any account; and even when they are so thick as to die on the trees, there is nothing gained by cutting off the dead wood close to the body.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of *Pulmonary* diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its useful ness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE NECESSITY OF PROMPT CHRISTIAN LABOR.

Although there be vague and ambiguous profit in labor not strictly religious—and some worldly theme or occupation must necessarily partially or wholly absorb the mind temporarily—yet as often as released from such labor, how pleasing the idea, that thought and work much more sublime, glorious, and beneficial, may absorb the soul, and engage the attention. "Bodily exercise profiteth little, but godliness is profitable unto all things." Do not duty, and the brevity of life, suggest the importance of redeeming time by actively disseminating the fundamental truths of the Gospel, through the various means which God hath put into our hands? These means are numerous, and are manifested in the improvement of the "diversity of gifts" in the church of Christ, which gifts are "of the same spirit." Now, what ought to be the principal business of the Christian, whether of the laity or clergy?—to improve these gifts, and obey the mandates of Christ, or succumb to the world, and "live after the flesh?" Ought he not, through grace divine, to cast a holy and saving influence upon the world in his varied intercourse with it—to reflect a heavenly light upon children, parents, brethren, and other friends. Should we not endeavor to strengthen and encourage the "weak" child of God, to confirm the wavering mind in the truth, to alleviate the burdens of the sick, help the poor, "visit the widow and the fatherless in their afflictions," and strive to pour the balm of consolation into the sad and broken heart? Surely, these acts constitute important work for the Christian. If so, when shall we be about this work? We hear it said, "It is easier to preach than to practice." Shall we not "fight a good fight?" Shall we not "keep the faith?" Shall we not "keep ourselves unspotted from the world?" Shall we not strive for "a crown of righteousness?" When shall we exhibit the "fruits of the Spirit," and follow the examples of Christ?—during our probation, while time is passing, and health endures, or when disease shall be corroding our mortal frames, and wasting our mental powers? Shall we wait to do good, even until we are brought upon our death beds, just before the flight of the soul from the body? O procrastination, what a "thief" thou art! These sentiments apply both to the professedly renewed and to the unrenewed heart. Shall we defer to become religiously influential, continue lukewarm and worldly-minded, neglect daily prayer, and truly spiritual devotions, even until life flitters and reason vascillates? What vital realities depend upon the doings of a brief mortal life! Nothing less than the saving or losing of the soul! "For God shall bring every work into judgment, with every secret thing, whether it be good, or whether it be evil." How solemn, then, it is to live! What awfully augmented responsibilities rest upon the sons of men! In view of these considerations, ought precious time to be squandered in elaborate discussions of things of small moment, or of little consequence? Are not myriads of souls sinking to hell because professed Christians, both preachers and people, are so recreant in the cause of vital truth? Parents, what, above all other things, ought your children to read, learn, and know, to save them from perdition?—all the different dogmas of poor erring men—all the doctrines of infidelity, and the "hair-breadth" discussions of the professedly orthodox people, or the simple, cardinal truths of the religion of Christ? Are the former of such paramount importance as to merit the bestowal of the best energies of the soul in their dissemination, by the use of the pen, and through domestic and social converse? Children should be early taught that "the fear of the Lord is the beginning of wisdom"—that "youth is the time to serve the Lord."

Every body ought to know, and to realize, that Jesus Christ is the most lovely Personage that ever graced the earth—that He is God, and almighty to save—that His wonderful condescension in the atonement is a subject of more thrilling interest than any which can engage the mind of man—that to Him, the Father, and Holy Spirit, belong all adoration, glory, and praise, and much labor of love in the best improvement of our God-given rational powers, and spiritual gifts, in the glorification of His name. But alas! how many professors of his holy religion strive more to please, praise, and glorify finite man! "They seek that honor that cometh from men," labor with all their powers of body and mind for earthly fame, reputation, wealth, and aggrandizement, let their Saviour go, and worship other gods, as did ancient Israel. O, what regret are such accumulating for the death bed! What anguish must fill the recreant soul, at that awful time, upon the reflection of past unfaithfulness and recklessness in the cause of Christ! What remorse, upon the thought that many of the finally lost might have "entered into the straight gate," had their conversation, motives, labors, thoughts, desires, purposes, and affections, been right, and well directed!

How necessary, then, to work for God while the day lasts, and give Him our hearts and energies. Angels, in their work of love, are obedient in protecting the working Christian from the fatal assaults of the devil. "The angel of the Lord encampeth round about them that fear him, and delivereth them." Psalm 34: 7.

O then, since all heaven is engaged in our redemption, "how shall we escape if we neglect so great salvation?" Reader, incorporate the religion of Jesus in all of your daily actions and every-day business. Characteristically and prayerfully interweave His virtues and godly qualities in all your thoughts, words, and purposes. Make the spirit of religion, its duties—love, joy, and peace—the most important and indispensable component parts of your life. Be religious, not weekly only, but daily and hourly. Have the glory of God in view in all you do. The Lord hath said, "Be ye holy, for I am holy." Be a conscientious, consistent, humble Christian. Thus you may become the "salt of the earth," be a bright and shining light, wield the power of good examples, do much good in the cause of Christ, and die in the triumphs of living faith. E. S. B.

NEW YORK MILLS, April 21, 1856.

For the Sabbath Recorder.

A STRONG WILL.

Every great man has a strong will. As Cicero said of Brutus—*What he wills he strongly wills*—it may be said of any great man. It is not from chance nor circumstance, that important ends in life are accomplished; but there is always needed the presence of a determined will, to carry into execution the firm and steady purpose. And often, when circumstances are in the wrong direction for the man, this strong will works its way, if not *through* them, then *over* them, and makes the very barriers pliant tools to subserve his own ends. So Luther, in the German Diet, made Cardinals, Princes, and Emperors, powerfully help on the Reformation. So Washington made the frozen earth and floating ice of the Delaware minister strongly to the surprise of the enemy's camp, and give new hope to his desponding country. This Will shapes the circumstances, and controls the patronage which surrounds the man. He is not a weather-gauge, to be turned by the mind, but, like the firm mountain, he *turns* the wind. He works out his own patent of nobility, and the world is compelled to pay respect to his intrinsic magnanimity. This Will differs wholly from stubbornness. A man may be *decided*, because he is stubborn; but when possessed of this will, he seeks counsel, and it is sweet to him; and in the end does as he will, because he *has* a will.

But the question, how shall we get a strong will? is of more importance. It is at once clear and plain, that it will not come of itself. As is sometimes said of poets, they are born, not made. In all the departments of life, the rudiments are first given, and then are perfected by much patient culture. Like the fingers upon the organ, they are ardently *trained*, until they strike the keys that warble notes divine. It is of little use for us to inquire whether any course of discipline will make us firm and resolute, as great as the model before us, but rather, if we may not be made *more* firm and resolute through culture. What if Cassius never could have been made as firm as Cato, or Wilkinson as cool and calculating as Washington? Cato was not thus resolute without much culture, nor was our independence achieved without the firm decision, cool calculation and self-discipline of Washington.

This will cannot be gained by force. A man would not strengthen his affections by putting himself to the task of loving with all his might; and no more would his will be increased by any attempt to think hard by compulsion, or to force it out. Should he pull at his boot-straps all day, he will be on terra firma at night. Stubbornness may be gained by main strength; but it is a dogged will; it is not that strong cable which holds the man steady to a firm purpose, which finds its end in duty. There must be some distinct and definite object before the mind, after which it aspires as "the heart pants for the water brooks." The thinking mind finds ample occasion for calling out its energies, and grows strong without at all thinking about the powers it is gaining. A man may feel the rebukes of his own spirit, and the reproaches of his friends may strike like the whip of scorpions for his indolence and want of enterprise, and under the sting may force up a resolution by main strength that he will do better; but his resolutions will not long hold out, for it is all a forced business. Should he resolve to stand all day on one foot, he would soon get tired of it, and become the more discouraged.

Again, the strength of the Will will be as the *importance* and *morality* of the object. The affections may be strengthened by a constant observance of redeeming qualities, of real worth in the object, and thus grow more ardent daily. So is it with the will; the magnitude, dignity, and morality of the object will give the will proportionate strength. On the other hand, there may be great tenacity of will in pursuing mere trifles; and a whole life may be spent with great perseverance in chasing a very small object. With such an end, the will loses its manly valor. Sam Patch was decidedly persevering in his efforts at jumping; and when he jumped out of the world, he proved the trivial fact, "that some things could be done as well as others." A Prussian soldier displayed great tenacity of will in pitching bullets into the holes of his cartridge box at a distance of ten feet; and when the Emperor Frederick saw him do it twenty times and not miss, he very appropriately said, "Give that man a peck of bullets." How wisely did Socrates rebuke one of his scholars, who received the applause of the multitude by never letting his wheel deviate at all from the mark in the chariot race, saying: "You might have learned to rule nations with the same perseverance that enables you to guide horses."

So strongly does this will work in the minds of some men, that they have believed themselves under a destiny or some guiding star. Of this fact, Alexander, Bonaparte, and Cromwell are examples. It was said of Bonaparte, that he had an *iron* will. A. R. C.

BROOKFIELD, April 22d.

THE DEATH PASSAGE.

But what are their feelings *in the passage*, while they are going from this world to the other; or what are their first discoveries, and their first impressions, as they pass inside the veil separating time from eternity and earth from heaven, we cannot fully know. We think their state of mind, in dying, must be various. In some instances, various degrees of spiritual peace, invisible measures of divine support, are put into the bitterest cup of pains, when the functions of life resist and contend to the last, when the struggle is terrible, and the unutterable agony continues to the last gasp, and the soul finally makes its glad escape amidst the surging billows which break the strong hold of the body on life. In other cases, the pains of dying, the bitterness of death, seem past sometimes before death fully comes, and the spirit takes its flight. In some instances of this kind, while the eye is being placidly composed into its final sleep, and while the fluttering pulse and the heaving breath are settling—like the lulling ocean when the storm is past—we have evidence of most peaceful and delighted activity of mind. The spirit is not gone, it has not quite left the body and earth, but it has passed on so far through the dark valley of death, that light from another world strikes the vision of the traveler, and breezes from the hills of heaven fan him. This point in the soul's final passage from earth to heaven seems like Bunyan's "Land of Beulah," a little sweet island out in the dark sea, beyond the fretting of the surf and the rolling of the waves, on which the passing spirit stops a little, where it can look to either shore—back to earth, and on to heaven.

This is not a matter of mere pious fancy. It has often been the fact. Not a few have touched there in their final passage. At that place, out beyond all the waves, and darkness, and gloom of the river of death, where the celestial city loomed up in sight, many a saint has stopped, and swung back again, and as life has revived a little, has spoken of the opening glories beyond. Some, standing there, when the tongue could no longer speak, nor the eye see, by a gentle pressure of the hand have indicated that Jesus and heavenly messengers had met them. In that place, and by some signal, they have told us that the glory of heaven and the melodies of heaven were opening upon their enraptured souls. There and thus, some have bidden us and earth farewell, and gone to heaven. We cannot doubt that at death the saints pass immediately into heaven. [Rev. Wooster Parker.

WHY MEN RATHER THAN ANGELS.

We have somewhere read of a traveler who stood one day beside the cages of some birds, that, exposed for sale, ruffled their sunny plumage on the wires, and struggled to be free. A way worn and sun-browned man, like one returned from foreign lands, looked wistfully and sadly on these captives, till tears started in his eye, and turning round on their owner, he asked the price of one, paid it in strange gold, and opening the cage set the prisoner free; and thus he did with captive after captive, till every bird was away, soaring to the skies and singing on the wings of liberty. The crowd stared and stood amazed; they thought him mad, till to the question of their curiosity, he replied, "I was once myself a captive; I know the sweets of liberty." And so they who have experience of guilt, have felt the serpent's bite, the burning poison in their veins, who on the one hand have the sting of conscience, and on the other the peace of faith, the joys of hope, the love, the light, the liberty, the life, that are found in Jesus—they, not excepting heaven's highest angels, are the fittest to preach a Saviour, to plead with man for God, or plead with God for man. Each Sabbath morning the gates of heaven might have opened, and, sent by God on a mission worthy of seraphic fire, an angel might have lighted down upon this sanctuary, and, flying into the pulpit, when he had folded his wings and used them to veil his glory, he might have taken up the wondrous theme of salvation and the cross. No angel would leave heaven to be a king and fill a throne; but, I believe, were it God's will, there is no angel there but would hold himself honored to be a preacher and fill a pulpit. Another and very different messenger appears—a frail, dying, sinful man—one who is bone of your bone, and flesh of your flesh; and if his humanity made Jesus the better Saviour, it makes his servants the better ambassadors, that they also are touched with their people's infirmities, and are made in all points like as they are, and especially in this point, that we cannot add, "yet without sin." [Dr. Guthrie's Gospel in Ezekiel.

ANECDOTE OF MR. WESLEY.—A lady once asked him, "Mr. Wesley, supposing that you knew you were to die at 12 o'clock to-morrow night, how would you spend the intervening time?" "How, madam?" he replied; "why, just as I intend to spend it now. I should preach this evening at Gloucester, and again at five to-morrow morning. After that, I should ride to Tewksbury, preach in the afternoon, and meet the societies in the evening. I should then repair to friend Martin's house, who expects to entertain me, converse and pray with the family as usual, retire to my room at 10 o'clock, commend myself to my heavenly Father, lie down to rest, and wake up in glory."

"Blessed is that servant whom his Lord, when he cometh, shall find so doing." Luke 12: 43.

THE RAIN.

Dusty lies the village turnpike, and the upland fields are dry,
While the river, inly sighing, creeps in stealthy marches by;
And the clouds, like spectral Druids, in their garments old and gray,
Sweeping through the saddened silence, fold their sainted palms and pray.
As their tears of tender pity, soft and chrismal, trance the plain;
All the birds, like sweet-mouthed minstrels, blend their tuneful notes again,
With the tinkling and the sprinkling
Of the gentle summer rain.

Tangled in the dreamy meshes of the soft and slumberous haze,
How the rain-drops thrill the spirit in the mild September days;
Pouring on the golden-tinted autumn splendor of the leaves,
Rustling through the yellow grain fields, and the reaper's standing sheaves—
How they swell the silver streamlets, ~~how they brim~~ the land with glee!
So our lives shall brim with pleasure, pulsing like a living sea;
At the clattering and the pattering
Of the joyous autumn rain.

Sadly as when harp-strings quiver, wildly as a wail of doom,
Unappeased the night-wind surges through the elemental gloom;
All the inner light is winsome, though the outer dark be chill,
And my passing thoughts are fancies of a brain-entranced will—
I will charm the fleet-winged hours, they shall fold their pinions fair,
While I sit and weirdly listen, reading legends old and rare,
To the roaring and the pouring
Of the noisy winter rain. [Putnam's Mag.

From the Independent.

BIBLE-MAKING AT THE BIBLE HOUSE.

One of the most interesting institutions which can be visited by a Christian stranger in this city, is the Bible House in Astor Place. The establishment, considered merely as a great manufactory of *books*, would awaken curiosity to examine its internal structure and economy; but the visitor's interest is greatly increased from the peculiar atmosphere that pervades the place as a great work-house in which the *Word of God* is wrought into tangible forms, and sent out into all the world. The Bible House is a stupendous pulpit from which "*the poor have the Gospel preached to them.*" It lifts up its voice with an utterance that may be heard in every part of the earth. Day by day and year by year, it scatters abroad the Scriptures of eternal life. Its types and presses never rest nor grow weary in their labors of love.

The edifice is a large triangular structure built of brick, with an open paved court in ~~the center, opposite to the~~ Cooper Institute.

A visit through its various departments, to be most satisfactory, should be made systematically. The *tour* properly begins below the level of the street, at the engines and machinery. The engineer takes pleasure in showing the five boilers, and giving their dimensions and capacities. One of these is sufficient to drive the engine, and the others are used to convey steam and hot water through all parts of the building. The engine is one of thirty horse power, which, besides imparting motive power to the various wheels and bands in every room in the building, pumps up into a reservoir on the top, at the rate of forty gallons a minute, the water that is needed for the hydraulic presses and for numerous other purposes in manufacturing.

The first floor, which is on the plane of the street, is occupied, together with a room in the floor above, as a depository of Bibles and Testaments; and at our last visit, the volumes that were piled in its racks and stalls exceeded one hundred and fifty thousand in number. The books that are sold are here packed and sent away. The sales during the past year amounted to $300,000. The number of volumes completed and sent down from the finishing rooms into the depository, average nearly *three thousand daily!* The power of three thousand copies of the Sacred Scriptures, judiciously distributed among so many destitute individuals or families, with the blessing of God invoked upon each as it is given, can hardly be adequately conceived by the human mind. What *one day's labor* in any other institution or factory, except of a similar kind, is able to yield such blessed fruits!

Leaving the depository, we enter the press room, in which seventeen presses, ranged in two parallel rows, are either at work or are ready for it. About ten are usually kept running, although a sudden demand ~~for books~~ sometimes requires fifteen or sixteen to be put in simultaneous operation. On passing through one day last week, we saw five in motion, while three or four others were just starting. The printed sheets as they fell from each contained successively some pages of the Epistle to the Romans in the Spanish New Testament—of the Revelation in the English—of Romans in the German-and-English—of Leviticus in the English Reference Bible—and of the Gospel according to St. Luke of the English New Testament.

We observed also a singularly constructed hand press, on which the *Bible for the blind*—which is itself not only a noble work of love, but of art—is printed in raised letters to be read by the touch of the finger.

The sheet room is next in order, in which the vast quantities of paper used in printing are damped and pressed, and thus adapted for the clearest impression from the types. Several hydraulic presses of great power are in continual use for this purpose.

The composing room, in which the typesetters work, does not present so busy a scene as many ordinary printing offices in the city, from the fact that type-setting is here needed only when the electrotyped plates, from which alone the printed impressions of the Bible are taken, become worn and worthless. An average number of eight or ten compositors, however, is employed throughout the year. Two of the standard editions of the Bible—the "small diamond reference," and the "pica reference"—are now in the compositors' hands, the old electrotyped plates being on the point of failure. These plates serve for half a million impressions, after which they are deemed no longer fit for use.

The proof readers are three in number. Every page, as quickly as a "proof" of it can be taken, is passed to the first proof reader, who reads and re-reads it several times, and marks his corrections. The English Reference Quarto Bible is the typographical standard of correctness, with which every line and letter from newly set types is rigidly and repeatedly compared. The sheet is then passed to the second proof reader, who does the same. The types are then electrotyped, and a third impression, which is in this instance made from the *plates*, is taken. This "proof" is examined by the third or responsible proof reader, whose corrections—if any are marked—must be made by altering the plates, which is done with but little difficulty. The inaccuracies thus noted consist chiefly of *broken letters*, which need replacement.

~~The electrotyping process~~, which has here entirely superseded stereotyping, cannot be thoroughly understood in its various details except by persons who have some acquaintance with science, and particularly with galvanic electricity.

A surface of wax is prepared, into which each form, or page of types, is impressed, leaving a perfect intaglio mold. This mold is powdered with plumbago, to give the wax a *metallic* coating, and then hung in the bath of a galvanic battery. One of Daniel's compound batteries is here used, containing six large cells, each one of which has a capacity of three gallons. The wax mold remains in the chemical solution until a thin copper shell, which is an accurate reproduction of the mold, is formed by gradual deposits upon the plumbago surface. This frail copper plate is then stiffened by soldering the back of it with tin, to the thickness of about a quarter of an inch. Into the mold thus made ready for use, the liquid metal which is to form the final plate is poured. After it has filled every interstice and there solidified, it is lifted out of the mold and presents a *relieved* surface in which every letter is clearly and sharply defined. It is now ready for the press and the printer, and is sent to do its appropriate work.

The drying room is a spacious apartment in which sheets of paper were hung up to dry, as clothes in a laundry. Paper must be damped before it is printed, in order that the impression may be clear. When the printed sheets come from the press, they are dried, that they may not blot or blur; and are then subjected to a powerful hydraulic pressure, that they may be smoothened, or *ironed*.

The folding room presents a lively scene. Sometimes a score or more of girls are employed in *folding* the sheets; and the rapidity of execution which they attain after a comparatively short practice is truly astonishing.

The gathering room receives the folded sheets. A large number of copies of a separate portion of the Scriptures, as for instance Genesis, is set in one pile upon a long table. Another pile, containing Exodus, or a part of it, is placed by its side. Another and another, following in due order, are in like manner set down, concluding with the Revelation. A girl then takes a folio from each pile in succession, and when every pile has yielded its tribute, she has in her hands the sheets of a complete Bible. This is then set apart, and another is collected in a similar way, the constant repetition of the operation being conducted with great dispatch.

Other hands are now called in, to square the edges of each book and to put it once more into the subduing grasp of the hydraulic press.

A hundred stitchers now get ready their needles and benches in the stitching room. The books are carefully taken down from the press and distributed among them to be sewed. This work must be performed with much care. It is altogether a *manual* operation, no adaptation of machines having been yet made with success. But the work is rapidly executed even by hand, and the scene in the stitching room is not exceeded in activity and interest throughout the manufactory.

The edges are then to be cut and the backs rounded. Before binding, the books are sent to the gilders or the sprinklers, for the ornamentation of the edges. The gilder's room is a special department, and the work of gilding requires no little skill for its successful accomplishment.

The bindery now opens its doors, and clears its tables for the invoice; for as yet truly "the word of God is not *bound*." The covers, in various sizes, styles, and values, are here put on; and the volumes which are thus approaching completion, are then sent to the finisher.

The finishing room contains apparatus for stamping the covers, gilding the backs, and fitting the clasps. Our exit from this is to the depository, which we entered on beginning our walk through the building. Those who wish to make their examination still more complete, may request the key of the Managers' room, and go in to look at the portraits of the five presidents of the Society, including that of the present incumbent of the chief office.

One striking peculiarity of the *workers* throughout every department of this establishment will impress itself upon the visitor; it is their uniform neatness, intelligence and courtesy, which perhaps are not equaled among the operatives of any other factory in this country. Two causes are assigned to account for this improved character; one is their daily interchange of words and courtesies with visitors; and the other, the necessary abiding consciousness that the Word of God is in their hands.

The cost of the erection of the edifice, and of its internal equipments, was $305,000, which is being gradually defrayed by a building fund, supplied by special contributions. Not a penny of the money contributed for the distribution of the Bible, is applied to the payment of the debt, of which about $120,000 now remain unpaid. In addition to the building fund, the rental of various rooms throughout the edifice is applied to the removal of this burden.

The total number of volumes issued from the Bible House last year was about eight hundred thousand, and since its first operations in 1816, more than ten millions. It has been carefully estimated that since 1804 (the date of the institution of the British and Foreign Bible Society) the total aggregate of copies of the Scriptures issued through the medium of Bible Societies has been more than fifty millions. Of this number a proportion of about one fifth has been published by the American Society, and about three-fifths by the British.

In view of such stupendous results in the successful dissemination of the Holy Scriptures, it cannot be questioned that these two great institutions—standing on each side of the ocean and together embracing the whole world as their field of effort—have been raised up, not merely as the excellent devices of *good* men, but rather by the power and the almost direct providence of God himself, for publishing the Gospel of Salvation to every land, and people, on the face of the earth.

GREATNESS SUPERIOR TO VANITY.

The following extract from the Life of Chalmers, by that prince of biographers, Peter Bayne, shows how little the Scottish preacher was affected by his wonderful popularity:

"On the day after his arrival in London, he preached in Surrey Chapel. The service began at eleven; at seven in the morning the place was filled. At length Chalmers ascends the pulpit, and all eyes are centered there. The sermon commences. The face of the preacher has a certain heavy look, over its pale, rough-hewn, leonine lineaments; his eyelids droop slightly, and his eyes have something at once dreamy and sad in their expression; his voice is thin, somewhat broken, unimpressive; his tone may be called drawling, and his dialect is broadly, almost unintelligibly provincial. The London audience sits cool and business-like, not given to tumultuous emotion, but accustomed to moral essays; eye meets eye in half-disappointed surmise. But look, Chalmers is beginning to move; he gradually works himself into the heart of his subject; his voice is becoming loud, rich, impassioned; the Londoners sit still unmoved, but now no eyes are wandering; the preacher warms, the latent heat within is beginning to be evolved; he curbs his spirit sternly, but it will bear him away; his auditors are silent, a consciousness of some strange enchaining power begins to pervade the place, but the light in the thousand eyes fixed on Chalmers is still mostly that of criticism; the Londoners still know where they are; the orator warms swiftly to white heat; his face is radiant with earnestness; the distending eyeballs swim; at last the fire within lights in it that wondrous watery gleam which tells that the spirit of Chalmers is in its last passion and agony of its might; his audience have forgotten where they sit; they bend forward in simultaneous assent to his every paragraph; he has chained them to the chariot-wheels of his eloquence.

"Report of the new wonder flies over London. Fashion hears of him in her glittering saloons; senators and peers speak of him in their halls and cabinets. The highest and gayest in the land crowd to hear him. 'All the world,' writes Wilberforce, in his journal, 'are wild about Chalmers.' Chancellors and lords desire to be introduced to him; the lord mayor visits him; mighty London seems to do him homage.

"The spectacle is strange; the test the man has to stand is searching. From the still and sequestered vale of Kilmany, he has ascended to the highest summit of contemporary fame. He was all unregarded in his quiet parish; he has now the great ones of the earth becking and applauding round him; there is a shout in his ears as if he were more than human. Let us not fail to perceive the danger and difficulty of his situation. The assenting voice of one fellow-creature has been said by one of the best of judges to 'strengthen even infinitely' any opinion a man may have formed, and a flattering opinion of one's self is so easy to strengthen; amid the vociferous plaudits of thousands, to retain one's self estimate, undiminished, unmagnified, unwavering, is difficult indeed. And how many, even of the powerfully-minded, have failed, when popular applause, that sun whose stroke so often is madness, has centered its rays upon them. Edward Irving was no ordinary man; yet he who, in his noble and beautiful eulogium on this 'freest, brotherliest, bravest human soul,' he ever met, bears witness to his force and healthiness, ~~tells us~~ also that he swallowed the intoxicating poison of fame, and had not 'force of natural health' to cast it out. Edinburgh celebrity contributed largely to the ruin of Burns; applause, every one knows, inflated and befooled Rosseau; Byron, unconscious, perhaps, of the fact, and in words scornfully denying it, was really the slave of fame—we might almost say of mode; and to what length might we not extend the list? The man who can see the world gazing at him unmoved, is the man intended by nature to be gazed at! Chalmers triumphantly bears the test. Let the world say what it will, he knows he is just Chalmers, of Kilmany, nothing more nor less—one whose power, be it what it may, neither inflates nor collapses in the popular gale. All who approach him find him simple, unassuming, devout. Nay, his instinct of reality is rather offended than otherwise; his heart whispers that much of this tumult is mere vocal vacancy. As principalities and powers cluster round him, he stands quiet and self-possessed, unabashed, unastonished, unalarmed; his greatness has its source within. No man could more thoroughly weigh popular acclaim, and more firmly pronounce it wanting; beautiful ardors and rapturous admirations would have been somewhat damped in London, had his ultimate definition of such matters been by any chance heard—'the hosannas of a driveling generation!'"

ELDER HIRAM CORNWELL.

The already feeble band of Seventh-day Baptist Ministers has been rendered still smaller, by the death of the brother whose name heads this article. After a very brief illness—only one week—he finished his course, on Thursday, the 24th ult., triumphing over the fear of death through faith in the Lord Jesus Christ. His age was fifty-eight years and a few days.

Brother Cornwell was not very extensively acquainted in our denomination. Since his association with us, his residence has been within the bounds of the Western Association, and it is our impression that he had not extended his travels beyond it. Perhaps many who will read this notice had not heard of him. Retiring in his habits, he sought not notoriety, "the honor that cometh from God only," being the chief object of his desire. Withal, he was reduced to the necessity of toiling in agricultural pursuits for his daily bread, which rendered it impossible to mingle with his brethren abroad, as much as would, no doubt, have been agreeable to him.

But our brother was a good man, and lived near to God. His daily life was of a character to commend the Christian religion to every one's regard. No better proof of this is needed than the universal esteem in which he was held by all his neighbors, of all classes. The ungodly felt him to be a man of piety, and spoke of him as such. The community in which he resided had not been particularly distinguished for its religious character, nor even for its morality; but such was the power of Bro. C.'s life, that a marked change was witnessed soon after he had taken up his abode there. What ought to be said of every Christian, (but can be said of only a few, with any truth,) is abundantly confirmed of him, that his neighbors are the better for his having lived among them.

At the time of his death, our brother was preaching for the Second Genesee Church, and was highly appreciated by that body. He did not live there, however; his home was in the town of Bolivar, some eight miles from his place of pastoral labor. Having been for many years enfeebled in health, riding so great a distance every week, and returning home to give the necessary superintendence to his temporal affairs, rendered his work very arduous. Yet he performed it cheerfully, to the full extent of his ability. The church he was serving has suffered a great loss; nevertheless, we hope it will be remembered by the bereaved body, that Christ still lives, and has "received gifts for men, that the Lord God might dwell among them."

Bro. C. came to us, some years ago, from the First-day Baptist denomination, though his still earlier religious connection was with the Methodists. By both of these denominationss he was, if we mistake not, recognized as an ordained minister of the gospel. We are not particularly acquainted with the circumstances which led to his abandonment of the popular belief, and his alliance with us, but we are prepared to say, that it was with him as with most of those who have come to us from other orders; his change was not attended with any acerbity of spirit towards his former fellow communicants, nor did it result in kindling up the fires of bigotry in his heart. He felt that he could love the Sabbath, without being the narrow partizan of a creed; he therefore rejoiced to recognize as his brethren all who call on the name of the Lord Jesus out of a pure heart.

The funeral exercises, attended by a large assembly, were conducted at the meeting-house of the First Genesee Church, on the Sabbath following his decease, by Elders Andrus, H. P. Green, H. P. Burdick, and Brown. Discourse by the latter, founded on 2 Tim. 2: 1—8. The death of our brother is mourned by a widow and several children of mature age, one of whom is a worthy minister of the gospel in our denomination, and Principal of the Brookfield Academy.

We have prepared this notice of our departed brother, partly as an act of justice to his memory, and partly by way of reminding our people, once more, that the ranks of the ministry are becoming fearfully thinned, while the prospect of new recruits is fearfully dark. Paul urged Timothy to renewed diligence in the work, from the fact that he himself had about finished his course, and the time of his departure was at hand. The benefit of the Apostle's instructions and labors was soon to be withdrawn; therefore Timothy must be instant, in season, out of season, and make full proof of his ministry. But where are the young evangelists in our denomination, whom our venerable fathers may exhort, as the hour of their departure draws nigh, to rouse themselves to the battle? Is the Lord holding a controversy with us? Is he calling to their final rest our best ministers, and our most godly private members, and leaving us without any reviving work of the Spirit? Are the churches, instead of seeking to be replenished for the waste created by death, resting under the blighting influence of worldly mindedness—at ease in Zion? Must this state of things continue, till we become a contempt to all people? T. B. B.

Poor Children in the City.—Several Societies in New York are now engaged in the laudable work of gathering up poor children from the streets of New York, and sending them to homes in the country. It is stated in the abstract of the report of the *Children's Aid Society*, that 936 unfortunate or impoverished children had been sent, by that Association, to places in the country during the last year. In the report of the managers of the *Juvenile Asylum*, we find that 569 more had been provided for by them in country towns. From the *Home of the Friendless*, the *Ladies' Mission* in the Five Points, and Mr. Pease's *House of Industry*, we may conclude that at least a thousand more of this class have been sent out to good homes within a year. For other Sunday Schools, Industrial Schools, and Missions, 200 would be a low estimate for the number whom they place in situations, or in families out of the city. So that we have every year, at least, 2,700 of the refuse juvenile population of the city, drawn out of their vile circumstances and placed where there are opportunities for labor and comparatively good influences.

ARE WE ABLE?

In all discussions of our educational interests, the Primary, Collegiate, and Theological, should be considered one and inseparable. Any plan proposing the permanent establishment of one without the others, or all independent of each other, would fail in the end of full efficiency, or of accomplishing the greatest good. They must be mutual supports. The Primary must supply students for the Collegiate, and the Collegiate must supply them for the Theological, and the Theological, in turn, should shed a spiritualizing, a religious influence, on the others.

This being premised, the question arises, are we able to endow such an institution? If so, when, and how?

It has long been felt to be desirable, if it could be done. Some have had faith; others have doubted. In the mean time, active operations for the accomplishment of so desirable an object have been commenced. The enterprise has already been inaugurated. May nothing prevent it from being brought to a prosperous termination. The doubter, however, may ask, has not the enterprise been undertaken rashly, or is it not intended to drive forward with an inconsiderate zeal? Will it be prosecuted according to the dictates of sound discretion?

Any view taken of the subject, tending to convey the impression, that such an enterprise will be a mere pastime, or a transient effort, is illusive. We should fully understand, that such an effort, undertaken at any time, will cost labor—hard, persevering labor. We should "know the worst, and provide for it." Nothing tends so much to cause reaction, as flattering prospects never to be realized. We should anticipate an arduous struggle, and commence and work accordingly. Let us not flatter ourselves, that this enterprise is to proceed with such rapidity and ease, that a College will burst upon our astonished gaze so suddenly, that we shall be utterly unprepared for action—that it is to be officered and manned, ready to turn off fifty or a hundred graduates at its first anniversary. It will probably have to go through something of the same process of growth and development as nearly all similar institutions. It will, doubtless, have to pass through stages similar to what they have in arriving to a perfect manhood. It will require toil and money. It must be a gradual, a progressive work—not a spontaneous growth, without means or measures.

If these things are so, they are all reasons why we should commence operations immediately—not postponing them to an indefinite future. The burden should be shouldered early, and increased as we are able to bear it. Success must be attained by persevering industry. We need not flatter ourselves—like Ortugral in his dreams—that the golden stream, when it commences flowing, will be quick and violent—this too without effort.

"A College is a tree of centuries." "An hundred years old, and no taller," said the fabled gourd to a venerable palm, to whose very top it had climbed in a single season. "*Every* summer of my life," replied the palm, "a gourd has climbed up around me as proud as thou art—and as short lived as thou wilt be." Such must ever be the language of all truly noble institutions of learning to every ephemeral or spasmodic effort.

With these admonitory thoughts, suggesting caution and great circumspection of action, is it not, nevertheless, possible for us to choose a practical, common sense, working method—a method for securing in a reasonable length of time the desired institution?

One hundred thousand dollars are necessary to a full and complete endowment. Any thing less than this would leave the work incomplete, imperfect, and embarrassed in its operations. We must strive for the whole amount. The labor is not finished until the whole is raised. Are we able to raise it? Yes, if we are willing to take hold of the work with an energy and determination corresponding to its importance. It is the great work of the denomination for the present. It may require somewhat of sacrifice; but the sacrifice, the outlay, will be light in comparison with the richness of the returns.

Let us suppose the one hundred thousand dollars to be divided into one hundred shares of a thousand dollars each; are there not twenty men in the denomination, who could take five shares each, and pay the same, say, within the next ten years, without any serious difficulty. True, it might require some management, some arrangement, the same as any other great undertaking. How many of these twenty men, think you, would be obliged to forego the conveniences of life in order to meet the demand? How many, think you, would ever have to forego many even of the luxuries of life which they now enjoy? Or suppose that these one hundred shares of a thousand dollars each, should be taken by one hundred men, to be paid in the same manner. How many, think you, would know the difference at the end of the ten years? They might have to use some circumspection, care and economy, in order to meet the yearly dues, but this very care and economy would tend to add, yearly, to their incomes, so that in the end the incomes from this cause would, doubtless, equal, if not more than counterbalance the outgoes from their donations. Do not those communities that pay most liberally for benevolent purposes, generally have the greatest worldly prosperity?

Again, let the whole sum be divided into one thousand shares of a hundred dollars each. Are there not two hundred men that might take five shares, or five hundred dollars each, to be paid in five years, in equal installments, without any serious inconvenience? Or, are there not one thousand men that could take one share each, and pay it within the same period, without scarcely knowing that they had paid it, by any inconvenience they would have suffered? It would be only one dollar and sixty-six cents, exclusive of interest, per month, for the time for each individual. The sum appears large in the aggregate—the burden heavy—but thus divided, it is light—easy to be borne.

It is, however, scarcely to be hoped that we shall—indeed, it would not be desirable to accomplish the object by any one of these classifications; but by combining all, taking a few with the higher sums, and increasing the number as we descend to the lower, we should combine and secure the advantages of all. It would enable all to do according to their ability, and thus secure the assistance and sympathy of all.

We repeat it, this is our great work for the present, and we are able to do it. *

STATE OF THE CHURCH—NO. 3.

In my former articles, I have confined myself mostly to the action of the church with reference to benevolence as exhibited toward each other as Christians, and the manner of conducting our public religious meetings, but briefly hinting at the contrasts intended. I design to call attention to some of equal importance, because equal if not greater consequences cluster around them.

In the first place, it is our duty to learn who God is; for unless we understand his character and our relations, we are liable to be deceived and led into sin. Then we should learn his will concerning us; that is, what he wishes us to do or refrain from. I am far from believing that God has made a revelation to his creatures, by which he intends to judge them at his bar, and left it in such a mystery as many suppose, so that none but the theologian can understand it. The instructions given to Adam and to Moses were plain and easily understood. So of the teachings of our Saviour; for example, turn to Matthew, 5th, 6th, and 7th chapters, called his Sermon on the Mount. How many years would a person of ordinary intellect have to attend a theological institution to understand this sermon? It may well be said of our Saviour's teachings, that the wayfaring man, though a fool, need not err therein. He that runs may read and understand. I am not opposed to education—by no means—I believe it to be the duty of our government to provide for the education of all of the youth of our country, and the duty of parents to see that their children avail themselves of its benefits, that they may be qualified to fill their proper stations in society; but it cannot be shown from the Bible, or from the history of the church, that God has relied on what are called liberally educated men, or that they have proved the most efficient agents in carrying forward the great work of reforming the world; but the Bible informs us that God has chosen the foolish things of this world to confound the wisdom of the wise. True, Moses was a man of learning and wisdom; and still he needed the assistance of Aaron to help him in teaching the Israelites their duty. The Apostle Paul was brought up at the feet of Gamaliel; but, with all of his education and wisdom, was not as successful as Peter in preaching, if we judge from the record of the writer of the book of Acts. Peter was an impulsive man, and lost much of his influence by his wayward course. Had our Saviour thought that education was of such vast importance as the church of the present day, it appears to me he would have chosen different persons for his disciples, instead of fishermen. Why did he not call Paul at first, and Caiphas, and the rest of the priests or learned men of that age? Why were not Socrates, Demosthenes, and Cicero sent as missionaries in their day? Why not have used a Calhoun, or a Clay, or a Webster? The Scriptures inform us that the race is not to the swift, nor the battle to the strong; then, my brethren, be not conformed to this world, but be ye transformed into the image of Christ. It is said of mankind, that they are religious beings. This is probably true of all men. Those who worship a god of their own making may offer such sacrifice as they please, considering themselves the owners of all they can grasp; but not so of the Christian, who is only a steward or agent. Obedience is all that is required of him. To fear God, and keep his commandments, is the whole duty of man. The world is his field of labor, diligence should be his motto, the Saviour his example, promptness in duty should be our watchword. Our Saviour and his disciples were not confined to the Sabbath or the synagogue; they embraced every opportunity to reprove, rebuke, and warn fallen men, and relieve their distresses; they fed the hungry, healed the sick, raised the dead, and cast out devils. How striking the contrast between the followers of Christ then and now. In this age of improvement, every clergyman has his congregation or church; all his efforts are put forth to build up this church or organization; his time is spent with reference to his Sabbath exercises; the object apparent is to keep up his congregation or church, which is distinguished from others by some doctrinal point or practical duty, the adoption of which is made a test of fellowship. L. P. B.

AN UNEXPECTED VISIT.

Was you ever taken on surprise? To be suddenly and unexpectedly aroused from our slumbers, in the darkness of the night, reposing in "nature's sweet restorer," the first thought is, robbery, sickness, death. The physician becomes accustomed to such calls; he knows his services are wanted immediately; he starts upon his errand of mercy, penetrating the thick darkness, facing the pelting storm, to stop the ravages of disease, and do what he can to relieve suffering humanity. The pastor, when thus aroused, supposes that some one is in trouble, probably dangerously sick, and wishes his counsel and prayers, that he may not die without the comforts of religion.

On the evening of the first of May, after the family of one of our country clergymen, living in a quiet country village, had all retired to rest save one, they were unexpectedly startled from their quiet repose by an unusual thumping of the knocker on the front door. For the moment it caused some alarm. The door was immediately opened, and behold no one was there. Upon the stoop stood a "*May Basket*"—not one of those little, useless, fancy things, made for show only, but a large basket, of the dimension of over a bushel, filled with useful articles. The top was decorated with a wreath of evergreens, ornamented with May flowers. The sleeping clergyman was called from his bed, wondering what had caused the alarm, and was shown the basket, and requested to help carry it into the house. After the moment's excitement had passed, it was taken into the house, and on the top of the articles lay the following note:—

> "Please accept these few articles from your many friends, as a slight memento of their friendship for you, and their appreciation of your many valuable services rendered to them."

While engaged in reading the above note, the knocker gave another alarm; the door was again opened; but no one was to be seen; the fairies had vanished. But there stood, not a "May *basket*," but a May *tub*—yes, a large washing tub, filled to overflowing. Hearty thanks would have been bestowed upon the donors, notwithstanding the alarm they caused, but they could not be found. The articles thus presented, by unknown benefactors, are of great value in a family; they were articles of comfort, such as every family needs, consisting of groceries, dry goods, dried fruit, and money.

We suppose that most of those kind-hearted parishioners, who chose to make a demonstration of their affection to their pastor in that secret way, are readers of the *Recorder*. Therefore we, as a family, would wish through that medium to express to them our kindest regards and thankfulness, hoping that the attachment expressed may be mutual, and lasting as time, and perpetuated and perfected in eternity. And may the blessings of Heaven follow them, knowing that "God loveth the cheerful giver," and that "it is more blessed to give than to receive." I trust that we may prudently appropriate the bounties thus freely bestowed. W. B. G. AND FAMILY.

Shiloh, N. J., May 2, 1856.

DEATH OF JEREMIAH BLISS.

The last link is broken which bound the present generation with the past in the family of the venerable and long since departed Eld. William Bliss, of Newport, R. I.

Jeremiah Bliss was the youngest son of Eld. William Bliss, and was born on the 4th of March, 1770. He had long enjoyed the privilege of sitting under the ministrations of his eloquent father in the little sanctuary in Newport, and was finally baptized, at the age of 36 years, April 6, 1806, by his elder brother, Eld. Arnold Bliss, of Dartmouth, Mass. The ordinance of laying on of hands was administered by his venerable father, on the occasion of his admission to membership of the church.

On the 8th of September, 1811, he was unanimously chosen a deacon of the church, and the 8th of November following was appointed for his ordination, of which ceremony we find the following minute in the records of the church:—

> "Nov. 8th, 1811, brother Jeremiah Bliss was solemnly set apart and ordained to the office of a deacon, at the Seventh-day Baptist meeting-house in Newport, Eld. Abram Coon, of Hopkinton, and Eld. Arnold Bliss, of Dartmouth, being present. Eld. Coon began the service of the day by prayer; a hymn suited to the occasion was sung; then Eld. Coon preached a sermon from 1st Timothy 3 ch., 15 v. Elders Coon, Bliss and Burdick laid on hands; Eld. Bliss made the consecrating prayer; Eld. Coon gave the charge; and Eld. Burdick gave the right hand of fellowship."

On the 21st of February, 1813, Mr. Bliss was chosen clerk of the church by a unanimous vote.

Some years afterward, however, a misunderstanding arose between him and the church, which finally led to a dissolution of their fellowship, a vote to that effect having passed at a church meeting held on the 7th of December, 1825.

As a citizen, Mr. Bliss was much respected by the inhabitants of Newport; and he has left a large circle of friends, and a numerous posterity, to mourn his loss. He died in Providence, R. I., on the morning of the 11th of April last, in the 87th year of his age. T. B. S.

RETURN OF MRS. WARDNER.

Under date of Feb. 6, 1856, Bro, Wardner informs the Executive Board of the Seventh-day Baptist Missionary Society, that he had determined to send Mrs. Wardner and his two boys to the United States. He had engaged a passage in the ship "Rock City," which was to sail in about a week after the date of this letter.

Accompanying the letter communicating this intelligence, is a certificate from E. R. Hall, M. D., who has been Bro. Wardner's family physician for three years, in which, after giving a statement of the health of Mrs. Wardner and her boys, he says: "In view of this state of Mr. Wardner's family, and the prostrating effects of the coming summer, I have deemed it my duty to urge most strongly upon him the necessity of sending his family home, believing the voyage and change of climate will afford them the only chance of re-establishing their health."

Under this advice Mrs. Wardner has relinquished her cherished wish of spending all of her days in China. If she started about the middle of February, as expected, she will arrive here some time in the summer. From four to six months are required for the homeward passage. The expense of the voyage, as arranged with the Captain by Bro. Wardner, is five hundred and sixty-seven dollars. This must be paid in fifteen days after their arrival. Remittances have lately been sent to our missionaries, leaving the treasury empty. To meet this expense, we request those having funds on hand to remit them to the treasurer, so that there shall be no lack when they come. We hope, also, that the friends of missions will make extra efforts to furnish funds for this extra expense.

J. Bailey, Cor. Sec.

THE ANNIVERSARIES.

This is Anniversary Week in New York—a busy and important week to those who are engaged in carrying forward the great benevolent enterprises of the country. The exercises have barely commenced when we send this paper to press, and of course we must defer until our next the usual abstract of reports and proceedings. Sermons were preached on Sunday evening before several of the Societies—before the New York Bible Society, by Rev. Dr. Cheever; before the American and Foreign Christian Union, by Prof. T. W. J. Wylie of Philadelphia; before the American Home Missionary Society, by Rev. N. S. S. Beman of Troy; before the Society of Inquiry of Union Theological Seminary, by Rev. Dr. Williams.

The New York Female Guardian Society held its Anniversary on Sunday evening, at which a sermon was preached by Rev. T. L. Cuyler. The Annual Report was read, showing that the income and expenditure of the Society, including the publishing department, and the Home for the Friendless, have been $27,925.

The Board of Foreign Missions of the Presbyterian Church also held their Anniversary on Sunday evening, when a sermon was preached by Dr. Gurley of Washington. From an abstract of the annual report read by the Corresponding Secretary, it appears that the receipts from all sources were $201,933 61, and the expenditures $201,908 75, leaving a balance of $24 86. The advance in the receipts of the treasury were $10,000 over those of last year. Forty-eight missionaries and assistant missionaries were sent out during the year. The missionary strength employed by the Board is diffused as follows: Among the various Indian tribes in the United States there are twelve missionaries and sixty assistants. In Africa there are nine missionaries and fifteen assistants. In India there are twenty-nine missionaries and sixty-four assistants. In Siam there are three missionaries and three assistants. In China there are fourteen missionaries and nineteen assistants. At these stations, as well as others among the Romanists and Jews, the reports were encouraging and cheerful.

Perhaps there is no Anniversary to be held during this week, in the results of which so much interest is felt as in that of the American Tract Society. For several months past a discussion has been going on through the newspapers relative to the course of the Society on the subject of Slavery, and it is expected that some action will be taken at the annual meeting. As much curiosity is felt to know what the Annual Report will say upon the relations of the Society to Slavery, we copy that portion which declares the policy of the Administration upon this subject:—

In the present agitations on the subject of Slavery, friends of the Society in the Northern States have expressed an earnest desire that more should be published on the acknowledged evils connected with that system.

All the known wishes of the Society, or of any of its members and supporters, the Committee wish ever to regard, as far as consists with the solemn obligations under weich the Society have bound them by the Constitution, the law under which they act.

The sacred compact which binds the Society to PEACE with all God's redeemed people, in seeking the glory of Christ and the salvation of the perishing, is "known and read of all men." It was entered into thirty-one years ago by the Society's founders, in the assurance that evangelical Christians *do agree* in the great essential practical truths of revelation which have been eminently blessed by the Holy Spirit in saving souls from death and raising them to Heaven. The convention of delegates from then existing Tract Societies solemnly and unanimously adopted this compact. It was publicly and unanimously sanctioned by the Society as the fundamental article of its Constitution in its organization, was solemnly reäffirmed on accepting the act of incorporation, and has been sacredly adhered to in all the Society's harmonious course, on which the blessing of God has so richly rested. Milnor, and Stokes, and Stearns, and Justin Edwards, and Bliss, acted on it in good faith till their death, as have surviving founders to the present hour. The three Standing Committees of the Society, and the Executive Committee to whom they monthly report their proceedings, each of which committees contains members of five or six different communions, have all endeavored to this day to fulfill this compact, and no act of theirs has ever been carried into effect that was not unanimous. Nothing can change these historical verities.

The Publishing Committee have honestly endeavored faithfully to apply the true principles of this compact, as expressed in the Constitution, in their decisions on every thing proposed for publication; but they lay no claim to infallibility in any of their acts. Many things beyond the limits of this compact may have been desired by individual members of the Committee, and by others; but the Committee have done nothing knowingly to offend one another, or evangelical Christians elsewhere.

Almost nothing specifically discussing the evils of Slavery has ever been laid before them. It seems to have been understood by the whole community, that the subject of Slavery, in its aspects of political, national, and sectional strife, could not be discussed by this Society. Yet there are other aspects of the subject and of duties and evils connected with it, in which it might be hoped that evangelical Christians, North and South, would agree; and so far as this is the fact, and Tracts of this character, breathing the love of Christ and promising usefulness, shall be presented, the Committee know no reason why they should not be approved and published.

As to the propriety of having in some cases omitted from a book a few words or phrases which Christians at the South would regard as untruthful, harsh, or denunciatory, if the Committee have misjudged, and such omissions were needless, they have no desire to perpetuate them; or if the terms omitted would be offensive to some evangelical Christians, and their omission is offensive to others, the books thus abridged might be dropped, however full the testimony to the evils of Slavery which is now borne in the Society's editions of those books.

The Committee desire to seek light on the subjects in question, under the teaching and guidance of the Word, the Spirit, and the Providence of God, till they shall discern more clearly how they may best advance his glory and the temporal and eternal welfare of men.

Prize Essay on Slavery.—A gentleman who has resided at the North and at the South, but whose name is not given, has offered a reward of one hundred dollars for the best prize essay of eight to twenty-four pages on the subject of Slavery, adapted to receive the approbation of evangelical Christians generally. "Without attempting to prescribe the precise manner or form of the essay, the individual who offers the premium would desire the writer to show that the common and Christian view which we propose does not, on the one hand, affirm that no slaveholder can be a Christian; that there are not many godly ministers and devoted churches in the South; that slavery in form should instantly and everywhere be abolished; or that the Northern States have any *political right* to interfere with the peculiar institutions of the South. Nor, on the other hand, does this common and Christian view admit, with some extreme men, that American slavery is a divine and patriarchal institution, sanctioned by the Bible, necessary to the highest state of society, to be meliorated and improved, and then perpetuated forever, or that the North has nothing to do with this matter, no moral responsibility in the case, and no right to discuss the subject." Essays for the prize are to be sent to Rev. Asa D. Smith, D.D., No. 142 East 13th street, New York, until the first of August next.

Alfred Academy.—The following Card, dated Alfred Academy, Allegany Co., N. Y., April 27th, 1856, we copy from the *Genesee Valley Free Press* of April 30th:

The undersigned take this method of returning their thanks to the numerous friends of Alfred Academy, who in various ways commended it to the consideration of the Legislators of the State during its recent application for relief. Their gratitude is due alike to those who petitioned, and to those who advocated the application in the halls of legislation. They feel assured that the best return they can make for these offices, will be to do what they can to render said Academy still more worthy the confidence of the public. May God, who in his providence has enabled Alfred Academy these twenty years to do good service in the cause of popular education, continue to bless it and its friends, and cause even its enemies, if any it has, to be at peace with it.

J. R Hartshorn.
W. C. Kenyon.

Delegates to the Eastern Association.—Eld. W. B. Gillett furnishes the following information relative to the means of getting to Shiloh, at the time of meeting of the Eastern Association:

"The afternoon boats from Philadelphia to Salem have not yet commenced running, and probably will not until June, when the people commence leaving the city for the country. It will be necessary for those coming to the Asssociation to leave New York, from the foot of Courtland street, as early as Third day (Tuesday,) at 4 o'clock, May 20th, and they will arrive at Philadelphia at 8 o'clock. The next morning they will take the steamboat for Salem, N. J., from the foot of Arch-st., above Market, at 10 o'clock, and arrive at 2 o'clock, where carriages will be in waiting to convey them to Shiloh, free of charge. At the Arch st. Hotel, (Newkirk's foot of Arch-st., or the Ridgeway House, or at Davis', foot of Market-st., they will find comfortable entertainment for the night."

The London Christian Times says that Rev. Charles G. Finney, so well known for his writings and his efforts in promoting religious revivals, is about to be invited to visit Great Britain, with a view of addressing public meetings to be opened for that purpose. The movement is initiated by some gentlemen chiefly resident in Huntingdon,

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, APRIL 28.

In the Senate, another bill was introduced for the incorporation of a Pacific Railroad Company, which was referred to the Special Committee on that matter. Mr. Brown made a speech on the Kansas question. An ineffectual attempt was made to take up the River and Harbor Bills; after which Mr. Bell, of Tennessee, defended Lieut. Maury from the derogation implied by the action of the Naval Board.

In the House, several personal explanations were made with reference to the struggle for the Speakership. The Senate bill to remit duties on goods destroyed by fire was finally referred to the Committee of the Whole. The bill amending the act establishing the Circuit Court of California was passed.

THIRD-DAY, APRIL 29.

In the Senate, a bill was introduced providing punishment for forging or counterfeiting land warrants, and referred to the Judiciary Committee. Several private bills were passed.

In the House, the Committee on Commerce was instructed to inquire into the expediency of exempting steamboats under 150 tons burden from the action of the steamboat law. Mr. Quitman made a speech in favor of the repeal of the Neutrality laws, in which he advocated interference in the affairs of Mexico, Central America and Cuba, and the seizure of the Isthmus of Panama as the connecting link between our Atlantic and Pacific possessions.

FOURTH-DAY, APRIL 30.

In the Senate, the Finance Committee was directed to consider the expediency of providing that all articles of foreign manufacture obtained from submerged and derelict wrecks, may be admitted free of duty. The action of the Naval Retiring Board was again discussed.

In the House, a bill was reported from the Committee on Commerce, establishing collection districts, designating ports of entry and delivery, and modifying the revenue laws. After various explanations regarding the character of the bill, its further consideration was postponed to the second Monday in June. Mr. Herbert made a reference to the recent massacre at Panama, remarking, that this was not the first time that such offences had been committed there, and said that it was high time the Government should take measures to put a stop to such proceedings. He offered a resolution, which was adopted, instructing the Committee on Foreign Affairs to inquire into the matter. The Indian Appropriation bill was taken up in Committee, and, after several speeches on the Slavery question, it was reported to the House, without a word having been said in relation to it.

FIFTH-DAY, MAY 1.

In the Senate, Nicaraguan affairs occupied attention. Mr. Weller submitted a resolution—which he subsequently withdrew on learning that Mr. Seward had previously introduced one of the same character—calling on the President for correspondence with the Nicaraguan Minister. He entirely disagreed with the Government in not recognizing the new *regime*, and said that if Parker H. French was refused recognition as the Nicaraguan Minister on personal grounds, intimation of that fact should be conveyed to that Government. He read a letter from Gen. Walker, which asserted that the British Government have interfered in the pending struggle between Costa Rica and Nicaragua, and have furnished the former with arms. In the course of his remarks, he adverted to the recent massacre at Panama, stating that the best feeling existed between our Government and that of New Granada, and that he had no doubt the whole power of the latter would be exerted to bring the offenders to justice. Senator Douglas also addressed the Senate in favor of the legitimacy of the present Nicaraguan Government. He believed that the Clayton-Bulwer Treaty was being violated every day by Great Britain, and thought that something ought to be done about it. Senator Butler thought we ought not to involve ourselves through the acts of adventurers.

In the House, several bills were passed; the Slavery question was discussed; and Mr. Quitman introduced a bill, which was referred to the Judiciary Committee, to repeal certain sections of the Neutrality Laws.

SIXTH-DAY, MAY 2.

The Senate listened to a speech from Mr. Benjamin, of Louisiana, on Kansas matters, in which he maintained the Southern view, and denounced the Know Nothings. Remarks were also made by Messrs. Cass, Clay, and Hale; after which the Senate adjourned till Second-day.

The House was engaged all day on private bills, of which it passed thirteen, and then adjourned till Second-day.

Riot and Massacre at Panama.

By the steamer Empire City, we have the particulars of a frightful massacre of Americans, which took place at Panama on the 15th of April. Although it is believed that an attack was premeditated by the natives, among whom a great hatred of our countrymen has been for some time evolving itself, the immediate cause of the late terrible affray was a dispute between an American and a native respecting the payment for some fruit. Weapons were displayed and acts of force resorted to by these parties, which led, in a few minutes, to an almost general rising of the natives against the American passengers by the steamers Cortes, the J. L. Stevens, and the Illinois, who were stopping at Panama. The two hotels, outside the walls of the town, most frequented by Americans, the Pacific and the Ocean House, were completely destroyed, and it is believed that more than sixty passengers were killed. Thirty-one bodies of Americans who fell in the *melée* were collected at the Railway Depot and other places the next morning, before the rest of the passengers took their departure for Aspinwall. As many of the Americans fled to the woods, where the firing continued during the night, it is believed that the number killed will prove to be quite large, from sixty to seventy being the number spoken of. Not contented with this savage act of murder, the natives broke into the Railway Depot, robbed the safes of the Company, and rifled the trunks and other baggage of the passengers. The police force of Panama, a set of colored soldiers, well armed, were sent by the authorities to quell the riot, but instead of protecting the Americans against their savage assailants, they were foremost in the attack upon them, and exceeded the cowardly natives in their activity in plundering.

European News.

The mammoth steamer Persia, after a very short passage, reached New York April 30th, with one week later news from Europe.

The political news from England is not of special significance. The Government had sustained an apparent defeat in the passage of Mr. Spooner's motion to withdraw the Maynooth Grant. Lord Panmure had given a perfectly satisfactory explanation of the motives of the Government in sending troops and ammunition to Canada; the only purpose was to replace the men and munitions of war which had been withdrawn to be sent to the Crimea. No hostile movement was intended by it. Mr. Dallas, our Minister, had been entertained at a banquet by the Lord Mayor.

The various governments which were represented at the Peace Congress in Paris having ratified the terms of the treaty, the Congress was dissolved on the 16th, and the members composing it were preparing to return to their respective homes. But the dissolution of the Peace Congress does not give absolute peace to Europe; there was one awkward subject which could not be disposed of, and which will require another Congress to settle. This subject is the Italian question; the Pope, the King of Naples and Austria, have yet to be compelled to treat the Italians with that degree of justice and moderation which will prevent another revolution in that unhappy land.

The commercial accounts by this arrival represent a very large business in cotton at Liverpool, at an advance of a farthing the pound, with corresponding activity in the trade at Manchester. The comparatively low point to which Grain and Flour have fallen brought in buyers on the last market day, and prices for select parcels of Wheat and good brands of Flour, and also for Indian Corn, assumed more steadiness.

Lord John Russell's measure for the education of the people of England, after being introduced with much pomp and ceremony, and after having occupied the House of Commons for several nights, has been withdrawn. The leaders of all the parties in the British House of Commons was opposed to it.

A splendid ball was given on Sunday night, the festive day of Paris, in the Hotel de Ville, by the civic authorities of that beautiful city, to the Plenipotentiaries of the Great Powers.

California News.—The Steamship Illinois, with two weeks later news from San Francisco, and nearly two million in treasure, arrived at New York on the 30th of April. From California there is scarcely any news worth recording. The drouth, of which we were previously advised, has been happily interrupted by grateufl showers, and there was now every promise of a good crop. From Oregon we hear of more fighting with the Indians. On the night of the 25th of March, the latter, some 800 strong, attacked the Cascades and obtained possession of the only pass by which communication could be kept up with the volunteers in the field—killing a large number of citizens, and destroying their houses and property. The entire town is said to be in ashes.

More Fighting in Nicaragua.—Another desperate battle has been fought between the Costa Rican troops and Walker's forces. It seems that the Costa Ricans, some three thousand strong, had taken possession of Rivas, and that on the 7th of April, General Walker, at the head of about sixteen hundred Americans, endeavored to dislodge them. The fight lasted some seventeen hours, at the end of which time Walker was compelled to retire, it is said, for want of ammunition. The number of Costa Ricans killed is variously stated at from 300 to 600, while the estimates of Walker's loss range from 30 to 100. All accounts represent that the American residents in Nicaragua were in imminent danger of their lives. President Mora, of Costa Rica, had issued a decree declaring that foreign prisoners, taken with arms, should be punished with death. This threat has already been put into execution, and the men who were captured in the affair at which Schlessinger commanded have been barbarously massacred.

Torturing a Jew.—A party of Germans were before Alderman Ogle of Philadelphia, on Saturday, April 26th, upon a most extraordinary charge, preferred against them by a boy named Bernadotte Glischman. From the evidence of the youth, it seems that himself and his father board at a lager-bier house in Front-st, above Coates, kept by William Leckfeld. On the 22d of the month, during the absence of the father of the boy, the latter was beaten in the bar-room, by a number of the frequenters of the place, and he was afterwards carried up stairs and stretched upon a bed, where they stuck pins into him, and to silence his cries, covered his head with a pillow. The boy alleged that he was subjected to this treatment because he was a Jew, and because his tormentors, who are Catholics, wanted to punish him because the Jews crucified Christ! The father of the boy testified that his son had been badly beaten on the occasion alluded to, and that he found him, after much difficulty, locked up in the room, and suffering from the treatment he had received. The story is certainly a most extraordinary one.

Grand Buffalo Hunt in the West.—A company has been organized to start from St. Cloud, Minnesota, on the 5th day of June, for the great buffalo ranges on the Red, Shugeneau, and James Rivers. The buffalo ranges are about 150 miles west of St. Cloud, and constitute the finest tract of country in the North-west. The route lies through a beautiful section of country. Probably there will never be another so favorable an opportunity to indulge in the grandest sport ever seen on the continent. The renowned Chief of the Chippewa Nation, Hole-in-the-Day, and twelve of his braves, several Pembina gentlemen, and Pierre Bottineau, [Guide to Stevens' Pacific Railroad Expedition, will accompany this. Those desiring further information are referred to Ex-Gov. A. Ramsey, St. Paul; the Hon. H. M. Rice, Delegate to Congress, Washington; or the Committee of Arrangements.

The Contrast.—Not less than three Free-State men in Kansas—namely, Dow, Barber, and Brown—have within a few months past fallen victims to pro-slavery hostility; and yet no vigorous efforts have been made to ferret out aud bring to punishment their murderers. At length a pro-slavery man, one Sheriff Jones, after committing many eutrages upon the rights of Free-State men, was shot at Lawrence by an unknown hand. Thereupon a large meeting of friends of freedom in Kansas was held at Lawrence, resolutions denunciatory of the murder were passed, and Governor Robinson offered a reward of five hundred dollars for the arrest of the assassin. This proceeding shows who are the friends of "law and order" in Kansas.

SUMMARY.

The late Augustus Graham, of Brooklyn, in his will, made an appropriation for the purpose of having four discourses a year delivered on the Seasons, as exhibiting the wisdom, power and goodness of God. At the Church of the Saviour, Rev. Dr. Farley recently delivered one of these discourses on Spring. The subject was treated in an able manner, showing that in the return of Spring the faithfulness, power, wisdom and goodness of God were manifested, and the resurrection typified, when the soul was to be introduced to a perennial Spring. In conclusion, he drew some striking analogies between the Seasons and human life, applying the subject to his hearers.

On a recent Sunday, the Rev. Dr. Hatfield, pastor of the North Presbyterian Church, New York, made an appeal to his congregation for the amount of $2,300, in order to complete the sum of $20,000 to be raised by the 1st of May, for the purpose of erecting a new church. The appeal met with a hearty response, and before the congregation dispersed, $3,077 was subscribed, being $777 more than the stipulated amount. The new church is to be built on the northeast corner of Thirty-first street and Ninth avenue, and will cost when finished a sum approaching $40,000.

Some days since it was announced that a spiritual medium had proclaimed that the steamship Ericsson would be destroyed by fire on the 26th of April. But the Ericsson arrived on the 30th, in good condition, fourteen days from Liverpool. The Ericsson is not the fastest steamer running across the Atlantic, but she is one of the safest. She forms, now, one of the Collins line. Her last passage out was made in thirteen days, and she has made ten passages without an accident. It is stated that the Ercsson consumes but a ton of coal an hour, which is a wonderful economy of fuel for a steamer of her size and speed.

An arrangement has been concluded between Mr. Campbell, Postmaster General, and the British Postmaster General, the Duke of Argyle, providing for the registration of valuable letters to and from Great Britain. The registration fee on letters will be five cents, the same as on domestic letters, thus making the rate on a single letter, when registered, twenty-nine cents. The English registration fee is twelve cents. On all registered letters in each country, prepayment is required. The arrangement went into operation on the first of May.

The British and American Commissioners of Patents have shaken hands over two hundred volumes of specifications and drawings, presented by the former to the latter, as evidences of the good feeling that binds the countries in friendly bonds. A year ago last January, our Commissioner forwarded to the British Office copies of all the Patent publications issued here up to that time, and Prof. Woodcraft returns the compliment this Spring. Ninety-three volumes of the set are filled with drawings of British patents.

The Cincinnati Commercial says that a wealthy cotton planter from Tishomingo county, Mississippi, named Josiah Stittles, is in Hamilton, Butler county, Ohio, with a family of nine slaves, which he proposes to set free. He also intends to educate and otherwise prepare them to sustain properly their new relation to society. The family consists of a mother, with six sons and two daughters. Three of the boys are good mechanics, and another acted as an overseer. Mr. Stittles is still the owner of many slaves.

A dispatch dated Alton, Ill., Friday, May 2, says: The Committee appointed by the Kansas and Alton Transportation Company, to establish a line of steamers between this city and Kansas, for the transportation of passengers and merchandise direct, have completed their arrangements, and a circular will soon be issued to apprise emigrants and forwarders of the increased facilities offered by the Company. It is as yet uncertain how soon the boats will commence their trips.

There is no doubt but that the U. S. Government will take prompt measures relative to the outrages at Panama. The Secretary of the Navy supposes that the sloop St. Mary's is there by this time under the instructions of her ordinary cruise, but an additional vessel of war will be dispatched from the Atlantic coast. It is highly probable that a Commissioner will be sent thither to ascertain the facts of the case.

Riot and revolution have cut off, for a while, the communication between the eastern and western shores of the United States. The struggle between Walker and the Costa Ricans closes the thoroughfare through Nicaragua; the murderous and lawless condition of the native population at Panama must, for a time, prevent any prudent voyager, homeward bound from California, bearing about him the fruits of his labor, from periling life and property in that den of thieves.

James McCombs was hung at Columbus, S. C., on Friday, April 25th. His execution was a horrible affair. The criminal some how or other got his hands loose and grasped the rope, and with great difficulty his death was accomplished.

A project is on foot to obtain from the Canadian Parliament a charter for a line of railway from Quebec on the North shore of the St. Lawrence to Montreal, via Bytown or Ottawa City, Pembroke, &c., to Georgian Bay.

In Paris the telegraph wires are laid under ground, no poles being seen in the streets. A trench is dug about a foot wide, in which the wires are placed side by side, but not so as to touch each other. Liquid bitumen is then poured on, which surrounds the wires, and completely isolates them. It secures them from damage by accident or design, and from being damaged by the atmospheric influence.

The Empress Eugenie having expressed a wish to preserve the pen with which the peace was signed, the gallant diplomats made use of one plucked from the wing of a living eagle, and the relic is now in her possession, ornamented with gold and diamonds. In addition to signing the principal documents, each of the plenipotentiaries had to put his name to eighty-six separate paragraphs.

A young white woman of Dickens County, S. C., has turned her attention to farming, and made cotton last year which netted her $100; her corn crop was 250 bushels. She plowed her land, drove the cart, cut the wheat, and cribbed the corn, without any manual labor except that contained in her own hands.

The people of the Cape de Verde Islands are now perishing for want of bread, and their destitution is of the most urgent character, having neither food to eat, nor money to buy it. A worse than Egyptian famine is now brooding over these devoted islands, and their only hope is in an appeal to the charity of the Christian world.

The Great Durham mixed cow, for several years owned by William Shepherd, of the Manchester House, was sold the other day to Francis F. Hoyt, Concord, for $500. This cow was raised in Pembroke, and is 7 years old. She girts 9 feet, and weighs 2,760, being the largest cow in the United States.

Hon. Mr. Douglas, United States Senator from Illinois, has made a donation of ten acres of land to the Baptists of Illinois, in the city of Chicago, for a site for a new college. It is also understood that the Baptists of Chicago, and their friends, will raise in that city $100,000 towards an endowment.

On the 20th of March the Emperor and Empress of Austria washed the feet of 24 old people, viz: 12 old women and 12 old men. The oldest of the women was 89, and the youngest 83; the oldest of the men was 91, the youngest 82; the ages of the 24 combined amounted to 2052.

A dispatch dated Montreal, Wednesday, April 30, says: The new Suspension Bridge over the Falls of Montmorency gave way this morning, and the whole structure, with a man, woman, horse and cart, was carried over the Falls. The bodies of the man and woman have not yet been found.

The Springfield (Ill.) Journal says: For the last two weeks the tide of emigration passing through this city to the Westward has been very brisk. The destination of the emigrants has been principally Iowa, though many will, doubtless, find their way into Kansas and Nebraska.

The Milwaukie and Mississippi Railroad, which is now in operation from Janesville to Madison, will be opened in June to the Wisconsin River at Helena. Thence a line of steamers will run down the Wisconsin River to Prairie du Chien, and up the Mississippi River to St. Paul.

The block of model houses in Boston, for which Mr. Lawrence provided in his will, bequeathing therefor $50,000, will be erected at the corner of Ash and Bennett streets, South End. The new building is to contain five hundred rooms, and will be an enduring monument of practical benevolence.

At a recent meeting of the Public School teachers of Hudson County, N. J., held at Hoboken, it was determined to hold a Teachers' Institute in the city of Hudson, to commence on Monday, June 15. The State has appropriated $100 to each county for the expenses of these institutes.

The total number of land warrants issued under the law of March, 1855, as we learn by a dispatch from Washington, are 227,000; requiring upwards of 15,000,000 acres. The number of claims received are 245,700. Upwards of 14,000 warrants, covering 1,700,000 acres, were issued in April.

On the night of April 30th, the village of Gowanda, Cattaraugus Co., N. Y., was almost destroyed by fire. Among the buildings burned are Salem's furnace, Camp's factory, E. W. Hennie's store house, the Palmer block, the Welsh block, the Mansion House, the Old Mill, &c. The bridge was also destroyed.

The report of the Methodist Book Concern for the year 1855, presented to the Conference of the Methodist Episcopal church at Baltimore, states that the periodicals, except the Christian Advocate, failed to meet the expenses of their publication.

G. P. R. James, Esq., the British Consul at Norfolk, Va., has received directions from Lord Clarendon to distribute $1,000 among the benevolent institutions having in charge the widows and orphans of those who died during the epidemic last Autumn.

The steamer Cuba, plying on the Alabama River, was recently snagged on the wreck of another steamer, and sunk. A widow lady and her family, consisting of four small children, on their way home, somewhere in North Carolina, (deck passengers,) and two deck hands, were drowned.

Hon. Ogden Hoffman, a prominent member of the New York Bar, died at his residence in this city on the 1st inst., in the 63d year of his age. His disease was congestion of the lungs, which terminated fatally after an illness of five days.

It is said that a deposit of valuable coal has been discovered on the land of Mr. Isham Sealy in Cumberland county, (Va.) about four miles from Farmville. Indications of the existence of this mineral have also been found on other farms in the vicinity.

Bogus two shilling pieces have recently been put in circulation in the Western part of this State. They are said to be very well executed, but have an unmistakably bogus (greasy) feel, by which they can easily be detected.

The California Overland Mail Company have held meetings and organized in St Louis, and a similar movement has been set on foot in California.

There was a terrible fire in Philadelphia on the 30th of April, which destroyed forty stores and dwellings, and property valued at over a million of dollars.

Though the number of persons in the city of Boston worth $50,000 and upwards, increases from year to year, the number of colossal fortunes is smaller than it was a quarter of a century since.

A Massachusetts post-rider the other day charged a newspaper publisher $13 for delivering twenty copies of that paper for six months. The whole value of the subscriptions for the time was $15!

A man residing at South Boston, while in a state of intoxication, administered to his child, two years of age, four or five spoonfuls of gin. The child soon after was seized with convulsions, and died two days after.

The ships arriving at New York Quarantine bring frequent cases of small-pox, yellow fever and measles. All the victims, and persons exposed, are kept from the city until danger is past.

Since the first of January about sixty persons have united, on profession of faith, with the Baptist church in Cannon street, New York, of which Rev. Joseph Banvard is pastor.

The international fair is to be held in Buffalo on the 8th of September next. $15,000 is being raised by subscription for premiums, competition being open to both United States and Canada.

The sum of $610 has just been subscribed privately by members of the Church of the Pilgrims in Brooklyn, and will be paid to the Treasurer of the American Tract Society, as the donation of that church for 1856.

It is said that Mrs. Stowe, the author of Uncle Tom's Cabin, will soon put to press a work illustrating the alleged degradation of the poor white population at the South.

Young men from the country should be careful to avoid the swindlers who agree to furnish employment and take what money the verdant youngster has to pay expenses.

The first printing press was introduced into New Hampshire in August, 1856; the first newspaper printed in October, and the first book in November of the same year.

Great excitement prevails in New Orleans on the subject of Nicaragua, and the friends of General Walker are laboring hard to send aid.

A vessel has arrived at Philadelphia with a cargo of Venezuelian guano, from Mark's Islands, in the Caribbean.

American silver half and quarter dollars, by edict, are henceforth to be worth only forty and twenty cents in the Island of Cuba.

Beware of counterfeit five dollar bills on the Merchants' Bank of Newburyport, Mass. There is said to be a quantity afloat.

The Secretary of the Navy has ordered the United States steamer Fulton to proceed forthwith from Pensacola to Aspinwall.

Revivals are reported from Clifton, Dover Plains, Painted Post, Castile, Bath, and Whitestown, N. Y.

A St. Louis man has sold for $24,875 a site in St. Paul, Minnesota, which he purchased for $600 six years ago.

Specimens of fish, with four legs, from Fort Defiance, New Mexico, have been received by Prof. Agassiz.

New York Markets—May 5, 1856.

Ashes—Pots $6 75, Pearls 7 62 per 100 lbs.

Flour and Meal—Flour 5 81 a 6 37 for various grades of State, 5 62 a 6 00 for Michigan, Ohio, and Upper Lake, 7 00 a 8 75 for extra Genesee. Rye Flour 3 75 for fine, 5 25 for superfine. Corn Meal 3 25 for Jersey.

Grain—Wheat 1 62 for prime red, 1 70 for fair White. Rye 75 a 78c. for Pennsylvania and Northern. Oats 39 a 43c. for State and Ohio, 45 a 48c. for Chicago. Corn 56 a 62c. for common to prime mixed and yellow. Southern 60 a 62c. for old mixed Western.

Provisions—Pork 15 50 for prime, 17 75 for mess. Beef 6 62 and 8 00 for country prime, 8 00 a 8 50 for country mess. Lard 10 a 10½c. Butter 13 a 17c. for Ohio, 16 a 22c. for State, 22 a 24c. for prime. Cheese 5 a 10c.

Apples—1 50 a 2 50 per bbl. for Greenings, 2 00 a 2 75 for Baldwins, 2 50 a 3 25 for Spitzenbergs.

Potatoes—1 00 a 1 25 per bbl. for Western reds and Pinkeyes, 1 62 a 2 50 for Mercers and Carters.

Tallow—10¼ a 10½c.

MARRIED,

By J. R. Irish, at DeRuyter, April 13, 1856, C. A. Osgood, of Georgetown, to Mary M. Peaseley, of DeRuyter.

LETTERS.

J R Irish, E G Champlin, E P Larkin, Nathan Gilbert, C T Gray, W B Gillette, Abram Burger, Pardon Cottrell, Zuriel Campbell.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

Welcome Stillman, Westerly, RI		$2 00	to vol. 12	No. 52

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Welcome Stillman, Westerly, R I $1 00

WILLIAM M. ROGERS, Treasurer.

Rogers' Hotel and Dining Saloons,

KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.

☞ Rooms to let by the day or week.

Clarke Rogers
Henry Zollver } Late of Fulton Hotel.

Eastern Association.

THE Twentieth Anniversary of the Seventh-day Baptist Eastern Association will be held with the Church in Shiloh, N. J., commencing on Fifth-day, May 22d. Introductory Discourse by S. S. Griswold; alternate, Phineas S. Crandall.

The annual session of the Executive Committee will be held at 8 o'clock A. M. of Fifth-day.

S. S. Griswold, Sec.

Every Reader

WILL please notice the advertisement descriptive of MR. SEARS'S PICTORIAL FAMILY BIBLE, and send for the Printed Catalogue of all our Illustrated Works.

☞ To the *unitiated* in the great art of selling Books, we would say, that we present a scheme for money making which is far better than all the gold mines of California and Australia.

☞ Any person wishing to embark in the enterprise, will risk little by sending to the Publisher $25, for which he will receive sample copies of the various works, (at wholesale prices,) carefully boxed, insured, and directed, affording a very liberal per centage to the Agent for his trouble. With these he will soon be able to ascertain the most saleable and order accordingly. Address (post paid)

ROBERT SEARS, Publisher,
181 William Street, New York.

Savery's Temperance Hotel

AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our wide-spread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid.)

ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.
Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.
Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.
Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Miscellaneous.

Our National Capital—The City of Washington.

The Philadelphia *Bulletin* has the following interesting remarks upon the present condition and future prospects of the city of Washington:

The plan of Washington has been ridiculed for its vastness, and it may have seemed ridiculous to have a few thousand people scattered over a place that would lodge a million, and call it a city. But the designers of Washington had calculated for futurity, and already it is beginning to show that it will be large enough for its great plan. Within the past fifteen years its population has more than doubled, and many of the present generation will live to see it a compact as well as an elegant city of perhaps several hundred thousand inhabitants. The plan, besides being vast, is perhaps the finest ever conceived for a great metropolis. Paris, in spite of its Boulevards, its Rue de Rivoli and its Champs Elysees, can never be made as superb a city as Washington must become in the course of centuries. The universal wide, straight streets, and the grand avenues radiating from the Capitol and the President's House, give it an advantage in variety and in circulation that no European capitol possesses.

There is no grander urban spectacle in the world than that presented to the spectator from the capitol, even at the present time. The city lies at his feet, and Pennsylvania avenue stretches out before him, even its mean lodging houses acquiring a sort of beauty as if being component parts of a vista. Vistas are always beautiful, and this one, terminating with the President's House and the Treasury in the distance, will at some future day be one of the most beautiful in the world. Looking directly westward, the mall spreads out before him, with the quaint but picturesque buildings of the Smithsonian Institute and its surrounding grounds, relieving the monotony of its once desert waste. Afar off the huge white obelisk of the Washington Monument rises, at present an ugly looking thing, somewhat resembling an exaggerated lighthouse, but destined to become a noble and commanding structure, although its design may offend some critical tastes. When the monument is finished, and the grounds of the mall are laid out as a public park, there mill be no more beautiful view than this anywhere.

The grounds of the Capitol are already extremely beautiful, and those surrounding the President's House, which have already been admired, are now more worthy of it than ever. Lafayette Square is an attractive appendage to these, and open spaces at the intersections of the various avenues and streets will, at some future day, be planted and embellished, so as to make an abundance of gardens and shady promenades all over the city. There are no grand palaces, such as make a splendid attraction in foreign capitals, but the President's House is elegant and appropriate, and fully satisfies all our republican ideas on this point. But the capitol, when finished, will be as grand a government building as can be found in the world, and besides its vastness and elegance, it has advantages of situation above those of all the European palaces. The Patent Office, or; more properly speaking, the building of the Interior Department, is a noble structure, and the Post Office, when finished, will be scarcely inferior to it. The colonnade of the Treasury is deservedly admired, and the proposed new buildings for the State, War and Navy Departments will doubtless be made correspondingly handsome.

In works of art, Washington, although deficient as compared with European capitals, much surpasses all other American cities. There is no national gallery of pictures, but the pictures in the rotunda are the only national pictures we have. Trumbull's unpoetic but faithful works have a historical value which compensates for their artistic defects; and while the Baptism of Pocahontas, the Landing of Columbus, and the melo-dramatic highly-colored and very French picture of the Discovery of the Mississippi may be objected to for want of fitness, or for certain defects in execution, all visitors must be attracted and touched by the exceeding beauty of Weir's Embarkation of the Pilgrims. The statuary of the Capitol is not what it should be, and Greenough's Washington, sitting with bare arms and shoulders in the open grounds, is rather an unpleasant representation of the Father of his country. But the Jackson statue—let rigid old world criticism say what it pleases—is a noble work, and one that every spectator must be struck with as a bold, original design, admirably carried out, and much more interesting than nine-tenths of the equestrian statues that are seen abroad.

Education of the Royal Children.

Possibly some of our home circles may derive valuable suggestions from the system of training to which the royal family of Great Britain are subjected, as reported by the *London Court Journal*:

"The education of the royal children being a matter in which all must feel interested, a few details of the manner in which the day of the royal scholars is divided, may perhaps be entertaining to our readers. [These children are eight in number, from fifteen to two years of age, viz.: a daughter—a son—a daughter—a son—two daughters—and two sons.] A primary regard is paid to moral and religious duties. They rise early, breakfast at eight, and dine at one. Their various occupations are allotted out with almost military exactness. One hour finds them engaged in the study of the ancient, another of the modern authors; their acquaintanceship with languages, first founded on a thorough knowledge of their grammatical construction, and afterwards familiarized and perfected by conversation.

"Next are they trained in those military exercises which give dignity and bearing. Another hour is agreeably filled up with the lighter accomplishments of music and dancing. Again the happy little party assemble in the riding school, where they may be seen deeply interested in the various evolutions of the menage. Thence—whilst drawing and the further exercises of music, and the lighter accomplishments, call off the attention of their sisters—the young princes proceed to busily engage themselves in a carpenter's shop, fitted up expressly for them, at the wish of the royal consort, with a turning lathe and tools essential to a perfect knowledge of the craft. Thus they early become, not only theoretically but practically acquainted with the useful arts of life.

A small laboratory is occasionally brought into requisition, at the instance also of the royal father, and the minds of the children are thus led up from a contemplation of the curiosities of chemical science and the wonders of nature to an inquiry into their causes. This done, the young carpenters and students throw down their saws and axes, unbuckle their philosophy, and shoulder their percussion guns—which they handle with the dexterity of practiced sportsmen—for a stroll through the royal gardens. The evening meal, the preparation for the morning's lessons, and brief religious instruction, closes the day."

Egyptian Discoveries.

We take from the correspondence of the Baltimore Sun the following extract, which describes the palace and person of the present Viceroy:

The palace is a large white building, distinguishable neither for the style of its architecture nor the beauty of its finish, and was built during the reign of Mahomet Ali. Ascending a broad marble stairway, and passing the ante-room, in which, as usual in the East, was a large collection of ill-dressed and lazy looking attendants, we entered the reception room of Zooflika Bey, the Minister of Foreign Affairs. Here we whiled away a quarter of an hour in sipping coffee, and receiving and returning *Oriental* compliments. After passing through a large hall we entered a spacious saloon, in which we found the Viceroy. A broad low divan, covered with crimson damask satin, run around the entire apartment, the floor of polished ebony was decorated with a basket of flowers held by two cupids, all made of colored wood inlaid in the centre. The furniture was chiefly European, and by no means remarkable for its elegance. When we entered, the Viceroy was seated a la Turque, upon the furtherest corner of the divan, from which he slided as we approached, to greet us with a shake of the hand when presented.

In order that your readers may not labor under the mistake in picturing to themselves a "turbaned and malignant Turk," with solemn face and flowing beard, as the great dignitaries of the East are usually represented by poetic tourists and imaginative painters, I will give them a brief but faithful description of Said Pasha, the youngest son of Mahomet Ali, and the present Viceroy of Egypt. Apparently about forty years of age, I am confident was his weight accurately ascertained, it would not fall below three hundred and fifty pounds. This quantity of flesh, together with his low stature and the loose style of his dress, gives him, as may naturally be supposed, instead of a commanding figure, rather a squatty one; while his head, placed immediately upon his shoulders, without the intervention of a neck, by no means tends to enhance the dignity of his appearance. His face, which is as devoid of expression and as unmeaning as a mass of copper colored flesh can possibly render it, is covered with a short wiry red beard; and if Lord Chesterfield's caution to his son, to "beware of a man who constantly shuts one eye," be correct, one would ever be on his guard against the Viceroy, for he never opens one eye and always keeps the other half closed. Instead of wearing upon his head the ample folds of the expressive turban, it was covered with a small red tarboush, scarcely concealing his bushy hair, vieing with it in the brightness of its color. His costume was Egyptian, a small embroidered jacket, full trousers made of light blue cloth, a beautiful cashmere shawl wound around his waist, and a pair of red morocco slippers upon his feet. Such was the appearance of the Viceroy, as he stood revealed before us after sliding from the divan upon which we found him coiled.

He received us most kindly, seated us by him on the divan, and commenced asking many questions concerning America and her institutions. I was surprised to find one whose education had been neglected, and especially concerning the affairs of the western continent, should know as much as he did. He was anxious to know if the Government of the United States were about purchasing, aa he had been informed, an island from the King of Greece. After spending nearly an hour in pleasant conversation, and sipping Mocha coffee, handed to us in small China fingans, beautifully incrusted with brilliants, we took our leave. Though his mental capacity by no means corresponds with his physical developments, I was altogether much gratified with the reception he gave us.—During our interview he was exceedingly profuse in his thanks to Mr. DeLeon for two Minie rifles which he had recently presented him.

A few days previous to my visit to the Viceroy, I called upon the Governor of Alexandria. During my interview with him he informed me that in making some excavations behind the palace some days before, several ancient Egyptian tombs had been discovered, and kindly offered me the services of his Dragoman to point them out, did I wish to examine them. Passing the palace and proceeding toward the sea, in the midst of sand banks, we came upon the tombs. They were three in number, and about twenty feet below the surface of the ground. Upon descending I entered a low vaulted chamber about twelve feet in length, and eight in width, the whole covered with a fine and highly polished stucco. The sides were embellished with Egyptian painting, the colors in the highest state of preservation, and representing funeral scenes, resembling those in the mummy pits near Memphis. This chamber is separated from another and smaller one by an arched partition. In this, upon a stone altar about three feet in height, were the bones of the person for whom it was built. From their appearance I should judge them to have been those of a female, though I was informed no jewels or ornaments had been found. They had not been disturbed, but were lying in the same position as when the tomb was opened, and were in excellent preservation. The skull was entire, and I could not resist the temptation of extracting a tooth.

The other tombs, though not so large or not so well preserved, were built upon the same model, and no doubt about the same period. Judging from the figures upon the walls, the style of the architecture, and their whole appearance, they are doubtless of great antiquity, dating far beyond the time of the Ptolemies. What adds weight to this supposition, is the fact that since the foundation of ancient Alexandria, 323 years before Christ, the Island of Pharos has never been used for the purposes of sepulture, and consequently these newly discovered tombs were those of the ancient Egyptians, and are no doubt Pharaonic. The Viceroy, I understand, intends continuing the excavation for the purpose of discovering, if possible, some token by which the date of their construction may be ascertained. Though the land is surrounded by salt water, that which covers the floor of the tombs is perfectly fresh. I have been thus minute in my description, as it is, I believe, the first that has yet been given of them, but few having seen them.

A Turkish Slave's Career.

CONSTANTINOPLE, Monday, March 10, 1350.

Halil Pasha. the Damad in virtue of his connection by marriage with the imperial family, died suddenly last week, of a disease of the heart. His Majesty had four sisters—Salieh Sultana, Michrima, Hattien, and Adileh, wife of Mehemet Ali Pasha, the present lord high admiral. The deceased functionary espoused Salieh, the eldest of those princesses, and filled during long years, almost uninterruptedly, several important posts under Government, more especially that of Capudan Pasha at various intervals, and which, in the last instance, he had to vacate in favor of the present dignitary shortly after his return from exile. His career was strange and full of curious incidents; and I may be permitted to say a few words respecting it, as an apt illustration of the real aspect of slavery in Turkey.

Halil was a native of Georgia, and slave of the late Khosreff Pasha, himself originally of the same class and extraction, and who died, you recollect, last year, childless, at the age of 103, in the fullness of affluence and honors. He purchased, for 1500 piasters, Halil, at a tender age, and brought him up with the utmost care in his family, and gave him the benefit, under the guidance of the best masters, of instruction in Oriental literature, and the various branches of elementary knowledge. He had him, besides, taught the French language, a rare and exceptional advantage in those days. Halil, having been endowed with considerable aptitude, profited quickly by the advantage within reach, and having conducted himself, besides, in all things entirely to the satisfaction of his patron, his freedom was the reward, as is invariably the case under such circumstances, and he entered the army shortly after the destruction of the Janissaries.

The old man was at that time in the plenitude of power and popularity, and intrusted with the entire direction of the new military system, and his favorite was thus soon promoted to the rank of Pasha, and gradually advanced to the highest honors and dignities. During the late reign, moreover, an Embassy Extraordinary to the Court of St. Petersburg having been resolved on, the varied acquirements and amiable manner of Halil, as well as certain political leanings imbibed from his earliest years under the tuition of old Khosreff, insured him above all others the coveted distinction of being intrusted with the important duties of that mission.

The Turkish Envoy was received with open arms in the Russian capital, and obtained it is said, great success and fame in fashionable circles, particularly among the fair sex, and having attained the object of his mission, returned to Constantinople loaded with presents and distinctions. Since then he has filled almost invariably important posts, either in the capital or the provinces, and amassed enormous wealth and landed property. His annual income, derived from Khans, factories, steam mills and trading operations, amounted, it is said, to about £30,000, and his jewels, plate, valuables, &c., to about two millions sterling. Ingratitude to his patron is the only blot on the memory of Halil, and of this the old man often complained, as the only regret which embitted his declining years. Such, then, is the history of Halil, and of many a slave in Turkey.

[Cor. Daily News.

Produce of Land in Different Parts of the World.

The amount greatly varies in different kingdoms, states and localities, according to the difference of cultivation, soil, manuring climate and exposure.

In England, Scotland, Flanders, and part of Germany, the productiveness of the land has been greatly improved in modern times, by new and skillful systems of farming, and a great increase of attention in enlarging the quantity of the manure of the farm, as well as buying all the mineral manures they can obtain, and applying them in the most advantageous manner.

Farmers who made the first settlements and clearings in *this country* found the land generally very productive, and consequently felt no necessity for making and applying manure, nor for seeding their uncultivated fields with grass, in order to increase their fertility.

In process of time, the vegetable matter and the mineral substances most needed by the growing plants, became so exhausted, that much of the land ceased to yield remunerative crops, and the decayed, impoverished patrimony, had to be resuscitated and improved, or otherwise abandoned by the proprietors. Wheat flourished for many years on these new lands, but at length gradually declined, and in many parts rye was introduced in its stead, which succeeded for a time; but, on the neglected soils, *that* also was found to languish; and in some sections oats and buckwheat followed until the land was finally abandoned, and thrown out for old fields. In the first settlement and cultivation of different parts of this country, the preparation of the soil, and the time of seeding with wheat, were not sufficiently attended to, in order to insure a large return. With these precautions, the crops of wheat on these virgin soils might have averaged 20 or 25 bushels per acre, but instead of that product, they have not probably yielded an average crop of more than 12 or 15 bushels per acre, including all the localities, in this country, where wheat has been grown on new land for a series of years.

In many regions famous for the growth of wheat, the average product is very much overratted. On a visit to Western New York, we expressed our surprise to a farmer who had resided there for twenty-five years, at the poor appearance of much of the wheat in that section, where we had understood that 40 bushels an acre was only an ordinary crop. He declared that he did not believe the average had exceeded 15 bushels, since his residence in that part of the State, though some years ago it was called by the wheat dealers "the granary of North America." Ohio has, of late years, produced more wheat than any other state in the Union—but she had greater breadth of land under culture of that grain, with a yield of 14 to 20 millions of bushels; she has had two millions of acres sown, which gives an average of only 7 to 10 bushels per acre.

The average product, per acre, of the whole State of New York, as shown by the census of 1846, is of wheat, 14 bushels—of oats, 26 bushels—of barley, 11 bushels—of rye 9 1-2 bushels—of Indian corn, 25 bushels.

Professor Emmons, in his Natural History of the State, gives a series of averages a little less than these.

The premium crops of New York, for 1846, range thus—wheat 56 bushels per acre, (this is the highest,) Indian corn 142 bushels, and oats 106 bushels.

New Brunswick, (British Territory,) 1848, wheat 19 bushels per acre; oats 30 bushels; barley 30 bushels; rye 20 bushels; corn 41 bushels.

England, according to A. F. W. Johnson, in 1849, wheat 21 bushels per acre; oats 36 bushels; barley 32 bushels. Highest, wheat 88 bushels, barley 80, oats 100, potatoes 900, and turnips 1200.

Scotland, on the same authority—wheat 30 bushels per acre, oats 46, barley 40.

The following is near the average of the crops of Flanders, as obtained by Thomas Radcliff, about 1835—wheat 23 bushels per acre, rye 30, oats 42, potatoes over 300.

Secrets of the Peat-bog.

Far, far down in the depths of the moor there lies many a secret of the olden time. Below the grim, ghastly surface, below the waters, below the black remnants of countless plants, lie the sad memorials of ages unknown to the history of man. Huge trees stand upright, and their gigantic roots rest upon the crowns of still older forest giants. In the inverted oaks of Murton Moor, in Switzerland, many see the famous oak woods that Charlemagne caused to be cut down, now more than a thousand years ago. For centuries the moors have hid in their silent bosoms the gigantic works of ancient Rome, and posterity has gazed with wonder at the masterly roads and massive bridges, like those built of imperishable wood by Germanicus, when he passed from Holland into the valley of the Weser. Far in the deep, lie buried in the stone, hatchets and flint arrow heads of Frisians and Cheruski, by the side of the copper kettle and iron helmet of the Roman soldier. A Phœnician skiff was found of late, and alongside of it a boat laden with bricks. The skeletons of antediluvian animals rest there peaceably by the corpses of ancient races with sandals on their feet and the skin of animals around their naked bodies. Hundreds of brave English horsemen, who sought an honorable death in the battle of Solway, were swallowed up, horse and man, by the insatiable moor. And in years bygone, a Danish King Harold, called the Blue Tooth, allured with treachery a fair princess of Norway, Gunhildo, to Jutland. She came, and she vanished from the memory of man. History had forgotten her, tradition had even begun to fade, but the peat bog opened its long-closed lips, and accused, late but loud, the bloody king of his wicked deed. The poor princess was found far below the peat, strangled and tied to a post, where her merciless foe had buried her, as he thought, for ever, in the abyss. It is a strange and most melancholy charm that these low chambers of death have for the careful observer.

[English paper.

The Sleep of Plants.

The way in which sleep is shown in the vegetable kingdom is infinitely more variable than among animals. Man throws himself prostrate; some kinds of monkeys lie on their sides; the camel places its head between its fore legs; and birds roost with their heads beneath the wing. But in plants there is no end to the curious and beautiful diversity which rewards the seeker in Nature's mysteries. Some plants droop their leaves at night, the flat part becoming flacid and pendulous. Others, of the kind called "compound," as clover and vetches, close their leaflets together in pairs, and occasionally the whole leaf drops at the same time. The three leaflets of clovers bring their faces to the outside, and so form a little triangular pyramid, whose apex is the point of union between the leaflets and their stalls. Lupines, which have leaves resembling a seven-fingered hand without a palm, fold together like a lady's half closed parasol. Chickweed raises its leaves so as to embrace the stem; and some species of lotus, besides many of its elegant family, the Leguminosæ, bring them together in such a way as to protect the young flower buds and immature seed vessels from the chilly air of night. These are only a few out of the many cases which could be instanced of change of position in leaves, while in flowers there seems to be no limit to variation. The greater part shut the petals at night, the stalks declining one side; but there are some which roll their petals back, and curl them up like miniature volutes. The sleep of such plants is probably unaccompanied by any external change.

The same may be said of Campanalas, and other bell-shaped flowers of Cruciferæ, it should have been observed, are remarkably careless of repose. Their sleep never appears sound, or even constant, for many successive nights they seem restless, and in the morning always look dozy and uncomfortable. When flowers are over blown, or the plant, if an annual, is near its decay, the phenomena of sleep are very considerably diminished. In fact, they are only seen in perfection when the growing powers of the plant are in full operation. Deciduous trees—that is, such as cast their leaves in autumn—are in a sort of trance in the Winter months. Flowers, too, lose their sensibilities altogether, when the period of fertilization is passed, as may readily be seen by inspecting a field of daisies early in the morning before the dew is off the grass. The overblown one will be found wide open; those in the younger stages, all crimson tipped and sound asleep.

WORTH TELLING.—Mrs. Polly Beeman, of Birmingham, Connecticut, is in her 92d year. Her husband, Tracy Beeman, died a short time since; he was two years senior of his wife. They had lived in the same farmhouse sixty nine years. They had a family of nine children, the eldest of whom now is seventy three, and was married when she was fourteen. Of the grandchildren there are now forty-nine, the oldest of whom is fifty-six years. There are one hundred and fifty-six great grandchildren and eighteen great great grandchildren. The family enjoy iron constitutions. The venerable woman can call two hundred and thirty of her lineal pedigree around her thanksgiving table. Their united ages now amount to 7,724 years; so that, if this family had followed each other consecutively, the first might have been an old lady of seventeen hundred Summers at the day Adam woke up and ate forbidden fruit with his partner. Our Connecticut old lady intends to take a long journey next week behind the "iron horse." She ought to have a free ticket.

[Hartford Courant.

Organic and Inorganic.

An organized body is one having organs to secure the purpose of its being. An animal has arteries, veins, nerves, and glands, a heart, lungs, stomach, &c.,—organs having functions in the economy of life. A plant has sap-vessels, secreting organs, leaves, buds and flowers. Crystals of the metals and minerals have their parts arranged by a law as definite and inflexible as the bodies themselves—a kind of organization. A gathering of citizens becomes an organized body by the choice of moderator and clerk. A Legislature is organized by appointing speaker and clerk. These officers are organs by which the design of assembling is to be accomplished. But the terms organic and inorganic, as technically used in agriculture, have nothing to do with the object, design or arrangement of parts, but refer simply to the element or elements of which the body is composed. The terms thus used, may be convenient, and are easily understood. If we burn a body, those portions which become gases and fly off we call organic; those to which the fire gives no wings, we call inorganic. If we take a piece of hickory, for example, and burn it, oxygen, carbon and hydrogen will fly off, and silex, magnesia, potash, &c., will remain. If you burn a cabbage stump, nitrogen will be added to the winged products by burning. If you burn a fresh bone, oxygen, hydrogen, nitrogen and carbon will fly off, and lime, phosphorus, iron, &c., will remain. The wood, the cabbage and the bone are organized bodies, composed of organic and inorganic substances, and so far as we know, the inorganic potash and lime are as essential to organization as the oxygen and hydrogen. The fact that when you destroy the organization by fire, one part flies away, certainly proves nothing on this point. The inorganic are frequently called mineral elements.

Were we to apply scientific accuracy to the terms organic and inorganic, we should find them, in their best agricultural use, very indefinite and faulty. All would call a piece of, chalk inorganic, and yet if you burn or heat it, almost half of it flies off in this same oxygen and carbon, and the remainder is lime; and even this lime, when subjected to a higher heat, is shown to be, in part, a metal called calcium, in part, this same winged oxygen. Inorganic water is composed wholly of the winged spirits, oxygen and hydrogen. So that chemistry soon brings us to elements, and of these one is just as much organic, for ought we can see, as another. But in the agricultural use of the terms, if you burn an organized body, those substances which pass off are called organic.

[Culturist and Gazette, Pittsfield.

STATISTICS OF LONDON.—London covers at present a space of 122 square miles. It contains 327,391 houses and 2,362,236 inhabitants, the annual increase of the population being upwards of 40,000. The length of all the different streets is 1,750 miles. The paving of them cost £14,000,000, and the yearly cost of keeping them in repair is £1,800,000. London has now 1,750 miles of gas pipes, and the same length of water pipes. The introduction of gas cost £3,000,000. There are 360,000 burners in the city, which consume every night 13,000,000 cubic feet of gas, valued at £500,000, or $2,500,000.

The Bankers of London have under their control a capital of £64,000,000, and the different Insurance companies have a cash capital of £10,000,000, and £78,000,000 in negotiable paper.

The taxes on houses amount yearly to £12,500,000. The furniture of those houses is insured to the amount of £166,000,000. Twenty thousand persons are constantly employed in keeping the docks in repair.

TELEGRAPHING ON THE CONTINENT.—The International Electric Telegraph Company flashed 26,430 messages in the last six months of 1855, and paid a dividend of 7 per cent. This looks like business. The Queen's speech, 701 words, was sent to Amsterdam by Varley's apparatus, and printed in twenty minutes and a half, the total length of wire and submarine cable being 107 leagues. The clerk was a girl of eighteen, and she transmitted nearly thirty five words a minute, the quickest dispatch yet recorded of the instrument. Two words had to be corrected by interchange of signals, and all within the time stated. Bonnelii's method of signalizing from one train, or between two trains while in motion, has been tried successfully on the Paris and St. Cloud railway. Parties in the respective trains talked by telegraph with each other while speeding along or with the office.

The New Orleans Bulletin notices an ingenious machine for making barrel staves. The stave is cut off from a solid stick of timber, either green or dry, and by a forward-and-back motion of the curved knives both sides are cut and dressed and with the required bilge. No previous preparation of the wood, either by steaming or soaking, is required. The staves as they come from the machine, make so tight a joint that the barrels are perfectly air-tight. They can be made of any thickness and any description of wood, so as to make either tight or dry barrels. They are made with great celerity, as many as 2,000 an hour.

RUSSIAN MINING SCHOOLS.—Since the time of Peter the Great, the Russian Government has made enormous appropriations to maintain a corps of miners, who shall combine the most thorough scientific training with abundant practical experience. The high school of miners in St. Petersburg, with its thirty-six instructors and two hundred and fifty scholars, is supported by seventy-four lower mining schools in different parts of the empire, to which it furnishes instructors from its graduates, and form which, in turn, it derives well fitted pupils. The course of instruction in the school occupies eight years.

There is a school mistress teaching school in the town of Lisbon who stands in her stocking feet, six feet and seven inches. Her name is Wilkinson, and we are informed she is the shortest of a family of four children, three women and one man.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856.

This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from *their* use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary *to recount* the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion	$ 75
" " each subsequent insertion	50
" " six months	6 00
" " one year	10 00

For each additional square, two-thirds the above rates.

The Sabbath Recorder.

EDITED BY GEO. B. UTTER AND THOS. B. BROWN. "THE SEVENTH DAY IS THE SABBATH OF THE LORD THY GOD." TERMS---$2,00 PER ANNUM, IN ADVANCE.

VOL. XII.—NO. 49. NEW YORK, FIFTH-DAY, MAY 15, 1856. WHOLE NO. 621.

The Sabbath Recorder.

ANNIVERSARY STATISTICS.

American Tract Society.

The receipts of the American Tract Society during the year ending April 1, 1856, exceed those of any previous year by $2,401 60. The total amount of donations was $158,435 08. The receipts from sales of pubications amount to $257,171 51, of which $50,128 75 were from sales of the American and German Messenger and Child's Paper; $149,102 23 from sales of publications by agents and colporteurs, and $57,940 53 from sales by booksellers, missionaries, and individuals. The total receipts of the Society for the year were $415,606 59.

The whole amount expended during the year was $415,0[illegible]

Of this amount $221,862 21 was expended in the publishing department, of which $110,453 37 was paid for paper; $35,490 99 was paid for stereotyping and printing; $6,479,19 was paid for designs and engravings; $63,722 98 was paid for binding and materials.

The Colportage Department has cost during the year $111,601 88.

The grants in money to missionary institutions in foreign and pagan lands were $17,500; of which 1,000 was given to the Sandwich Islands; $7,900 to India and China; $300 to Western Africa; $800 to the Levant; $2,800 to Turkey and Greece; $500 to Italy and Sardina; $3,000, to Sweden, Germany and Austria; $1,000 to the City of Paris. The services and expenses of 31 general agents, who have traveled through the country to raise funds and to awaken an interest in the operations of the society, have cost during the year $27,565 16.

Among the smaller items of expense in the Treasurer's account, we notice $943 10 as the loss on uncurrent money, broken and counterfeit bank bills, received through the 'contribution box.' The amount of *counterfeit money* given annually to benevolent objects in the country, is very great. Donors should look at their bank-bills, not only when they receive them, but when they give them away—for the purpose of doing good.

Six hundred and twenty-two colporteurs have been employed for the whole or part of the year, who have labored in thirty-one States and Territories and in Canada. One hundred and thirty-eight colporteurs have labored particularly among the Germans; two hundred and ten have labored in the Northern and Middle States; two hundred and thirty-nine in the Southern and Southwestern States; and one hundred and eighty one in the Western and Northwestern States. These colporteurs addressed 12,827 religious meetings and visited 538,338 families. Of these families they found 94,931 that habitually neglected evangelical preaching; 46,210 that were destitute of all religious books except the Bible, 30,287 that were destitute of the Bible. 57,181 of the families visited were Roman Catholics.

The Inventory of the Society's property, taken April 1, 1856, estimates the machinery, presses, and printing and binding materials in the Tract House, to be worth for the Society's use, $66,608; the sheet stock, paper, stereotype plates, and engravings, $111,781. The books in the Depository are estimated to have cost $90,112 87; books in the hands of colporteurs, $108,257 08; due for books from auxiliaries and others, $13,242 85.

The Society owns the house and lot, corner of Nassau and Spruce streets, New York, which it occupies. This estate is now valued by the City Assessors at $114,000. There is a debt of $25,000 upon it. The parts of the building not occupied by the Society yield an annual rental of $5,850, which is applied as a sinking fund to the reduction of the debt.

The Society is now under engagements for paper, due previous to July 1, 1856, amounting to $10,920 06. There is a balance in the treasury.

The Society has issued during the year 105 new publications in several languages, including 13 volumes. The whole number of publications is now 2,053.

929,074 volumes, and 9,788,864 other publications of the Society, have been circulated during the year. $53,000 worth of publications have been given away. The monthly circulation of the *American Messenger* is 190,000; of the *German Messenger* is 28,000; of the *Child's Paper* is 305,000. These are all monthly publications.

American and Foreign Christian Union.

The Society has a balance in hand, having received $69,330 and expended $67,657—leaving nearly $2,000 on the right side. It has 119 laborers in its service; 67 at home and 52 abroad, being an aggregate increase of 11 over last year. The general affairs of the Society show but little change; its work is to enlarge the domain of religious freedom, and the corruptions of the Church of Rome are its especial abhorrence. The annual report details the evidences of a declension in the Catholic Church, particularly in Sardinia, Tuscany and Spain, and the Board rejoices at the confiscation of the estates of the Church in Mexico, intelligence of which fact has recently reached us. The discussions in politics, particularly the controversies of Prof. Morse with Bishop Spalding, and of Mr. Brooks with Archbishop Hughes, are dwelt upon at considerable length as furnishing indications that the people of the United States are realizing the evils of Catholicism.

The Board have continued the plan of popular lectures to Romanists with good success. They have somewhat extended it. They have also held some public missionary meetings in Central and Western New York to considerable advantage.

In France, the Evangelical and the Central Protestant Societies have continued to conduct the service for the Board, and, though amid much persecution and suffering on the part of some of the Missionaries and their hearers, there has been incalculable good done. The Board have entered upon the plan of establishing an American Chapel in Paris, and have appointed a chaplin, and raised some thousands of dollars towards it.

In Rome itself, the chapel service was sustained by the Secretary for Foreign Correspondence, Rev. Dr. McClure, through the Winter and till the close of the month of March, when he was succeeded by Rev. Mr. Marks, who will continue the service yet for some time.

In the publishing department an advance was made on the preceding year. Several new editions of its books and of its series of tracts have been published, and to the latter two new ones of eight pages each have been added.

The Magazine continues to have a large circulation, but should have a larger one.

The Sunday School Library, designed for the more advanced classes, has grown in public favor, and the Board have supplied between 300 and 400 schools.

Seamen's Friend Society.

This Society has prospered during the year, having received $22,223, and expended $21,648. The aggregate receipts and expenditures of the auxiliaries and local Societies are not included in this statement. The whole receipts will reach $100,000. At the Sailors' Home in Cherry-street, New York, 3,309 boarders were received in 1855, who deposited in Bank about $12,000, and carried away or sent to friends $60,000. The number of boarders at the Home in 14 years has been 47,156.

In the Seamen's Savings Bank, in New York, seamen alone have deposited nearly *one third of a million of dollars* the past year. Over *two and a half millions* in that Bank belong to seamen.

This Society has foreign chaplincies at Aspinwall, Panama, Honolulu, Lahaina, Callao, and the Chincha Islands, Valparaiso, Canton, Havre, Marseilles, Galtland, Copenhagen and St. Johns, N. B., and also sustains the Mobile Bay Bethel, the New York Sailors' Home, aids the Portland Bethel, and helps the Mariner's Church in this City. In one Bethel, in New York, over 100 hopeful conversions have taken place.

The report points out the chief obstacle in the way of rapid success—attributing much of the blame to owners, in driving the present ruinous system of *shipping* and *rewarding* sailors. It proposes a remedy in a change of system; considers and answers objections, and shows the beneficial results of the proposed change, to owner, officer and sailor.

In the year 1830, the tonnage of American vessels was 1,191,776 tons; the number of seamen and watermen under the American Flag, including those in the Navy, a little over 90,000. In 1855, twenty-five years afterwards, the tonnage increased to 5,212,000 tons, and the number of seamen, to nearly 400,000, both having more than quadrupled in one-fourth of a century.

In 1814, the tonnage of the British Commercial Marine was 2,616,965 tons, employing 172,786 men and boys. In 1854, forty years afterwards, the tonnage had increased to 5,043,270, and her seamen, including the 63,000 in her Navy, to nearly 400,000, both having doubled in less than half a century.

New York State Colonization Society.

The results of the year are as follows: Receipts $20,077. Of this amount, $2,500 were borrowed to meet the expenses of the Liberian packet *Lamartine*. This vessel was fitted out in December, and conveyed 55 emigrants to Liberia, of whose speedy and safe arrival advice has been received.

The bark *Cora* has been dispatched from Baltimore and Norfolk twice during the year, in May, and in November, conveying 156 emigrants.

The legacy of the late Samuel S. Howland, of the City of New York, of $10,000, was not received from the executors within the fiscal year under review, but the Board are gratified to announce that it has been, during the past month, paid to the Treasurer of the American Colonization Society, and a large portion has been already appropriated to the objects of the testator. This and other similar legacies go to swell the aggregate in our next annual report.

The Slave trade is stated to have been renewed in some measure, on the Coast of Africa, but not in Liberia.

The importance of Government armed steamers, to cruise in those calm latitudes, is urged in the report.

The successful and peaceable election of President Benson, in the place of J. J. Roberts, who declined being a candidate, is considered as a hopeful sign of the success of republican institutions on the coast of Africa.

The subject of education is referred to as having received a new impulse during the past year, both in Liberia and in this country, and the Board particularly allude to the valuable income of the Beveridge and Bloomfield funds, by which thirteen youths have been supported in a course of superior education in Liberia. Bequests for this important object are desired.

The *Colonization Journal* has been continued, with evidences of increasing favor and usefulness.

The appeal and plans of the American Colonization Society for raising and appropriating $100,000, are referred to with approbation, the experiment of an interior settlement, and the speedy preparation of commodious and healthy homes for the newly arrived emigrants.

Special and grateful allusion is made to the distinguished liberality of a gentleman in Mississippi, Mr. David Hunt, who, in the hour of extreme want, remitted a donation of $5,000 to the Treasurer of the American Colonization Society; of the late John Stevens, of Talbot County, Maryland, who, while yet living, transferred the bonds and available means to secure a fund of $36,000 toward the building of a vessel; and the considerate liberality and care of two gentlemen of this Society, Messrs. A. G. Phelps and H. M. Schieffelin, by whom the first steam sugar mill has been furnished to the farmers of Liberia.

A cheering review is made of the progress of Christian missions in Africa.

American Home Missionary Society.

The American Home Missionary Society is thirty years old, and is brisk and prosperous. It has received during the last year $193.548; payments have amounted to $186,611, and there are $9,551 due to missionaries; with a balance in the Treasury of $23,942, received chiefly in legacies towards the close of 1855. The receipts exceed those of 1854 by $13,000. There are 986 laborers in active service; 10 missionaries have preached to colored congregations, and the pupils in Sunday Schools count up to 60,000. There have been added to the missionary churches 5,602 persons, and 50 new churches have been organized within the year, and 48 houses of worship were completed.

The speakers at the anniversary were the Rev. Fred. G. Clark, of New York, Rev. Horace James, of Worcester, Mass., and Rev. Lyman Whiting, of Portsmouth, N. H. These gentlemen spoke successively in support of the following resolutions, which were severally adopted:

Resolved, That the principle of personal responsibility to Christ, as pervading all departments of the work, is our main reliance for the successful prosecution of Home Missions.

Resolved, That the work of Home Missions, being substantially the work of the Gospel, furnishes a basis upon which the stateliest conservatism and the most thorough reform may co operate in the unity of the Spirit, and the bond of peace.

Resolved, that the *Home*, which it is the care of this Society to supply with the Gospel, demands our regard, for its sublime extent and encouraging aspects.

CHRIST'S BLOOD THE SOUL'S BALM.

With its peace-speaking, soul-cleansing efficacy, Christ's precious blood is the balm which God has provided to restore soundness to the sin-stricken nature. Most usually in the vehicle of some 'faithful saying,' the Holy Spirit takes the truth concerning Jesus, and applies it to the understanding and the heart. In some thoughtful or anxious moment He sheds a new and endearing light on the sacrifice and intercession of the Saviour; and whilst surveying the great appointed Antidote, love, thankfulness, and praise, steal into the mind of the beholder. The aspect of the Godhead is altered; and, surrendering to the grace of the gospel, the rebel is subdued into a penitent, and the penitent is subdued into the gratitude and new obedience of the prodigal restored.

As a North American Indian once described it to an audience in London: 'You know we Indians are great deer-hunters, and when we shoot the deer he runs away as if he was not hurt; but when he gets to the hill, he feels the pain, and he lays down on that side where the pain is most severe. Then he feels the pain on the other side, and turns over; and so he wanders about till he perishes. After I learned to pray, that pain in my heart increased more severe. I could not sleep. Like the wounded deer, I turned from side to side, and could not rest. At last I got up at one or two o'clock at night, and walked about my room. I made another effort in prayer, and said, O Jesus, I will not let thee go, except thou bless me; and before the break of day I found that my heavy heart was taken away. I felt happy. I felt the joy that is unspeakable and full of glory. I found Jesus indeed sweet to my soul.'

A hundred years ago, there was a vigorous-minded man and an able scholar, the rector of Winringham in Lincolnshire. Entering the ministry without love to God or to the souls of men, for years he spent his professional income in self-indulgence; and whilst the preacher amused himself, the people perished. At last his conscience was awakened, and as his conduct grew correct, his preaching became earnest and arousing. Still he was ignorant of 'Christ crucified,' and as his was not the ministry of reconciliation, no effect followed his solemn exhortations. He was vexed at the epistle to the Romans; for, hard as he found it to attain a life of superior sanctity, St. Paul seemed to make no account of human goodness, however eminent; and, although he read Grotius and Hammond, they did not resolve his difficulties. But being a man of strong native sense, he could not rest in this uncertainty. Accordingly, one day, he 'spread this matter before the Lord,' and entreated him to pity his distress, and guide him by His Holy Spirit into the understanding of the truth. Then taking up his Greek Testament, he read carefully over the first six chapters of the Romans. To his unspeakable astonishment, his difficulties disappeared. The righteousness of God was revealed to him. He saw that justification through Jesus Christ alone is the great burden of the gospel, the grand display of God's perfections, and the only principle of genuine holiness. He rejoiced with exceeding joy. His conscience was purged from guilt through the atoning blood of Christ, and his heart set at liberty to run the way of God's commandments, in a spirit of filial love and holy delight; and from that hour Mr. Adam began to preach salvation through faith in Jesus Christ alone, to man by nature and practice lost, condemned under the law, and, as his own expression is, 'always a sinner.'

* * *

Good Advice—He gave good advice who said, If you are in trouble, don't tell of it to every person you meet. Not one in a hundred will sympathize with you. Some may speak a word of comfort or turn away and ridicule you, but few will laugh less freely or engage with less earnestness in the business of life. Troubles, in nine cases out of ten, are like threatening clouds which soon vanish.

NO CROSS, NO CROWN.

The following poem by Sheldon Chadwick is taken from his volume of poems just published in England:

'T was eve, and in a lovely room
A student sat in sombre gloom,
Twirling his fingers in his hair,
Like one in revery—or despair.
Before him lay an open book,
Sadness was in his languid look;
And as he traced the pages o'er,
Four golden words his spirit bore—
No cross, no crown!

Around in deathlike silence stood
The forms of many great and good—
Prophets, martyrs crucified;
Stern patriots, who for freedom died;
And poets, who died desolate,
Scanning the wondrous scroll of fate;
While glory round their foreheads shone,
He read upon their lips of stone—
No cross, no crown!

Hard was the toil through learning's lore,
For one so young and worldly poor.
His books were precious, though but few;
And deathless fire from heaven he drew.
Heart-wearied oft and over wrought,
He traced in throbbing lines his thought;
And 'mid his toil this seemed to be
The voice alone of destiny—
No cross, no crown!

Sometimes his noble spirit turned
Towards fame's pillar as it burned,
And oft he judged his efforts vain
To cross the burning bars of pain;
He groaned in agonized distress;
Life's cup was dashed with bitterness;
And then he thought of those of old,
Who carved in brass those words of gold!
No cross, no crown!

They fought the battle, bore the cross,
That truth might never suffer loss,
But, like the tempest cradled flower,
Spring through the storm, the martyr's dower;
Souls that, while beaconing the free;
Sunk like a lighthouse in the sea;
But from their graves a spirit came,
Uttering words of winged flame—
No cross, no crown!

His soul sometimes would droop her wing,
When envious arrows sped the string;
But, like the tempest's martial strains,
His country's voice thrilled through his veins,
And heedless of the critic's ire,
His heart glowed with immortal fire;
And, like a man in earnest, he
On thought's Patmos toiled wearily—
No cross, no crown!

And thus he wrote his spirit's strings
To music's rare imaginings;
To love and freedom, truth and right,
Justice and mercy, gods of light!
Oh! cheerful fell those golden words
Upon his worn heart's tender chords;
In death those words his spirit bore—
And chants them still forevermore—
No cross, no crown!

This be the motto of the brave,
And this the watchword of the slave;
The patriot's with the people's scorn,
The martyr's with his garland's thorn.
Whoever seeks to win a name,
Whoever toils for freedom's fame,
Whoever human tears would dry,
Let this forever be his cry—
No cross, no crown!

AN EASTERN SKY AT NIGHT.

Prof. Hackett, in his *Illustrations of Scripture*, gives a graphic sketch of his first view of an eastern sky:—

The appearance of an eastern sky at night is quite peculiar, displaying to the eye a very different aspect from our sky. Not only is the number of stars visible greater than we are accustomed to see, but they shine with a brilliancy and purity of lustre of which our heavens very seldom furnish an example. Homer's comparison, at the beginning of the fifth book of the Iliad,

> ———"bright and steady as the star
> Autumnal, which in ocean newly bathed
> Assumes fresh beauty,"

was often brought to mind, as I remarked the fresh, unsullied splendor, as it were, of the more brilliant constellations.

An oriental sky has another peculiarity, which adds very much to its impressive appearance. With us the stars seem to adhere to the face of the heavens; they form the most distant objects within the range of vision; they appear to be set in a ground-work of thick darkness, beyond which the eye does not penetrate. Unlike this is the canopy which night spreads over the traveler in Eastern climes. The stars there seem to hang, like burning lamps, midway between heaven and earth; the pure atmosphere enables us to see a deep expanse of blue ether lying far beyond them. The hemisphere above us glows and sparkles with innumerable fires, that appear as if kept burning in their position by an immediate act of the Omnipotent, instead of resting on a frame-work which subserves the illusion of seeming to give to them their support.

Never can I forget my first night in the desert, in traveling from Egypt to Palestine. I had entered the tent erected for me about dark, and, being occupied there for some time, the shadows of evening in the meanwhile insensibly gathered around us; the stars came forth one after another, and commenced their nightly watch. On going abroad, at length, a scene of surpassing beauty and grandeur burst upon me. I was in the midst of a level tract of sand, where no intervening object rose up to intercept the view; the horizon which swept around me was as expanded as the power of human vision could make it; and all this vast circuit, as I glanced from the right hand to the left, and from the edge of the sky to the zenith, was glittering with countless stars, each of which seemed radiant with a distinct light of its own; many of which shone with something of the splendor of planets of the first magnitude. I could not resist the impulse of the moment, but taking my Hebrew Bible, read with a new impression of its meaning, the sublime language of the Psalmist:

> "Jehovah, our Lord, how excellent thy name in all the earth,
> Who hast placed thy glory upon the heavens!
> When I consider thy heavens, the work of thy fingers;
> The moon and stars which thou hast made;
> What is man, that thou art mindful of him,
> And the Son of Man, that thou carest for him?"

I remembered, too, that it was probably in some such situation as this in which I was then placed, and on an evening like this, that Abraham was directed to go abroad, and "look towards heaven, and tell the stars if he could number them," and thus form an idea of the multitude of the posterity destined to be called after his name. (Genesis 15: 5.) I turned to that passage also, and saw a grandeur in the comparison, of which I had possessed hitherto but a vague conception.

A WONDERFUL PIECE OF WORK.

There is on exhibition now in New York, at 483 Broadway, a most remarkable work of art. It is a pen picture, of such a character, and executed under such circumstances, as excites the utmost surprise.

Mr. David Davidson, the artist, a Polish Jew, found himself in this city some three years ago, friendless and destitute, with a family in Europe, which he wished to bring to this country. He reflected on his condition, and what he could do. He had lost the sight of one eye entirely, and that of the other was defective. The idea was suggested to his mind—as he believes, by a divine influence—of executing this work. The entire plan of it in the detail was matured in his mind; and then he went about it. Assisted, as he believes, from first to last, by a divine power, he wrought on it by night and day, for *two years and seven months*, seeing no one, going no where, except as was absolutely necessary—scarcely sleeping more than two hours out of the twenty-four, until the work was finished. He describes his sufferings of body and mind as intense; and yet, as if impelled by some strange power, he could not stop until it was done.

This remarkable work is executed by the pen on paper, and is *five feet* wide, by *six and a half feet* high, covering a surface of 4680 square inches. The picture is the front elevation, or facade, of a temple, in the gothic style, of the Saracenic type; with its doors, lancet and circular windows, pillars, towers, &c. But instead of its being a picture in *drawing*, it is a picture in *writing*. The whole is done in writing so fine, that in many places it would require the aid of a glass for common persons to trace the letters. The writing is executed in black, blue and red inks, and the letters are chiefly in antique printing style. At a short distance, the whole resembles a finely etched engraving. The picture contains the whole of *thirty-six* books of the Old Testament thus written. It has nearly 1,500 letters to the square inch, and the whole has more than 570,000 words, and more than 2,850,000 letters. The whole number of lines is 27,594.

The whole is so perfectly executed, that it is next to impossible to detect the slightest defect, and yet no pencil ever touched it, and there was no drawing to guide the work. In addition to this, the whole is so arranged, the parts, the number of lines in a part, the number of words in a line, the different colors, and the various parts of the building, as to represent various cabalistic ideas, and correspond to certain mystical numbers. The work is unique and remarkable, and when we consider that the artist is nearly blind, and that he never had any previous skill in penmanship, or knowledge of designing, and was almost entirely unacquainted with the English language in which it was written, the achievement seems scarcely possible, and is absolutely astonishing. He has several smaller works, executed since that, not less curious.

[Watchman & Reflector.

PREREQUISITES FOR DEATH.

Is he resigned?—was he sensible?—are inquiries which we sometimes hear made in regard to dying or deceased persons. An affirmative answer appears to be perfectly satisfactory to many of the inquirers; as if, in the fact indicated by such reply, there was something equivalent to a suitable preparation for death. We invite attention to the following wise and faithful words, which, if pondered, might do much to impart more correct modes of thought and expression in regard to this momentous topic:

Reader, until I see conversion and faith in Christ, I cannot and dare not feel satisfied about a dying man's soul. Others may feel satisfied if they please, and say after their friend's death, they hope he is gone to heaven. For my part, I would rather hold my tongue, and say nothing. I would be content with the least measure of repentance and faith in a dying man, even though it were no bigger than a grain of mustard seed; but to be content with any thing less than repentance and faith, seems to me next door to infidelity. Reader, what kind of evidence do you mean to leave behind as to the state of your soul? Lay to heart what I have heen saying, and you will do well. When we have carried you to your narrow bed, let us not have to hunt up stray words and scraps of religion, in order to make out that you were a true believer. Let us not have to say in a hesitating way one to another, 'I trust he is happy, he talked so nicely one day, and seemed so pleased with a chapter in the Bible on another occasion, and he liked such a person, who is a good man.' Oh! let us be able to speak decidedly as to your condition. Let us have some standing proof of your penitence, your faith, and your holiness, that none shall be able for a moment to question your state.

Reader, depend on it, without this, those you leave behind can feel no solid comfort about your soul. We may use the form of religion at your burial, and express charitable hopes. We may meet you at the church-yard gate and say, 'Blessed are the dead who die in the Lord.' But this will not alter your condition. If you die without conversion to God—without repentance—and without faith in Christ—your funeral will only be the funeral of a lost soul. [Rev. J. R. Ryle.

A Loss and a Gain.—This is the first heavy loss which you have ever experienced; hereafter the bitterness of the cup will have passed away, and you will then perceive its wholesomeness. This world is all to us till we suffer some such loss, and every such loss is a transfer of so much of our hearts and hopes to the next; and they who live long enough to see most of their friends go before them, feel that they have more to recover by death than to lose by it. This is not the mere speculation of a mind at ease. Almost all who were about me in my childhood have been removed. I have brothers, sisters, friends, father, mother, and child, in another state of existence, and assuredly I regard death with very different feelings from what I should have done if none of my affections were fixed beyond the grave. To dwell upon the circumstances which, in this case, lessen the evil of separation, would be idle; at present you acknowledge, and in time you will feel them. [Robert Southey.

ANECDOTE OF JACKSON.

The Western *Christian Advocate* records the following interesting anecdote of Jackson. The scene of it was in the Tennessee Annual Conference held at Nashville, and to which he had been invited by a vote of the brethren, that they might have the pleasure of an introduction to him:

'The committee was appointed, and the General fixed the time for 9 o'clock on Monday morning. The Conference room being too small to accommodate the hundreds who wished to witness the introduction, one of the churches was substituted, and an hour before the time filled to overflowing. Front seats were reserved for the members of the Conference, which was called to order by the Bishop, seated in a large chair by the altar, just before the pulpit. After prayers the committee retired, and a minute afterward entered, conducting the man whom all delighted to honor. They led him to the Bishop's chair, which was made vacant for him, the Bishop meanwhile occupying another place within the altar.

'The Secretary was directed to call the names of the members of the Conference, which he did in alphabetical order, each coming forward and receiving from the Bishop a personal introduction to the ex-President, and immediately retiring to give place to the next. The ceremony had nearly been completed, when the Secretary read the name of Rev. James T——; an elderly gentleman, with a weather-beaten face, clad in a suit of jeans, arose and came forward. Few seemed to know him. He had always been on a circuit on the frontier; and though always at Conference, he never troubled it with long speeches, but kept his seat, and said but little—that little, however, was to the purpose. Mr. T. came forward, and was introduced to General Jackson. He turned his face towards the General, who said, 'It seems to me that we have met before.' The preacher, apparently embarrassed, said, 'I was with you through the Creek campaign—one of your bodyguard at the battle of Horse Shoe—and fought under your command at New Orleans.' The General arose slowly from his seat, and throwing his long, withered, bony arms around the preacher's neck, exclaimed: 'We'll soon meet where there's no war—where the smoke of battle never rolls up in sulphurous incense!'

'Never, before or since, have I seen so many tears shed as then flowed forth from the eyes of that vast assembly. Every eye was moist with weeping.

'Eleven years have passed away since that day. The old hero has been more than ten in his silent and narrow home. The voice that cheered the drooping spirit, and thundered in the rear of routed armies, is silent forever. The old preacher, too, has fought his last battle, laid his armor by, and gone home to his eternal rest.'

* * *

Loss and Gain.—I remember reading of a woman whose house was on fire. She was very active in removing her goods, but forgot her child, who was sleeping in the cradle. At length she remembered the babe, and ran with earnest desire to save it. But it was now too late! The flames forbade her entrance. Judge of her agony of mind when she exclaimed, "O, my child! my child!"

Just so it will be with many a poor sinner, who was all his life "careful and troubled about many things," while the "one thing needful" was forgotten. What will it then avail for a man to say, "I got a good place, or a good trade, but I lost my soul! I got a large fortune, but lost my soul! I got many friends, but God is my enemy! I lived in pleasure, but now pain is my everlasting portion! I clothed my body gaily, but my soul is naked before God!" [Rev. Geo. Burder.

* * *

True Politeness.—Lord Chatham says: "I believe politeness is best to be known by description, definition not being able to comprise it. I would however venture to call it 'benevolence in trifles,' or the preference of others to ourselves in the little hourly occurrences of life. It is a perpetual attention to the little wants of those with whom we are, by which attention we either prevent or remove them. Bowing ceremonies, formal compliments, stiff civilities, will never be politeness; that must be easy, natural, unstudied; and what will give this but a mind benevolent, and attentive to exert that amiable disposition in trifles to all you converse and live with!"

* * *

Believeth.—Mr. James Ruthven, of New York, not long before his death, recited slowly, emphatically, and with great clearness of voice, 'He that believeth on the Son hath everlasting life; and he that believeth not the Son shall not see life; but the wrath of God abideth on him.' 'What a contrast!' said he; 'there is none in the universe like it. What vast consequences hinge on the question! 'Believeth'—I would like to see that word printed in capitals. How simple and easy it is; and yet how many refuse to believe and perish. Unbelief is the only sin which the gospel does not meet. For this it has no cure. 'Ye will not come to me, that ye might have life.'

* * *

Amos Lawrence's Pocket Book is a curiosity. On one fold of it is printed in gold letters, "What shall it profit a man if he gain the whole world and lose his own soul?" You open another fold and read, "The gold is mine saith the Lord of Hosts." On still another fold is printed, "He that giveth to the poor lendeth to the Lord."

CHRIST AND MOSES.

The doctrine that Christ has set aside the law, or the prophets, is one with which we have no sympathy. It is expressly affirmed to be false by Christ himself, and the Apostle Paul as expressly affirms that the law is not made void, but established, through faith. And when brethren, heretofore reputed orthodox on this point, begin to espouse systems which cannot be otherwise sustained than by the assumption that Moses taught that with which the gospel of Christ comes into direct conflict, we think it time to enter a caveat.

Christ's sermon on the mount—the very sermon in which the continued authority of the Old Testament Scriptures is asserted—is nevertheless the text, from which there seems likely to be an everlasting series of discourses upon the unlawfulness of oaths, of divorce, of resistance to oppression, &c; these discourses proceeding, always, upon the false supposition that Christ puts himself in direct opposition to "them of old time." For because Christ introduces his comments upon Old Testament precepts with the expression, "But I say unto you," it seems to be thought that He means to set forth something radically different from those precepts. But is this view just? Is it something radically different from the precepts themselves which He declares, or different only from that *construction* of them which the people had been accustomed to hear? We take it that the antithesis implied in our Saviour's "But I say," is not what was *said* by them of old time, but to what His auditors had always *heard* as having been so said. For in each case alluded to, He does not say, simply, "It hath been said by them of old time," but, "YE HAVE HEARD that it hath been said."

Take, for example, the allusion to the *lex talionis* (as it is sometimes called) of the Levitical code. (Matt. 5: 38) The idea that Moses, in any of the places where this law is mentioned, (Exod. 21: 24, Lev. 24: 20, Deut. 19: 21,) has any reference to the intercourse of men with one another, apart from their relation to the civil or municipal law, is not warranted. Moses certainly did not contradict himself. "Thou shalt not avenge nor bear any grudge against the children of thy people, but thou shalt love thy neighbor as thyself." (Lev. 19: 18) And after laying down such a precept, besides expressly enjoining it on every man to do kindness to his enemy, (Exod. 23: 4, 5,) it is inconsistent that he should, in the law above referred to, enjoin, or even tolerate, a course of conduct directly the opposite. In short, it is very clear, that the "eye for an eye and tooth for a tooth" principle of the Mosaic code was merely a sanction of municipal law, to be enforced and executed by the judges. It gave no sort of sanction to private revenge.

On the other hand, it is perfectly obvious that our Saviour's lesson has reference to the private intercourse of neighbors with one another. He is not concerning himself with the civil law; he simply lays down the life and character which his disciples must cultivate, if they would enter into the kingdom of heaven. To conclude, therefore, that his "But I say unto you" is designed to express the contrariety of his doctrine to that of Moses, is one of the most glaring *non sequiturs* that we ever met with in the writings of sensible men. It was as wrong under the Mosaic Law for a man to take revenge into his own hands, as it is under Christ. Else, what did the Apostle mean, when he said, "It is WRITTEN, vengeance is mine; I will repay, saith the Lord?" *Where* did he find it thus "written?" How came he to lay it down, not as a new commandment, but as an old one which they had from the beginning? (See Rom. 12: 19 and Deut. 32: 35 compared.)

Nor is our Saviour's doctrine in conflict with that of Moses concerning divorce. Moses never justified the putting away of wives; he only tolerated it, or endured it, "because of the hardness of their hearts." Originally, God created one male and one female, and commanded them to cleave to one another—a clear intimation, as our Saviour argues, that such was the law of marriage. (Matt. 19: 3—6.) Nay, while the Mosaic Law was in full force, under the Prophets, the Lord, the God of Israel, was understood to say that "he hated putting away," and that he had made but one of each kind, Adam and Eve, although he had "the residue of the Spirit," and could have made millions, in order "that he might seek a godly end." (Mal. 2: 14—16.) Were not Moses and the Prophets in harmony?

The fact that something was conceded to the hardness of the people's hearts, was no justification of that hardness. It was a concession to their obstinacy when they had a king granted them, but it was no justification of it. On the contrary, they sinned when they asked for a king. (1 Sam. 12: 17.) In fact, the principle of conceding somewhat to the perverseness of human nature is not a peculiarity of the Mosaic Law; it obtains under all civil governments. But, as we have already said, our Saviour in this discourse does not concern himself about government; he simply shows how men ought to act, when they act as individuals, or as moral creatures accountable to God. And in declaring that it was unlawful to put away one's wife for any cause except fornication, he uttered, not what was in opposition to, but what was in strict accordance with, the whole spirit of the Old Testament. It is sheer, downright ignorance of the Bible, when any one says that divorce for trivial causes is justified by the Old Testament.

But perhaps we may resume the subject in a future article. T. B. B.

BENEFACTORS OF LEARNING.

"In gathering up the material for a history of education, literature, and science, in this country, we have been," writes the editor of the *American Journal of Education and College Review*, "deeply impressed with the number and value of the donations and bequests which have already been made by individuals in different States to build, furnish, and maintain libraries, schools, colleges, and scientific institutions." "It is a fortunate omen of a still brighter future, that from small beginnings in the days of our poverty—from gifts of nails, glass, and timber—of a few books, a few acres of wild land, and a few pounds in money, we now hear and read of donations and bequests which are reckoned by thousands and hundreds of thousands of dollars, flowing out of the abundance of rapidly accumulated fortunes. Men of ample means begin to feel the luxury of doing good, and to see that a wise endowment for the relief of suffering, the diffusion of knowledge, the discovery of the laws of nature, the application of the principles of science to the useful arts, the conservation of good morals, and the spread of religious truth, is in the best sense of the term a good investment—an investment productive of the greatest amount of the highest good, both to the donor and his posterity, and which makes the residue of the property from which it is taken both more secure and more valuable. To the continued and increased liberality of men of large means, either in their associated or individual action, must we look for the multiplication and still larger development of our literary, scientific, and educational institutions."

We have copied these remarks for the purpose of introducing the following letter from Amos Lawrence to his brother Abbott, who bestowed $100,000 for the founding and endowing of the scientific school at Cambridge. It expresses the sympathy and oneness of aim existing between two brothers, princely in fortune, and with hearts of princely benevolence. In another letter to a friend, the same brother writes: "This noble plan is worthy of him; and I can say truly to you, that I feel enlarged by his doing it. Instead of our sons going to France, and other foreign lands, for instruction, here will be a place, second to no other on earth, for such teaching as our country stands now in absolute need of." The following note was written on reading his brother's letter to Hon. S. A. Eliot, Treasurer of Harvard College, accompanying his first donation of $50,000. The letter speaks for itself. *

WEDNESDAY MORNING, June 9, 1847.

DEAR BROTHER ABBOTT,—I hardly dare trust myself to speak what I feel, and therefore write a word to say, that I thank God I am spared to this day, to see accomplished, by one so near and dear to me, this last best work ever done by one of our own name, which will prove a better title to true nobility than any from the potentates of the world. It is more honorable, and more to be coveted, than the highest political station in our country, purchased as those stations often are by time-serving. It is to impress on unborn millions the great truth that our talents are trusts committed to us for use, and to be accounted for when the Master calls. This magnificent plan is the great thing which you will see carried out, if your life is spared; and you may well cherish it as the thing nearest your heart. It enriches your descendants in a way that mere money never can do, and is a better investment than any one you have ever made.

Your affectionate brother, AMOS.
TO ABBOTT LAWRENCE.

ANIVERSARY STATISTICS.

American Anti-Slavery Society.

The 22d Anniversary of this Society was held on Fourth day, May 7th. In consequence of the illness of the Treasurer, a formal report from him was not presented; but it was stated by the President, that the receipts of the Society and its auxiliaries during the year were $33,646 53; expenditures $29,138 90; balance $4,507 63. Several resolutions were read, and addresses upon the subjects embodied in them were delivered by a large number of persons, among whom were Samuel J. May, Charles Remond, Mrs. Lucy Stone Blackwell, and Theodore Parker. The following are the resolutions, and from them our readers will learn the present feelings of the leaders in the old Anti-Slavery Society:—

1. *Resolved*, That organized as it was to effect the entire abolition of chattel slavery in our country, the American Anti-Slavery Society will not have fulfilled its mission until the last slave shall have been set free, and "liberty proclaimed throughout all the land, to all the inhabitants thereof."

2. *Resolved*, That in a cause so humane and righteous, we can know nothing of weariness or despondency—nothing of concession or compromise—nothing of effecting a truce or beating a retreat; but recognizing in every slave "a man and a brother," asserting his right to immediate and unconditional emancipation, and proclaiming the sinfulness of slaveholding under all circumstances, we shall continue to call men and things by their right names—to "agitate, agitate, agitate,"—giving the oppressor no repose in his iniquity, and the land no rest, so long as a single fetter remains to be broken.

3. *Resolved*, That Slavery has not only cloven down the rights of its victims, but impaired the reason and paralyzed the conscience of the slaveholder—turning the South into one vast Bedlam, without any restraint upon its madness; fulfilling the ancient declaration, that, "whom the gods intend to destroy, they first render insane."

4. *Resolved*, That the Anti-Slavery sentiment which is "bounded by 36 ° 30 north latitude," is unbounded foolishness and measureless infatuation.

5. *Resolved*, That we are struggling not for the non-extension, but the non-existence of Slavery—not to make it sectional, but to drive it out of the land—not to restore the Missouri Compromise, but to terminate all compromises—not to repel the aggression of the slave power upon Northern rights, but to secure freedom and equality to all who dwell upon the American soil—making the imbruted slave the test of all statesmanship, all patriotism, all philanthropy, and all true religion.

6. *Resolved*, That the right to enslave a human being, on any pretence whatever, is not a debatable question, any more than is the right to commit adultery, burglary, highway robbery, or piracy; and to every defence or apology for its exercise, ours is the good old Revolutionary reply: "We hold these truths to be self evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

7. *Resolved*, That all constitutional liberty has ceased to exist in this country; that none but "the traffickers in slaves and souls of men" are permitted to enjoy freedom of speech and of the press, wherever they plant their feet; that we are living under the sway of "border ruffianism," incarnated in the person of Franklin Pierce, no longer the legitimate President of the United States, but one deserving of immediate impeachment and removal, for his perfidy and treason as the unscrupulous tool of the slave power; and, therefore, that we are in the midst of a revolution, to throw off the chains of a slaveholding oligarchy, a thousand times more intolerable to be borne, than any ever imposed upon our revolutionary fathers by the mother country.

8. *Resolved*, That we shall neither give nor ask for any quarter; but our motto is, "Victory or Death!"

American Tract Society.

The annual meeting of the American Tract Society, held in New York last week, was a scene of considerable excitement, growing out of a discussion of the Society's course on the subject of Slavery. For a year or two the newspapers have had the subject in hand. No doubt many members came to the meeting expecting that an effort would be made to change the administration; but this was not attempted; only an investigation was proposed, which was secured by the adoption of the following preamble and resolution:

Regarding the actions and proceedings of the Executive Committee, as frankly and ingenuously inviting the fullest investigation into all the affairs intrusted to their charge, therefore,

Resolved, That at the suggestion of the Executive Committee themselves, a Special Committee of fifteen be appointed to inquire into and review the proceedings of the Executive Committee, and report to the next annual meeting, or to a duly convened special meeting, to be called by said Special Committee, at their discretion.

The President announced the Committee of Investigation, as follows:

Hon. T. Frelinghuysen, Rev. Thomas De Witt, D. D., Judge Jessup, Pa., Rev. Albert Barnes, D. D., Rev. F. Wayland, D. D., Rev. M. B. Anderson, LL. D., Rev. Y. T. Bedell, D. D., Rev. John S. Stone, D. D., Rev. John McLeod, D. D., James Donnelson, Esq., Geo. H. Stuart, Esq, Rev. Joel Hawes, D. D., Rev. Mark Hopkins, D. D., Rev. Ray Palmer, D. D., Rev. S. S. Schmucker, D. D.

American and Foreign Bible Society.

The 19th Anniversary of the American and Foregn Bible Society was held in New York on Fourth-day of last week. The anniversary sermon was preached by Rev. Wm. Hague, D. D. The President of the Society, B. T. Welch, D. D., occupied the chair. From the Report of the Treasurer, Nathaniel C. Platt, Esq., it appeared that the receipts from all sources for the past year amounted to $105,618 10; disbursements, $107,409 56, exceeding the receipts by $1,791 46. The Corresponding Secretary, Rufus Babcock, D. D., read the annual Report of the Board, which detailed the transactions of the Society for the year past, and announced the death of seven directors and twenty-six life members of the Society. The mode of distributing the Bible by means of colporteurs was spoken of as entirely successful and deserving of all praise.

American Bible Society.

This Society held a meeting at the Tabernacle, on Fifth-day, May 8th. The day was exceedingly stormy, and it was therefore determined to hold another meeting at the Academy of Music, one week later. At the meeting in the Tabernacle, Hon. Theodore Frelinghuysen presided, and opened the proceedings as usual with a brief address. The speakers who followed in succession were Rev. Mr. Stockton of Baltimore, Rev. H. D. Ganse of Sheffield, Mass., Rev Dr. Nichclson of Cincinnati, Rev. Dr. Adams of this city, and Rev. Dr. Tyng. The following is a brief abstract of the annual report:

The receipts of the year amount to $398,167 35, being an increase of $46,355 68, over the former year. Of this amount $161,069 48 are gratuitous, and $232,106 77 from sale of Bibles and Testaments.

The number of volumes issued is 668,225.

There are thirty-three Agents employed by the Society, including two on the Pacific Coast, one in South America, and one in the Levant.

Union Theological Seminary.

The anniversary exercises of the Union Theological Seminary in the City of New York, were held at the Mercer-street Church on the evening of Second-day, May 5th. The opening prayer was offered by Rev. Albert Barnes. Six members of the graduating class delivered brief orations; after which Prof. N. B. Smith addressed the class, expressing the interest of the Faculty in their future course, and pointing out some of the duties which would henceforth devolve upon them. The following are the names of the graduates:—

Chester S. Armstrong, Parma, Mich; Jas. B. Bonar, New York; Alonzo Brown, Ossipee, N. H.; Israel Brundage, Benton, Pa.; Jackson G. Coffing, New York; John P. Cushman, Troy; Charles Harding, Conway, Mass.; Edwin L. Hurd, Galesburg, Ill.; E. B. Hurlbut, Galesburg, Ill.; M. D. Kalopothakes, Athens, Greece; Alexander McLean, Jr., New York Mills; James H. Parsons, Franklin; Herman C. Riggs, Brooklyn; George L. Tucker, New York; Henry H. Tupper, Hardwick, Mass.; Charles C. Wallace, New York; George H. White, Indianapolis, Ind.; William C. Whitford, Leonardsville; Marinus Willett, New York.

Baptist Home Mission Society.

This Society held its 24th anniversary meeting in New York on the 9th inst.

The report of the Treasurer showed that the receipts of the Society for the past year were $51,541 88; amount disbursed during the same period, $50,948 95—leaving a balance in the Treasury of $592 93. Deducting from this the debts which are owed by the Society, leaves a deficiency of $3,781 24, which is the amount of their present liabilities.

Rev. Benj. M. Hill of New York, the Corresponding Secretary, read an abstract of the Annual Report. It appears from this document that the efforts of the Missionaries in the United States and Canada, Mexico and South America, have been crowned with encouraging success. In New Mexico many converts have been made. In Kansas, there were two missionaries, but their efforts had been somewhat impeded by the troubled state of affairs there. In New Grenada, they were laboring earnestly and making gradual progress. The whole number of Missionaries employed by the Society during the past year was 113, but at present there were only 52 in commission.

In response to an inquiry of Rev. Lemuel Porter, D. D. of Massachusetts, the Secretary stated that, owing to want of funds, the Society was doing only about one half the work now which they were doing a year ago.

The Report of the Committee appointed at the last anniversary meeting, to ascertain the feasibility of procuring an edifice to be occupied by the Society for business purposes, was presented; $10,000 had been subscribed to that object. Rev. Ebenezer Caldwell, on behalf of the Committee, asked that the restrictions laid upon them when appointed, with regard to location, might be removed. A motion to this effect was made, but it was tabled after considerable discussion. The prevailing sentiment appeared to be, that the rooms now occupied in the building of the American and Foreign Bible Society are all that can be desired, and that to remove the restrictions of last year would be to unsettle "compromises."

GOSSIP AND THE PASTORAL OFFICE.—The following paragraph hits one of the evils which flow from an over free use of the tongue—a habit into which many persons fall without any thought of its great sinfulness:

"No attentive reader of the Epistles of the New Testament can fail to be struck with the annoyances and evils that this produced in the apostolic churches, and as long as the tongue continues to be the unruly member, will it work evil in the same way. We do not speak of the malignant backbiter, or the spiteful detractor, who is always seeking some object for the discharge of venom, for those gliding reptiles are found everywhere, and when known, lose half their power to injure. But really good and well-meaning people often set on foot whisperings, and doubts, and complaints about mere trifles, that pass from lip to lip, until at last they reach the minister in the form of apparently formidable dissatisfaction. He concludes that he has lost the affection and confidence of his people, and is perhaps guilty of some imprudent words or acts himself, which are reverberated through the whispering gallery until they come back to him in a loud and multiplied echo. The natural result of this is a speedy separation. All this might have been avoided by a little of the gift and grace of silence, which is often a much rarer and better gift and grace than that of speech."

DEATH OF REV. ADOLPHE MONOD.—A letter from M. F. Monod, in Paris, to a London paper, announces the decease of this eminent French Protestant clergyman, whose alarming illness was before mentioned:—

"I have just time, before the post, to write a line or two to inform you that my dear brother—brother in every sense of the word—the Rev. Adolphe Monod, has been called to his heavenly rest to-day, April 6th, at a quarter past one o'clock P. M. A shining light has thus been, by a mysterious but wise and merciful Providence, extinguished here below. His death bed has been one of intense suffering, and, at the same time, of glorious and gracious triumph. In the full and perfect assurance of his salvation through Christ, and in peace, has he commended his spirit into the hands of his heavenly Father. A few days ago I heard him saying, 'My ministerial labors, my works, my preaching, I reckon all as filthy rags; a drop of my Saviour's blood is infinitely more precious.' Though our affliction is great, we would not call him back from the rest and glory which are now his eternal portion."

THE SUNDAY IN ENGLAND.—The movement in England to open the Crystal Palace, and other places of public resort, on Sunday, appears to receive the approbation of the working classes, but to meet with violent opposition from the gentry. At a meeting held in Kentishtown, for the purpose of protesting against the movement, although the Earl of Shaftsbury presided, the clergyman opening the meeting with prayer was hooted at during its delivery, and even the Earl himself was compelled to retire. A similar meeting was held in another of the suburban parishes of London, with similar results. When still another was called in Glasgow, glaring handbills were posted round the city calling on the people *to rise and attack it.* On the other hand, the Congregational Union, the Wesleyan Conference, the presbyteries and the sessions of the Presbyterian communities have poured in their remonstrances and warnings upon the House of Commons.

STATISTICS OF PROTESTANTISM.—There are at present, says a correspondent of the *Independent*, more than three millions and a half of Protestants in Russia, in a population of sixty-five millions. The stronghold of Protestantism is in the province of Finland, with a population of 1,636,000, all of whom belong to the Lutheran Church, with the exception of 45,000 members of the Greek Church, and in the three Baltic provinces, Estland, Livland, and Courland, where the German language still prevails. Two flourishing universities, at Dorpat for those parts of Russia which speak German, and at Helsingfors for Finland, serve for the instruction of the young Protestant generation. Notwithstanding the long persecution, religious life is not extinct. The university at Dorpat furnishes many valuable contributions to Theological literature; the Protestant Bible Society of Russia is still in the field, and several cities possess flourishing Home Mission societies, societies for the relief of the poor, and the like. Thus, in particular, the Protestant Poor Aid Society of St. Petersburg, founded in 1846, and being now under the presidency of the Duke Max von Leuchtenberg, is spoken of in terms of the highest praise.

THE INDIANS OF THE UNITED STATES.—According to the report for 1855 of the Commissioner of Indian Affairs, the Indian population of the United States, exclusive of a few in several of the States who have lost their tribal character, or amalgamated with the whites or blacks, may be estimated at from 320,000 to 350,000 souls. The tribes are 99 in number. In 1854, the payments of money by the Government to the various tribes amounted to $546,357 38. During the last ten years, expenditures have been made by certain societies for the educational and religious advancement of the Indians, as follows: By the American Board of Commissioners of Foreign Missions, (Boston,) $402,974; by the Board of Foreign Missions of the Presbyterian Church, (New York,) $327 193 53; by the Missionary Society of the Methodist Episcopal Church, (New York,) $107,230; by the American Indian Mission Association, (Louisville,) $104,413 15; by the Catholic Mission, (St. Louis,) $87,319 65. During the same period the Methodist Episcopal Church South has expended for the same purposes about $288,000. The total outlay for the christianization and civilization of the Indians, within the last ten years, amounts to more than $2,150,000.

DEATH OF PERCIVAL, THE POET.—The telegraph brings us intelligence of the death of James G. Percival, the poet; he died at Hazelgreen, in the State of Illinois, on Friday May 2d. Mr. Percival was born in Berlin, Connecticut, in the year 1795, and graduated at Yale College in 1815. He wrote verses at a very early age, but his first appearance as an author was in 1821, when he published his *Prometheus* and other poems. He published another volume of poems the following year, and at that period he was the most popular of American poets; the tenderness and melancholy sweetness of his verses being in accord with the prevalent taste of the day. In 1824 he was appointed an assistant surgeon in the U. S. Army, and stationed at West Point to lecture on chemistry; but he resigned his commission after holding it a few months. He published a third volume of poems in 1827, and, in 1843, appeared his *Dream of a Day*. Dr. Percival was a man of purely scholarly tastes and eccentric habits, and he united a remarkable love of scientific pursuits with his taste for poetry. He possessed great linguistic acquirements, and assisted Noah Webster in the compilation of his great Dictionary. He had made a geological survey of the State of Connecticut, and at the time of his death, he held the office of State Geologist of Illinois. He was never married.

RELIGIOUS DENOMINATIONS IN FRANCE.—It appears from official returns, that the number of persons in France belonging to the Roman Catholic religion is 35,931,032; Calvinists, 480,507; Lutherans, 267,825; Jews, 73,975; and other creeds, 30,000. The following are the salaries of the bench of bishops:—1 Archbishop at Paris, 50,000 francs; 14 others 20,000 francs each; and 65 bishops, 12,000 francs each; in all 80 Episcopal sees. The prelates invested with the dignity of cardinal receive in addition 10,000 francs a year each; and 23 bishops, residing in large and expensive centres of population, receive in addition 72,000 francs among them. The indemnities allowed for diocesan visits, &c., amount to 143,000 francs a year. The total expense of the 80 sees is estimated at 1,385,000 francs per annum.

WRITING FOR THE RELIGIOUS PRESS.—The following paragraph from an exchange expresses very forcibly an idea which ought to be familiar to every writer for the religious press:—

"Though it made us mourn over our own infirmity, we could not but feel what a just sense of the importance of the religious press, as well as of the responsibleness of an editor, one who stands foremost among the preachers and writers of America expressed, when he said to us, 'I should consider I had done a good week's work when I had written a column of editorial for a religions newspaper.' A real gem fills but a small space; and your gem of a newspaper article is not an exception to this rule."

THE WAY TO WORK EFFECTIVELY.—Rev. George Gilfillan, in a late work, says:

'I am often asked, with real or affected wonder, how I can get through so much work of various kinds. My answer is—sleep and system. I sleep eight or nine hours out of the twenty four, and I never write after dinner or supper. I never have, at any time, written more than five hours a day, and I read at meals and odd moments. At Edinburg I hurt myself, as I said, by sitting up late to study; and when I obtained a settled position, I said, 'I shall throw down my pen every night at nine;' and, with the exception of *three* several times in nineteen years, I have kept the resolution.'

PERSECUTION IN TUSCANY.—The correspondent of the London *Christian Times* says that the criminal prosecution against the Protestants of Ponteders, temporarily suspended through the remonstrance of Lord Normandy, had been recommenced, and is now engaging the attention of the Ministry of Justice. Indeed, espionage and persecution are the natural fruits of the season, and in Catholic States you may look for their appearance in Lent with as much certainty as for the first green peas. Vigilance is unusually stimulated by the notice of the Government, that no less than 10,000 persons have left the Catholic Church!

RELIGIOUS INTELLIGENCE.

If, as is generally expected, Gen. Comonfort confiscates all the church property in Mexico, he will take nearly four hundred millions of dollars from the 'holy fathers.' This vast wealth yields the clergy an annual income of about twelve millions of dollars. The church establishment, thus supported, consists of the archbishop of Mexico and nine bishops, whose aggregate income amounts to $539,000 The number of the parochial clergy is 3667. There are also ten cathedrals, having 168 canons and other dignitaries, and one collegiate church. The regular clergy comprise 1978 monks, chiefly Franciscan, and there are 156 convents.

The British Baptist Missionary Society's Deputation, Mr. Underhill, has effected several important changes in the Missions of that Society in Ceylon. They have resolved to leave the management of the native churches to their elected native officers; to require ~~the native churches to support their pastors;~~ to teach only the vernacular, even in the schools for training ministers; to employ none but Christian teachers in any of their schools, &c. These changes meet the entire concurrence of the missionaries.

A farewell missionary meeting was recently held in Baltimore previous to the departure of Rev. Roswell H. Graves as a missionary to China. Mr. G. has already sailed in the ship Houqua, for Canton, his destined field of labor. Two of the passengers were Chinamen returning to their native land; one of them a pious and intelligent young man from Canton, a member of the Presbyterian church.

Rev James Beecher, wife and child, sailed on the 25th ult., in the ship Wild Pigeon, for Canton, China, where Mr. Beecher will enter upon his labors as a missionary. He is a son of Rev. Dr. Lyman Beecher, who has now lived to see all his sons preachers of the same gospel that he has declared for so many years; and they are persons, as are also his daughters—in all twelve—of more than ordinary ability. Mrs. Beecher is a native of Newburyport.

The expenditures of the several New England auxiliaries of A. H. M. S., for the year ending the first of March, are reported in the Missionary, and are as follows:—Maine M. S, $12,228 06; New Hampshire M. S., $5,805 02; Vermont D. M. S., $4,853 25; Rhode Island H. M. S., $1,475; Connecticut M. S. $4,206 23, and Massachusetts H. M. S, $5,956; total $34,523 66.

The total membership of the Methodist Church, South, including probationers, of whom there are over seventy thousand, is 621,136; of whom 170,150 are colored, and 3613 are Indians. The increase during the year was 23,689. The number of traveling preachers is 2078; of superannuated, 151; local preachers, 4,628.

The Church of St. John the Evangelist—a new free ~~church, established by an association~~ tion of ladies, as a monument to the memory of the late Bishop Wainwright, was opened to public worship on a recent Sunday. It is located on the corner of Hammond street and Waverly Place, New York, and is capable of accommodating about twelve hundred persons.

Rev. John Thompson, D. D., pastor of the Grand street Presbyterian church, has set sail in the clipper ship Dreadnought, for Europe. He is accompanied by twenty members of his congregation, who have chartered an entire cabin of the ship, forming a social sailing party on a larger scale than is usually attempted.

A handsome testimonial, consisting of a gold watch and chain and a purse containing £100, has been presented by the citizens of Toronto, to the Rev. Dr. Adam Lillies, to mark their appreciation of his services to the public in making known, through his lectures and essays, the manifold resources and advantages of Canada.

A note from Rev. G. S. F. Savage says, that an interesting revival has been in progress for some weeks in the Congregational church at St. Charles, by which the church has been greatly benefited, and twenty or twenty-five hopefully converted. It is expected that this number will unite with the church as the fruits of the revival.

On the 13th ult., seventy persons were admitted into the (O. S.) Presbyterian Church, Washington, Pa, eighteen of whom were College students. About fifty persons in Rev. Mr. Waller's Presbyterian church in Bloomsburgh, Pa., have recently experienced religion Thirty-eight have been admitted tn Rev. Dr. Anderson's church in St. Louis.

Advices from Florence state that the Tuscan Government has commenced a persecution against the Protestants settled at Pontedera. The English Ambassador at Florence has been applied to. His Excellency immediately addressed the Tuscan Government on the subject, but hitherto with no effect.

Notwithstanding the promises given by the King of Prussia to the Evangelical Alliance to intercede for the Baptists in other German States, they have still to suffer. Lately one of their ministers in the kingdom of Hanover, De Reni, has been condemned to three months imprisonment.

We learn from the Philadelphia *Christian Chronicle*, that J. P. Crozer, Esq., has offered $50,000, to be paid within two years, if they will remove Lewisburg University to Delaware county, near Philadelphia, where he resides.

The Rev. Mr. Spear gives the following computation of the number of Chinese in California; they belong mostly to five companies, viz.: Young-wo, 14,000; Canton, 6,800; Ybu-wo, 1,780; Sze yap, 9,200; Ning-Yeung, 6,907—total, 38,687.

We learn from *Zion's Advocate*, that in East Dixmont, Maine, a pleasing revival of religion has been for some time in progress, and some thirty to forty persons are judged to have 'passed from death unto life.'

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MAY 5.

In the SENATE, Mr. Pugh presented resolutions of the Legislature of Ohio in favor of the admission of Kansas with the Topeka Constitution. The Secretary of State was called upon to furnish the journal of the proceedings of the Commissioners convened at Paris to adjudicate on the claims for French Spoilations. Mr. Bayard spoke in favor of the adoption of his substitute for the Naval Committee's bill to amend the act creating the Naval Board. It proposes to restore officers on the reserve list, and to investigate the cases of those dropped.

In the HOUSE, the Senate bill providing for deepening the channel over St. Clair Flats, Michigan, was passed, as was also the bill in relation to improvements in the Savannah River. Mr. Clingman asked leave to submit a joint resolution authorizing the President to employ any part of the land or naval forces, and to call for and use any number of volunteers, to provide for the safety of the passengers and property on thoroughfares or lines of travel between the Atlantic and Pacific Oceans, as guaranteed by existing treaty stipulations. Considerable debate ensued, and the House finally adjourned without receiving it.

THIRD-DAY, MAY 6.

The SENATE was occupied principally in the discussion of measures for Harbor Improvement, but without any definite action.

In the HOUSE, the bill making appropriations for Consular and Diplomatic expenses was passed. The subject of granting lands to aid in the construction of railroads was then considered; after which personal explanations were in order until the adjournment.

FOURTH-DAY, MAY 7.

In the SENATE, a third Conference Committee on the Deficiency Appropriation bill was appointed—the two former not having been able to agree. Mr. Bayard concluded his speech on the best means of promoting the efficiency of the Navy.

In the HOUSE, the entire session was spent in debate on the Deficiency Appropriation bill, growing out of the failure of the Committees of Conference to agree. The principal difficulties were stated to be relative to the Senate's amendments appropriating $1,800,000 for the Army and $300,000 for the Washington Water Works. No final action was had.

FIFTH-DAY, MAY 8.

The SENATE was engaged during the entire day in the consideration of the resolution from the Committee on Foreign Relations, declaring the notice which has been given to Denmark to terminate the treaty regulating the Sound Dues sufficient.

In the HOUSE another call was made on the President for information in relation to the recent disturbances at Panama. The Deficiency Appropriation bill was again considered, and during an earnest attack on the item for the expenses of the Judiciary in Ohio, Mr. Giddings fainted and fell to the floor. He soon returned to consciousness, and was conducted to his residence, but subsequently returned and concluded his remarks. The House, adopted the report of the Joint Committee of Conference on the bill amendatory of the Bounty Law of 1855. The bill provides that parol evidence, where no record exists, may be admitted to prove military service performed; construes the 8th section of the act of 1855 to embrace officers, marines, seamen, and other persons engaged in the naval service during the Revolutionary war, and their widows and minor children, and allowing, to complete the time of service, one day for every twenty miles from the place where the troops organized to muster, and also on their return after discharge. The bill granting upwards of 1,500,000 acres of land to Iowa, to aid railroads in that State, was passed by 79 to 59. On motion of Mr. Pennington, it was resolved, that the President be requested to communicate, if compatible with the public interests, such information as may be in his possession touching the recent disturbances at Panama, and the interruption on either of the routes, on foreign territory, between the Atlantic and Pacific Oceans, and what measures have been taken for the protection of American interests relative to the same.

SIXTH-DAY, MAY 9.

The SENATE passed the House bill giving 1,500,000 acres of land to Iowa for Railroad purposes. A bill was reported from the Committee on Patents, to amend the Patent Laws, with the object of protecting the public against oppressive invalid patents, and inventors against piracies.

In the HOUSE, the proposition from the Senate to appoint a third Committee of Conference on the Deficiency bill was adopted. The New Mexico contested election case was discussed, but without decision. The Senate adjourned to Second-day.

SABBATH-DAY MAY, 10.

The House of Representatives met on Sabbath, the first Saturday Session since the organization; but nothing was done in the way of public business, the time being occupied in personal explanations touching the Slavery question.

Shipwreck and Exposure among Arabs.

The Hartford *Times* publishes the following private letter from G. H. May to his brother in that city: MONDAY, Feb. 4, '56.

I take this opportunity of informing you of my whereabouts. We are in Angra de Cintra Bay, in latitude 23° N. on the West Coast of Africa, among the Arabs. We have got 275 bbls. of whale oil; whales are very scarce. There are 12 or 15 sail here, whaling on the coast, and none of them doing much. We were in company with a schooner named the Mountain Spring, of Provincetown, Mass., and she was wrecked in the breakers on the 7th of January in the same bay with us. Of the 22 men on board, 19 were lost. The Captain and two men were saved, and they are with us. We lost one boat and the crew with her. Three of them belonged to New London. Their names were Augustus Jones, William Crocker and William West (cooper.) We had one captain shot in the legs by the Arabs. His name was Rider, master of the brig Lewis Bruce, of Orleans, Cape Cod. They attempted to get him on a camel, for a slave; he resisted, and they shot him in the legs to maim him, when he turned and shot one of the Arabs dead. One of our boats got him off the beach. I was an eye-witness to the whole scene with the Arabs, and was hastening to his assistance [when he shot the Arab.] They are low and treacherous; we have to look out sharp for them. I have been on shore among them, considerably, trading, but went well armed, with two boats' crews. But we seldom see any of them now; they keep back in the desert; they don't like lead!

European News.

By two arrivals—the Hermann at New York, with London dates to the 23d, and the America at Halifax, with dates to the 26th of April—we receive one week's later advices from Europe.

It seems that at the time the America left Liverpool a report was current that the British Government was at last disposed to abandon, in a measure, the position it has assumed on the Central American question. It is also alleged that Mr. Crampton will not be recalled.

The event exciting most attention in Great Britain was the grand review of the fleet on Wednesday, the 23d ult. The papers overflow with details. Over 100,000 spectators were present, on sea and land. The fleet numbered over 240 ships of war, big and little, all steamers, with the exception of two; comprised 34,000 horse power; carried 3,000 guns and 33,000 men; included 16 gun-boats and three floating batteries, and extended 12 miles along the water, east and west, across Spithead. The fleet formed four squadrons and performed a number of naval maneuvres for the edification of the Queen. Afterwards the fleet made a sham attack on Portsmouth Castle, and the performances were concluded by illuminating all of the ships with colored lights.

The London News publishes what it asserts to be the treaty of Peace. Its provisions accord with those that have already been given to the world. One clause requires the immediate evacuation of the Ottoman Territory by the Allies, and, according to our advices from thence, this movement has been commenced. The conclusion of Peace was officially announced to the French army by Marshal Pelissier, on the 2d of April.

Among the most interesting items of news by the present arrivals is an account of the Czar's visit to Moscow. In a speech, addressed to the nobles who waited on him in that city, his Majesty declared that he had ratified the Treaty of Peace before he left St. Petersburg. He makes, however, the somewhat remarkable declaration, that he has adhered strictly to the views of his father, and in the treaty of Paris has obtained that which it was the ambition of Nicholas to secure. Rumors of extensive reforms in Russia and Poland are again in circulation. The Emperor is reported to have expressed his determination that all children born of serfs shall, on the day of his coronation, be made free. This event, it is expected, will take place on the 31st of August next.

An imperial decree announces that the Russian army is to be reduced to a peace establishment. The force in the South of Russia and the Crimea is henceforth to be divided into two armies—one under the orders of Prince Gortschakoff, the other under Gen. Luders.

The last mail from the East states that the insurgents against the Porte, in Arabia, have suffered so much from cholera as almost to put down the insurrection. The report affirms that 13,000 have died out of an insurgent tribe of 45,000.

A dispatch from Stockholm announces that Prince Oscar, the second son of the King of Sweden, leaves Stockholm for London, in the middle of May, for his betrothal with the Princess Mary, of Cambridge.

A telegraphic dispatch from Berlin says that the coronati[illegible] of the Czar will take place at Moscow, on [illegible]31st of August, the *fete* of his patron saint. [illegible]ense is estimated at about half a mi[illegible]rling.

Four Days Later.

The steamship Atlantic, with four days later news from Europe, arrived at New York on Second-day, 12th. The feature of the news by this arrival is the official publication of the treaty of peace. Attached to the treaty there are three separate conventions, and also a declaration respecting the maritime law, and the course to be pursued with respect to neutrals during a time of war—that is to say, to put an end to privateering. Copies of all the protocols of the sitting of the Congress of Paris have been laid before Parliament. Peace was formally proclaimed at London, on Tuesday the 29th, with the medieval pageantry of heralds and so forth.

Fatal Affray in Washington.

At Willard's Hotel, in Washington, on Fifth-day, May 8th, Mr. Herbert, member of the House of Representatives from California, shot Thomas Keating, the head waiter, killing him instantly. Mr. Herbert was arrested, and on the next day the affair was investigated.

The evidence of the servants belonging to the Hotel was conflicting, but was to the effect that Mr. Herbert came into the dining-room at 11 1 2 o'clock, accompanied by a friend, and called for breakfast, but being past the usual hour, he was informed by a servant that he could not have a meal without an order from the office for it. Mr. Herbert directed several of the servants who spoke to him on the subject to retire, calling them harsh names. The deceased made a reply, when Mr. Herbert struck him with his fist or with a napkin. The deceased then picked up a plate or tray, making movements as if to throw it, when Mr. Herbert threw a chair at him, the latter returning the assault with a plate. During the *melée*, Patrick, a brother of the deceased, entered, having heard of the proceedings. Mr. Herbert seized him, and the two brothers closed with him. The proceedings now became intensely exciting, and chairs and crockery were broken profusely by the parties in the contest. The Austrian Minister quietly beheld what was occurring, but did not move until he went to the man whom Mr. Herbert had fired at, to ascertain whether he was dead or living.

Col. McKay testified that he saw when he went into the drawing room six or seven persons in a scuffle, and thought it was a general fight among the stewards of the hotel, but shortly beheld one of the servants knock down Mr. Gardiner with a chair, and saw three other servants striking Mr. Herbert, holding him by the wrists. Witness seized hold of a chair to defend Mr. Herbert, who was sinking under the weight of the men, and Mr. Gardiner at the same time was beating them promiscuously. After Mr. Herbert fired the pistol two other servants rushed forward and clinched with him.]

Capt. J. Smith confirmed Col. McKay's statement, saying the crowd of servants had Mr. Herbert in their power, striking him on the head with plates, trays, &c.

Mr. Bishop, member of Congress, was positive that the pistol was discharged while the struggle was going on. Three or four persons were holding down Mr. Herbert, and he appeared much exhausted.

Capt. Blanding corroborated the fact that several of the servants were pressing down the man, whom he afterwards ascertained to be Mr. Herbert, previous to and at the time of the firing.

Capt. Deponte's testimony was confirmatory of the above.

[Mr. Herbert was held to bail in the sum of ten thousand dollars to answer to the charge of manslaughter.]

HEAVY MONEY TRANSACTIONS.—The following extract from the money article of the New York *Times* of May 6th, will give some idea of the way business is done by the banks of this city:

The gross deposits ran up during the week to $92,816,063, mainly on Friday and Saturday, in preparation for the 4th May payments, which were heavy beyond all precedent, and caused the clearances or exchanges between the Banks this morning to exceed *thirty-seven millions of dollars.* One Bank—the American Exchange—sent into the Clearing House a tenth of this large sum in checks, drafts, &c., to be exchanged with its neighbors. Several others sent in each two and a-half or three millions of dollars. The actual result of the week's operations is the drawing down of the deposit line, after the daily settlements between the Banks, from $66,285,880, as it stood last Monday, to $65,025,870. The daily clearances, for the six days, amounted to *one hundred and sixty-six and three quarters millions dollars!* The average per day was $27,790,193.

SHIPWRECK AND SUFFERING.—The British bark Blake, of 800 tons, Edward Rudolph, Master, belonging to Messrs. Firnie, Brothers & Co., of Liverpool, England, sailed from Ship Island Harbor, State of Mississippi, United States, with a cargo of pitch-pine deals, bound to Cork for orders, in fine trim, and beautiful order, on the 8th February last, with a fine fair wind and weather, with every hope of making a good and prosperous passage. On the 13th, during a snow storm, she was capsized; seven were washed overboard, the decks burst open, all the hatches washed off, and every morsel of provisions carried away. The remainder of those on board were without food or drink for five days; on the eighth day a small cask of water was got at and a half drowned rat was caught and devoured; afterwards a man died and his body was reserved to be eaten, and was actually eaten in part, when, on the ninth day after the disaster, the schooner Pigeon, of St Johns, N. F., hove in sight, and rescued the sufferers. Eight persons were washed overboard; two died of cold and starvation; and seven were saved.

THREE GREAT JEWS.—An English gossiper thus describes the personality of the three greatest Jews in all England:

'Under the gallery, I found myself seated next the chiefs of the Hebrew fraternity, Sir Lionel Goldsmidt and Lord Mayor Solomons, listening intently to Milner Gibson's long-winded harangues. Presently Sir Moses Montefiore joined us, but strange to say, I felt no thrill of delight at my contiguity to these Caucasian notabilities. Sir Lionel is little and shabby-looking; Sir Moses is portly and irregular in his aspect; but the Lord Mayor, in his clerical suit of black, with a neat white neckcloth, prim, intellectual, and ruddy, might pass for a dignitary of the Church.

SUMMARY.

There was a trial of three Steam Fire Engines a few days ago, before a large crowd, for a prize of $500, and two of $300, offered by the city. The engines competing for the prizes were Lee & Larned's, and two model engines by W. J. & J. S. Burnham and James Smith. Lee & Larned's got up steam in 14 minutes with 100 pounds. With fifty feet of hose, through a 1 1-18 inch nozzle, it threw water 150 feet. The Burnham model got up steam in 22 minutes with 50 pounds of steam; through 50 feet hose and 3 4 inch nozzle it threw a stream 125 feet. The model of Smith got up steam in 12 minutes at 80 pounds, and threw water 65 feet through 20 feet length of hose, and 5 16 inch nozzle.

Theophilus Dolsen, of Dolsentown, (some three miles southeast of Middletown, Orange Co., N. Y.,) lately sold his farm, of over 100 acres, to a Mr. Benedict, for $115 per acre. This farm is a very valu[illegible]property, and is a portion of a tract of 700 acres purchased before the French and Indian war, (just one hundred years ago,) by his ancestor, Isaac Dolsen. In early times there was an Indian settlement in one of the meadows of the Dolsen property, and also an Indian burying-ground on the high ground in the same vicinity.

The Indianola (Texas) Bulletin of the 12th ult., says, workmen are now busy in erecting enclosures for the camels that are now daily expected at that port, for service on the western plains. The building is to be 200 feet long by 20 feet in width, and the enclosure will cover 10 acres of ground. It is proposed to keep the animals at this place several months to recruit them. Some of the animals were presented by the Viceroy of Egypt to our Government, but most of them were procured by Major Wayne and Capt. Porter.

The House of Representatives has passed a bill granting alternate sections of land to aid in the construction of Railroads in the State of Iowa. The first of the lines named for which the donation is proposed, lies between Burlington, on the Mississippi, and a point near the mouth of Platte River, on the Missouri. This road, when completed, will furnish a direct railroad connection between the New England and the Middle States and the Territory of Kansas.

Intelligence has been received of a fearful accident, which occurred on Wednesday evening on the Mississippi and Missouri Railroad, near Davenport, Iowa. The express train from Iowa City ran off the track, while going at a rapid rate, causing terrible destruction. Twelve persons are said to have been killed and a great many others were wounded. The entire train, consisting of the locomotive, four passenger cars, and a baggage car, was demolished.

A dispatch dated Detroit, Friday, May 9, says: Much excitement was occasioned here yesterday in consequence of the arrest of four persons for violation of the Prohibitory Liquor law. The military were called out to preserve the peace. During the examination of the cases to day, the informer was driven from the Court room and chased into a neighboring house, which was besieged by an excited crowd several hours. He finally returned, and the trial proceeded without further interruption.

An ounce of corrosive sublimate and an ounce of alum dissolved in a pint of rain water, and applied to the roots of furs with a sponge, and if possible on the inside of the fur, it is said, will effectually prevent the attacks of moths. Articles treated as described, then hung up to dry in a room for a few days, may then be wrapped in glazed linen, and laid by with perfect safety for the summer.

The Boston Traveller is informed that milk is now adulterated in this country by a chemical, of French invention, of a consistence of tar, giving the milk a color and body of which it had been deprived by a free use of water, and adds that a person has lately visited that city from New York, offering to teach the milkmen, for a "consideration," how to use this new adulterator.

The venerable Stuyvesant pear tree, at the corner of Third Avenue and Thirteenth St., New York, is budding out vigorously this spring, and gives promise of its wonted crop of fruit. It generally yields about a bushel of pears, which are highly prized, more for the antiquity of the tree than for the fruit, although the flavor of the pear is said to be very fine. The tree is more than two hundred years old.

A dispatch dated Rock Island, Ill., Tuesday, May 6, says: The steamboat Effie Afton, while passing the draw bridge this morning, was carried by the current against the pier, smashing her cabins and setting fire to the boat. The fire extended to the bridge, one span of which was destroyed. The boat and cargo, valued at $75,000, is a total loss. No lives lost.

A young man who was convicted of bigamy at Newburyport, last Spring, upon serving out his term of punishment was met at the railroad station by his first wife, who took him to a clothing store, gave him a new rig, then presented him with $300 which she had earned since he deserted her, and they departed together for their former home in New Hampshire.

The following quotations for land warrants are current:

	Buying.	*Selling.*
160 acres	$1,08 per acre	$1,10 per acre.
120 acres	1,03 per acre	1,05 per acre.
80 acres	1,08 per acre	1,10 per acre.
60 acres	1,03 per acre	1,05 per acre.
40 acres	1,16 per acre	1,20 per acre.

The city of New York owes $14,000,000; Philadelphia $10,000,000; New Orleans $8,000,000; Boston $7,000,000; Baltimore $5,000,000; Cincinnati over $2,000,000; Portland, Maine, over $2,000,000; St. Louis over $2,000,000; Mobile $1,500,000; Charleston, near $2,000,000; and San Francisco $1,500,000.

Mr. Raymond, for himself and company, proprietors of the *N. Y. Times*, has purchased from the trustees of the Brick Church, Rev. Dr. Spring's, Beekman street, for the sum of $250,000, their interest in that property, which is three-fourths of the whole; the other fourth being owned by the city.

A letter from Kansas states that the Deputy Sheriff of Douglas County is having writs issued for the arrest of one hundred citizens of Lawrence, charged with the commmission of crime under the Territorial laws. A standing army will be stationed at Lawrence until all the arrests are made. The prisoners will be conveyed to Lecompton.

A meeting of the newspaper publishers along the line between Albany and Buffalo, was held in Utica, Tuesday, May 6. Delegates were present from Albany, Utica, Rome, Syracuse, Auburn, Rochester and Buffalo. An association was formed, to be called the "Associated Press of the State of New York."

There was a fire in the village of Borodino, Onondaga Co., N. Y., on Wednesday night, May 2d, which commenced in a stove store, and destroyed that and five buildings adjoining. Among the sufferers was D. F. Randolph, late of Scott, who lost a portion of his household goods.

In Washington, on the 8th inst., Mr. Wallach, the Editor of the *Star*, was severely whipped in Willard's Hotel, by Major Heiss, formerly of the *Union* newspaper, whom he insulted for declining to recognize him as a gentleman. Wallach was armed, as usual, but failed to use his weapons.

A dispatch dated Philadelphia, Thursday, May 8, says: The train from Elmira, on the Catawissa Railroad, was detained near the Ringold station, last night, by the explosion of the engine boiler. The fireman and brakeman were killed and the baggage master fatally injured.

Jenny Lind has written a letter to a lady in Philadelphia, in which she deeply sympathizes with Barnum in his financial troubles, ascribes to him noble qualities, and expresses her intention of placing a sum of money at his disposal.

A dispatch dated St. Johns, N. B, Friday, May 9th, says: The boiler of the steamboat J. D. Pierce, exploded yesterday, thirty miles from Fredericton, instantly killing four persons; another has since died, and several others are severely injured.

An explosion occurred in the powder mill at Gorham, Mass., May 6th, partially destroying the building, and killing Alfred R. Allen, who leaves a wife and three children. But a small quantity of powder was in the mill at the time.

It should be noticed, as an interesting item, that Ohio and Illinois furnished over 2,000 of the 2,508 beef cattle on sale in New York, May 7th, while the States east of Ohio furnished only 152.

The ruins of the Temple of Diana, which were known to have existed at Marseilles, have just been discovered by the workmen employed in digging the foundation of the proposed new cathedral.

Rev. R. S Cook, one of the secretaries of the American Tract Society, is about to set out for Havre, to spend a summer in Switzerland for the benefit of his health.

At midnight on Sunday, two men were run over and instantly killed by the milk train of the New York and Erie Railroad, about four miles from Jersey City Ferry.

The receipts of the Southern Michigan and Northern Indiana Road, in April, amounted to $291,000, against $246,000 same month last year.

There was quite a brisk flurry of snow at Newburg at noon, May 5th. The temperature was low during the whole day, with a sharp wind.

Strawberries from the hot houses have made their appearance in some of the confectionery windows. The sight is refreshing.

A man at Horicon, Wis., in firing at a loon on the water, accidentally shot a man who was standing on the opposite shore.

The value of real and personal property in Detroit is $13,795,000, being an increase of about one and a half millions since 1852.

The Washington Bank, Washington, suspended payment recently. It is owned by Selden, of Chicago.

MARRIED,

In Edgerton, Wis, April 27, 1856, by Rev. J. H. Wells, Mr. JONATHAN H. PALMITER to Miss JANE FURSE, all of Edgerton, Rock Co.

In Rockville, R. I., May 1, 1856, by Eld. P. S. Crandall, Mr. THOMAS W. BOSS, of Ashaway, R. I., to Miss MERIBAH WHITFORD, of Adams, N. Y.

DIED,

In North Stonington, Ct., on the 30th of April, 1856, of an affection of the lungs, Mrs. ELIZA BURDICK, wife of Robert Burdick, aged 50 years. Sister B. was a member of the 1st Seventh-day Baptist Church of Hopkinton, R. I. Her sufferings under disease were protracted and severe, but she bore them with Christian fortitude. In her last hours, her faith in Christ was much stronger than when she was in health, and enabled her to triumph over the fear of death, which had at times greatly afflicted her.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

To Persons out of Employment.

An Elegant Gift for a Father to present to his Family.

☞ Send for one copy, and try it among your friends. ☜

WANTED—AGENTS TO CIRCULATE SEARS'S LARGE TYPE QUARTO BIBLE,
For Family Use, entitled
THE PEOPLE'S PICTORIAL DOMESTIC BIBLE.

This useful Book is destined, if we can form an opinion from the Notices of the press, to have an unprecedented circulation in every section of our widespread continent, and to form a distinct era in the sale of our works. It will, no doubt, in a few years become THE FAMILY BIBLE OF THE AMERICAN PEOPLE.

☞ The most liberal remuneration will be allowed to all persons who may be pleased to procure subscribers to the above. From 50 to 100 copies may easily be circulated and sold in each of the principal cities and towns of the Union. IT WILL BE SOLD BY SUBSCRIPTION ONLY.

☞ Application should be made at once, as the field will be soon occupied.

☞ Persons wishing to act as Agents, and do a safe business, can send for a specimen copy.

☞ On receipt of the established price, Six Dollars, the PICTORIAL FAMILY BIBLE, with a well-bound Subscription Book, will be carefully boxed, and forwarded per express, at our risk and expense, to any central town or village in the United States, excepting those of California, Oregon, and Texas.

☞ Orders respectfully solicited. For further particulars, address the subscriber (post paid)
ROBERT SEARS,
181 William Street, New York.

Merchant Tailoring Establishmen

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Fort, copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Miscellaneous.

Lamartine.

Reports of sad reverses to Lamartine have been circulated, and they are confirmed by the following extract from a new work by him, now in course of publication in Paris:

"In spite of deceitful appearances, my life is not an enviable one; I will say more, it is ended; I no longer live, I survive. Of all the different characters which to a certain extent made up my being—the man of feeling, the poet, the orator, the man of action—the man of letters alone remains. Nor is the man of letters happy; my years do not weigh upon me yet, but they must be taken into account, and heavier far than my years I feel the weight of my heart. The former, like the phantoms of Macbeth, stretch their hands over my shoulder and point—not to crowns—but to a grave. Would to God I were stretched in it already!

"Nothing smiles upon me in the past, nor in the future; I am growing old without posterity in my empty home, surrounded by the graves of those I have loved. I cannot cross my threshhold without tripping against one of these stumbling-blocks of our love or our hopes. There they are, like so many bleeding fibres torn from my still living heart and buried before my eyes, while that heart beats in my bosom like a forgotten time-piece in a forsaken home, which continues to strike in solitude hours that no one reckons.

"What life I have left is concentrated in a few loving hearts and a small patrimonial estate. And even those hearts suffer through me, and I am not sure that I shall not be stripped of my inheritance to-morrow and sent, in the words of Dante, to die in a stranger's home. The hearth on which my father stood, and on which I stand to day, is but a borrowed hearth, whose ashes may be scattered at a moment's notice; it may be sold to the highest bidder to-morrow, and resold again for a whim; so may my mother's bed, and even the very dog that licks my hands in pity when he sees my brow contracted with anguish. I must account to others for all I possess; on the faith of my honor and my labor they have staked the inheritance of their children and the fruits of their own industry. If I ceased to work daily for them, if even I slept my whole nights through, or if an illness (which may God spare me till his appointed time!) were to arrest my pen—the dilligent instrument that I am wearing out for them—these honest friends would suffer with me, and would have to seek for their fortune among my ashes. They would recover it all—no doubt—but they would find it beneath my ruins."

Bones *versus* Guano.

Until the supply of home-made or barn-yard manure is exhausted, we would by no means advise any one to go beyond the farm to purchase any kind of fertilizer whatever, unless it be *gypsum*, (plaster of Paris,) where this has been found beneficial, or where it has been untried, and *lime*, to apply to cold, sour soils, or to those abounding in undecayed roots and other organic matters. But when the home-manures are all used to the best advantage, most farmers will still have remaining one to a dozen fields, that may be profitably treated to a dose of some kind of fertilizer brought from abroad.

No other question connected with agriculture is half so frequently asked us as this:—"What manure would you advise me to purchase?" Since the thorough and successful trials of good Peruvian guano have proved its high and almost universal value as a fertilizer on nearly all kinds of soils and crops, we have in most cases recommended the use of this, in preference to all other foreign manures; and *when it can be obtained at a reasonable price* we still think it the safest and best, all things considered. But there is a limit to its profitable use; and those who chance to have a monopoly of the article seem determined to reach that limit. It will be well for them, for farmers, and for the country, if they do not go beyond. The last straw broke the camel's back, and we are inclined to think the agents of the Peruvian Government, by a continual increase in price of guano have very nearly, if not quite, put upon their own backs the last straw.

The constantly varying price, and the imperfect arrangements for shipping regular supplies, have been and are the cause of much dissatisfaction among consumers. Just at this time the agents have little or none to sell at any price. The excuse that shipping is not available will hardly pass. The supply of an article that pays the owners so large a profit, and which has been depended upon by so large a number of persons, should not be left to the chance ships that may find it convenient to visit the Chincha Islands.

A reaction is already taking place among intelligent cultivators, and when the tide has once fully set backward, it will not be so easy a matter to stay its course. Those who have patiently experimented with guano at 2 1-2 cents per lb., until they have concluded that at that price it will pay, will not at once conclude that this will be the case when, as now, they cannot get it for less than 3 cents per lb., or an advance of 20 per cent. Some will continue its use, while a multitude of others will become irritated and disgusted with what they consider an imposition practiced upon them, and they will be quite likely to ignore the use of the article altogether. These hints are thrown out in all kindness to the Peruvian agents. We do not know what are their present intentions in regard to this matter, but if we are to judge from the past, we may look for another advance of 20 per cent. in the price of guano during the next year or two. If such should be the case, and even if there be not a partial receding from the present prices, and a steady supply furnished, our advice to farmers will be, look out for yourselves and let Peru do the same.

We are glad to see public attention turned to other sources of materials to resuscitate our impoverished soils. A large manufacturer of super-phosphates combined with ammonia from our gas works and other sources, informs us that his orders this Spring are increased four-fold over those of former years, and that the price of guano and its irregular supply have made his fortune. His orders are mainly from those who have heretofore relied on guano. Almost every week we hear of some new factory started to manufacture artificial fertilizers, and companies are formed, and being formed, to explore the Islands of the Pacific in search of new deposits of guano as yet *unmortgaged* and unmonopolized.

But thus much by the way. We commenced this article to call the attention of farmers to one or more substitutes for guano. In our own experience, as well as observation, we have found no so good substitute as finely ground *unburned* bones. Unfortunately, the supply of this material is not unlimited, nor indeed considerable, but so far as it goes it is worth looking after. We recently saw a hundred or more barrels of fine bone sawings lying without a purchaser, though offered at $3 to $3,50 per barrel of 250 to 300 lbs., or but little above one cent per lb. And yet chemical analysis, as well as experiment, shows that this article strongly resembles guano, both in its composition and its effects upon crops. The large amount of organic matter in *unburned* bones, which decompose readily when they are finely pulverized, furnishes an excellent stimulant or nourisher to most growing plants. It is a safe application, as there is none of that causticity found in guano.

Where immediate benefit is desired, it is important that the bones be *finely ground*. Whole bones will lie in the soil whole years without being wholly decomposed, and when crushed to the size of peas, it will often be two or three years before their full effect is realized. Where a large application of bones is to be made, as in grape-borders, in gardens, &c., the coarsely pulverized are preferable, as in this case they will afford sufficient nourishment for present use, and continue longer operative. [Times.

The Cultivation and Preservation of Fruit.

At the last of the series of Legislative Agricultural meetings, held in the hall of the House of Representatives of Massachusetts, Hon. M. P. Wilder, in remarking on the value of fruits as an article of American husbandry, and the importance of their cultivation and preservation, said:—

Few subjects exhibit so remarkably the progress of American society, as the cultivation of fruit. It is only about a quarter of a century since the first horticultural society in our country was established—the Massachusetts society, and a kindred one in Pennsylvania. Now, they are scattered over the country, from Maine to California, and from the British Provinces to the Gulf of Mexico. All are working harmoniously together, and aiding the American Pomological Society, whose influence extends throughout our national domain. The extent of the demand for fruit trees at the present time may be indicated by the fact that from a single nursery in New York, $80,000 worth of trees and plants were sold last year. The fruit crop in the United States is now believed to exceed $30,000,000 in value annually,—more than double the rye crop, and nearly equal to that of the potato. It is rapidly increasing in importance, and is destined to become one of the most important departments of American husbandry. No country is better adapted to the cultivation of this fruit than ours, especially of the apple and pear. Strange as it may seem, there are some varieties of the pear that seem to flourish better in Mississippi than in our own section. The Julienne pear reaches the weight of half a pound there, and the Beurre Diel sometimes weighs a pound and a half; and these from trees only seven years from the bud, and fifteen feet high, bearing from one to two hundred specimens each.

It is not easy to calculate the importance of fruit culture, whether we consider the crop as a luxury, or as contributing to health and wealth. At no distant day, it is probable that we shall be large exporters of fruit to other countries. It is, therefore, a subject which deserves careful inquiry as to what is the best mode of cultivation, and what are the varieties best adapted to particular localities, and also to general cultivation. As there would not be time to speak of many kinds of fruit in one lecture, he would confine his remarks to the pear.

The impression formerly prevailed, that a long life was required to bring the pear to bearing, and hence this distich:

> "He who plants pears,
> Plants them for his heirs."

The first thing necessary is a genial soil, and proper preparation of it. It is absolutely necessary that the soil should be rich and deep, or be made so by artificial means. Thorough draining of soil, also, in some cases lies at the foundation of success. In a cold, wet soil, disease commences at the root; the juices become stagnant, and unfit for vegetation. Thorough draining permits the air to permeate the soil, warms it, and prepares the latent fertilizing elements as food. Plants do not suffer from drought where the soil is properly drained. The importance of draining is beginning to be understood, and is attracting the attention of governments, both at home and abroad. The Emperor of France recently recommended the appropriation of 100,000,000 francs ($20,000,000) for the encouragement of draining,—an act which, if properly expended, will redound as much to his honor as any of his life.

For fruit trees the upper and lower soils, with appropriate manures, should be thoroughly incorporated. But however properly the soil is prepared, the varieties selected for cultivation must be suited to their localities also. All are not adapted equally well to the same section of the country. All plants flourish best in soils similar to those in which they originally grew. Although we have many excellent foreign varieties, the safest way is to raise our own seedlings. Van Mons, after a long experience, advised to sow seeds in order to obtain better fruits. The speaker was satisfied that the best means to obtain the most valuable plants for particular localities is to plant the most hardy and vigorous seeds, on the principle that like produces like, and from the conviction that immature seeds will not produce vigorous, healthy plants.

In reference to the cultivation of the pear upon the quince stocks, he thought the prejudice against this practice must have arisen from a want of proper management. The pear upon the quince should be planted deep enough to cover the place of junction three or four inches below the soil, and then the pear will throw out roots for itself, and the result will be not only early fruiting, but also strength and longevity.

On the subject of the preservation of fruit, he said particular attention should be paid to gathering it. The pear should generally be picked a few days before it would naturally come to maturity. It the process of fermentation commences, the cellular tissues are broken, and decay will ensue.

When picked, pears should be kept at a low temperature, that the ripening process may not commence. The great difficulty is to keep them from ripening in the warm autumnal days, and he had not been able to keep a perfect equilibrium of temperature without the use of ice in the months of October and November.

In relation to the profits of fruit culture, he thought there was no branch of husbandry that could be made more profitable. One gentleman in this vicinity purchased in 1848 as many dwarf pear trees as he could plant upon an acre, setting them in rows eight feet by twelve; and between the pear trees he planted quinces. He received from them the 5th year 120 bushels of pears and 60 bushels of quinces. He sold about 70 bushels of the pears at from $5 to $6 a bushel, and gave the rest away. Only two or three per cent. of the trees have died, and they are still healthy and vigorous. Similar facts might be adduced to show the pecuniary advantage of the business of raising fruits. The following list was then given as being those which are best suited to this section of the country, those at the head of each class being the earliest to ripen:

SUMMER VARIETIES.

Doyenne d'Ete,	Boston,
Beurre Giffart,	Tyson,
Rostiezer,	Brandywine,

EARLY AUTUMN.

Bartlett,	Golden Beurre of Bilboa,
Doyenne Boursock,	Andrews.

MID AND LATE AUTUMN.

Louise Bonne de Jersey,	Paradise d'Automnes,
Belle Lucrative,	Beurre Bosc,
Seckel.	Beurre Diel,
Urbaniste,	Figue d'Alencon,
Flemish Beauty,	Vicar of Winkfield,
Lodge,	Beurre d'Anjou.

WINTER VARIETIES.

Lawrence,	Beurre d'Aremberg,
Winter Nelis,	Easter Beurre,
Beurre Langlier,	Doyenne d'Alencon,
Glout Morceau.	

VARIETIES WHICH SUCCEED WELL ON THE QUINCE.

Beurre d'Amalis,	Vicar of Winkfield,
Louise Bonne de Jersey,	Nouveau Porteau,
Belle Lucrative,	Figue d'Alencon,
Urbaniste,	Winter Nelis,
Duchesse d'Angouleme,	Gloute Morceau,
Beurre Diel,	Easter Beurre,
Beurre d'Anjou,	Doyenne d'Alencon.

NEW KINDS WHICH GIVE GOOD PROMISE.

Beurre Clairgeau,	Conseillor de la Cour,
" Storkman,	Sheldon,
" Superfine,	Walker,
Emile d'Heyst,	Howell.
Pius IX.	

Chickens.

The subject of raising chickens has of late years attracted very much attention, not merely from the cultivators of the soil, but from men who are interested in other pursuits. Much money and time have been spent in importing different breeds of fowls from foreign lands, some of which, no doubt, are much better than those already found here; yet many of the importations were worse than those here; hence the time and trouble was thrown away. There is not the least doubt but that some breeders are preferable to others—some being very fine and tender for eating, some large, and others small, and some noted as great layers. Much may be done toward improving the breeds by judiciously crossing them—for instance, by taking those that are great layers, which are generally small fowls, and crossing them with a larger breed, thus obtaining a medium size, inheriting the peculiar properties of both.

It is not a fact that fowls need no care; on the other hand, if you wish them to improve and to be profitable, you must take good care of them. Every one who has the care of horses knows from experience that by spending a short time every morning in cleaning and feeding them regularly they will keep on less grain, and look and feel better than with more grain and less care. This is equally the case with fowls; if they are kept where feed and water are always at their command, to eat and drink as much as they wish, they will lay more, and in every way be more profitable to their owner.

I do not think that it makes any difference whether they are kept up in moderate-sized pens or left to ramble where they choose, as they lay about as well one way as the other. [Germantown Telegraph.

Friction Matches.

The following brief account of the manufacture of friction matches, is from a work by Chas. Knight, now in press in Boston:

"Among articles of great demand that have become of importance, though apparently insignificant, in our own day, there is nothing more worthy of notice than the friction or lucifer match. About twenty years ago, chemistry abolished the tinder box; and the burnt rag which made the tinder went to make paper. Slowly did the invention spread. The use of the match is now so established that machines are invented to prepare the splints. In New York, one match manufactory annually cuts up a large raft of timber for matches. The English matches are generally square, and thus thirty thousand splints are cut in a minute. We will follow a bundle of eighteen hundred thin splints, each four inches long, through its conversion into three thousand six hundred matches.

Without being separated, each end of the bundle is first dipped into sulphur. When dry, the splints adhering to each other by means of the sulphur, must be parted by what is called dusting. A boy, sitting on the floor with a bundle before him, strikes the matches with a sort of mallet on the dipped ends till they become thoroughly loosened. They have now to be plunged into a preparation of phosphorus or chlorate of potash, according to the quality of the match. The phosphorus produces the pale, noiseless fire; the chlorate of potash the sharp, crackling illumination. After this application of the more inflammable substance, the matches are separated, and dried in racks. Thoroughly dried, they are gathered up again into bundles of the same quantity, and are taken to the boys who cut them; for the reader will have observed that the bundles have been dipped at each end. There are few things more remarkable in manufactures than the extraordinary rapidity of this cutting process and that which is connected with it. The boy stands before a bench, the bundle on his right hand, a pile of empty boxes on his left. The matches are to be cut, and the empty boxes filled, by this boy. A bundle is opened; he seizes a portion, knowing by long habit the required number with sufficient exactness; puts them rapidly into a sort of frame, knocks the ends evenly together, confines them with a strap which he tightens with his foot, and cuts them in two parts with a knife on a hinge, which he brings down with a strong leverage. The halves lie projecting over each end of the frame; he grasps the left portion and thrusts it into a half open box, which slides into an outer case; and he repeats the process with the matches in his right hand. This series of movements is performed with a rapidity almost unexampled; for in this way two hundred thousand matches are cut, and two thousand boxes filled in a day, by one boy.

It is a law of this manufacture, that the demand is greater in summer than in thn winter. The increased summer demand for the matches shows that the great consumption is among the masses—the laboring population—those who make up the vast majority of the contributors to duties of customs and excise. In the houses of the wealthy there is always fire; in the houses of the poor, fire in summer is a needless, hourly expense. Then comes the match to supply the want—to light the afternoon fire to boil the kettle. It is now unnecessary to run to the neighbor for a light, or, as a desperate resource, to work at the tinder box. The matches sometimes fail, but they cost little, and so they are freely used, even by the poorest. Their value was sufficiently shown, when an English officer, in camp at Sebastopol, recently wrote home that no want was greater than that of the ready means of procuring fire and light, and that he should hold a box of matches cheap at half a crown."

Fortunes of Kossuth.

The fortunes of Louis Kossuth are far from being in a flourishing condition. For a long time the distinguished emigrant supported himself by his pen. He began to write first in the *Sunday Times*; but the proprietors and he soon differed, and he left them. The editor of the *Atlas* next engaged his services; and for several months together he favored the readers of that journal with his views on the policy and progress of the war. He did not succeed. His very patriotism operated against his success; he saw every event from the Hungarian point of view, and approved or disapproved as they forwarded or retarded his schemes of Hungarian independence. As it was very seldom the war took the former course, Kossuth's articles were marked by a violence which was not calculated to make him popular. Englishmen prize the luxury of abusing their Government, but they are not pleased with foreigners who take that liberty. At any rate, Kossuth and his readers became mutually dissatisfied with each other; and about Christmas last, he announced that he was to close his career as an English journalist.

He has now reverted to his old position of instructor *viva voce*; and lectures to be given by him have occasionally been advertised. The last was a course upon the Austrian concordat as it affected the Protestants of Hungary, to be given in a school-room in one of the obscure parts of the metropolis—the admission to be one shilling and two shillings. All this indicated straitened circumstances; and this week the matter has been put beyond doubt, by that octogenarian and enthusiast, Mr. Walter Savage Landor, appealing to public sympathy on his behalf through the columns of the Daily Papers, and heading the subscription list with a donation of £10, or 50 dollars. Mr. Landor avows that Kossuth knows nothing of this appeal; and the noble exile may refuse public charity conveyed to him in this public way.

Building Cisterns.

Eight years ago, while building my house, I dug a hole seven feet deep, six feet in diameter at top, three feet at centre, sloping the bottom like the large end of an egg. The soil where made, mostly clay in composition. Used equal parts of water-lime and coarse, clean sand, for covering. After it had dried, coated thoroughly with a white-wash made from cement to fill any cracks occasioned by the drying process. Laid three pieces of white-oak scantling across the top, with a covering of two-inch plank matched together, and a trap-door to admit ingress for the purpose of cleaning it out as occasion required. Where cisterns are thus constructed, the first filling of water should be pumped out. After that it will be as soft as though caught in a barrel. It matters not what the soil is, if it but holds its shape till the mortar sets. I have seen them dug in a bed of sand with good success. It must not be allowed to freeze.

My cellar bottom is composed of the same material, with this difference: one part cement with two of very coarse gravel. I think five barrels of water-lime sufficient for a cellar 24 by 40 feet, one and a half inches thick of mortar. Make the bottom of the cellar a little convex. Put the cement on with a trowel. In a few weeks you have a bottom as hard as a rock. In hot weather throw on cold water and scrub off with a broom; the water will run off the edges into the drain, and you will have a sweet, cool cellar in the hottest weather. Observe the same caution as with the cistern, viz.: keep out the frost.

Shade and Fruit Trees.

Let every *child* set a tree. We have nothing now to say to the men; *they* will set trees, of course, and tend them after they are set. But the *child* who has never set a tree, knows little of the enjoyment in store, if he or *she* has not one tree to care for and love, and water and tend and watch over, as it bursts into new life and beauty and promise at each returning spring. He who has practiced it, will know the sweetness of the enjoyment, and when the tree has gained stature and strength and sent out its broad and leafy branches to shut out the noon day sun, how gratefully will he listen to the songs of birds that nestle and feed their young about him. And for this kind provision of a home, *they* will teach him lessons of wisdom and trust, or beguile his hours of labor with their cheerful notes, or protect his crops from enemies so minute as to escape his own observation.

Parents should encourage children each to plant a tree. It will be an object of interest through life, be often remembered, or spoken of, or visited. Children will gather around it and relate old incidents of the homestead, and not only will it become the centre of clustering affections, but of gathering hearts themselves. "My father planted this elm," said a gentleman to a happy group, "when I held it in place at the age of five years; I remember it well. See how its branches extend, and shield us from the burning rays; more than a dozen families people its sheltering top, whose social and happy lives are perpetual lessons of confidence and love. My children ever read them with delight, and daily bless the memory of their grand parent, who planted this tree. In imitation of his noble example, they, too, have planted their trees, and these trees, and these groups about us, lifting their heads to the skies, or reaching away into air, are so many good genii around our dwelling, protecting and adorning and influencing all."

Now is the time to decide what and where to plant. Shall it be one of the varieties of the elm, prim, and all its length of a size, like a maiden's dress in days gone by, or the vase-form, or the weeping elm? Will you select the red or white maple, the stately ash, the rough, but noble oak, the pendent willow, the wide spreading beech, the horse chestnut, black walnut or some evergreen?

Our New England Flora is unsurpassed; the nurseries, and the woods and pastures, abound with beautiful specimens of most of our varieties. What child in the country will feel that its whole duty is discharged, who *has not* PLANTED A TREE! [N. E. Farmer.

FOUNDING NEW TOWNS IN THE TERRITORIES.—A correspondent, writing from the settlement of Fontenelle, in Nebraska Territory, gives an interesting account of the way in which new places grow:

The plan adopted by the pioneers of this colony and place, is worthy of example by families East, who purpose migrating westward. In the Fall of 1854, a colony of about fifty families were formed in Quincy, Illinois, to migrate in the following Spring to Nebraska, in the mean time sending on a few to make a claim therefor, improve and hold the same until the colonists came on. These pioneers, after looking over the country, selected this point. A few houses were put up during the Fall and Winter, and in May the colonists came on and distributed the property selected. The shares numbered fifty, and each member paid $100. The same shares now sell for $500. As soon as the distribution was over, the colonists commenced improving and building. Many new ones have been added, and at present the proprietors of town or members of the Nebraska Colonization Company, comprise people from very many of the States. Fontenelle is now, perhaps, about the third town of importance in the Territory.

A HUMAN HORN.—Dr. Porcher, of Charleston, has in his possession a horn, about seven inches in length, and in diameter two inches and three quarters, bearing a close resemblance to a ram's horn, which he extracted from the head of a negress, aged about 52, born on a plantation in St. John's Berkley, South Carolina. The tumor commenced forming some eight years since, with a swelling and discharge, and after a while a gradual increase in size. During the four months preceding its removal, it grew some two inches, and having, in curving around, reached the face in the temporal region, just to the left of one eye, and having commenced to produce supperation of the skin with which it had come in contact, its immediate removal was necessitated. Its removal, which was done in December, 1854, in the presence of Dr. D. J. Cain and several students of the Charleston Preparatory Medical School, was accompanied with comparatively little pain. It was found, upon examination afterward, that some remains of the original growth remained and there is some probability that it may increase in size and again require removal. [Augusta Chronicle and Sentinel.

COMPRESSING THE BULK OF FLOUR.—The Albany Journal states that Louis Napoleon, in 1853, conceived the idea that it would be practicable to compress flour so as to diminish the bulk, and yet not injure its quality. In July of that year, an experiment was made by his command to test his views. Flour, subjected to a hydraulic pressure of 360 tons, was reduced in volume more than twenty-four per cent. On close examination it was found to possess all the qualities it had previous to its violent treatment. It was then put into zinc boxes and sealed up. At the same time, other flour manufactured from the same wheat, but not compressed, was sealed up. In October, thereafter, several boxes containing both kinds of flour, were opened and examined. The pressed was pronounced to be the best. Twelve months after this, in October, 1854, another examination took place, and with the same result. The two kinds were kneaded into loaves and baked. The pressed flour made the best bread. In March, 1855, more of the zinc boxes were opened, and on examination, the loose flour showed mouldiness, while the pressed was sweet and retained all its qualities. Made into bread, the same difference was observable.

THE CORK TREE.—About a hogshead of acorns of the cork oak have been introduced from the South of Europe, and distributed in the Middle and Southern States for experiment or to test their adaptation to the climate. This tree, in its native country, where it is an evergreen, usually grows to the height of 20 to 30 feet, but in England there are specimens which exceed 50 feet in height, with a diameter of more than 3 feet. The substance familiarly known to us as cork, is the epidermis, or outer bark, and sometimes grows two or three inches thick. Should the experiment succeed, it will be a subject of great national importance that plantations should be established in various parts of the country for the purpose of growing this useful substance, particularly in the event of a war between this country and Europe, in consequence of which the supply would be cut off.

AMERICAN PAINTERS.—America has produced some of the most eminent of painters, whose names are recorded on the scroll of fame. Stuart was a native of Boston, and studied his art under Sir Benjamin West. Copley was a native of Boston; he was a pupil of Smibert, and in 1770 became a member of the Royal Academy. His principal historical works, on which his fame reposes, are the "Death of Lord Chatham," the "Seige of Gibralter," the "Death of Major Pearson," "Charles I. in the House of Commons," and the "Surrender of De Winter to Duncan." Sir Benjamin West was born in Springfield, Penn. For his celebrated painting of "Christ Healing the Sick," the British Institution paid him three thousand guineas. In 1791, he succeeded Sir Joshua Reynolds as President of the Royal Academy.

A considerable quantity of cork oak acorns were imported this season by the Patent Office and distributed in the Middle and Southern States. These acorns are from the South of France, and were transported in tin cases.

Senators Douglas and Weller have made in the Senate of the United States explicit and emphatic declarations of their desire that our Government should officially recognize that of Gen. Walker in Nicaragua.

The number of missionaries laboring in all the world is 3,612. These, if equally distributed, would allow one missionary for about 167,000.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—SPRING ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 5 10 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 5 P. M.

Leave Plainfield for New York at 6 30 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is [illegible] bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from *their* use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

SELF-DEFENSE.

In the *Sabbath Recorder* of May 1, 1856, under the above head, I find an article purporting to be answers to inquiries of "One of the Subscribers." Those inquiries were not made for the purpose of getting up a debate; nor did the writer assume the right to inquire whither Mr. G. was "leading the lambs of the flock," or the general reader; but only to inquire where he was going or could be found himself. I had supposed that all public speakers, writers, teachers, and especially those occupying important positions, were under some obligation to so write, speak, and teach, that their doctrines should be susceptible of some sort of proof. Bare assertions do not prove any thing. I considered it a very important question, in the Kansas affairs, whether the free-state settlers, as Christians, ought to submit to every sort of insult, and all manner of abuse, and finally to be driven out of the State, and lose their homes and all they had; or to consider themselves at home, with a right to protect the same, and themselves and families. I have read somewhere, that those who neglect or refuse to provide for their households, have denied the faith, &c. With me it is a question that I would like to have answered, how far is it a man's duty to provide for and protect his family. The questions put were plain, fair questions, which demanded candid answers. I asked if it was a Christian's duty to quietly suffer himself and family to be butchered, making no resistance. I am answered by asking me if I believe in polygamy, and taking an eye for an eye; and when will I learn that we are not now under law, but under grace—intimating that ignorant persons ought not to ask questions. I supposed I was inquiring of one who had set himself up as an instructor of such. I did not expect that we were under the ceremonial law of Moses' time; but I had not yet learned that Christians were perfectly lawless. I supposed that every man was under civil and judicial law, and that every man's grace, and faith, and liberty of conscience, were protected by such laws, without which Mr. G. would not be allowed to keep the Sabbath, or any other day, or even to profess Christianity, or write or speak on that subject. How long would Christ and his followers have been allowed to preach, without law to protect them? And how long could society now exist, without such protection? If all men considered themselves lawless, polygamy might be practiced with impunity. I understand there is at least an imaginary line drawn between truth and error, between right and wrong, freedom and slavery, reason and fancy. And I have thought, some times, that Saul's Jewish brethren were not the only men who had a zeal that was not according to knowledge, Bible, reason, or common sense. I believe that Solomon advised not to be over much wise or over much foolish, but to understand things as they really were. I am asked to define my position. I reply, that I am so far an abolitionist and free-state man, that I had, before reading your article, and since also, supposed that I had a just, legal, moral, equitable, and inalienable right to take my family to Kansas, purchase them a home, provide for and protect them, and to think, speak, write, and vote, on the side of freedom, without being gagged, or driven out of the State; and if persons from the same or any other State should enter my house for the purpose of kidnapping, or assassinating, or butchering me or any of my family, that I would be justifiable, by all the laws and commands, practices, usages, or examples of man and my Creator, that were ever given, revealed, or made known, in using such force as would be necessary to eject such intruders, and save myself and those committed to my care. But when an election of the actual settlers of Kansas should be had, if it should be voted a slave State, it would be my duty quietly to submit, and allow the majority to rule, or otherwise move out of the State. If you have any divine authority to the contrary, I would like to see the papers, as I fear that bare assertions will never convince me. I am still

ONE OF THE SUBSCRIBERS.

SCRIPTURAL EMBLEMS.

Dr. Hacket, in his recent work, thus beautifully refers to a scene which he witnessed:—

'As I was passing near Gethsemane one day, I saw, at a little distance, a shepherd engaged in shearing one of his flock. The animal lay stretched before him on the ground; submitting, without resistance or complaint, to the operation which he was performing. It seemed as if every movement of the shears would lacerate the flesh; the feet were bound; the man's knees were pressed rudely against the sides of the helpless captive. This posture, so irksome, had to be endured a considerable time before the ample fleece was removed. Yet, during it all, it was wonderful to observe how patient the creature remained; it struggled not, it opened not its mouth. Under ordinary circumstances the incident might not have attracted my attention; but being seen in such a place, it spoke to my heart with touching power. How could I forget the prophet's use of that emblem, in describing the spirit of unshrinking submission to appointed suffering; which was to distinguish the Saviour of men, and of which he gave such matchless proof in the agony of the garden! Isaiah (53 : 7) said, with reference to that trait of his character, 'He is brought as a lamb to the slaughter, and as a sheep before her shearers is dumb, so he opened not his mouth.''

RELIGIOUS LIBERTY.

In the third volume of Knight's Pictorial History of England, and at page 807, occurs the following interesting passage relative to the rise and progress of the great principle of absolute liberty of conscience in religious matters.

"The principle of religious liberty could hardly have suggested itself to any speculators before the Reformation; but it was taken up and maintained with more or less reservation by various writers not long after that event. Upon the burning of Servetus at Geneva, in 1553, a controversy arose on the expediency of attempting to repress heresy by the arm of the civil power, which was strenuously denied in a work published in Latin at Basil the following year, under the fictitious name of Martines Bellius, and which was attributed by Beza, who answered it, to Sebastian Castalio. The author—a French translation of whose work was soon after published at Lyons—cites several preceding writers as having promulgated the same opinions. A more famous defense of the same, or similar views, appeared also at Basil in 1565, the treatise of James Acontius or Aconzio, entitled *De Stratagematibus Satanæ*, of which an English translation by John Goodwin, the Independent Minister,, was published at London in 1648, with the title of 'Satan's Stratagems; or, the Devil's Cabinet Council Opened;' and reissued in 1651, with that of 'Darkness Discovered; or, the Devil's Secret Stratagems Laid Open.' Acontius, however, *excepts Atheists and Apostates* from the toleration which he would accord to mere heretics; and even to these latter he does not deny the abstract right of the magistrate to punish, but only endeavors to show that it is much the wiser as well as the safer course—more reasonable as more in accordance with the spirit of Christianity—to leave them alone.

"But the earliest vindication of the principles of religious freedom, in its widest extent, that appeared in the English language, seems to have been a tract entitled 'Religious Peace; or, a Plea for Liberty of Conscience, long since presented to King James and his High Court of Parliament, by Leonard Busher,' which was printed in 1614, and again in 1646. Busher would extend the most perfect toleration, not only to all forms of Christianity, in other words, to all diversities of heresy, but also to every other religion as well as to the Christian; nor would he have any punishment or restraint applied even to persons of no religion at all. But this and other schemes that have been noticed were nothing more than the speculations of individual writers; the honor of having founded the first church or sect that made universal toleration one of the articles of its creed and practice has been claimed for the Reverend Roger Williams, who was born of a respectable family in Wales, in 1598, and was educated at the University of Oxford; but after having been ordained in the Established Church, embraced the principles of the Puritans, and emigrated in 1631 to the young colony of Massachusetts in New England, from whence, however, he was banished, three or four years afterwards, 'as a disturber of the peace of the church and commonwealth,' and driven to take refuge with a few followers among the Indians of what is now called Rhode Island, where he founded the settlement of Providence, on a tract of territory purchased from the native inhabitants."

THE PARSEE, THE JEW, AND THE CHRISTIAN.

A Jew entered a Parsee temple, and beheld the sacred fire. He spake to the Priest: 'How! ye adore the fire?'

'Not the fire,' sanswered the priest, 'it is the image of the sun and its quickening light.'

'Then,' asked the Jew, 'do ye worship the sun as your deity? Do ye not know that he is but the creature of the Almighty?'

'We know that,' replied the priest, 'but sensitive man requires a sensible sign to comprehend the Highest; and is not the sun the image of the invisible and incomprehensible Fountain of Light, which sustains and blesses all things?'

Then the Israelite answered: 'Do your people then discern between the image and the original? They call the sun their god, and descend from him lower still, kneeling before an earthly flame. You charm their outward, but blind their inward eye, and whilst placing before them the earthly light, withdraw from them the heavenly. Thou shalt make no image or likeness.'

'How do you describe the supreme Being?' asked the priest.

The Jew answered, 'We call him Jehovah Adonai, that is, the Lord, which is, which was, and which is to come.'

'Your word is great and glorious,' said the Parsee, 'but it is terrible.'

Just then a Christian joined them and said, 'We call him Abba, Father.'

Then the heathen and the Jew looked at one another, and said, 'Your word is the highest and nearest! But who gave you courage to call the Eternal thus!'

'Who else,' said the Christian, 'but He the Father himself!' Upon this he declared to them the mystery of the manifestation of the Father in the Son, and the word of reconciliation. And as they heard this, they believed, and raising their eyes to heaven, they spake full of fervor and devotion: 'Father, beloved Father!' And they joined their hands all three, and called themselves brethren.

[Krummacher.

PRAYER.

There is an eye that never sleeps
  Beneath the wing of night,
There is an ear that never shuts,
  When sink the beams of light.

There is an arm that never tires,
  When human strength gives way;
There is a love that never fails,
  When earthly loves decay.

That eye is fixed on seraph throngs;
That ear is filled with angels' songs;
That arm upholds the worlds on high;
That love is shown beyond the sky.

But there's a power which man can wield,
  When mortal aid is vain;
That eye, that arm, that love to reach,
  That listening ear to gain.

That power is *Prayer*, which soars on high,
And feeds on bliss beyond the sky.

DEATH OF ALEXANDER HAMILTON.

The following letter of a distinguished clergyman who visited Alexander Hamilton after he received his death-wound in the duel with Aaron Burr, not only gives a view of the state of mind in which that statesman died, but contains many valuable suggestions for the general reader.

New York, July 18, 1804.

To the Editor of the Commercial Advertiser:

SIR.—Having read in your paper of the 16th a very imperfect account of my conversation with General Hamilton the day previous to his decease, I judge it my duty to lay the following narrative before the public:

On the morning of Wednesday, the 11th inst., shortly after the rumor of the General's injury had created an alarm in the city, a note from Dr. Post informed me that 'he was extremely ill at Mr. William Bayard's, and expressed a particular desire to see me as soon possible.' I went immediately. The exchange of melancholy salutations on entering the General's apartment was succeeded by a silence which he broke by saying that he had been anxious to see me and have the sacrament administered to him, and that this was still his wish. I replied, 'that it gave me unutterable pain to receive from him any request to which I could not accede; that in the present instance a compliance was incompatible with all my obligations, as it is a principle in our churches never to administer the Lord's supper privately to any person under any circumstances.' He urged me no farther. I then remarked to him, that 'the holy communion is an exhibition and pledge of the mercies which the Son of God has purchased; that the absence of the sign does not exclude from the mercies signified, which were accessible to him by faith in their gracious Author.' 'I am aware,' said he, 'of that; it is only as a sign that I wanted it.' A short pause ensued. I resumed the discourse by observing that 'I had nothing to address to him in his affliction but that same gospel of the grace of God which it is my office to preach to the most obscure and illiterate; that in the sight of God all men are on a level, as 'all men have sinned, and come short of his glory;' and that they must apply ~~to~~ him for pardon and life, as sinners, whose only refuge is in his grace, reigning by righteousness through our Lord Jesus Christ.' 'I perceive it to be so,' said he, 'I am a sinner; I look to his mercy.' I then adverted to 'the infinite merit of the Redeemer as the propitiation for sin, the sole ground of our acceptance with God, the sole channel of his favor to us,' and cited the following passages of Scripture: 'There is no name given under heaven among men, whereby we must be saved, but the name of Jesus.' 'He is able to save them to the uttermost who come unto God by him, seeing he ever liveth to make intercession for them.' 'The blood of Jesus Christ cleanseth from all sin.' This last passage introduced the affair of the duel, on which I reminded the General that he was not to be instructed as to its moral aspect; that 'the precious blood of Christ' was as effectual and necessary to wash away the transgression which had involved him in suffering as any other trangression; and that he must there, and there alone, seek peace for his conscience, and a hope that should 'not make him ashamed.' He assented with strong emotion to these representations, and declared his abhorrence of the whole transaction. 'It was always,' added he, 'against my principles. I used every expedient to avoid the interview; but I found, for some time past, that my life must be exposed to that man. I went to the field determined not to take his life.' He repeated his disavowal of all intention to hurt Mr. Burr, the anguish of his mind in recollecting what had passed, and his humble hope for forgiveness from God.

I recurred to the topic of the divine compassion, the freedom of pardon in the Redeemer Jesus to perishing sinners. 'That grace, my dear General, which brings salvation, is rich, rich.' 'Yes,' interrupted he, 'it is rich grace.' 'And on that grace,' continued I, 'the sinner has the highest encouragement to repose his confidence, because it is tendered to him upon the surest foundations; the Scriptures testifying that 'we have redemption through the blood of Jesus, the forgiveness of sins according to the riches of his grace.' Here the General, letting go my hand, which he had held from the moment I sat down at his bedside, clasped his hands together, and looking up towards heaven, said, with emphasis, 'I *have* a tender reliance on the mercy of the Almighty, through the merits of the Lord Jesus Christ.' He replaced his hand in mine, and, appearing somewhat spent, closed his eyes. A little after he fastened them on me, and I proceeded: 'The simple truths of the gospel, my dear sir, which require no abstruse investigations, but faith in the veracity of God, who cannot lie, are best suited to your present condition, and they are full of consolation.' 'I feel them to be so,' replied he. I then repeated these texts of Scripture: 'It is a faithful saying, and worthy of all acceptation, that Jesus Christ came into the world to save sinners, and of sinners the chief.' 'I, even I, am he that blotteth out thy transgressions for mine own sake, and will not remember thy sins.' 'Come, now, and let us reason together, saith the Lord; though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool.' 'This,' said he, 'is my support. Pray for me.' 'Shall I pray with you?' 'Yes.' I prayed with him, and heard him whisper as I went along, which I supposed to be his concurrence with the petitions. At the conclusion he said, 'Amen; God grant it.'

Being about to part with him, I told him 'I had one request to make.' He asked, 'what was it?' I answered, 'that whatever might be the issue of his affliction, he would give his testimony against the practice of dueling.' 'I will,' said he, 'I have done it. If *that*,' evidently anticipating the event, 'if that be the issue, you will find it in writing. If it please God that I recover, I shall do it in a manner which will effectually put me out of its reach in future.' I mentioned once more the importance of renouncing every other dependence for the eternal world but the mercy of God in Jesus Christ, with a particular reference to the catastrophe of the morning. The General was affected, and said: 'Let us not pursue the subject any further, it agitates me' He laid his hands upon his breast with symptoms of uneasiness which indicated an increased difficulty in speaking; I then took my leave. He pressed my hand affectionately, and desired to see me again at a proper interval. As I was retiring he lifted up his hands in the attitude of prayer, and said feebly, God be merciful to ——.' His voice sunk so that I heard not the rest distinctly, but understood him to quote the words of the publican in the gospel, and to end the sentence with 'me a sinner.'

I saw him a second time in the morning of Thursday; but from his appearance and what I had heard, supposing that he could not speak without severe effort, I had no conversation with him. I prayed for a moment at his bedside, in company with his overwhelmed family and friends, and for the rest was one of the mourning spectators of his composure and dignity in suffering. His mind remained in its former state, and he viewed with calmness his approaching dissolution. I left him between twelve and one, and at two, as the public know, he breathed his last.

I am, sir, with much respect,
Your obedient servant, J. M. MASON.

DR. CHALMERS' PRAYER.

In Dr. Chalmers' Sabbath Scripture readings, for 1844, while at an advanced age, and only a few years before his death, he was toiling to gather a missionary congregation, and build a church and a school in one of the most depraved parts of Edinburgh, I have noticed the following fervent and simple prayer on this very point: 'Let me not faint, O Lord, under the toils of that ministry which thy providence hath put into my hands. Give me wisely to husband my strength; but let me be unwearied and most tenaciously persevering in my enterprise for the families of the West Port. Save me from all dishonesty and deceitfulness in handling thy Word. And let me walk on a visible platform, and in the daylight of an open manifestation. O may I find a way to the consciences of many, by the godly sincerity of my conversation in the world, and above all, by the power of that gospel which the devil tries to intercept, but which do thou, O Lord, cause to enter the hearts of those among whom I labor, with power and the Holy Ghost and much assurance. Give me the light of thy glory in the face of Jesus Christ, and in his great work of redemption. Lift the veil from my mind, that it may be in darkness no longer, but that in thy light I may clearly see light. And O, let a sense of the coming immortality sustain me amid all my present discomforts and despondencies, so that while my outward man perisheth, my inward man may be renewed by that bright and confident anticipation. O for a realizing sense of the futurities on the other side of death, an efficient and practical apprehension thereof, so that I may not only rejoice in the hope of the glory of God, but learn to joy in tribulation also.'

HER SILENCE SAVED ME.

'I remember,' said a young man, 'being in company with several thoughtless girls. Among them, however, there was one exception; a serious, quiet and beautiful woman, whose religious opinions were well known, and whose pen had for a long time spoken eloquently in the cause of truth and virtue through the columns of our village paper. Suddenly I conceived the thought of bantering on religious subjects, and with the foolhardiness of youth, and the recklessness of impiety, I launched forth with some stale infidel objections that none but 'the fool who saith in his heart there is no God,' would venture to reiterate. The flock of silly goslings about me laughed and tittered, and I, encouraged by their mirth, grew bold, and repeated my inuendoes, occasionally glancing slyly towards the principle butt of all my fun. She did not seem to notice me at all; she did not smile, did not look away, did not look *at* me.

Still I continued my impious harangue, thinking that she must refute something, that she would not surely hear her own holy faith held up to ridicule by a beardless boy. The snickerers around me gradually began to glance towards her. Her face was so quiet, so even solemn in its quiet, that seriousness stole over them, and I stood alone, striving by my own senseless laughter to buoy up my fast sinking courage.

Still she never spoke nor smiled—scarcely moved; her immobility grew awful; I began to stutter—to pause—to feel cold and strange—I could not tell how. My courage oozed off; my heart grew faint—I was conquered.

That night, after I went home, in reflecting over my fool-hardy adventure, I could have scourged myself. The sweet angelic countenance of my mute accuser came up before me even in the visions of the night; I could not sleep. Nor did I rest, till, some days after, I went to the home of the lady I had insulted, and asked her pardon. Then she spoke to me, how mild! how Christianly! how sweetly!

I was subdued; melted down; and it was not long after that I became, I trust, a humble Christian, and looked back to my miserable unbelief with horror.

Her silence saved me. Had she answered with warmth, with sarcasm, with sneer, or with rebuke, I should have grown stronger in my bantering and more determined in my opposition. But she was silent, and I felt as if my voice was striving to make itself heard against the mighty words of an omnipotent God. O! how often would it be better, if instead of vain argument or hot dispute, the Christian would use the magic of silence, utter silence!'

[Olive Branch.

THE HAPPY WISE OLD MAN.

Behold a patriarch of years, who leaneth on the staff of religion;
His heart is fresh, quick to feel, a bursting fount of generosity.
He, playful in wisdom, is gladdened in his children's gladness;
He, pure in his experience, loveth his son's first love.
Lofty aspirations, deep affections, holy hopes, are his delight;
His abhorrence is to strip from Life its charitable garment of Idea.
The cold and callous sneerer, who heedeth of the merely practical,
And mocketh at good uses in imagining things—that man is his scorn;
The hard, unsympathizing modern, filled with facts and figures,
Cautious and coarse, and materialized in mind—that man is his pity.
Passionate thirst for gain never hath burnt within his bosom;
The leaden chains of that dull lust have not bound him prisoner.
The shrewd world laughed at him for honesty, the vain world mouthed at him for honor;
The false world hated him for truth, the cold world despised him for affection;
Still he kept his treasure, the warm and noble heart;
And in that happy wise old man survive the child and lover.

[Blackwood's Magazine.

THE DYING BED.

Because salvation is all of grace, it is not therefore the less interesting to understand the immediate influences by which the soul is made anxious, and led to the experience of conversion to God. The writer of this would be one of the last to glorify human instrumentality in the work of redemption, yet he cannot refrain from looking with grateful interest upon several occasions where God evidently spoke through human incidents to his soul, and where his voice was made to penetrate irresistibly to the heart and conscience. Among these incidents, the deathbed evidences of three near relatives will occupy prominent points.

An elder sister, whose life had comprehended much of disappointment, but little of even the common enjoyments of this world, died while I was a mere careless boy. Not being at home at the time, I was not cognizant of the incidents of her death-bed, further than to know that the world had ceased to have any attractions to render her separation from it painful, and that the whole embodiment of her impressions of the desirableness of earthly things was conveyed in the exclamation, '*What is there in this world worth living for?*'

This query I never ceased to ponder, and often repeated it in my own heart as bearing with it, uttered from the very confines of the tomb, a significancy utterly beyond the common-places of affected misanthrophy or exhausted dissipation. And in a few years I learned how to answer it by thanking God for the space given for repentance and faith in this earthly sojourn, and for the blessed privilege of exemplifying the power of the glorious gospel. The one I had begun myself to appreciate; the other I was favored in witnessing in the persons of one and another dear friend.

Time came for my mother to die. Weeks, months, even, beheld her waiting for release, without a thought or prospect of a remission of disease, and every day's lapse but added brightness and consistency to the exhibition of peace she was honored in affording. My sister, a matured disciple of Jesus, attended her, and frequent and of great interest were the conversations of the mother and daughter. My sister, for her own edification, took pains to learn all that could be imbibed from the spiritual exercises of the dying saint, and made the most diligent inquisition with that view. Her faith was not—whose is?—unsusceptible of stimulus and corroboration from the light which can beam from the better land through the opening portals of the tomb. To her pressing and earnest inquiry whether there was any lingering doubt, any confusion of vision, any dimness of hope, the emphatic answer was given and repeated, '*not a cloud*; NOT A CLOUD.'

I was then in the midst of my own strife of soul, and who will estimate the mighty force of such an influence as that testimony for Christ furnished? Especially when that departing parent went into eternity with her hands clasping mine, and her eye fixed full upon me with a gaze which was such a mingling of maternal love, of earnest Christian invitation, and triumphing confidence and joy, as I can never cease to remember, and which I trust will never cease to dwell with its calm radiance in my inmost memory.

Again, time came for that sister to die. She too, was for months hopeless of restoration to health, and for weeks lingered in pain and helplessness, for the silver cord to break. I pressed the same examination upon her that she had pressed upon my mother. I asked her if she fully realized that she was soon and certainly to see and associate with Paul, with David, with Isaiah. But this was like talking of the stars and forgetting the great central sun. Her answer to such inquiries was (in substance): '*I can only think of Christ! I am about to be with Him, and see Him as he is!*'

'Precious in the sight of the Lord is the death of his saints. And shall not their death be precious likewise in the sight of the saints themselves? When such light can be thrown back from the lamp of Christian experience to illuminate the pathway of those who are toiling behind, when such testimonies are given of the finally sustaining power of God's grace; when we know and feel that these are instrumentalities and agencies that God has blessed in all ages and employed universally for the comfort and encouragement of his people; how shall we duly prize them, how properly improve them!

The process of conversion, as it is often manifested, seems well exemplified in the three instances referred to; though rather as to the logical arrangement of the impressions they originated in others and may be denominated their coincident successsion, than as limiting God's method in leading souls to himself. There was first, the discovery of the utter insufficiency of the world to satisfy the longing of the spirit—'Nothing in this world worth living for.' Then there was the light of God's truth shed abroad fully in the heart, until 'not a cloud' intervened between the Christian's vision and the peace of heaven. And finally, the shrinking and disappearance of every subordinate glory and secondary joy in the grand appreciation of Christ, as all in all, 'God blessed forever.' [Independent.

LESSONS OF CONTENTMENT.

It happened once in a hot summer's day, says a German parable, I was standing over a well, when a little bird flew down seeking water. There was, indeed, a large trough near the well, but it was empty, and I grieved for a moment to think the little creature must go away thirsty, but it settled upon the edge of the trough, bent its little head forward, then raised it again, spread its wings, and soared away singing; its thirst was appeased. I walked up to the trough, and there in the stone work I saw a little hole about the size of a wren's egg. The water left there had been a source of revival and refreshment; it had found enough for the present, and desired no more. This is contentment.

Again, I stood by a lovely, sweet-smelling flower, and there came a bee, humming and sucking, and chose the flower for its field of sweets. But the flower had no honey. This I know, for it had no nectary. What then, thought I, will the bee do? It came buzzing out of the cup to take a further flight; but it spied the stamina full of golden farina, good for making wax, and it rolled its legs against them until they looked like yellow hose, as the bee-keepers say; and then, heavily laden, flew away home. Then said I: 'Thou camest seeking honey, and finding none, hast been satisfied with wax, and hast stored it for thy house, that thy labor may not be in vain. This likewise shall be to me a lesson of contentment.'

The night is far spent—the dark night of trouble that sometimes threatened to close around us—but the day is at hand, and even in the night there are stars, and I have looked out on them and been comforted; for as one set, I could always see another rise, and each was a lamp showing me somewhat of the depth of the riches of the wisdom and knowledge of God.

A GREAT CITY IN CENTRAL AFRICA.

Mr. Bowen, a Baptist Missionary sent from Florida, in his journal mentions a visit made last April to Horrin, the capital of the kingdom of Tombs. He speaks of it as 'about the largest town, with the exception of London,' that he has ever seen. He describes the inhabitants as a peculiar people, with whom he was much pleased—mostly black, but some nearly white; hair between that of a negro and a white man's beard; good European features—some of their noses would even be considered sharp in America. Again he speaks of them as that superior class or race of men who have jet black skins, with European features and large beards. They are sometimes called *white* black men.

Mr. Bowen adds: 'I never saw an honorable man nor a modest woman in Africa; till I reached Horrin. The number of people who can read and write, surprised me. Many of them have no idols. They are generally serious, solid, sensible people, and profess to believe in God. They have no tincture of Mohammedanism.'

The existence of such a people in a region hitherto unknown, but supposed to be the abode of utter barbarism, is a fact of no little interest. It would seem from Mr. Bowen's statements—(unfortunately, his journal is too brief to be satisfactory)—that they are willing listeners to the Word of God. True, he was, on arriving at Horrin, subjected to a nominal confinement for a few days; but very soon was received with high honor by the king, who gave him a valuable horse, presents for his wife, land to build upon, and also for a house of worship.

* * *

THEY ARE YOUR GOD.—'Sir,' said a lady to the Rev. Wm. Romaine of London, 'I like the doctrine you preach, and think I can give up every thing but one.' 'What is that, madam?' 'Cards, sir.' 'You think you could not be happy without them?' 'No, sir, I could not.' 'Then, madam, they are your god, and to them you must look for salvation.' This pointed and faithful reply is said to have led to her conversion.

* * *

Suppose an angel should say to you to-day, 'Come with me and see thy God!' What effect would it have upon you? Don't deceive yourself! If you don't love God, you never will want to see him. Seeing him will never make you happy. But if you have done your first duty—if you can say, 'Thou knowest all things, thou knowest that I love thee'—how happy you are now—how happy you will be when you appear in his presence and see him as he is. [Rev. W. Arthur.

* * *

Solemn and important was the advice given by Robert Hall—"Walk, as it were, upon the borders of the ocean of eternity and listen to the sound of its waters, till you are deaf to every sound beside." O, if we always did this, what different persons we should be to what we are now, "in all manner of holy conversation and godliness."

MOSES AND CHRIST—NO. 2.

"Wars and fightings come of the lusts which war in our members," we are told by one of Christ's apostles, and it is certain that the spirit of Christianity is opposed to war. Nevertheless, a resort to arms, on some occasions, finds an apparent justification in the Old Testament; thus presenting a seeming discrepancy between the teachings of Moses and Christ—a discrepancy which cannot be otherwise disposed of, by some, than by taking the broad ground that Moses and Christ are at variance on this point.

Our reverence for the Scriptures, as having been *all* given by inspiration of God, is shocked, when we hear it said that the doctrine of Moses is unsuited to this advanced state of the world—that it was adapted only to a barbarous age—that it served very well for the rude and fierce tribes under his guidance, but is now superseded by the more elevated and refined teachings of the Prophet of Nazareth. We do not wonder that men who avow such sentiments should, after a time, set themselves above the Scriptures altogether, and treat even Christ as they have already treated Moses.

There is no real contradiction between Christ and Moses, in reference to war. Christ, as well as Moses, makes God the sovereign Arbiter of the universe, in which character he disposes of nations according to his will, and takes away human life by whatever methods may seem to himself most fit. What then were the wars in which the Israelites under Moses were engaged? Were they wars of extermination against the Canaanites? Did the Israelites invade a territory occupied by other tribes, burn their cities, and put the inhabitants to death? They did. But if any semi-infidel fancies this to be on a par with the exterminating wars of modern times, by which one nation ruthlessly possesses itself of territory belonging to another, and slaughters the unoffending inhabitants, he is a very superficial thinker.

Does not the territory of this world belong to God? Has he not the right to dispose of it as he will? Had he not the right to give the land of Canaan to what people he chose? Had he not made it over to Abraham and his posterity, by a clear deed of conveyance, some hundreds of years before? The Canaanites were, therefore, occupying a territory which did not belong to them—which God had given to others—and as they would not vacate it peaceably, reason required that they be compelled; to do which, the Israelites had an express warrant.

In the execution of this undertaking, they shed the blood of the Canaanites. They were expressly commanded to do so. It was God's will to put the Canaanites to death for the abominations of which they were guilty. He had the right to make the Israelites the executioners of his will. Is it not God's prerogative to kill, as well as to make alive? Was it not his right to kill Isaac by the hand of Abraham his father? Abraham certainly thought so, notwithstanding the law against murder was as binding then as it was after being delivered from Mount Sinai. Does Christianity frown upon, and reprobate, that act of the patriarch? On what ground, then, can it be supposed that Christianity reprobates the wars of the Israelites?

Is war entirely forbidden by the Christian code—is it, in no case, justifiable, in this advanced age of the world? It is replied, that Christ forbids us to resist evil. But is this precept to be understood in an absolute and unqualified sense? How far would it then lead us? Arrest not the murderer; take not the life of him who wantonly sheds the blood of his neighbor, notwithstanding the precept of the Old Testament, "Ye shall take no satisfaction for the life of a murderer;" because Christ says, "Resist not evil." Is not this the legitimate result of the principle? Accordingly, almost all non-resistants are opposed to capital punishment; consistency requires that they should be. But does not consistency require them to go a little further? Does it not require them to refrain from offering any resistance whatever to the murderer?

Now, what is war but capital punishment upon a large scale? If it is lawful to inflict capital punishment upon a small, we cannot see how it is unlawful to inflict it upon a large scale. An enemy that invades our country with an army, is an organized band of murderers. It is certainly lawful to capture such an enemy, and put him to death, if it is lawful to capture and put to death an individual murderer. Our casuistry discerns no difference in the two cases. It seems to us, therefore, that the whole question about the lawfulness or unlawfulness of war, resolves itself into the cause for which war is undertaken. If it is undertaken for any cause which would not justify the taking of human life in individual cases, it is undertaken unjustifiably; if for a cause that would justify capital punishment in individual cases, then it is a justifiable war, and the projectors of it may seek the blessing of Heaven. T. B. B.

AN OLD BIBLE.—Some of our antiquarian readers may be interested in a description of an old copy of the Bible, which we find in the *Examiner:*

"A gentleman in Alabama owns a manuscript Bible, which is said to be the oldest book in the United States. It was written a thousand years ago. The owner gives the following description of it: The book is strongly bound in boards of old English oak, and the leaves are fastened together by thongs. The leaves are of parchment of a most superior quality, of a fineness and smoothness little inferior to satin. The pages are all ruled with great uniformity and beauty, and written in the old German text, divided into chapters and verses. The first chapter of every book is commenced with a large capital letter, beautifully executed and splendidly illuminated with red, blue, and black inks, which still retain their vivid colors; and no two of the capital letters in the volume are alike. Some monk probably beguiled many a weary hour of his monotonous life, in writing and ornamenting this rare and valuable relic."

THE LABORERS NEEDED.

Society is being filled with a great variety of customs, beliefs, and prejudices. Our country is young, buoyant, and ill brooking the old, the past, yet ready to be swayed and molded by leading spirits. What are some of the qualifications necessary for such spirits, in order that they may have an influence both great and good?

1. They need to be clothed with bodies that are stout of limb and strong of nerve—constitutions that will stand toil and struggle.

2. They need a thorough and extended course of intellectual training, that will enable them to stand high in whatever station they may be called to occupy. They need an intellectual energy, industry, and enterprise, that will do honor to them in any situation. The higher and the lower walks of life mingle. Education of the highest grade is open to all—invites all. Many are seeking for place and honor. The struggle of truth and right must henceforth be with the educated. Now, in order to meet such, it is necessary to have an education equal or superior to theirs. Again, false doctrines are rife, are fast gaining ground. They find learned, wily, and successful advocates. These must be met, and in order to meet them successfully, there is need of much learning and wisdom. Those labor under a mistake, who think that if men have a passable education—one that would enable them to do tolerably well at the beginning—they can, as they grow older, take the lead in intellectual and moral reforms. They may succeed well for a while; but society is ever changing, advancing, and soon they will find themselves falling behind in the race, pressed down in the struggle. Those of better intellectual qualifications, though perhaps inferior in morals, will supersede them, while they are compelled to pass the remainder of their days in comparative obscurity. It therefore becomes those youth who are looking forward to fields of future usefulness—who are desirous of exerting a high, hallowed, and commanding influence—to consider well what they will have to meet, and make preparations accordingly, not permitting their zeal to thrust them hastily or prematurely into the field.

3. They need deep and ardent piety. This is necessary in every walk of life, however humble and secluded. If so, how much more necessary for those who are to give form and character to society. They need meekness, fortitude, patience, energy, and perseverance. They need virtue that will be proof against the seductive influences that may surround them—a burning zeal for the good of their fellow-beings—a moral courage that cannot be frowned down—a spirit that will not be satisfied with moving in the smooth, gentle current of public favor, but an aggressive spirit, that will leap the bounds of public opinion, take a bold stand for truth and right, and maintain that stand fearless of consequences—not only maintain a defensive position, but make a direct attack upon whatever opposes progress.

Such are the individuals most needed at the present for laborers. •

SOLEMN THOUGHT.

I am a creature bound for eternity. This soul of mine, which is most emphatically myself, invested with immortality, and that which began an everlasting career as soon as earthly existence began, will soon mingle with spirits in the spirit land. Heaven or hell awaits me as soon as this frail tenement falls into ruin. Oh! those solemn words—those incomprehensible subjects!—who can tell what those felicities are which constitute heaven, or those deep miseries endured by the lost? No one. We must die to know. Revelation gives us a faint outline, but we must die to know. How very different we should feel and act, if what is revealed was believed and realized as belonging to ourselves. Alas! the world, with its various pursuits and enterprises, places its hand over those stirring revelations, and we see them not. Is it true, that human life hangs on a slender thread? Is it a reality, that we are walking on a narrow neck of land, between two unbounded seas, ever exposed, and ever liable to plunge off on the one side or on the other? Yes, it is all true; yet how insensible! We buy, and sell, and get gain—we marry and are given in marriage—we build houses and plant pleasure grounds—we arrange and speculate and calculate, and all as if there was no end. Oh, the dream of life—the false calculation—the foolish fondness of the creature! Death comes, and sweeps away the beautiful fabric we had erected and adorned, and perhaps worshiped. But what is death?—an everlasting sleep—a blotting out of existence? Nay, it cannot be. Why this consciousness of immortality, of which no man is free? Why this inward certain and fearful expectation of something beyond the grave? "If death was nothing, and nought after death," why this unavoidable apprehension, fear and hope of a mysterious world at some time, and perhaps very soon, to be entered? It is no delusion. I feel it—you feel it—we all feel it. It is all true. Nor can all the philosophy or false reasoning of infidelity blot out the hand-writing of the Almighty on the soul. Indeed, the conviction is carried in every man's bosom of an existence beyond this narrow life—of good or evil—of happiness—of misery—in fact, of heaven or hell—despite of all the scepticism he can muster. The question is momentous, whither am I tending? Very soon the problem will be unraveled, and we shall be introduced into the company of the blessed, who dwell forever in the complacent and benignant smile of God, or else shut up in endless despair with rebellious and wicked spirits, who are crushed by the Almighty's frown. Were we not sinners, the subject of futurity would not be alarming to us; but how can sinners think without unutterable concern? What shall we do? Evade the claims of a broken law we cannot. To buy our release—to procure our safety and our bliss, by sacrifice or suffering, or by a virtuous life, is equally beyond our ability, and a moral impossibility. Looking around us, there is neither human nor angelic help. All is dark and fearful and hopeless. Hark! I hear the voice of mercy. It is soft and sweet. It comes from the cross—from a divine Saviour's bleeding side—from his dying groans—from his sufficient sacrifice. Here, then, hangs our hope—our only hope, but sure. My soul, take refuge here, and from this interesting spot look onward to the day of death and judgment, without terror. With the doctrine of the cross in view, the spirit-land is full of light and glory.

Reader, whither art thou going—to heaven or to hell? The stream of time is carrying you irresistibly on, and will soon land you on the other side. Have you cast your anchor within the veil, or are you building your hopes on the sandy foundation of error, laid in your own imaginings? If you are out of Christ, see to it that you make no delay, lest you die out of Christ, and perish. The day is fast approaching, when the line of separation shall pass between the two classes of the human family—on the one side, the short but awful decision will be announced, "These shall go away into everlasting punishment;" on the other, "But the righteous into life eternal." Reader, may you and I be on the right side. GEO. R. WHEELER.

SALEM, N. J.

REVIVAL IN PETERSBURG.

To the Editors of the Sabbath Recorder:—

Thinking that it may be interesting to the friends of the Redeemer to hear of the prosperity of his cause, I send you a brief notice of a work of grace in Petersburg, N. Y. For a few months past, we have been enjoying a precious revival of religion. Many backsliders have been reclaimed, and a goodly number hopefully converted to God. Eleven have been buried with Christ in baptism, and have united with the Sabbath-keeping church. Others are expecting to follow soon. A number have united who had been previously baptized. Among the candidates for membership are seven who are converts to the Sabbath. Others are convinced of the claims of the law of the Lord, and acknowledge the seventh day to be the Sabbath of the Bible, but choose to follow convenience in preference to the word of God. The First-day Baptist and Methodist churches have received some additions. In view of what has been done, we feel like saying, "The Lord hath done great things for us, whereof we are glad." To his name be all the glory.

THOMAS A. MAXSON.

PETERSBURG, May 11, 1856.

EDITORIAL TROUBLES.

An exchange says, that all men have their troubles of some sort—and if editors do not have more than any other class, they have a bountiful share—some of which, as they add to no one's comfort, or convenience, or estate, and grow out of thoughtlessness and inattention, might as well be removed. Every subscriber ought to observe these rules, whether he can see the use of them or not:

1. *When you write to an editor, on your own business, always inclose a postage-stamp.* It is as much as you can expect of him, to give you his time, ink, paper and service, without levying a tax of three cents extra on him for the privilege of neglecting his own business to attend to yours. You may think three cents is a small matter, and so it is. But if he has 6000 subscribers, and each one writes to him in violation of this rule once a year, it amounts to $180.

2. *When you write to the editor inclosing money to pay your dues, or when you first subscribe for his paper, write your name very distinctly.* It would be well to put it down in full, to make every letter separate, or print it with the pen. If your account is not correct, and your paper does not come, or is missent, don't get angry and be so foolish as to discontinue your support, for in nine cases out of ten you may be sure it is your fault.

3. *Always give the name of the Post office, and always the name of the State where you want your paper sent.* If you say "send it to Lexington," the editor does not know whether you mean Lexington, Ky., or Lexington, Mass., or some other place. A man writes "change my paper from Jefferson to Washington." Well, there are more than one hundred places in the U. States with each of those names, and the editor is entirely nonplused.

4. *If you are a new subscriber, say so.* The editor cannot ascertain whether you are an old or a new subscriber without looking over a list of several thousand names.

5. *If your object is to change your Post-office, be very careful to give the name of the office and State you wish to change* FROM, *as well as the one you want to change* TO. Strange to say, this is perhaps the most important rule of all. Editors have no alphabetical list of subscribers' names. They are arranged according to your Post-offices and places, and if you do not say where your Post-office is now, he cannot find your name and account without reviewing his whole list, unless it may happen to be plainly enough printed on the outside of your letter to be read, or unless he may happen to remember where some of your name live. And then there may be two or more of the same name on his list, and your letter may have been post-marked at an office where you have dropped it while away from home.

ANNIVERSARY STATISTICS.

Central American Education Society.

The anniversary sermon before this Society was preached on Sunday evening, by Rev. Thomas Skinner, D. D. An abstract of the 38th Annual Report was read on the occasion, from which it appears that during the past year this Society has rendered aid to 101 young men, who are engaged in a course of study preparatory to their entering upon the work of the ministry of the Gospel. Some of these have been assisted only a portion of the year; but the larger part of them have received aid through the entire year. The number under patronage at the close of the Society's year, April 30, 1856, was 72; and they are pursuing their studies in eight different Institutions, and in all the stages of their preparatory course. Eleven beneficiaries completed their course of studies soon after the commencement of the year, and twelve more have, during the last week, entered upon the duties and responsibilities of their public life as preachers of the Gospel. The amounts of money which have been received into the Treasury during the year have been as follows:

From Collections in the Churches	$4,541 20
From Donations by Individuals	685 00
From Loans to former beneficiaries, returned	173 00
From Legacies	3,362 85
Making a total of receipts	$8,762 05

which is about double the amount received during the preceding year.

The amount expended in appropriations to the young men under the patronage of the Society has been $7,005.

The Church relation of the 101 beneficiaries reported, is as follows: 57 Presbyterians, 37 Congregationalists, 4 Old School Presbyterians, 2 Reformed Presbyterians, and 1 Lutheran.

American Baptist Missionary Union.

This organization held its 42d annual meeting in New York last week. The usual reports and statistics were presented, the substance of which we have already printed. The subject of most interest before the Union was a report, submitted by Rev. Dr. Bailey, of Indiana, from a Committee of Reference, appointed last year to inquire into matters of difference between the Executive Committee at Boston and certain missionaries, which have caused considerable agitation since the return of a Deputation to the missions some two years since, and growing out of the transference of missionaries to new stations, restrictions concerning schools, and especially a council called in the case of Rev. Mr. Vinton. The Committee, in their report, on the whole, and after some twenty-seven sittings, vindicated the course of the Committee and the Deputation, except in the matter of the council named. The Board of the Union reported that they had adopted the following resolution respecting the report of the Reference Committee:

"*Resolved*, That without endorsing in detail either all the history of the past or the comments on that history found in the very able report of the Committee of Reference, this Board would gratefully and unitedly accept its general statement of principles as to the relations of Missionaries and churches; and, also, the concluding recommendation, that the brethren abroad and at home *suspend further* discussion, and await in mutual prayerfulness and patience the return of that better intelligence yet to be hoped for on the present platform."

This resolution was brought before the Union for approval, and was adopted, after a lengthy discussion, and the rejection of numerous proposed amendments.

American Baptist Publication Society.

The 32d Annual Report gives a very encouraging account of the condition and prospects of this Society. When the Society was re-organized, in 1840, its property was estimated at $4,121 70; it is now estimated at $63,667 03. Of this sum $21,805 26 is a Building Fund, and $39,300 71 is invested for publication purposes, including stereotype plates, wood cuts, steel engravings, &c. The total number of publications now embraced in the Society's Catalogue is 501, of which 237 are bound volumes. The sales of books and tracts during last year amounted to $35,554 15, of which over fourteen thousand dollars worth was sold by colporteurs. The receipts during the year, from all sources, amounted to $54,501 63, being an excess over the previous year of $1,793 89, and leaving a balance in the treasury of $94 12.

American Baptist Historical Society.

The annual meeting of this Society was held on the evening of May 10th, in the Calvary Baptist Church, New York. An able address on Baptist history was delivered by the Rev. Dr. Howell, of Virginia. The Annual Report of the Board was read by the Corresponding Secretary, Rev. J. Newton Brown. It alluded to the history and formation of the Society. Its aim was co-operative rather then competitive. The Board of Curators had held regular quarterly meetings, and several special meetings had also been convened. Corresponding members from England and from Scotland had been added, and the Society had to acknowledge the receipt of a considerable number of books and pamphlets. A meeting was announced as soon to be held in Philadelphia, at which several interesting communications are to be read. The report closed with fitting remarks on the value of history, and the importance of the preservation of historic records.

The following are the officers elect for the ensuing year:—

President—Rev. Wm. R. Williams, D. D.
Vice-Presidents—Rev. Drs John M. Peck, of Illinois; Wm. Hague, of New York; Baron Stow, of Massachusetts; and R. B. C. Howell, of Virginia; Hons. A. H. Dunlevy, of Ohio, and Isaac Davis, L. L. D., of Massachussetts; Samuel Colgate, Esq., of New York; Rev. Franklin Wilson, of Maryland.
Corresponding Secretary—Rev. J. Newton Brown, D. D.
Recording Secretary—Horatio G. Jones.
Treasurer—Rev. Benjamin R. Loxley.
Curators—Revs. Joseph Belcher, D. D.; Wm. B. Jacobs; Thomas S. Malcom; N. B. Baldwin; John M. Richards; D. Benedict, D. D., and C. W. Anable; F. Lee, Esq.; Levi Knowles, Esq; Rev. T. B. Bunker; Jacob Chalfant, Esq., and Samuel A. Crozier, Esq.

Swedenborgian Publishing Society.

The American Swedenborgian Printing and Publishing Society held its sixth anniversary in New York a short time ago. The principal business of the Society appears to be the reprinting of the works of Emanuel Swedenborg. The total number of volumes printed during the year was 3,060; the sales amounted to 2,464 volumes in all. The Treasurer's report exhibited a balance to the new account of $75,90, the entire expenditure being upwards of $4,900.

DARK FOREBODINGS.—Some of the more conservative statesmen of this country express much solicitude about the future, thinking that they see now a war-cloud in the horizon. There are three principal causes of apprehension. The first is the course of the British Government in regard to the enlistment difficulty. When the connection of Mr. Crampton, the British Minister, with that matter, was established to the satisfaction of our Government, of course his recall was asked; but that having been refused, there is little doubt he will be immediately dismissed—a proceeding which may or may not be received in dudgeon by the British Government. The second cause of apprehension is the course which the United States Government threatens to pursue towards the French Government, on account of indignities to the three military officers sent out to the Crimea. It seems that those officers were received with much courtesy by the British and Russian commanders, but treated very coldly by the French commander, and also by the French Minister of War, when they called on him in Paris, on their return from the Crimea—proceedings which our Government threatens to treat as an intentional indignity to this country. The third cause of apprehension is the recognition by the United States Government of the Walker Government in Nicaragua—a measure which both England and France may regard as looking to a foothold in Central America, and may on that account be disposed to resist. Either of these difficulties may, by bad management, lead to collision with governments with which it is our interest to be at peace. It is to be hoped that discretion has not so far left our Executive and his counsellors that they will venture to plunge the country into an unnecessary conflict.

THE METHODIST CONFERENCE.—The quadrennial General Conference of the Methodist Church North, (says the *Daily News*,) is now in session at Indianapolis, and is very fully attended. Some of the proceedings have transpired which have a general interest. One of the first topics was the report of the Book Concern. The Western Book Concern report that, after paying their proportion of the award to the Methodist Episcopal Church South, and all other liabilities, their capital is $150,405 74. The sales of books during the last four years, $346,886, being an increase of $86,057 27. The sales of periodicals during the four years past, $302,953 93, being an increase over the four years previous of $90,804 63. The total sales of the last four years, of books and periodicals, have been $649,840 73. The report of the Book Committee at New York was then read. The report states that the sales of the last year amount in the aggregate to $1,000,734 18, with an aggregate profit of $191,000. This makes a grand total of sales for last four years, $1,650,574 91.

The following is a statement of the circulation of Methodist newspapers and magazines, as reported to Conference: Christian Advocate and Journal, (New York,) 29,875; Western Christian Advocate, (Cincinnati,) 28,718; Northern Christian Advocate, 15,000; North-western Christian Advocate, 10,033; Pittsburgh Christian Advocate, 8,000; Sunday-School Advocate, 114,692; Missionary Advocate, 34,000; Christian Apologist, (German,) 6,967; Quarterly Review, 2,721; National Magazine, 15,825; Ladies' Repository, 29,580.

Memorials are before the body signed by more than one hundred official members of Syracuse District, Black River Conference, requesting such a change in the chapter on slavery in their discipline as shall prohibit the admission of slaveholders into the church, and also that all persons now members of the church shall emancipate their slaves in one year or withdraw from the church or be expelled. The subject has been referred to a large committee, consisting of one from every annual conference.

TIMELY NOTICES.—The New School General Assembly of the Presbyterian Church met in the new church of Dr. Adams, on Madison Square, New York, May 15th. After the opening discourse, the Doctor gave the necessary notices about entertainment for delegates &c. He then stated, that intelligence had already reached him, that one of the delegates was that morning fleeced out of some forty dollars at an auction store—a circumstance which would justify him in saying, by way of caution, "that all the people whom the brethren would meet in this metropolis are not quite so good as the families who entertain them." He thought, also, that it might not be amiss to caution "those who were not yet altogether accustomed to cities, not to pick up any pocket-book which they might happen to see lying on the pavement, and that if they saw anybody pick up a pocket-book they should have nothing whatever to do with it." Finally, "there was still another notice, which he felt it to be his duty to give in behalf of the Trustees of the Church. He did not chew tobacco, but if any brother felt a necessity for the use of that article, and would be kind enough to inform the Janitor of the fact, the necessary implements would be provided. He desired to make this remark in the kindest spirit, but with a wish to protect the private property and furniture of the pews."

THE REBELLION IN CHINA.—The *North China Herald* says with regard to the rebellion, that the Imperialists had of late been getting the worst of it; that they had sustained a defeat at Chin-kiang foo, which they were besieging, and had fallen back on Tantoo, where they had formerly a military camp. At Whoo-hoo, on the banks of the Yang-tsze-keang, upwards of a hundred Imperialists had been killed, amongst whom were some Shanghae people, whose friends had received the intelligence of their death. It is reported that the people on the banks of the Yang-tsze-keang allow their hair to grow, for fear of being killed by the rebels, and that the mandarins had ceased decapitating them for this crime, as the numbers were so great that it was feared the whole country would rise in their defense. The *Herald* says the rebellion is now most active in Keang-se, to the south of the Poyang lake. It is reported that in the prefecture of Tseu-chow, between the Yang-tsze-keang and the Yellow rivers, seven cities have been taken by a set of rebels distinct from those of Nankin.

ACCIDENT ON THE PANAMA RAILROAD.—A frightful accident occurred on the Panama Railroad, May 6th, in which some thirty persons were killed, and two or three times as many wounded. It appears that three trains left Aspinwall for Panama, with the passengers of the George Law, which sailed from New York April 21st, some nine hundred in number; the first train containing the baggage, the second the cabin passengers, and the third the steerage passengers. The freight train got off the track, and it was deemed advisable to return with the other two trains to Aspinwall. Accordingly, the passenger trains were united, and the two locomotives turned round on a turn table, and attached to the rear of the combined train, thus bringing the steerage passengers into the fore part of the train, as it returned toward Aspinwall. At a curve in the road, a rail gave out, and nine cars, filled with steerage passengers, were thrown off the track, and smashed up one against another, causing the loss of life above stated.

GIRARD COLLEGE.—The whole number of orphans now receiving the benefits of this institution, is 313. There were 52 admitted during last year, and thirty-two apprenticed to suitable trades or occupations. The cost of maintaining the establishment was $83,330, of which $15,950 was for educational purposes. The whole number of pupils apprenticed by the college since its opening is 119, of whom the highest number (19) were placed with printers; 12 with farmers and horticulturalists; 10 with chemists and druggists. The college is about to be enlarged by the addition of another building, which will accommodate one hundred pupils. When completed, one thousand orphans will be able to enjoy the benefits of Mr Girard's munificent bequest.

Kansas Affairs.

By way of St. Louis, we have intelligence of a high-handed outrage on Governor Robinson of Kansas. It appears that he with his family had left Kansas for the East. When the steamer on which he was a passenger reached Lexington, Missouri, he was waited upon by a Committee of citizens, and notified that he would be detained, on the ground that he was fleeing from the Territory, to avoid arrest on an indictment of treason, which, they alleged, had been found against him by the Grand Jury of the United States District Court. Gov. Robinson replied, that he had been informed by one of the Grand Jury, that an attempt had been made to find a bill, but had failed. This did not satisfy the Committee, they insisting that Mr. Robinson should remain, and he finally consented to do so, on persuasion of Mr. Parkinson, captain of the boat, and Mr. Barnard, of Baltimore. He was invited to the house of Mr. Sawyer, one of the Committee, his family proceeding on to St. Louis. The Committee agreed to send a messenger to Kansas, to ascertain if an indictment had been found; and if not, all the expenses of Mr. R.'s detention were to be paid.

It is reported that a dispatch from Leavenworth has been received, stating that an armed body of men were *en route* for Lawrence, for the purpose of destroying the evidence taken by the Investigating Committee.

While Gov. Reeder was in attendance at the session of the Committee of Investigation at Lecompton, on the evening of the 8th, the Deputy Marshal served on him a writ to appear before the Grand Jury at Lecompton, to answer to a charge of contempt for having refused to comply with a summons from the Grand Jury previously served upon him. Mr. Reeder refused to obey the writ, and appealed to the Committee, but they decided that they had no power in the case. Messrs. Howard and Sherman, however, expressed as their opinion, that Mr. Reeder was protected by his privilege. Mr. Oliver dissented, and said the Committee could not stand between him and the Marshal. Mr. Reeder said that, although his life was in danger in Lecompton, he would remain on his privilege, in attendance at the sittings of the Committee, and warned them to touch him at their peril. The Marshal left, but was expected to return on the 9th, with U. S. dragoons.

Judge Lecompton charged the Grand Jury, on Monday, the 5th inst., to indict all the State officers and members of the Legislature for high treason, but up to the 9th inst. no such indictments had been found by the Court, so far as their proceedings had been made public.

The Executive Committee of the New York State Temperance Society invite a general attendance of members at the regular semi-annual meeting of the Society, to be held at Albany on the 18th of June. The principal object of the meeting will be "to consult upon the new duties and future policy of the friends of the common cause, and to join in declaring with just emphasis their principles and purposes to the State and the World."

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MAY 12.

In the SENATE, it was moved to reconsider the vote by which the Iowa Railroad bill was passed, but after debate the subject was postponed. Documents were received from the President relative to the Indian hostilities on the Pacific coast. Mr. Cass made his promised speech on Squatter Sovereignty.

In the HOUSE, the subject of the late outrages at Panama was considered, but nothing definite was effected—the House refusing to suspend the rules to allow Mr. Clingman to introduce his resolution, offered last week. The President was requested to give information as to the part taken by United States soldiers in Kansas affairs. The bill to enlarge the Government building at Milwaukie was passed; also the Senate bills to deepen the channels of the St. Mary's River, Mich., and to keep open the channel at the mouth of the Mississippi. Leave was asked to offer a resolution expressive of sympathy for the Cape de Verde sufferers, but the House adjourned pending the motion to suspend the rules.

THIRD-DAY, MAY 13.

In the SENATE, on motion of Mr. Fish, the Secretary of War was *directed to report an estimate for removing* the rocks at Hurlgate so as to admit of the passage of war vessels and large merchantmen Mr. Cass concluded his remarks commenced yesterday. Mr. Clayton spoke on the Sound Dues question, contending that this country ought no longer to submit to this exaction—that, in fact, the treaty with Denmark had already been abrogated.

In the HOUSE, Mr. Jones of Pennsylvania, in reply to Mr. Fuller, denied the asseverations of the latter gentleman in regard to Mr. Buchanan; whereupon, Mr. Fuller gave the Democratic Journal of the State as his authority. Mr. Evans spoke on the Slavery question. The report of the Committee of Conference on the Deficiency bill, striking out the Appropriation of $300,000 to continue the Washington Aqueduct, was agreed to by both Houses.

FOURTH-DAY, MAY 14.

In the SENATE, Mr. Clayton alluded to a statement in one of Mr. Crampton's letters, recently published, that he (Mr. Clayton) had on various occasions stated that he "considered Ruatan a British possession, as much as Jamaica, or any other British West India Island," pronouncing it untrue in every particular. Several other Senators spoke on the subject, in a strain not very complimentary to British diplomacy. The Senate refused to reconsider the vote by which the Iowa Land bill was passed.

In the HOUSE, a bill was reported from the Committee on Public Lands, granting one million acres to Florida to aid in the construction of railroads. It was passed after some debate, during which it was announced that the Committee intend to report similar bills for railroads in several other States, requiring about six million acres.

FIFTH-DAY, MAY 15.

The SENATE passed the House bill granting lands in alternate sections to Florida and Alabama, to aid in the construction of railroads. Mr. Mallory spoke on the subject of the Naval Retiring Board, replying to all the arguments urged against the Board, but taking no notice of the personalities which have been intermingled in the discussion. A message was received from the President, inclosing reports from the Secretary of State, Secretary of the Navy, and the Attorney-General, in reply to a resolution of the Senate, in March last, also a resolution adopted May 8, both having reference to routes of transit between the Atlantic and Pacific Oceans, thro' the Republics of New Granada and Nicaragua, and to the condition of our affairs with Central America. The documents were ordered printed.

In the HOUSE, a resolution was presented, and after discussion laid on the table, to instruct the Judiciary Committee to inquire into the case of Mr. Herbert, who killed the Irish waiter. A message from the President on Central American Affairs was received and read.

SIXTH-DAY, MAY 16.

In the SENATE, a resolution was adodted in reference to the unlawful deterioration of coins, and the action of the Naval Board was discussed.

In the HOUSE, a rule was adopted, that all bills and reports from the Court of Claims shall be referred to the Committee on Claims, and be in order every Sixth-day.

Both Houses adjourned over to Second-day.

European News.

The steamer Asia, with European news to May 3d, arrived at New York on the 16th inst.

From England, we learn that the Palmerston Ministry has been sustained in Parliament on the question concerning the fall of Kars. The majority against Mr. Whiteside's motion for a vote of censure on the Government was one hundred and twenty-seven.

There is noticable in the English press a decidedly Anti Gallican tone, since the treaty of peace was signed, and a freedom of expression in relation to the French Government, in very marked contrast to the respectful and guarded manner in which all allusions to France were made during the alliance.

The London papers give but little intelligence of general interest. Military courtesies, it seems, are being exchanged between the armies but lately ranged in battle array, one against the other. According to the latest advices from the Crimea, the Allied troops had been reviewed by the Russian Commander-in-Chief.

The London *Times* lately published a leader, attempting to prove that the interpretation given by the British Government to the Clayton-Bulwer treaty is the correct one. The article is significant as an indication that the views of the Palmerston Ministry on this subject have undergone no change. Among the papers submitted to Parliament on the 2d of May, was the long-expected reply of Lord Clarendon to our Government's demand for Mr. Crampton's recall. The London *Daily News*, an influential paper, thinks that such a demand "is only inviting the English Cabinet to disgrace itself for the amusement of the Government at Washington."

Among the latest intelligence received at Liverpool, by telegraph from London, is a treaty between Queen Victoria, Napoleon, and the Emperor of Austria, in which the contracting Powers guarantee jointly and severally the independence of the Ottoman Empire.

California News.

Two weeks later news, and about two million dollars in treasure, have been received from California.

The domestic news is generally unimportant. The Oregon war continued. A body of Regulars had been defeated by the Indians at Rogue River, with a loss of 28 killed. Several whites had been massacred at that place. It was reported that 1,000 Indians were approaching Dallas from the North. Several other fights are reported, the whites being generally victorious. It will be remembered that, on the 26th of March, the Indians made an attack upon the Cascades, captured the place, slaughted the inhabitants, and destroyed their dwellings and property. We now learn that two days subsequently the place was retaken, and the Indians were utterly routed.

In Washington Territory the Indians were attacking the settlements in every direction. Colonel Buchanan had defeated the Indians along the banks of the Rogue River, thus relieving the citizens in that vicinity.

The Central American papers are filled with the official correspondence between the dignitaries of State and the Commander of the United States sloop-of-war *St. Mary's*, and others, relative to the riot at Panama.

There is nothing new from Nicaragua, except a report current at Aspinwall, that Col. Schlessinger had been recaptured by the Walker party and condemned to be shot.

The Kansas Investigation.

The Committee appointed by the House of Representatives is at work in earnest with the Kansas Election Investigation. Several days' proceedings have been made public, from which it is certain that the propagandists of Slavery had formed an extensive organization for the express purpose of introducing illegal voters, and thus making Kansas a slave State. Mr. Jordan Davidson, the first witness who was examined before this Committee, testified that he was a member of a Secret Society formed in Missouri, the express object of which was to make Kansas a Slave State; and that he had reason to believe that it existed also in other Southern States—in Virginia, in Tennessee, Kentucky, and Arkansas. He came from Missouri to Kansas to vote; was sworn in on the spot as one of the officers of election; and knew of many others who came from Missouri and voted. William Lyons, another witness, testified that at the election, March, 1855, he saw a Mr. Shelby, who told him he had come 100 miles to vote, and "eight hundred Missourians would vote on that day; he himself knew that over 100 went to Douglas, where the polls were held, that day to vote. Augustus Wattles, living in the Second District, testified after an examination of the census returns, that there were but 25 legal voters in that District; and yet several hundred votes were cast. At that poll Mr. Hammond Muzzy, said that just as he got there a Mr. Mace offered to vote—and that when the Pro-Slavery Party saw that his vote was a Free State vote, they said he should not vote it; several men took hold of him by the collar and pulled him away; he took hold of me, and we were both pulled away together from the poll; and they cried out 'Cut his throat,' 'tear the d—d heart out of him;' saw one man draw a knife upon him, without doing any injury; saw a man with a lever, trying to pry up a corner of the cabin; others cried out, 'don't do it until you have orders;' saw Ellison come out of the cabin with the ballot-box in his hand, and cry out, 'Hurrah for Missouri!' Ellison was one of the Judges; heard Jones (now Sheriff) say he would give the Judge five minutes to resign or die; Jones gave one more minute, and they then left; these Judges were Ramsay and Burson, both Free State men; was there when the other Judges were appointed; the crowd then commenced voting; saw no Free State man vote."

Here the Missouri mob obtained entire control of the poll, and, with Sheriff Jones at their head, compelled two of the Judges, under threats of death, to resign, and then put two others in their place. In the Seventh District, Marcus H. Rose testified that there could not have been over 30 legal voters in the District—and 234 votes were cast. J. B. Titus testified that over 200 Missourians encamped near his place, and told him they had come there expressly to vote. William Jessie swears that he was at the polls in the Second District, and that "things went on until about 38 votes were taken, when one man came forward whose vote was objected to; the Judges would not receive it until he swore he was a resident of the Territory; the crowd cried out he should vote without swearing; while this was going on a dozen came to vote and were pulled away; pistols were presented to the Judges, and they were told their brains should be blowed out if they did not receive the votes of these persons who refused to take the oath; they declared they came there to vote and they would vote."

The mob finally demanded of Burson and Ramsay, the Free State Judges, that they should resign, and threatened to blow out their brains if they refused. Jessie further says:

"I hunted for Messrs. Burson and Ramsay, the other Judges, to see if they had come out; found them, and heard a man telling them he would give them five minutes to resign or die; I went into the cabin to see Burson again; and saw a man holding a watch in his hand; I told Burson he had better leave his house; he said he did not want to leave his own house; he finally did with Ramsay and myself; we went, some fifteen in number, to Mr. Ramsay's house; I asked Burson where the poll books were; I found the poll books in his pocket; he handed them to Mr. Humbacker; Mr. H. and Mr. B. then went towards their homes; a crowd of men came on horseback and asked where the poll books were; we told them we did not know; they swore they were there—went off and returned again and abused us; Mr. Jones, now Acting Sheriff, was with them, on horseback, with Mr. Humbacker behind him; soon others came after Judge Wakefield; they demanded he should go with them; he consented to go with them after three had promised to protect him against harm; Jones was one of the three; the cry and search was then for Burson; I found him and went away with him; when I returned, the bigger part of the company had gone; Jones, now Sheriff, was the man who was holding the watch and telling them they had five minutes to resign or die; some were there voting when I got back; when they left they went down East; I suppose there were nearly 400 strangers there; have not seen them in the District since; they were well armed, with knives, guns, and revolvers; I do not know as any settlers of the District voted."

Thomas B. Wolverton testified that he was at the October Election in Willow Spring—and that he was told by several men there that they had come from Missouri to vote, in order to make Kansas a Slave State;—and Thomas D. Hopkins, residing about nine miles south of Lawrence, says that at the Election he saw many of his old acquaintances from Missouri; he adds:

"They told me there was about twenty-five of my acquaintances there from that settlement; they said they came to vote and intended so to do; they said they wanted to make it a Slave State; if it wasn't they would lose their property, and if it was necessary they would come again; they told me there were from 700 to 1,000 from Missouri in this place, and that there would be from 5,000 to 10,000 here in the Territory from Missouri to vote."

The general tenor of all the testimony is the same: and it proves, beyond all possibility of doubt, that thousands of armed men from Missouri have invaded Kansas at every election, robbed them of their right of suffrage, and imposed upon them officers and legislators who did not represent their wishes, but acted in direct defiance of their will. It is the laws made by these men, thus elected, that the people of Kansas are required to obey. And the whole power of the Federal Government is to be used to compel obedience.

[New York Times.

The European Peace.

The treaty of peace agreed upon by the recent belligerents of Europe, is now made public. It is impossible (says the N. Y. *Times*,) to review its provisions, without feeling that Russia has received in that section which relates to the neutrality of the Black Sea a humiliation to which nothing but the sternest necessity could have induced her to submit, and from which she will embrace the first opportunity of any new European complications to disenthral herself. There is no other of the European nations, even the smallest, which is not permitted the right of erecting on her own coasts such fortresses and arsenals as she may deem necessary for their protection. By the thirteenth article of this treaty, Russia, however, alone of all countries, is forbidden either to preserve or erect any military or maritime arsenals on a portion of her own soil; and though in peace these, as the article observes, may be unnecessary, yet on occasion of the smallest rupture England can leap from any of her Mediterranean naval depots in a moment into the Black Sea, and carry destruction to Russia's unprotected shores. That a nation like Russia, whose moderation is pictured as beyond the ambition of other Powers, should long submit to such a humiliation ,is not possible. She will chafe daily under her restraint.

So far as Turkey is concerned, the alleged object of the war would appear to be accomplished for all parties. The liberties of the Sultan's Christian subjects, which was Russia's alleged cause of conflict, are nominally guaranteed, while, on the other hand, the object of the Allies is attained in the forbiddal, in the ninth article, of all right to any of the Powers, either collectively or individually, to interfere in the relations of the Sultan with his subjects or in the administration of his Empire. Those who are best acquainted with the internal condition of Turkey, however, express an unqualified opinion that the firman in which the new reforms and privileges are embodied, and which is stated to proceed spontaneously from the Sultan's will, can never be carried into practical operation or effect, and that the close of the war will find unhappy Turkey torn by internal dissensions, as bitter and depressing to her prosperity as exterior aggression could be.

FRENCH LOSS IN THE CRIMEA.—Mr. Stafford, member of Parliament, who, it may be recollected, twice visited the Crimea in 1854 and 1855, when delivering a lecture at Stamford, England, on the 17th ult., said it was told him by a French officer, and it had been confirmed indirectly by many persons who had opportunities of ascertaining the same statistics, that the French had lost, between July, 1854, and July, 1855—slain in battle, left dead on the field, 12,000; died afterwards, of wounds received in battle, 7,000; sent home with loss of limb or broken in constitution, 25,000; died of disease, chiefly diarrhœa, cholera and dysentery, 60,000;—total loss, about 105,000, exclusive of all who have been killed or died during the last seven months.

SUMMARY.

Thomas Powell, of Newburg, Orange Co., died at his residence in that place on Monday evening, May 12th, at the advanced age of 87 years. Mr. Powell was one of the oldest residents of the County, and had the reputation of being the wealthiest man in that section. He was a native of Ireland, came early to this country, began life with fair prospects but little money, worked hard, early and late, and by his indomitable enterprise and business energy made himself a name which will not soon be forgotten in Newburgh.

Daniel Burgess, of the firm of Daniel Burgess & Co., Publishers, No. 60 John street, New York, died of pneumonia, on Tuesday, May 13th. Mr. Burgess was 52 years of age. He was born in Plainfield, Connecticut, and was for many years engaged in the book business in the City of Hartford, where he was highly esteemed. He came to New York about twelve years ago, and from that time until his death, was engaged in the publishing business—generally school text-books.

A dispatch dated Philadelphia, Tuesday, May 13, says: Robert Hancock, a farmer belonging to the vicinity of Cootes Mill, New Jersey, was killed this afternoon near Bordentown, by a train of the Camden and Amboy Railroad. He was in a wagon with his wife, and attempted to cross the track in advance of the train, though the flag man warned him back. The horse attached to the wagon was killed, and Mrs. Hancock was severely injured.

The statement that the United States Military Commission, which recently returned from Europe, was treated with marked incivility and rudeness by the French Government officials, is fully confirmed. This commission, it will be remembered, was composed of Majors Delafield and Mordecai, and Col. McClelland, all officers of the United States Army, worthy and accomplished gentlemen, who were sent abroad by the President to acquire information of value to the military service of the United States. Wherever they met British officers, the members of the Commission were received with great cordiality and kindness. While in the Crimea they were handsomely received by the British commanders, but Pelissier refused them an audience.

Hon. George P. Marsh, of Vermont, has just written a book on the camel, called out by the action of the Government in attempting the introduction of that animal into the public service on the Southwestern plains. Mr. Marsh's object is to show that the camel can be domesticated in any part of the United States—the Liberian in the colder, and the Eastern in the warmer latitudes—and that its general introduction will prove of vast benefit to large portions of the country, where the scarcity of water renders the horse or the mule an uncertain traveler. The book is now in press at Boston.

A dispatch dated Albany, Thursday, May 15th, says: A steam boiler in Edson's distillery, in this city, exploded this morning, instantly killing Cyrus Edson, one of the firm, Mr. Henderson, the engineer, and Mr. Donovan, the fireman. One or two other employees were badly injured. The boiler was new, and the engineer was engaged in testing it when the explosion occurred. The bodies were horribly mutilated, Mr. Edson's head being completely torn from his body, and so much disfigured that he could be recognized only by his pocket-handkerchief and finger-rings.

Town Superintendents of Schools in the State of New York are no more. On the 3d of June the Board of Supervisors have special meetings to appoint District Commissioners, one from each Assembly District (except in the cities,) who will hold office till the 1st of January, 1858. In November, 1857, their successors will be chosen. Each (Assembly) District Commissioner has a salary of $500. He has no trouble of disbursing School money—all that "bother" now devolving on the County Treasurer.

The St. Anthony Express gives the following estimate of the number of feet of logs that will probably be floated down from the pineries during the present Spring:

	Feet.
From Rum River	120,000,000
From the Mississippi	40,000,000
From the St. Croix	160,000,000
From Chippewa	75,000,000
Total	395,000,000

Considerable excitement exists at Theresa, Jefferson Co., N. Y., in consequence of the appearance of the small-pox in that town. Mr. Parker, a member of Assembly, who suffered an attack of the disease in Albany last Winter, after his return to his home in Theresa, mingled freely with his neighbors, supposing that all danger of communication had passed. A member of his family has just been attacked with varioloid, and hence the excitement, others fearing that they will be attacked next.

Depredations on the mails in the State of Missouri have compelled the Judge of the United States Court now in session at St. Louis, to bring the subject to the notice of the Grand Jury, and that body has made an investigation. The Grand Jury found that the mails are transported in stages and hacks, in such a careless and unsafe manner as put all idea of security out of the question.

The St. Paul (Min.) *Daily Times* of April 29, says: "Emigration is pouring into the Territory at a rate far exceeding the predictions of the most sanguine. Every boat is crowded with a living freight, and the roads leading to the interior are thronged with hardy, industrious and enterprising emigrants—men who have the requisites for building a mighty commonwealth."

On the 28th ult., a couple of Germans were married in Cincinnati by Esquire Rowekamp. The husband came to this country some time before he sent for his wife. She came by New Orleans, while he had gone to meet her in New York. They never met till a few weeks ago. In the meantime both had obtained divorces, both had married again, and both had lost their partners.

A dispatch dated Boston, Thursday, May 15th, says: The accommodation train from Albany, while entering the city last evening, came in collision with a carriage, in which were Mr. McFarland, his wife, and Miss Heustis. The two ladies were instantly killed, and Mr. McFarland is dangerously if not fatally injured.

We learn from the Lexington (Miss.) *Advertiser* of the 15th ult., that a man named Guy, who was caught in the act of decoying negroes in that county, was arrested and imprisoned, and having made his escape, Mr. Little, in attempting to arrest him, was assaulted by him, and he had to kill him in self-defense.

A party of young ladies from Madbury, N. H., appeared in Great Falls on May-day—having taken their gentleman friends out to ride. They "stood treat" for their partners, and showed them all there was to be seen in the village—the gents carrying the parasols, bouquets, &c., while their fair friends drove the teams.

The Galveston *Confederate*, of the 29th of April, says that two negroes, the property of Mrs. Kinney, of that place, were killed by a Mr. Howard, the overseer of John H. Jones, at his plantation on Caney River, a few days since. It seems that Howard caught the negroes in the act of stealing horses, and fired upon them, killing them both.

The *Colonization Herald* says, about 600 applications have been received by the Pennsylvania Colonization Society, for a passage in the expedition to sail on the 1st of June next from Savannah, of whom the great majority are slaves who are to be emancipated for the purpose.

The Quebec *Colonist* says that an action of damages for $20,000 has been instituted against the Directors of the Turnpike Trust, on behalf of the orphan children of Cote, (six in number,) who was killed by the falling of the Suspension Bridge, at Montmorenci Falls.

The firm of Coleman & Stetson, of the Astor House, New York, has been dissolved, and the business passed into the hands of the junior partner, C. A. Stetson. This course was rendered necessary by the pecuniary embarrassments of Mr. Coleman, growing out of heavy endorsements for his brother, A. B. Coleman, of the Burnett House, Cincinnati, a portion of which were not honored at maturity.

Amos B. Corwin, of New York, formerly Consul of Panama, has been appointed by the President a Commissioner to proceed to Panama to inquire fully and take testimony relative to all the facts connected with the recent massacre and robbery of Americans there. He will sail on the 20th, and will be joined at Panama by Minister Bowlin, from Bogota.

The Rev. S. Moody, Presbyterian Minister at Ashland, Ohio, was drowned at Welsville a few days ago, by the upsetting of a skiff, in which a party were crossing the Ohio. The skiff contained five persons, among them a daughter of Mr. Moody. She was saved by the buoyancy of her clothing. A ferryman was drowned.

Six pressmen—three of them from the N. Y. Daily Times office sailed for England recently in the steamship Ericsson. They go to London to teach "our cousins" there how to work Hoe's six-cylinder lightning press, one of which has been purchased by the proprietors of a London weekly.

The Dubuque (Iowa) *Express* has commenced publication on Sunday morning, with no issue on Monday, after the fashion of the New Orleans papers. The editor offers up a rejoicing that the printers in the establishment will henceforth have their Sundays to themselves.

Mrs. Jerusha Palmer, for many years publisher of the Mount Holly (N. J.) Mirror, and mother of V. B. Palmer, of Philadelphia, died in Mount Holly recently. She was 90 years of age, and was with one exception the oldest resident of Mount Holly.

Private letters from Ancona, Italy, dated 2d of April, state that Mr. Fillmore was there, en route from Rome to Venice, and expressed a determination to visit St. Petersburg, now that peace was declared, before returning to the United States.

A dispatch dated St. Louis, Thursday, May 15th, says: The City Hospital was destroyed by fire to-day, and several of the inmates were burned to death, and others seriously injured.

The property of the Brick Church, corner of Nassau and Spruce sts., New York, was sold at auction on the 13th of May, and brought $270,000, of which the city gets one quarter.

In Memphis, Tenn., a few days ago, two men were shot by a Mr. Conner—one of them in a quarrel about a parrot, and the other while attempting to arrest Conner.

A dispatch dated Philadelphia, Thursday, May 15th, says: Four of Dupont's Powder Mills, at Wilmington, were blown up at 5 o'clock this afternoon, and three men killed.

New York Markets—May 19, 1856.

Ashes—Pots $6 00, Pearls 7 50.

Flour and Meal—Flour 5 50 a 5 75 for common to good State, 5 00 a 7 00 for various grades of Ohio, Michigan, Indiana, Illinois, and Wisconsin, 6 87 a 8 50 for extra Genesee. Rye Flour 3 25 a 4 62. Corn Meal 3 00 for Jersey.

Grain—Wheat 1 40 a 1 80 for white Southern; the range for all kinds is 1 30 a 1 60 for red, 1 50 a 1 80 for white. Rye 70c. for Southern, 80c. for Northern. Barley 1 15 a 1 26. Oats 33 a 36c. for Jersey, 37 a 39c. for State, 40 a 42c. for Ohio. Corn 58 a 60c. for yellow and white Southern. White Beans 2 25 a 2 50 per bushel.

Provisions—Pork 15 50 for prime, 19 50 for mess. Beef 7 50 a 8 00 for country prime, 8 00 a 9 50 for country mess. Lard 11 a 11¼c. Butter 13 a 17c. for Ohio, 14 a 20c. for common to very good State, 21 a 23c. for prime and choice. Cheese 6 a 10c.

Hay—75 a 87c. per 100 lbs.

Apples—2 25 a 3 50 per bbl. for Spitzenbergs, 2 50 a 3 00 for Russets, 1 50 a 2 50 for Greenings, 3 50 a 4 00 for Northern Pippins.

Potatoes—1 00 a 1 25 per bbl. for Western reds and Pinkeyes, 1 50 a 1 87 for Jersey Mercers, 2 25 a 2 50 for Jersey Carters.

MARRIED,

On the morning of the 10th inst., by Eld. A. W. Coon, Mr. J. BENNET CLARKE to Miss EUNICE L. ALVORD, all of Scott, Cortland Co., N. Y.

DIED,

In West Edmeston, N. Y., May 9th, EBENEZER EASTMAN, in the 59th year of his age. Twelve months since Mr. Eastman consulted the physicians about a small rupture upon his lip. They pronounced it a cancer. For a short time he was encouraged to hope that he might be cured, but every effort to stop the progress of the disease proved ineffectual. He had not made a public profession of religion before the disease fastened upon him, but as he gave up his business, he confessed his wanderings, and prayed for reconciliation to God. His protracted suffering he bore with Christian patience, and we trust he has gone where the weary are at rest. L. M. C.

In South Brookfield, N. Y., May 12th, of consumption, HELLEN M. CLARKE, aged 19 years.

LETTERS.

G R Lanphear, V C Chapman, W H H Coon, Judah Simons, K C Barber, Charles Vars, Isaiah R Maxson, J F Randolph, Albert Babcock, Daniel P Williams, Abram Coon, Z M Heritage, J B Cottrell, J C Green, H W Stillman, G R Wheeler, Benjamin Stelle, A M West, A W Coon.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

Mrs K C Barker, Newport, R I	$2 00	to vol. 13	No. 52
J A Champlin, Dorrville, R I	2 00	13	39
G R Lanphear, Brand's Iron W'ks	2 00	12	39
Wm H H Coon, Utica, Wis	6 00	12	52

BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Mountain Glen Water-Cure.

THE MOUNTAIN GLEN WATER-CURE, Plainfield, N. J., A. UTTER, Physician and Proprietor, is now open for the reception of patients.

Persons wishing circulars can be supplied at the *Recorder* office, or by addressing DR. UTTER,
Plainfield, N. J.

New Jersey Railroad.

FOR PHILADELPHIA and the South and West, *via* Jersey City—Mail and Express Line. Leave New York at 8 and 11 A. M. and 4 and 6 P. M., $3; 12 M., $2, stopping at all way stations. Through tickets sold for Cincinnati ($17 and $18 50) and the West, and for Baltimore, Washington, Norfolk, &c., and through baggage checked to Washington in 8 A. M. and 6 P. M. J. W. WOODRUFF, Ass't Supt.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

For Philadelphia,

BY THE CAMDEN AND AMBOY RAILROAD, from Pier No. 1 North River, foot of Battery place. The Camden and Amboy Railroad line for Philadelphia will leave as follows:

Morning line—at 6 o'clock A. M., daily, (Sundays excepted,) by the steamboat JOHN POTTER, Capt. John Simpson, for South Amboy; thence by the cars and steamboat to Philadelphia. Fare by this line $2 25.

Afternoon Express line—at 2 o'clock P. M., daily, (Sundays excepted,) by steamboat JOHN POTTER, stopping at Jamesburg, Hightstown, Bordentown, and Burlington, arriving at Philadelphia about 6½ o'clock P. M. Fare by Express line $3.

Returning, passengers will leave Philadelphia at 6 A. M. and 2 P. M.

Accommodation and Emigrant lines at 1 and 4 P. M.

1 o'clock line—first class passengers $2, second class passengers $1 50.

4 o'clock line—first class passengers $2, second class passengers $1 75. IRA BLISS, Agent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Miscellaneous.

Agricultural Proverbs.

Proverbs abound in all languages. They are the world's history of human nature. More moral and mental philosophy is often contained in one trite proverbial saying, than in ten sermons or dissertations. The common sense and experience of nations of men for hundreds of years is sometimes crystalized in a dozen words. A proverb is thus a moral power in the world. The wisdom of a whole age is gathered in a single focus, and the next generation kindle their fires at its light.

The majority of proverbs have an application to universal humanity; while others are significant only within a narrower sphere, and among a single class of men. Every trade and profession has its proverbs, which blossom and cluster only upon its own boughs, and can nowhere else be found. But of all the pursuits of men, there is no other so rich in its store of 'old sayings' as agriculture. It was the first occupation of man, and it is still the most universal; and by bringing all those who have pursued it into the presence of nature—which is vastly more suggestive than art, and everything but *human nature*—it has yielded a store of proverbs, greater in abundance and richer in quality than those of any other department of industry, and inferior only to the great stock which belongs equally to all men.

Agricultural proverbs and their history might be made to fill volumes. In this place our largest limits will permit us to present but few.

Proverbs concerning the weather are numerous, and are among the earliest of such sayings which have been recorded. They not unfrequently occur in the Sacred Scriptures. In the book of Job, which is supposed to have been the earliest of all books, allusion to the sky, the rain, the wind—the weather, and everything affected by it—are to be found in almost every chapter. Thus: 'Out of the south cometh the whirlwind, and cold out of the north;' also the following, 'Fair weather cometh out of the north.' Our Saviour, in speaking to the Pharisees, quotes one of their own proverbs against them: 'When it is evening, ye say it will be fair weather, for the sky is red. And in the morning, it will be foul weather to-day, for the sky is red and lowering. O ye hypocrites, ye can discern the face of the sky; but can ye not discern the signs of the times?'

But those now in most frequent use are of modern date, and of a more practical character. We say, 'If grass looks green in January, it will look worse all the rest of the year;' and in the same spirit, 'All the months of the year curse a fair February.' Many of these proverbs have been fashioned in the mould of rhyme, as:

> 'If there be neither snow nor rain,
> There will be dear all sorts of grain.'

The following is another:

> 'Look at your corn in May,
> And you'll come weeping away.
> Look at your corn in June,
> And you'll come with another tune.'

There are proverbs which relate to the soil. 'It's lost labor to sow where there is no soil.' A practical test of land is given in the following, 'It's a bad soil where no flowers will grow.' It might also be said, that a man will be likely to have a bad farm who has no flowers in his garden. The following, from Job, while it cannot be called a proverb, contains much of the truth, and partakes greatly of the character of such a saying: 'Can the rush grow without mire? Can the flag grow up without water? While it is yet in its greenness, and not cut down, it withereth before any other herb!'

The following illustrates the necessity of work: Where wilt thou go, ox, that thou wilt not have to plow?' 'In all labor there is a profit; but the talk of the lips tendeth to folly,' is from Solomon. A more delicate statement of the same truth is thus given: 'Even the ripest fruit does not drop into one's mouth.' The dignity of those who think they are 'too good for their work,' will perhaps be pricked with this fine point of satire: 'If I am master and thou art master, who shall drive the asses?' or, as it is sometimes given, 'You a lady, and I a lady, who shall drive the hogs a-field?'

Every farmer should seek sufficient independence to supply his own necessities, for it is well known that 'who goes a borrowing goes a sorrowing.' Solomon advised the same: 'Drink waters out of thine own cistern, and running waters out of thine own well.' (Prov. v.: 15.) The following beautiful passage, from the same inspired pen, should be always fresh in the mind of every tiller of the soil: 'Be thou diligent to know the state of thy flocks, and look well to thy herds; for riches are not forever; and doth the crown endure to every generation? The hay appeareth, and the tender grass showeth itself, and herbs of the mountain are gathered. The lambs are for thy clothing, and the goats are the price of the field. And thou shalt have goat's milk enough for thy food, and for the food of thy household, and for the maintenance of thy maidens.' (Prov. xxvii: 23–27.)

Diligence is inculcated in a familiar proverb which had birth among the old English husbandmen: 'Make hay while the sun shines.' It is thus expressed with its reward: 'Plough deep while the sluggards sleep, and you shall have grain to sell and to keep.' Solomon says: 'He that soweth in summer is a wise son; but he that sleepeth in harvest is a son that causeth shame.' The power of persevering effort is given in the following, which is everywhere quoted: 'Little strokes fell great oaks.'

'The rolling stone gathers no moss,' hints at constancy and patient continuance at labor; as also the two following: 'It is easier to build two chimnies, than to keep one in fuel.' 'It is hard to make an empty sack to stand straight.'

What young lad has not been complimented on his growth in the following terms: 'Ill weeds grow apace,' or, 'Fools grow without watering?' A similar proverb runs thus: 'More grows in the garden than the gardener ever sowed.' But the wheat need not be overpowered by the tares, 'For whatsoever a man soweth, that shall he also reap. (Gal vi. 7.)

Solomon's picture of the slothful man has passed into a proverb: 'I went into the field of the slothful, by the vineyard of the man void of understanding; and, lo! it was all grown over with thorns, and nettles had covered the face thereof, and the stone wall thereof was broken down. Then I saw and considered it well; I looked upon it, and received instruction. Yet a little sleep, a little slumber, a little of the folding of the hands to sleep. So shall thy poverty come as one that traveleth, and thy want as an armed man.' (Prov. xxiv, 30–34.)

Stage-drivers and cartmen in the city, no less than farmers in the country, should remember that 'a merciful man is merciful to his beast.' Another saying in the same tone is: 'He who greases his wheels helps his oxen.' Also another: 'It is not the burden but the over burden that kills the beast.'

An abusive use of wealth has suggested the following: 'When you grind your corn, give not the flour to the devil and the bran to God.' Solomon has also a proverb on the same subject, but of a different temper: 'He that withholdeth corn, the people shall curse him; but blessings shall be on the head of him that selleth it.'

The command was given to the ancient Hebrews: 'Thou shalt not muzzle the ox that treadeth out the corn;' and God designed that these words should have a wider and more significant application than to the 'ox that eateth grass.' They are reproduced in the New Testament: 'The laborer is worthy of his hire;' which means no less than 'good measure, pressed down, shaken together, and running over.' It has been thought that their spirit is violated and outraged in these latter days by the prejudices of 'peculiar institutions.' The prophet describes this class of oppressors, and thus denounces the nation that does not rebuke them: 'The Lord hath sworn by the excellency of Jacob, surely I will never forget any of their works. Shall not the land tremble for this, and every one mourn that dwelleth therein? And it shall rise up wholly as a flood; and it shall be cast out and drowned, as by the flood of Egypt.'

The following is the utterence of justice and generosity: 'Remove not the landmarks, and enter not into the field of the fatherless.' Prudence devised these: 'Buy what thou dost not need, and thou shalt sell thy necessaries.' 'Not to oversee your workmen is to leave to them your open purse.' To the latter a different turn is thus given: 'The eye of the master will do more work than both his hands.'

Good luck gives a sagacious wink in the following: 'Now that I have a sheep and cow, everybody bids me good morrow.'

The French proverb, 'It is easy to go a-foot when one leads his horse by the bridle,' admirably hits a kind of willing condescension which some men mistake for humility.

Here is one of the most admirable of the Chinese proverbs: 'Tie not thy shoe in a field of melons, nor adjust thy cap under a plum tree.' We remember a time in our earlier days, when we would have been vastly profited by this proverb in the following form: 'Pick not up chestnuts from thy neighbor's tree, or he will surely set his dog upon thee.'

Both the following proverbs look out steadfastly for 'number one': 'Every man draws the water to his own mill.' 'Better a grape for me than two figs for thee.'

Early rising for early labor has this reward: 'The morning sun has gold in its mouth.'

A neglectful farmer will ruin his farm: 'As the man is worth, his land is worth.'

Idle speculations for the future, without endeavor in the present, have this fruition: 'He that builds castles in the air shall soon have no land. Such a faith in the future, however, as is implied in another proverb, is noble and generous: 'He that plants trees loves others besides himself.' Who has ever passed through Northampton, and seen the stately elms planted more than a century ago by Jonathan Edwards, without feeling that a man who provides for the summer shade of other generations, is a true lover of mankind.'

The number of proverbs which recognize the existence and power of the Creator, and the workings of Divine Providence, is remarkable. They are to be found not only in the Scriptures, but out of them. It is a current saying, 'No leaf moves but God wills it.' The Scriptures similarly declare that not a sparrow falls to the ground without the notice of our Heavenly Father, and that the hairs of our head are numbered. The revelation of God in nature is beautifully expressed in Job: 'Ask the beasts and they shall teach thee; and the fowls of the air and they shall tell thee; and the fishes of the sea shall declare unto thee. Who knoweth not in all these that the hand of God hath not wrought this?'

Among the sayings of Solomon is the following, which might fittingly close any collection of agricultural proverbs: 'Honor the Lord with thy substance, and with the first fruits of all thine increase; so shall thy barns be filled with plenty, and thy presses shall burst out with new wine.' [Independent

Peeps into a Bee Hive.

There is nothing from the Master Hand, untouched by man, however small and insignificant it may seem to some, but is worthy of our careful study and investigation. We forget that the minute insect, or the worm upon which we tread with loathing and disgust, was framed and received the breath of life by the same Infinite Wisdom which created and animated us. They are governed by laws which they observe far more scrupulously than man does the laws which ought to govern him, even aided as he is by reason, a power they are not supposed to possess. We have no doubt that all the lower orders, even to the tiniest of them all, enjoy their little life, and contribute to carry out the general plan. If we studied them more, and became more familiar with their habits, we should lose all repugnance to them, and perhaps find lessons of value for every-day life in many of their works and ways. Let us see!

On the 17th day of July last, we placed in our dining room window an observing bee hive, constructed of glass, so that all the operations of the bees could be plainly and conveniently seen. A comb about a foot square was placed in it, containing some bread, with plenty of workers and drones, but without the queen bee. The hive was then carefully observed by one of the ladies of the family, who has given us the following account of their doings.

The first business the bees attended to, was in commencing the cells for a queen, and they prosecuted it with energy for two days. At the end of that time, a queen was taken from another colony and placed with them, upon which they pulled down the cells they had made in less than half the time it had required to construct them, and then began to piece out and repair the comb, which needed a corner. The queen at once commenced laying, and soon filled the unoccupied cells, when she was again removed, and the bees once more began the construction of queen cells.

The unhatched bees now began to come forth, and in two weeks the family increased so fast as to make it necessary for them to prepare to emigrate. So they built six queen cells, and in about twelve days the first queen was hatched. As soon as she was fairly born, she marched rapidly, and in the most energetic manner, over the comb, and visited the other cells in which were the embryo queens, seeming at times furious to destroy them. The workers, however, surrounded her and prevented such wholesale murder. But for two days she was intent upon her fell purpose, and kept in almost continuous motion to effect it. On the fourteenth day the second queen was ready to come out, peeping and making various noises to attract attention.

A part of the colony then seemed to conclude that it was time to take the first queen and go, but by some mistake she remained in the hive after the swarm had left. The second queen came out as soon as possible after the others had gone, and then there were two in the hive! Several minutes elapsed before it seemed to be known that she was left, and the two queens ran about the comb, which was now nearly empty, so that they could be distinctly seen. But they had not apparently noticed each other, while the workers were in a state of great uneasiness and commotion, seeming impatient for the destruction of one of them; and the mode they adopted to accomplish it was of the most deliberate and cold-blooded kind. A circle of bees kept one queen stationary, while another party dragged the other up to her, so that their heads nearly touched, and then the bees stood back, leaving a fair field for the combatants, in which one was to gain her laurels, and the other to die! The battle was fierce and sanguinary. They grappled each other, and like expert wrestlers, strove to inflict the fatal blow, by some sudden or adroit movement. But for some moments the parties seemed equally matched—no advantage could be gained on either side. The bees stood looking calmly on the dreadful affray, as though they themselves had been the heroes of a hundred wars. But the battle, like all others, had its close; one fell upon the field, and was immediately taken by the workers and carried out of the hive. By this time, the bees which left, made the discovery that their queen was missing, and although they had been hived without any trouble, they came rushing back, but not in season to witness the fatal battle, and the fall of their poor slain queen, who should have gone forth with them to seek a future home.

There was evidently sore diappointment in this result, for when they realized their loss, they uttered piteous cries, and for a day or two "refused to be comforted," wandering about, apparently without object, and in great confusion.

The hive was now crowded again almost to suffocation, and after a few days' uneasiness the bees all left and lighted on an apple tree near the window, from whence they were jarred off and the queen and a half pint of the bees returned to their old quarters, where they are to-day, August 30, doing well. A small colony made in July, was now brought forward, and after sprinkling it as well as the bees from the house with peppermint water, so that they might be all of one odor, the two strange colonies were mixed, and have continued to go on harmoniously together.

[N. E. Farmer.

Melons, Cucumbers, &c.—How to Plant.

For several years past we have invariably succeeded in getting an excellent crop of melons, cucumbers, squashes, &c. We first look out for a good supply of seed, say ten times as much as would be needed, if every seed could be insured to grow, and there was no danger of the young plants being cut off by bugs. Instead of planting a few seeds in hills at the distance they would ultimately be required to grow, we have put in a large quantity over the whole ground; so that at first we have had a hundred plants where only one was needed. Sometimes we have had a plant come up on every two inches over the whole bed.

As fast as the expanding leaves of the vines *interfere with each other*, we cut off the *weaker* ones with a pair of shears, so as not to disturb the roots of those remaining. The "bugs" have always materially assisted in the thinning process, but we have never failed to find twice or thrice the needed number of plants entirely untouched. When beyond the reach of danger from insects, all the weaker plants are removed; and a solitary vine left here and there has been enough to cover the ground.

The same ground will yield much better by having the vines at equal distances from each other, than if two or three are left together in the same hill, since the roots have more room to grow, and they find a greater amount of nourishment when thus isolated. The fruit will also be more solid, and of better quality.

It should also be remembered that air and light are essential to the growth and maturity of the fruit; and it is better to occasionally cut out a thrifty plant than that the ground be too densely covered. Just vines enough to thinly cover the ground will produce better than double the number. [N. Y. Times.

How to Secure Good Radishes at Small Cost.

Those not devoting especial attention to raising radishes usually find it difficult to secure a good crop of nice tender roots. We have had an abundance of radishes at all seasons, and that, too, without devoting a foot of ground to their special cultivation. As soon as our garden has been plowed or spaded, we sow over it a small quantity of radish seed, broadcast. The subsequent working and planting of the soil buries these seeds, and as they come up we destroy them as we would weeds, where there is not room for them to grow. But there is always some space between rows or hills of other vegetables, where several plants may be allowed to remain till large enough to pull up for the table. Wherever there is any spare room we scatter a few seeds when hoeing over the ground to kill weeds. This practice we follow up all through the Summer, and a single shilling's worth of seed, thus sown in small quantities, every time we have gone into the garden to work, has furnished us an abundance of young and tender radishes at all times. When early peas come to maturity, we have young beets or radishes growing up on the ground occupied by them, from seeds which were sown during the last hoeing they received.

It is well known that on many soils radishes do not grow well, but by our plan of scattering them in every part of the garden, we have always hit upon some spots just suited to produce the nicest roots. Where they happen to be in the way of other vegetables, or where they produce tough, strong bulbs, we cut them down with the hoe and cover them with earth, and they aid to enrich the ground. Thus used, a comparatively small amount of seed will yield a satisfactory and economical supply. [N. Y. Times.

Alfred Highland Water-Cure.

The erection of this establishment was commenced in October last, and completed ready for the reception of patients in the latter part of December. It is located upon an eminence, five miles from Hornellsville, which has a commanding view of a large extent of the surrounding country. It is supplied with pure, soft, spring water, and has accommodations for 25 or 30 patients. The building is 50 by 50 feet, the first story, the attice 25 by 30 feet. The air in this region is pure, bracing and refreshing. The benefit of such air and water are essential aids in restoring the sick and feeeble to health, which, in connection with the advice and treatment of a skillful physician, holds out inducements to those suffering with disease seldom to be met with.

Prof. Burdick, the proprietor and physician of this establishment, is a gentleman whose reputation as a successful practitioner stands unrivalled within the circle of his acquaintance, both as a physician and surgeon, and the inducements which his "Cure" holds out to the afflicted, when understood, will no doubt render it a favorite place of resort.

Connected with his establishment is a Dental Shop, which is filled up on an extensive scale with all the necessary implements and conveniences for the successful execution of this particular branch of his profession, and in which he appears highly proficient.

As exercise is one of the salutary restoratives to health, it will be seen by his advertisement that those of his patients who may be able, and wish to engage in farm or garden work can be accommodated, and compensated therefor, thus affording an opportunity to diminish expenses and at the same time put in practice one of the important requisites to the more rapid restoration of health.

[Hornellsville Tribune.

About De Quincey.

It is related, as an instance of De Quincey's carelessness in money matters, that, having been once arrested for a dept of twenty pounds in Edinburg, he was dragged to jail, where he remained for two weeks. During the period of his incarceration his daughter frequently visited him, and one day brought him a new waistcoat, the one he then wore being somewhat shabby. After De Quincey had taken off his old vest, his daughter carelessly examining the pockets discovered a bank note for thirty pounds, of the existence of which her father had no knowledge whatever, and with which, of course, the twenty-pound debt was instantly discharged.

De Quincey when he writes, flings each sheet as soon as finished over his shoulder, and never sees them again. His daughters gather up the scattered leaves, arrange and correct them, and hawk them among the magazine editors for sale.

For a long time De Quincey's nervousness from opium was so great that he was obliged to walk fourteen miles a day in order to procure two hours sleep at night. The way in which this was accomplished was curious. The dreamer had a mile measured on a neighboring road, and at one extremity placed a heap of seven stones. When the journey was to commence De Quincey took up a stone and carried it to the other end of the mile, then returned for another, until the pile was exhausted. This necessity of carrying the stones prevented De Quincey from forgetting the number of miles he had walked, which would otherwise be highly probable.

[N. Y. Times.

Discovery of a Remarkable Cave.—The El Dorado County Journal gives an account of a cave which has been discovered on the middle fork of Consumnes river, which has been explored a distance of some sixty feet from its mouth. About thirty feet from the entrance is a chamber about ten feet in diameter, decked with pendants, and studded by projections in the most fantastic and picturesque forms. From the roof hang stalactites—some resembling icicles, three and four feet long, and others the fins of fish; in the center is a stalagmite, resembling a parlor stove of modern size, very regular and handsome, with pipe attached, extending to the roof.

On one side is a resemblance of a mirror, reaching from floor to roof, slanted a little forward, as if just arranged for the toilette of some coquette; a raised rim is moulded round the mirror, giving it a very exact appearance of glass and frame. In another chamber, about eight feet in diameter, there are hung, as if placed there with the greatest care by the hand of man, large bunches of fruit, a near resemblance to fruits from all quarters of the known world. There can be seen the pine apple, apple, peach, orange, lemon, grape and many others. The curiosities are composed of carbonate of lime.

A Valuable Hint to Builders.—The Scientific American publishes the following suggestion from a correspondent, and endorses it as sound and reasonable advice. We venture to say it is worth more than five dollars, to any man who is about to build a house in our cold latitude:

"This cold winter brings to mind a matter connected with the building of houses which I do not remember ever to have seen in print, and which if generally known is seldom practiced. It is this: in any cold climate, cellar walls of houses should never be filled in with loam or clay, or earth that retains much moisture, because the frost expands it, and it exerts a great pressure upon the walls, tending to thrust them out of position. The effects of this are seen in the many cracked walls; the breaking of window and door sills and lintels; unjointed verandahs; and windows and doors rendered incapable of opening or closing, &c. In our New England States, this costs us many thousands of dollars yearly, all of which may be saved by filling in a few inches of sand or clean gravel next the walls."

Activity of Birds.—The activity and industry of birds when they have young is most surprising. A gentleman in England, who had for some days watched the operations of a pair of tit-mice while feeding their little brood, gives the following as the result of his own observations: The parent birds began their labor of love at half past three in the morning, and did not leave off till after three o'clock in the evening, after being almost incessantly engaged for nearly seventeen hours. Mr. Wier counted their various returns to the nest, and found them to be four hundred and seventy-five. Up to four o'clock, as a breakfast, they fed twelve times; between five and six, four times, and they contined at their work till the time specified, sometimes bringing in a large caterpillar, and at other times two or three small ones. The Germans are the finest appreciators of birds. It is a fact, that when the Prussian authorities, under pecuniary pressure, were lately about to cut down certain trees near Cologne, which were frequented by nightingales, the alarmed citizens purchased the trees in order to save the birds and keep their music.

Shearing Sheep by Machinery.—The Scientific American announces the fact that a Michigan Yankee, by the name of Palmer Lancaster, who lives in Burr Oak, in that State, has invented a machine to shear sheep, and which will probably put the old sheep-shears out of sight. It thus gives its operation:

"The machine, which is small and neat, is hung by a strap to the arm of the operator, and placed on the body of the sheep to be shorn. Then by simply turning a handle back and forth, and moving the machine over the body of the sheep, the wool is made to fly off in double quick time. It is well-known that the most experienced hands at sheep-shearing do not cut the the fleece even; and besides, the skin of the animal is invariably clipped out by the shears in many spots. This instrument cuts the fleece rapidly and evenly, never cutting any part of the fleece twice, and it avoids cutting the skin of the animal. It is therefore a humane, as well as a labor-saving contrivance.

Experiments with Cast Iron.—The interesting fact is developed by experiments of the U. S. Ordinance Department, that iron, by repeated fusion, up to a certain number of times, is thereby greatly improved in strength. Guns cast solidly, and those cast hollow, through which latter water was made to circulate after casting, showed an astonishing difference in their relative strength, the difference being in favor of the hollow-cast gun, which is attributed to the method of cooling; the solid gun, contracting from the outside, exerting a strain upon the arrangement of the particles of the metal in the same direction as the strain of the discharges. The experiments also showed that old castings are a great deal stronger than new. Eight-inch guns, proved 30 days after being cast solid, stood but 72 charges; 34 days, 84 charges; 100 days, 731 charges; and 6 years, 2,582 charges. This phenomenon is accounted for by supposing that particles strained in the cooling re-adjusted themselves in the course of time to their new position and become free, or nearly so. These are important facts for engineers.

VARIETY.

In the Rolls of Parliament, A. D, 1445, is a petition from the Commons of two counties, showing that the number of attorneys had lately increased from 6 or 8 to 24, whereby the peace of those counties had been greatly interrupted by suits. The Commons therefore petition, that it may be ordained that there shall be no more than six common attorneys for Suffolk, six for Norfolk, and two for the city of Norwich. Any other person acting as an attorney to forfeit twenty shillings.

Mr. D. H. Thompson, of Fitchburg, Mass., has invented a self-loading hay-cart. It consists in the employment of rakes applied to a cart or wagon, in connection with an inclined frame, operating in such a way that the hay will be raked up and loaded into the cart or wagon by merely drawing the vehicle or wagon over the meadow. Truly, the march of improvement is onward. The next contrivance, perhaps, will be a self-moving barn, that goes into the field, fills itself with hay, and then returns to its foundation.

The ancients knew but seven metals—gold, silver, iron, copper, mercury, lead and tin. Antimony was first discovered by Bazil Valentine, in 1490, and that by accident, while following his alchemical pursuits. Bismuth and zinc in 1530; while from 1733 to the present period, there have been found no less than forty-nine new metals by chemical research. These are known to be distinct in identity and characteristic from each other.

Dr. Jasper Main, who lived in the reign of James I., of England, was celebrated as a scholar and a wit. He displayed through life a strong propensity to joke. Just before he expired, he told his servant, who was sadly addicted to intemperance, that he had left him something that would make him drink. The servant, as soon as his master was dead, impatiently opened the legacy, expecting of course to find a heap of treasure; but, alas! his disappointment was great in finding nothing but a red herring!

Why should a young man fail? If he be honest, if he be honorable, if he be ardent, if he be energetic, if he be gifted with mental powers, if he be right in soul and strength, he should never fail; and if any alluring temptation whispers in his ear words that make him turn aside, let him revert to that bright lexicon, and never fail.

An exchange paper says: "A clergyman at the South, in sending a sermon for publication in the National Preacher, observes incidentally—'I should have no objection to your obtaining for me the degree of D.D. from some Northern College. I am a very popular man at the South, and I think it would have a tendency to harmonize the North and the South.'"

A man of a highly intellectual capacity seldom has much physical strength; but with the Pen and Press as his weapons, he accomplishes more than a thousand bullies with all their various pugilistic instruments of warfare.

Sir William Temple says: "The greatest pleasure of life is Love; the greatest treasure is Contentment; the greatest possession is Health; the greatest ease is Sleep; and the greatest medicine is a true Friend."

The difference between a school-master and an engine driver is, that one minds the train, and the other trains the mind.

"It is not the place," said Cicero, "that maketh the person, but the person that maketh the place honorable."

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—SPRING ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 5 10 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 5 P. M.

Leave Plainfield for New York at 6 30 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annnm in advance.
$4 if not in advance.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many *of them produce so much* griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no *irritation or pain, unless* it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

GENERAL ASSEMBLY SERMONS.

The two General Assemblies of the Presbyterian Church—Old School and New School—commenced their sessions in New York on Fifth-day, May 15. To the Old School Assembly there were about 240 delegates, and to the New School about 170. Each Assembly was opened with a sermon—that before the Old School being delivered by Rev. Dr. Rice, of St. Louis, and that before the New School by Rev. Dr. Wisner, of the Presbytery of Niagara. We copy the report of these discourses which we find in the *New York Daily Times*:—

Dr. Rice's Discourse.

His text was taken from the 2d Epistle of *Paul to Timothy*, 4th chapter, first and second verses.

"I charge thee, therefore, before the Lord Jesus Christ who shall judge thee quick, and the dead at his appearing in his kingdom, preach the Word."

He began by stating, as introductory to what he had to say on this important subject, the three following truths:

1st. That all true religion is obedience to God's revealed truth. 2d. That the principal means ordained of God for the propagation of his truth, and the evangelization of the world, is preaching. 3d. That the preaching of the word is a work of great responsibility and difficulty. This was sufficiently indicated by the very solemn admonition given by Paul to his son Timothy, in the words just quoted.

The subject to which he would ask attention on this occasion was, the Preaching of the Word, which naturally divided itself into two parts—the first had relation to the matter of preaching, the second to the manner.

In regard to the first there was no difference of opinion among them. The Bible contained the whole Gospel of God, and the faithful minister must preach the whole Bible, without addition, subtraction, or alteration. The second point, viz. as to the manner of preaching the Word, was one of great importance. The preaching of the Word should be exegetic and expository rather than philosophic. This was evidently implied in the phrase "preaching of the Word." Here arose the question, how far might the ministers of Christ allow their exposition of the Gospel to be influenced by scientific discovery, and particularly by theories as to the science of mind? The Gospel was corrupted and the Church was cursed before the Reformation by the introduction of the Pagan philosophy into the pulpit. And since the Reformation, France has been sunk into infidelity, and Germany into pantheism, from a commingling, in the same way, of a vicious philosophy with the preaching of the Word. It was to be considered, however, that the Word of God and the works of God are in harmony. Any discrepancy between the Book of the Gospel and the Book of Nature was only apparent, and arose from a misinterpretation of one volume or the other.

Again, the preaching of the Word—the faithful and sucessful preaching of the Word—required that human reason be kept within its legitimate limits.

Again, the Word of God should be preached literally—that is, the ministry of Christ should enrich its preaching with copious literal quotations of the Word of God. This was implied in the command, "Preach the Word." and constituted the greatest charm of the great preachers of the last century.

Again, the Word of God should be preached symmetrically. The Gospel was a great and beautiful whole. The prominent presentation of one or two doctrines or duties, at the sacrifice of all the rest, resulted in the production of a moral monster, just as a physical monster was formed by the deprivation of some limbs or features which, though small in themselves, were essential to the beauty of the whole. Some men declaimed against a particular sin or sins, believing that if the special object of their declamation, were accomplished, the millennium would surely follow. This was fanaticism, which is the soul's concentrating, upon a single point, the fears and affections and labors, that belong to the entire range of duty. Schism and mischief to the church must arise wherever such a state of things exist.

Again, the Word must be preached with deep and tender earnestness. A man never felt too much for a thing unless he felt more for it than the thing was worth. And who would say that the importance of the Gospel of Jesus Christ, and of man's eternal interests, could ever be over estimated?

The Word should be preached in faith—that is, the expectation of results—results in the edification of Christians and the conversion of sinners.

From these principles the following conclusions might be stated: First, the more purely the Word of God is preached, the greater is its power upon the minds of men. We saw, in the second place, the value of a rich Christian experience in the ministry of Jesus Christ; for without it how could there be either a clear perception of Divine truth, or the deep interest and earnestness of purpose which are so important, or the strong faith in the goodness and protection of God, which was absolutely essential. The ministerial work was one for the entire energies of each minister for his entire life; and lastly, if a great responsibility rested upon the ministers of Christ, there were corresponding responsibilities upon those who hear him.

Dr. Wisner's Discourse.

This discourse was a purely doctrinal one, setting forth the Calvinistic idea of Predestinarianism, as held by the members of this Church. In addressing the fathers and brethren who were now assembled together, Dr. Wisner said he proposed to avoid topics which bore special reference to the schism in the Church, and the circumstances by which that schism had been brought about, for the reason that many sermons had already been devoted to a consideration of these subjects; he proposed rather to unfold and apply a cardinal doctrine of the Calvinistic school. His text was found in Isaiah xlvi. 9 and 10:

"Remember the former things of old: for I am God, and there is none else; I am God, and there is none like me:

"Declaring the end from the beginning and from ancient times the things that are not yet done, saying, My counsel shall stand, and I will do all my pleasure."

These are the words of the great God, who cannot err, and who never changes. His counsel and purpose govern all. Every event which takes place in the universe occurs in pursuance of and in accordance with the eternal pleasure and counsel of God. By the eternal counsel of God, we understand that plan of operation which has always existed in the divine mind, and which is displayed in all the wonders of creation.

The speaker argued that as we willingly admit the controlling and governing power of God in all the phenomena of Nature, it is equally clear that we should admit the free moral agency of man under the control and foreknowledge of God. There are so many mysterious things in the history of free moral agents that we must admit they are under the control of God. He sends his Son and restores health to the suffering; he sets bounds which man cannot pass; he appoints the day of man's death. So we see God in history, and distinguish the finger of his power in the lives of Luther and Bunyan and John Knox; nor are we staggered at the doctrine which would lead us to believe that God called Cyrus, marked out the brilliant career of Alexander, and ordered the course of that wonderful man, the first Napoleon. Rev. Dr. adduced Scripture authority to establish this point. The first was that passage in the history of Joseph which describes his sale into slavery; he became a bondsman in Egypt, and by a series of events became elevated next the throne, and became the saviour of all Egypt and of his father's house. God meant that this should be so. And if he meant it, he meant it from eternity. A second passage was cited from Acts iv. 27, 28: "For of a truth, against thy holy child Jesus, whom thou hast annointed, both Herod and Pontius Pilate, with the Gentiles, and the people of Israel, were gathered together: for to do whatsoever thy hand and thy counsel determined before to be done." This reading every unprejudiced scholar and critic will admit is correct.

From this point, the Dr. proceeded to discuss the topic at length, dwelling with much stress upon the free moral agency of man, as governed and directed by Deity. If any being does as he pleases, he is a free moral agent, no matter what moves or governs his pleasure. So long as he acts according to his will, he acts freely, and is a free agent. But if any influence, physical or compulsory, compelling man to act against his will, is brought to bear, it destroys his free agency, or suspends it. Surely the certainty of an act cannot militate against the free agency of the actor. To God who sees the end from the beginning, no event is contingent; a contingency is not an event, but is owing to a want of a knowledge of a coming event. To the infinite mind all events are as certain as though they were already fulfilled; and if they are certain to God, they are certain in themselves. Events which seem to us uncertain are just as certain before they transpire as afterward; and yet this certainty does not interfere with free agency. A free agency must be employed before the accomplishment of the event can be brought about. They who question this doctrine confine the power of the Almighty to merely physical effects. According to them, man may use all agencies with more or less effect, but the Almighty is limited to one class, and that the physical only, which is the lowest. Such a theory tends only to degrade the Almighty and to exalt the finite above the infinite.

The Rev. Dr. then showed the consistency of this doctrine with the purity of God's character. The only difficulty which appears to stand in the way, is that which places God in the position of ordaining events which in themselves are sinful. It is asked how could God ordain the temptation by Satan, the eating of the forbidden fruit by Eve, the fratricide of Cain, without involving himself in the guilt of those acts. That God, in the use of instrumentalities, ever preferred to employ the agency of a wicked act to effect a good result, is no part of our doctrine, nor is it true that our faith leads us to a belief that his purpose was the perpetuation of wickedness. None do wickedly because they are compelled to do so against their will, but because they will to do so, rather than do otherwise. And God does not, in leaving men to act as they will, infringe upon the free moral agency of man. The eternal purpose of God is not to fix single isolated conditions, but to order a whole system of things. He comprehends the whole series of events from the beginning to the end, and orders the whole cycle of eternity. The Doctor followed out his line of argument to its natural conclusion, that the certainty of an event does not forbid the use of means, using as an illustration the facts which attended the shipwreck of Paul. In conclusion, he alluded with much feeling, to the sudden decease of Rev. Dr. Fuller, of St. Louis, who offered a cordial welcome to the Assembly at its session of last year in St. Louis. He was killed at the accident of the Gasconade Bridge some months since.

Early Conversions.—"Matthew Henry, it is said, was one of a large family of children, all of whom became Christians, they never knew when. The seed was sown upon the very soil of infancy, watered with the tears of parental intercourse, and from the first steps of childhood, their path seemed to be directly upward."

To Shake off Trouble.—Set about doing good to somebody; put on on your hat, and go and visit the poor; inquire into their wants and administer unto them; seek out the desolate and oppressed, and tell them of the consolations of religion.

BLESSEDNESS OF THE CHRISTIAN.

FROM THE GERMAN OF NOVALIS.

I.

When I can feel my Saviour mine,
  Mine by a sure, unchanging tie;
When on his promise I recline
  To guide and guard me till I die;
Little can earthly griefs annoy—
'T is all devotion, love, and joy.

II.

When I can feel my Saviour mine,
  Then dear my pilgrim's staff to me;
All meaner pleasures I resign;
  I follow where his smile I see;
Not mine to tread where thousands stray,
The noisy, broad, and crowded way.

III.

When I can feel my Saviour mine,
  How calm I sleep upon my bed;
The love that fills His heart divine
  Sheds sweet refreshing on my head;
His grace subdues me to obey
With all-pervading mildest sway.

IV.

When I can feel my Saviour mine,
  I own the world, for He's its King;
With angel-light my graces shine,
  While humbly to his robe I cling;
Wrapt in confiding, grateful thought,
The worldling's terrors scare me not.

V.

Where'er I feel my Saviour mine,
  There is my home, my fatherland!
The gifts Thou dost to me consign
  Come doubly precious from thy hand!
And Christian brotherhood imparts
Its union blest of loving hearts. Elakisteros.

THE AMERICAN BOARD.

A meeting in behalf of the American Board of Commissioners for Foreign Missions was recently held in New York, at which Rev Mr. Hood read the following gratifying statement:—

The missions under the care of the Board in whose behalf this meeting is held, have increased to 29: connected with which are 120 stations occupied by laborers from this country, and 60 out-stations, under missionary supervision, by native evangelists or pastors. Since the annual meeting in September, 7 ordained missionaries, 1 physician, 1 other male and 79 female assistant missionaries have been sent to the missions.

To the venerated names of Poor and Scudder, and younger brethren, are now to be added those of Whiting, for a quarter of a century wise, energetic and nnwearied in effort for the restoration of a living Christianity in Syria and the "Holy Land;" and the beloved Everett, whose pure minded and self-sacrificing zeal, for eleven years, in his Master's service among the Armenians of Turkey, assures us that he left these earthly scenes for "fullness of hope, fullness of joy, and fullness of glory."

The whole number of laborers from this country, in the Missions, is 409; consisting of 163 ordained missionaries, 26 unordained assistant missionaries, of whom 8 are physicians, and 220 female assistant missionaries. With these are associated 65 native preachers, and 227 other native helpers; making a total of 697.

Eleven printing establishments exist in the Missions; from which were issued, in the last year, about 26 million pages of the Word of God, and publications disseminating its truths. The educational operations of the Board are indicated by the 11 higher seminaries—an increase of two since Jan. 1855; 19 boarding-schools, three less than in 1854; and exclusive of the Sandwich Islands, 375 common schools, being 22 more than were reported one year ago. These contain a total of about 12,000 pupils; a diminution from various causes, and mostly in the common schools, of nearly 2000 from the report of 1854.

An addition during the year of 11 to the previously existing churches, and of 1487 to their former membership of 26,809, are facts full of encouragement. 66 of these churches have been formed within fifteen years; and the receptions into them all, during that period, exceed 31 000 souls; giving an average of more than 14 each year to each ordained missionary—a considerably higher average, it is believed, than the statistics of the religious denominations represented in the Board would show.

Twelve young men are under appointment as missionaries, of whom one-third are from beyond the Alleghanies. Several applications have not yet been acted on; and in our Seminaries and Colleges, and particularly from the West, the prospect in regard to missionaries is increasingly encouraging. But how few are the laborers! How plenteous the harvest and augmenting the need!

In China, the third and last era of *the dispensation of the Spirit* has commenced. During the year just reported, 83 persons, nearly all adults, and several of them above 50 years of age and attesting the sincerity of their profesion by persecution and loss endured, have, through the blessing of God on the labors of the two brethren of the mission of the Reformed Dutch Church under the care of the American Board in Amoy, been admitted to the Christian Church. Forty-three persons have also been received by English missionaries in the same city and vicinity in the same time; making an aggregate harvest, in one year, of twenty five fold more hopeful conversions than the devoted pioneer of Chinese missions, Dr. Morrison, was permitted to rejoice over during the whole twenty-seven years of his missionary life.

In two years, among the Armenians, sixteen evangelical churches have become twenty-five; the seven central stations of the mission are now fourteen; and a large addition has been made to every class of agencies employed. In Western Asia, in Syria, Assyria, and among the Nestorians, the leaven of the Gospel is spreading with great rapidity, and working with daily-augmenting power. New churches are on the eve of formation—soon, we believe to be, self-supporting and mission sustaining. The ordination has just occurred, at Aintab, of a pastor, whose entire support is assumed by that church. Two other churches are immediately to receive pastors of their own people; and a house of worship for one of them is promised by one recently a follower of the false prophet, and now a disciple of Jesus. Of intercourse with Moslems, spiritual results already developed, and a work to be done among them, the most animating accounts are furnished. Never will the Mohammedan mind bow to the idolatries of the paganized ecclesiaticism of the Oriental and Romish churches; but its tendencies towards evangelical Protestantism, lay upon us responsibilities of overwhelming magnitude.

OLD SCHOOL PRESBYTERIAN MISSION.

The Old School Presbyterians keep their missionary operations very much under the control of the General Assembly. At the recent meeting of that body in New York, the Board of Domestic Missions made the following report of operations during the past year:—

The number of missionaries in commission April 1, 1855, was 346, to which have been added to March 1, 1856, (11 months,) 220—making the whole number 566, and more by 41 than the year previous.

The number of Churches and missionary stations, wholly or in part supplied (as far as reported) by missionaries, is 943, and if all the stations were recorded, would reach 1,000. They are in twenty-six States, and in all the Territories except Utah, whither none have been sent.

The number of newly organized churches is 42.

The number of admissions on examination is 1,832, and on certificates 1,836, making a total of admissions of 3,668.

The number in communion with Churches connected with the Board is 22,916.

The number of Sabbath Schools is 332; of teachers, 2,443; and of scholars, 15,887.

The nnmber of baptisms is 217.

Of the 566 missionaries who have been in commission during the year, 187 have sent in no special report for the Assembly, nearly one-third of the whole number; consequently we must increase all the returns very nearly one-third, to make them correct.

The appropriations made to our missionaries from April 1, 1854, to March 1, 1856, have been at the office in Philadelphia, $50,103 34, and at the office in Louisville, 32,475 83; making a total of $85,129 17.

The apropriations made to missionaries from April 1, 1854, to April 1, 1855, were, at the office in Philadelphia, $48,785 42, and at the office in Louisville, 25,759; making a total of $74 494 42.

From this statement it appears that the appropriations made at the office in Philadelphia exceeded those made the year before, $2,967 92, and at the office in Louisville they were more by $7,666 83; thus making the total appropriations this year more than the year preceding, by $10,634 75.

The total amount of receipts from all sources, from April 1, 1855, to March 1, 1856, is $85,747 73, to which add balances on hand in the different treasuries, April 1, 1855, (less $320 95 withdrawn by Flint River Presbytery,) $16,223 34; making the available resources of the Board during the year, $100,971 07. Available balance in all the treasuries, March 1, 1856, $21,133 17. Amount due missionaries at same date, $13,226 54—leaving an unexpended balance of $7,906 63.

During the year the Board have established new Missions in various sections of our country. Three additional missionaries have been sent to California, 2 to Wisconsin, 1 to Minnesota, and 1 more to Oregon, 1 to Nebraska, and 1 to Kansas. Arrangements are made to send 1 additional missionary to Minnesota, and 2 to Kansas; 39 missionaries have been employed as itinerants. The receipts from the churches fell short of the payments upwards of $18,000. Seventeen hundred churches failed to contribute anything whatever to the cause of Domestic Missions.

GETHSEMANE.

Following now a path which turns a little to the south, at the distance of eight or ten rods beyond the bridge, we reach the north end of the garden of Gethsemane. The ground begins to rise here, and we stand at the western foot of Olivet. It is the spot above every other which the visitor must be anxious to see. It is the one which I sought out before any other, on my arrival at Jerusalem, and the one of which I took my last formal view on the morning of my departure. The tradition which places the agony and betrayal of the Saviour here has a great amount of evidence in its support. Eusebius, Bishop of Ceserea, who lived almost early enough to have taken by the hand some aged Christian who had seen the companion of the apostles, speaks of the garden as well known; and Jerome about fifty years later, repeats the same testimony, and describes the situation of the spot in accordance with the present locality. There is no proof that the tradition has ever wavered. The indications in the New Testament favor entirely the same view. When it is said that "Jesus went forth with his disciples beyond the brook Kedron, where was a garden," (John 18: 1,) it is implied that he did not go far up the Mount of Olives, but reached the place which he had in view soon after crossing the bed of that stream. The garden is named in that passage with reference to the brook, and not the mountain.

The place enclosed as Gethsemane contains about one third of an acre, and is surrounded by a low wall, covered with white stucco. It is entered by a gate, kept under lock and key, under the control of one of the convents at Jerusalem. The eight olive-trees here are evidently very aged; most of them, though they are still verdant and productive, are so decayed that heaps of stone have been piled up against their trunks, to keep them from being blown down by the wind. Trees of this class are remarkably long lived, and it is not impossible that those now here may have sprung from the roots of those which grew there in the days of Christ. Other olive trees, apparently quite as old occur just beyond the limits of the enclosure. It may be allowed that the original garden may have been more or less extensive than the present site, or have stood a few rods further to the north or the south; but far, certainly, from that spot it need not be supposed to have been. We may sit down there, and read the effective narrative of what the Saviour endured for our redemption, and feel assured that we are near the place where he prayed, saying, "Father, not my will, but thine be done;" and where, "being in agony, he sweat as is were great drops of blood, falling down to the ground."

"He bows beneath the sins of men:
He cries to God, and cries again,
    In sad Gethsemane;
He lifts his mournful eyes above—
'My Father, can this cup remove?'"

"With gentle resignation still,
He yielded to his Father's will
    In sad Gethsemane;
'Behold me here, thine only Son;
And, Father, let they will be done.'"

"The Father heard; and angels, there,
Sustained the Son of God in prayer,
    In sad Gethsemane;
He drank the dreadful cup of pain—
Then rose to life and joy again."

The garden has a reservoir, which supplies water for moistening the ground, and cultivating a few flowers. A series of rude pictures may be seen on the interior face of the wall, representing different scenes in the history of Christ's passion, such as the scourging, the mockery of the soldiers, the sinking beneath the cross, and the like. As I sat beneath the olives, and observed how very near the city was, with what perfect ease a person there could survey at a glance the entire length of the eastern wall, and the slope of the hill towards the valley, I could not divest myself of the impression that this local peculiarity should be allowed to explain a passage in the account of the Saviour's apprehension. Every one must have noticed something abrupt in his summons to the disciples—"Arise, let us be going; see, he is at hand that doth betray me," (Matthew 26: 46) It is not improbable that his watchful eye, at that moment, caught sight of Judas and his accomplices as they issued out from the eastern gates, or turned round the northern or southern corner of the walls, in order to descend into the valley. Even if the night was dark, he could have seen the torches which they carried, and could have felt no uncertainty respecting the object of such a movement at that unseasonable hour. This view is not necessary to the explanation of the passage, but it is a natural one, and supplies a connection between the language and the external circumstances, which augments exceedingly the graphic power of the narrative. [Hackett.

OLD BETTY.

"Have you never heard the story of old Betty?" said I to a friend, who was telling me some sad history of domestic discomfort.

"No!"

"Then let me tell it you. The story was told me by a young lady whom I met at the sea side; and though I believe it has appeared in print, I know no other version of it but the one she told me.

"Some years after I was converted," said Miss F., "it pleased the Lord to lay me aside from active occupation, and to confine me to a sick couch for full two years. This inactivity was very grevious to me, and my constant prayer was for restoration to health, and power once more to go about visiting the sick, and teaching the ignorant.

"When visited by kind Christian ministers and sympathizing friends, my constant request was that they would pray for my recovery, and that I might have faith to believe that the Lord would heal me.

"Still I grew no better. About the end of the second year, I one afternoon received a visit from a minister unknown to me, who in God's providence was then visiting the place where I lived. He read and prayed with me, he sympathized with my sufferings, and listened to my troubles. I lamented to him my weak faith, which I felt assured was the cause of my continued weakness of body.

"'Miss F.,' replied the minister, 'have you never heard the story of Betty, the old match-seller?' I had not. 'Old Betty,' said he, 'was brought to the knowledge of Jesus in her old age, and from the time of her conversion never thought she could do enough for Him who had loved her and washed her from her sins in his own blood. She went about doing good. She was ready to speak of her Lord and Master to all she met. She would nurse the sick, visit the afflicted, beg for the poor and for the heathen; she would give to those poorer than herself portions of what the kindness of Christian friends bestowed on her. In short, she always abounded in the work of the Lord. But in the midst of this happy course, she caught a violent cold and rheumatism, and was confined to her bed; where she lay day after day, and week after week, and, I believe, lay there till the Lord called her home. On her sick bed, Betty was as happy as she had been in her active duties; she was much in prayer—she repeated hymns and passages of Scripture—she meditated on the good things she had learned, and on the good land to which she was hastening. One day Betty was visited by an old friend, a minister, who had long known her. He was astonished to see his once active and useful old neighbor so happy in her bed, and he said to her, 'I little expected, Betty, to see you so patient; it must be a great trial to one of your active mind to lie here so long doing nothing.' 'Not at all, sir; not at all,' said old Betty. 'When I was well I used to hear the Lord say to me day by day, 'Betty, go here; Betty, go there; Betty, do this; Betty do that;' and I used to do as well as I could, and now I hear him say every day,' Betty, lie still and cough.'"

Miss F. told me this story as she heard it from her visitor, and she said it had a strong effect on her mind. She began to think that it was self-will, rather than faith, that made her so anxious to get well and be active again; and she humbled herself before God, begging for grace to bear his will, rather than seek her own. She became tranquil, happy and contented on her sick bed, and almost immediately after, it pleased the Lord to restore her to health, and continue her in it, to the time when I met her.

Martin Luther says, "Once I was bold to prescribe to God, and surely the Lord despised this arrogance of mine, and said, I am God, and not to be ruled by you."

So one of Luther's disciples, Anthony Ulrich, Duke of Brunswick, writes:

Trust in God!
Thou forlorn one, cease thy moan;
  All thy pain and all thy sorrow
Are to God, the highest, known.
  He leaves thee now, but helps to-morrow,
Trust in God!

Hold to God!
The blows he deals, in love are given,
  That thy soul's health may better fare;
So may'st thou know the fear of Heaven,
  Confide in his paternal care,
Hold to God!

[British Messenger.

THE LAWYERS AND THE BIBLE.

A correspondent of the *Republican*, writing from Jefferson City, Mo., gives the following amusing account of a trial which recently took place in that city, in which some of the most distinguished ornaments of the Missouri bar displayed their familiar acquaintance with the Bible.

"A few days since, I was serving as a juror in a case of slander. Three of our most prominent lawyers were engaged—one for the plaintiff, the others for the defendant. The counsel attempted to impeach the veracity of one of the witnesses, an old man named Mayhew. They failed entirely; and when the counsel for the plaintiff came to sum up the evidence, he said: "Gentlemen of the jury, the counsel on the opposite side have endeavored to impeach the veracity and destroy the character of the witnesses, and particularly of my old friend Mayhew. I must confess, gentlemen, I trembled for my old friend, when the senior counsel for the defendant, with his stern countenance, demanded of the old man whether he had not told a different story to his neighbors, and introduced Mr. Harris to prove it. But gentlemen, he failed, utterly failed; and my old friend Mayhew came out unscathed. Yes, gentlemen, like Daniel of old, out of the lion's den, without a hair of his head having been singed."

This excited the risibles of those familiar with the authority quoted; but some very broad grins were seen when the senior counsel for the defendant arose, and remarked to his hearers, 'That his friend the counsel for the plaintiff had not quoted correctly the passage from the higher law; that he had read and heard much of Daniel, but that was the first time he had ever heard of his being in the lion's den.'

All was silence, however, compared with the roar when the junior counsel made his reply. In alluding to the remarks of plaintiff's counsel he said, "My worthy friend on the the other side is not quite as familiar with the volumes of the higher law as he is with those of Chitty and Blackstone, or he would not have attempted to release his friend Mayhew from the lion's den without having a hair of his head singed. Unlike my senior, I have heard of Daniel being in the lion's den, but until to day I have never heard of his making use of fire. My worthy friend has, I suppose, mixed up the escape of Daniel from the lion's den with the passage of Nebuchadnezzar through the firey furnace, who had not a hair singed."

One good effect has resulted from this trial. Many who were present, and others who have since heard of the above, have been conning their Bibles; and as an instance, I will mention that I went into the post-office after the trial, where I found two grey-headed codgers busily engaged in hunting up the places referring to the passage of Shadrach, Meshach, and Abednego, through the furnace, and the escape of Daniel from the lion's den. When I entered they were about to give up the search in despair, one of them saying that he thought it was not in the Bible; that they had thumbed from first Genesis to last Jeremiah, and could find no such names."

SOLICITUDE FOR SOULS.

During a heavy storm off the coast of Spain, a dismasted merchantman was observed by a British frigate drifting before the gale. Every eye and glass were on her, and a canvas shelter on the deck almost level with the sea suggested the idea that there yet might be life on board. With all his faults, no man is more alive to humanity than the rough and hardy mariner; and so the order instantly sounds to put the ship about, and presently a boat puts off with instructions to bear down upon the wreck. Away after that drifting hulk go these gallant men, through the swell of a roaring sea. They reach it; they shout; and now a strange object rolls out of that canvas screen against the lee shroud of a broken mast. Hauled into the boat, it proves to be the trunk of a man, bent head and knees together, so dried and shrivelled as to be hardly felt within the ample clothes, and so light that a mere boy lifted it on board. It is laid on the deck; in horror and pity the crew gather round it; it shows signs of life; they draw nearer; it moves, and then mutters—mutters in a deep sepulchral voice—"*There is another man!*" Saved himself, the first use the saved one made of speech was to seek to save another. Oh! learn that blessed lesson. Be daily practising it. And so long as in our homes, among our friends, in this wreck of a world which is drifting down to ruin, there lives an unconverted one, there is "*another man*," let us go to that man, and plead for Christ; go to Christ and plead for that man; the cry, "Lord save me, I perish," changed into one as welcome to the Saviour's ear, "Lord save them, they perish." [Guthrie.

Merit.—The labor of a whole life directed to the object of establishing a merit of our own, will only widen our distance from peace; and we know of nothing that will send this visitant to our agitated bosoms but a firm and simple reliance on the declarations of the Gospel. [Dr. Chalmers.

MOSES AND CHRIST—NO. 3.

Christ has been supposed to repudiate the doctrine of Moses in respect to the *oath.* But when Christ says, "Swear not at all," does he refer to the same thing which Moses does—does he refer to *judicial* oaths? Reason requires that we understand his remarks upon this point in the same way that we understand his remarks upon the sixth and seventh commandments of the Decalogue; that is, not in opposition to what Moses set forth, but only in opposition to what the Scribes and Pharisees *said* that he set forth. And what was the current doctrine of Scribes and Pharisees in regard to oath-taking?

The practice of unauthorized and spontaneous oath-taking became, about the time of our Lord, of great frequency, and the nice distinctions made by Rabbinical writers reveal the subtle casuistry of that age. One of them is quoted as saying, "If any one swear by heaven, earth, the sun, and such things, although there may be in his mind while using these words a reference to Him who created them, yet this is not an oath; or if any one swear by one of the prophets, or by some book of Scripture, having reference to Him who sent the prophet and gave the book, nevertheless this is not an oath." Another authority of great repute (the Mishna) says, "If any one adjures another by heaven or earth, he is not held bound by this."

Thus it appears that, while the Jewish Rabbis professedly adhered to the law, they had, in *common conversation*, introduced a number of oaths which they did not consider binding. That such oaths, with their lax glosses, could hardly fail to loosen moral obligation, is clear enough. How little regard was actually paid to such means of substantiating truth, is seen in the case of Peter, who "began to curse and to swear, saying, I know not the man." (Matthew 26: 74)

Now it is clear that what Christ aims at, when he says, "Swear not at all," is this unauthorized, spontaneous oath-taking—the practice of swearing in common conversation, and especially swearing by created things. There is nothing in the context showing that he had any reference to *judicial* oaths. He himself did not refuse to take an oath in a court of law. (Matthew 26: 64.) It is not very likely that he would prohibit the practice in his followers, and afterwards do the very thing himself.

What is an oath? It is simply an appeal to God in attestation of the truth of what one says, or in confirmation of what one promises or undertakes. In resorting to it, God is recognized as the vindicator of justice and fidelity—as a being who knows all things and will punish guilt. It is, therefore, a religious undertaking; and being such, it is a clear confession, on the part of civil government, how inadequate and powerless are all the sanctions of its own to enforce justice and truth. Government herein confesses the necessity of throwing a witness upon those dread sanctions, which are above anything of human contrivance, and which only the God of the universe can enforce. It declares its own weakness, and magnifies the truth of divine revelation.

Apart from the fancy that it is forbidden by Christ, what is there in this solemn appeal to God which is intrinsically wrong? What commandment of the moral law does it violate? We can clearly see that "anger without a cause" is a breach of the sixth commandment, because it is the first budding of a murderous spirit. So also impure desire is a violation of the seventh commandment, because it is the first step towards adultery. But we see no tendency in a solemn appeal to God to destroy reverence for the truth, or loosen the restraints of the third commandment. Nevertheless, we are sensible of this very tendency in the light and irreverent appeals to the sacred name which characterize the swearing of ordinary conversation. This, therefore, is undoubtedly the evil which the Saviour would correct in the words under consideration.

T. B. B.

OUR CALLING.

Not long since, I heard an elderly gentleman, who had officiated for several years as a minister of the Gospel, but is now a farmer, remark: "I have concluded that if I ever had a call to preach, it has now expi[illegible]ed." The reasons for this conclusion were [illegible] not predicated on any physical disabilit[illegible]y; but, having served out his mission, h[illegible] was at liberty. The following questions [illegible] were immediately suggested to my mind [illegible]: Is a call from God *conditional?* If so[illegible], on what conditions may the demand be [illegible] satisfied?

We are [illegible] *all* called of God to labor in the great "[illegible] moral harvest," as reformers, and alle[illegible]ors of human suffering and degradation; some having a particular talent for teaching and exhortation, while others, deprived of this gift, are especially favored in pecuniary advantages, both classes being essential to the rapid progress of Christianity.

In answer to the questions suggested, I remark, first, the call *is* conditional; second, the demand will be satisfied when the earth is "filled with the knowledge of the glory of the Lord, as the waters cover the sea;" when we, as instruments in the hands of God, have put forth every effort in our power to uproot the strong holds of Satan; in short, when we have done all that God requires of us, then, and not until then, may we conclude that our "call has expired."

Before entering upon a life occupation, we should consult *evidences*, and, if possible, determine, beyond a question, what avocation is best adapted to our *call*, or in what pursuit we can best exemplify the Christian character. If, after much prayerful inquiry, our duty becomes apparent, and we enter upon our profession, I can see no reason to suppose that our call will *ever* expire, until first the *necessity* for such a call shall have expired. Our Saviour said, "Go ye into all the world, and preach the Gospel to every creature." This is not saying, Preach a few years, and then seek an *easier* occupation; but implies an unceasing effort to evangelize the world, and seek to bring into the fold of our blessed Redeemer, all such as are wandering from the goodly Shepherd. If efficient, unconditional laborers for King Jesus were ever needed, they are needed now. Zion languishes in want of a helping hand. False prophets, and skillful deceivers, are hurling javelins of death at the Church. The young are snatched in an unguarded moment from the high throne of innocence, and plunged into the gulf of guilt and ruin. The middle-aged, becoming carnally minded, forsake the principles of religion as superstitious folly; while the aged, tottering over the brink of the tomb, sigh for a release from this world of sin. Jesus stands at the entrance of the New Jerusalem, and beckons man to enter, but he heeds him not! Now he appears with pierced side, on Zion's walls and calls for help, but O how few respond! Yet soon we must all stand before the throne of his Mejesty, and be awarded according to our deeds.

"O thou whose power o'er moving worlds presides,
Whose voice created, and whose wisdom guides,
On darkling man in pure effulgence shine,
And cheer the clouded mind with light divine!"

L. E. L.

THE EASTERN ASSOCIATION.

The twentieth annual meeting of the Seventh-day Baptist Eastern Association] was held with the Church in Shiloh, Cumberland Co., N. J., commencing on Fifth-day, May 22d, and closing the evening of the following First-day. The delegation from the Rhode Island and Connecticut Churches was comparatively small, in consequence, probably, of the difficulty of reaching the place of meeting. Of the sister Associations, only one was represented by delegate, and that was the Western, from which Bro. J. M. Allen appeared. The attendance of the people of Shiloh and Marlboro, and their hospitality to visitors, were all that could reasonably be asked. The deliberations were characterized by a good degree of harmony, and the meeting was generally spoken of as a pleasant old-fashioned one.

Agreeable to appointment, the Introductory Discourse was preached by S. S. Griswold, who took for his text the 2d verse of the 11th chapter of Luke—"*Let thy kingdom come.*" The discourse was written out entire, and set forth very clearly the author's view of the kingdom of Christ—a kingdom in which, of course, war and slavery have no place.

Letters were received from all of the churches connected with the Association, excepting Newport, R. I. These letters were not particularly encouraging. Only one church, we believe, reported a revival of religion, and that was Petersburg. Several of the letters expressed satisfaction for the general prevalence of union and harmony, but a fear that they were at ease in Zion. The letter of the Petersburg Church requested the Association to send to that place a couple of brethren to assist in the ordination of Thomas A. Maxson to the work of the ministry—a request which was referred back to the church, with an expression of the Association's belief, that each church is fully competent to act in such matters.

Letters were received from the churches at New Salem and Lost Creek, Va., asking to be received into the Association, and Eld. Samuel D. Davis appeared as a representative of those churches. The proposition to receive them led to a somewhat lengthy discussion of the question whether the taint of slavery is upon them. It appears that an aged member of one of the churches, now dead, owned two slaves, one a woman quite advanced in years, and the other a young man. As the laws of Virginia would not allow of their manumission unless they were sent out of the State, and he did not feel at liberty to rid himself of them in that way, he left them by will to his heirs, under such restrictions as to insure them support through life. Some of these heirs being members of the church at Lost Creek, one or two brethren thought there was danger of sanctioning slavery by receiving into fellowship that church. Both churches were received, however, and the hand of fellowship was extended to their representative by the Moderator of the Association.

The missionary operations of the Association during the past year, as appeared from the report of the Executive Board, have been quite limited, nothing having been done except to make an appropriation in favor of the South Kingston Church. It seems that the Constitution forbids the Board to involve the Association in debt, while scarcely any of the churches furnish funds for missionary operations until near the close of the year. In view of the difficulties in the case, it was concluded to suspend missionary work through this organization, and recommend the feeble churches to apply directly to the Missionary Society for aid when they cannot obtain it from neighboring churches.

All of the sermons for which appointments were made at the last meeting of the Association, were preached at this meeting, as will appear more fully from the list of religious exercises printed herewith. Of the essays for which appointments were made last year, two were on hand. James Bailey read his essay on "copartnerships between Sabbath-keepers and observers of the first day, in which business is transacted on the Sabbath." It was adopted as the sentiment of the Association, and ordered printed in the *Sabbath Recorder.* Lucius Crandall, who was appointed to write on "Restricted Communion," was not present, but an essay by him was presented, read by the Recording Secretary and ordered printed in the *Recorder.*

In this connection we may as well state the appointments for essays and sermons at the next meeting of the Association. W. B. Gillett was appointed to write an essay on the means of promoting benevolence in the churches; A. B. Burdick on the sinfulness of social distinctions or castes among Christians, as they exist between employer and employed, rich and poor, &c.; H. H. Baker on the manner of conducting the religious exercises connected with the administration of the Lord's Supper; James Bailey to preach on the subject of Missions.

Of the general topics discussed in the Association, our readers may get an idea from the resolutions printed herewith — concerning which we have only time now to say, that the resolutions on Education were made the special order for First-day afternoon, when addresses upon them were made by J. M. Allen, G. B. Utter, H. H. Baker, James Bailey, S. S. Griswold, and B. F. Langworthy.

The officers of the Association this year were David Dunn, Moderator; G. B. Utter, Recording Secretary; A. B. Burdick, Assistant Recording Secretary; S. S. Griswold, Corresponding Secretary; N. H. Langworthy, Treasurer. Delegate to the next meeting of the Central Association, Geo. B. Utter; to the Western Association, James Bailey.

The Association adjourned to meet at Petersburg, N. Y., on the fifth day of the week before the fourth Sabbath in May, 1857; the introductory discourse on that occasion to be preached by P. S. Crandall—H. H. Baker, alternate.

Religious Exercises.

On the evening after Fifth-day, May 22d, a sermon was preached by Phineas S. Crandall, from Matt. 6: 33, 34—"But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you. Take therefore no thought for the morrow; for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

On the evening after Sixth-day, May 23d, a discourse was preached by Samuel D. Davis, from Psalms 125: 1—"They that trust in the Lord shall be as Mount Zion, which can not be removed, but abideth forever."

Sabbath morning, a discourse was preached by Charles M Lewis, in compliance with an appointment made last year, on "the necessity of personal holiness in order to the greatest efficiency of the Christian Church." Text, John 15: 5—"I am the vin[illegible] are the branches; he that abideth in me, and I in him, the same bringeth forth good fruit; for without me ye can do nothing."

Sabbath afternoon, a Sabbath School meeting was held, at which addresses were delivered by G. B. Utter, J. M. Allen, H. H. Baker, and P. S. Crandall, interspersed with singing by the Sabbath School Scholars.

Evening after the Sabbath, H. H. Baker preached the sermon for which he was appointed last year, on "the importance of the Bible Sabbath to the evangelizing of the world." Text, Ezekiel 20: 19, 20.

On First-day morning, a missionary discourse was preached by A. B. Burdick, from Matt. 13: 58—"And he did not many mighty works there, because of their unbelief." After the discourse a collection was taken, amounting to about seventy dollars.

In the evening following First-day, the closing discourse was preached by James Bailey, from Gen. 45: 4—"*See that ye fall not out by the way.*"

Resolutions Adopted.

Resolved, That while the Association repeats its confidence in the sentiment that God hears and answers the prayers of his people, we feel fresh encouragement to the performance of this duty, from the many proofs which we have received during the past year, especially in the release of our brother Pardon Davis from his suffering and confinement in a Louisiana prison.

Resolved, That in view of the increasing demand for missionary labor, and the rich blessings bestowed upon us the past year by our Heavenly Father, it becomes us to honor God by cheerfully responding to those calls so affectionately made upon us for means and men to carry on the glorious work of saving souls.

Resolved, That we request the churches hereafter to present in their letters a response to the suggestions of the Report of the Committee on the State of Religion. [That Report next week.]

Whereas, the Gospel was designed to save men, not only from the effects of sin, but from sin itself; and whereas, we believe it fully adequate to a complete deliverance of mankind from all moral evil, wrong, and crime; therefore—*Resolved*, That the real evidence of the progress of Christianity in the world must be found in the diminution of crime, the ceasing to do evil and learning to do well, individually, socially, ecclesiastically, and politically.

Resolved, That it is the duty of the church to so apply the Gospel as to remove the gigantic sins which it now permits, and thus fit itself to become a reformatory body for which it was designed, and remove those dark spots on its escutcheon which have so long tarnished its brightness, and rendered it very unfit to be the light of the world, the salt of the earth.

Resolved, That it is the duty of the ministry to so preach the Gospel as to lay its axe at the root of those monster sins which now exist under the sanction of religion and politics, and which seem to threaten the very existence of all that is good and righteous in church and state.

Whereas, all full and perfect education must have the religious element as the central and controling element; and whereas, schools are among the most potent means possessed by the church for doing good; therefore—*Resolved*, That this Association cordially approves of the past efforts of this Denomination in the cause of education, and heartily responds to the measures that have been taken for establishing and the endowment of a Collegiate Institution.

Resolved, That, next to personal holiness, and a more living faith and earnest zeal, such an Institution is *the great* want of the denomination.

Resolved, That, as stewards of the Lord, holding His gifts in trust to be used as means for good, we will cheerfully give for this object whatever, after careful and prayerful consideration of the subject, duty may seem to demand of us.

LETTERS FROM PALESTINE—NO. 25.

Visit to a Turkish Bath.

Among the curiously strange things in the East, though by no means the least useful, is the Turkish bath. From what I had heard of it, I rather dreaded the operation, but now that it is over, I no longer wonder that Orientals esteem it a luxury.

Having been invited by a couple of American dignitaries, I went a few mornings since to meet them at the vapor-house, as it might be called. The first room I entered was large and furnished on the sides with *mustabahs* or divans, built of stone, six feet long, four feet wide, and about three feet high. Upon each divan was spread a carpet, and upon this a sheet, or towel of large size. There were pillows at the head of the divans to invite the bather to repose when he came from the vapor. In the middle of the room was a fountain, or rather pool of cold water.

My companions had preceded me—their clothes were upon the divans—money, gold watches, and all in apparent safety. While undressing, an Arab screened the front of the divan by holding a towel with arms extended; this was then wrapped around the body, and another around the shoulders, and then the head was enveloped with another in the form of a turban. This done, I was told to step into the coob-cabs, a kind of sandal resting upon wooden blocks two inches high. At the first movement I slipped and would have paid dearly for my inexperience, had I not been upheld by an attendant. Free from the clogs, I passed through one room and a hall used for bathing, and so full of vapor that I could scarcely see, and then was led into the presence of my friends. A stout man was busy stretching the limbs and cracking the joints and washing one patient, while the other to my surprise was *drinking* smoke from a splendid shee shee, or, as it is sometimes called, narzilia. The hot stones and hot vapor were quite oppressive. On one side of the room was a circular stone cistern, receiving at pleasure either hot or cold water from taps projecting from the wall. The room was full of hot vapor and perfumed with incense. Each in his turn was seated upon the hot stone floor, and submitted to all the requirements of the stout man before referred to, who, as I am credibly informed, is in the ninetieth year of his age. On entering the bath-room, my Arab friend called out in high glee, *Yah khowags tifuddal*, O, gentleman, welcome, or come in. He knew that it was my first visit to the bath, and was amused to see how I would endure fire and water. Seating myself in a corner near the cistern, I submitted to the work, for work I should call it, of a man apparently sixty years of age—son of the stout man mentioned above—who began to apply to *mon corps* a *kaf* or mitten of a rough texture, something after the manner of a hostler. After fifteen minutes of this novel rubbing, then came soap applied with *leef*—fibres of the palm-tree—and a great quantity of hot water. I verily thought it would scald, and the soap too, I thought it would blind me, but alternate showers of cold water not only relieved, but essentially prepared me against the cold air without. Leaving the bath after half an hour, I was conducted to the divan in the general receiving room and there reclined for fifteen minutes and perspired as I had not done for years. In the meantime strong coffee and pipes were passed to those who wished, but my refusal of them called forth as usual some surprise from the Arabs who are at a loss to know how a Frank can refuse such *delicacies.* The wonder with me is how a man ever *can* learn to love them, especially *tobacco.* The whole expense for the party of three was five francs, or twenty-four piastres.

W. M. J.

JAFFA, March 8, 1856.

MISSIONS IN CHINA.

A part of one session of the Old School Presbyterian General Assembly, recently held in New York, was devoted to a narration of experiences by returned missionaries.

Rev. M. S. Culbertson, of the Shanghai Mission, gave briefly the results of his observations in China during the eleven years he has labored in that region. Of the Chinese language, he said it was difficult to learn, but the difficulty is not insuperable, for missionaries learn to preach intelligibly to the people in a year. But the missionary is compelled to learn two languages. One is the spoken language, and the other the written. Dialects differ. There is a dilect of Canton and a dialect of Shanghai. And this difficulty is experienced whenever a missionary changes his locality. Besides, there is another difficulty, and it is the great impediment in the way of the missionary work, that the people will not readily acquire a knowledge of written language One of the things which the missionaries would do would be to reduce the colloquial languages to writing, and experiments to this end have already been commenced; still many years must elapse before the work is fully accomplished. The language, however, as written, gives one great advantage. Whenever a book is written or printed, it is understood over the whole extent of the Empire—so that when we translate books, when we scatter abroad our tracts, we know that they are understood wherever they go. In regard to the religion of China, there is a great deal of it—of a certain kind. It is generally considered that Buddhism is atheism, and so it is in some measure; but China is not atheistical, although there is a great deal of that same kind of atheism of which we find much in our own land, consisting in the exclusive worship of mammon. It is a system of humanitarianism, as it were—a worship of self, a worship of ancestor, a worship of human nature. But the principle point of the worship of the Chinese is a deference to superstitions. It was this which produced the greatest effect upon the speaker.

Rev. Andrew P. Hopper represented the Canton Mission. He gave a historical sketch of the Opium War, and the American and French treaties, by which the country was opened to Christian effort. The speaker considered the Chinese race next the Saxon in the race of enterprise and in tendencies to civilization. They are much superior to all other heathen nations. Still they have suffered so greatly at the hands of foreigners, that they hate all foreigners who now come among them, so that the congregations which are gathered by the missionaries are small, and it is no wonder that they are so. Yet these missionaries are not disheartened or downcast; their hands never hang down, neither do their knees strike together with weakness, when they consider these difficulties and troubles through which they are called to pass; and, therefore, from year to year, with increasing love and with increasing life, they continue to hold forth the Word of Life. Still the speaker was free to confess that, since his return to this country, he had experienced moments of depression and anxiety, occasioned by the apathy which is felt by the Christian public in regard to the condition of that interesting people. He appealed to his Christian brethren, as members of this great Judicatory of the Churches, to Presbyteries and Synods, whether they were doing all they can to send these people the knowledge of our Lord Jesus Christ. It is necessary that our ministers should come forward, and if they cannot go, to send the blessed Gospel to those who have it not.

A CHARITY TO BE AIDED.

The public are aware of the existence of a Charity School in 28th-st., near the North River, called the Hudson River Industrial School. Its origin, its success, and its subsequent difficulties, have been given to the community in two Reports, and those who have assisted to maintain it are probably aware of its position and circumstances.

This charity, which of all others seems to promise alleviation for the miseries of the poor and outcast, had its day—its success—when funds came into the treasury unasked; now it is severely straightened. The list of subscribers to the Hudson River School is small, the sum annually subscribed not exceeding $200. The Corporation has within the year given $300, and a benevolent gentleman (Hon. C. H. Shipman) sent in last winter $100. This, with collections in two churches, and the sums the Directresses have been able to obtain from friends, is all that a school has to rely upon which requires with the strictest economy some $1400.

The question, then, whither this individual enterprise shall be abandoned in consequence of an exhausted treasury, must be met. None but those who have watched its beginning, with half a dozen squalid children, until the number increased to 100—who have found these hardened, brutalized, lisping profanity, ignorant of the God who made them, and the Saviour who died for them—who have seen these little ones softened by the voice of kindness, roused up from stupid insensibility to know that hearts beat in their bosoms, and souls animate their bodies. None but those who have watched this seedling, and trusted that it would take deep root and flourish, and become a shelter for many of the destitute and forsaken, can tell how mournful is the thought of seeing it blighted. Must we disband the school, and close its doors? These are children whose parents alternate between Blackwell's Island and their wretched hovels; they are the beggars who came half clothed and hungry to our doors. Shall we turn them utterly adrift and leave them to vagrancy and ruin? We appeal to the benevolence and generosity of the community for aid in this exigency. It is the last resource, and we trust earnestly that the appeal may not be made in vain.

Contributions can be sent to the following names:

MRS. MAURICE HILGER,	37 London Terrace.
MRS. J. S. GIBBONS.	19 Lamartine Place
MRS ROBERT RAY,	221 West 28th-st.
MRS. W. ANABLE,	43 London Terrace.

LAW-ABIDING POPULATION.—The counties of Barnstable and Dukes, Mass., with an aggregate population of over 40,000, whose interests are as varied as those of any other county in the commonwealth, save Suffolk, perhaps, are entitled to one term of the Supreme Judicial Court annually. The term was holden last week at Barnstable, for the two counties. Judge Bigelow left Boston by the morning train of cars at eight o'clock; opened the Court at eleven; the jurors were empanneled, the docket called, all the business requiring the attendance of jurors concluded, and they were discharged at twelve; the entire business of the term was disposed of, and the court adjourned, *sine die*, before one o'clock, the judge returning to his home in Boston before sunset of the same day. That's a model population! Cape Cod or Martha's Vineyard is the place to live peaceably and happily in.

DISHONESTY REBUKED.—One of our cotemporaries, speaking of that class who subscribe for newspapers and never pay for them, and this though they may be professing Christians, says:—

"There is something wrong in the wide spread robbery of publishers by *professing Christians*, for we presume that few others take religious papers. And there ought to be a remedy. It is downright dishonesty to 'filch one's religious reading,' and ought to be made a cause for discipline, for no one who is mean enough to defraud a publisher of the paltry price demanded for a paper, is fit to remain in the church of God."

RETURN OF MRS. WARDNER.—We have barely time this week to announce that Mrs. Olive B. Wardner, wife of Eld. Nathan Wardner, Seventh-day Baptist missionary at Shanghae, China, arrived at New York on the 21st inst, in the ship Rock City, after a short and pleasant voyage. She is accompanied by her two little boys, for the benefit of whose health, as well as her own, she returns to her native land.

RELIGIOUS INTELLIGENCE.

The manumission of slaves in Georgia is forbidden by a statute of that Commonwealth. Persons desirous of freeing their slaves have heretofore been in the habit of conveying them to Ohio, Pennsylvania, or some other free State, and there executing the requisite deeds. It has also been the practice of persons desirous of liberating their slaves after their death, to leave provision in their wills for their conveyance to some free State and manumission there. A bill has just passed the Georgia Senate which forbids both practices, and declares null and void all such posthumous bequests.

The Methodists of Huntsville, (Ala.) have a lottery scheme under way, for the benefit of the Andrew Female College. Rev. John H. Caldwell is apparently the prime mover in the speculation. $120,000 is to be collected in $20 instalments, (price per ticket) of which $75,000 is to be paid in premiums. It is expected to raise $50,000 for the College by this means.

The Genesee *Evangelist* states that Rev. C. G. Finney has been for the present laid aside from his labors by sudden indisposition. He is not regarded as in immediate danger, but as he is thought by physicians to be unfitted for further preaching for some days to come, he has concluded to bring his labors to a close.

The Buffalo *Post* says, that a pastoral letter from Bishop Timon, read in all the churches of his diocese, announces formall the death of Bishop O'Reilly, of Hartford, (who was on board the Pacific), a few years since Vicar General of this Bishopric, and solicits the usual prayers and ceremonies following the death of a prelate.

The First Dutch Reformed church of Jersey City has sued Mr. Welch, the architect, for $25,000 damages. They allege that Mr. W. furnished an estimate to build a church for $20,000, but that already when only half completed, it has cost $25,000. Hence the suit.

The New York *Mirror* states that the Trustees of the Brick Church have purchased eight lots of ground on Twenty-third and Twenty-fourth streets, within one lot and a half of Fifth avenue, on which to locate their new edifice—church, lecture room, and parsonage. The amount paid for them is understood to be $72,000.

Joseph E. Sheffield, of New Haven, has presented to Trinity College, Hartford, for the use of the college library, fifty shares of stock in the New Haven and Northampton Railroad. Their par value is $100 per share.

A letter from Smyrna states that Rev. Mr. Riggs and family, Mrs. Ladd, and Mrs. Whiting, (American Missionaries,) and Mr. Wm. A Hallock, Jr., of New Haven, were about to embark for Boston.

On the 12th ult., at Galveston, Texas, Rev. Arthur Cleveland Coxe was unanimously elected Bishop of Texas by the Convention of the Protestant Episcopal Church of *that* diocese.

Rev. David Dailey, the oldest minister of the Philadelphia Annual Conference of the M. E. Church, died at his residence in Snow Hill, Md., on Sunday, the 4th inst. His end was peace.

Five thousand slaves in the City of Charleston, South Carolina, have contributed the last year to benevolent objects, $15,000—*it being* on an average $3 each.

RELIGIOUS NEWSPAPERS IN NEW YORK.—The following statement, according to the N. Y. *Independent*, gives the present circulation of the principal newspapers published in that city: Christian Advocate and Journal (Methodist) 30,000; The Independent, (Congregational) 24,240; New York Observer, (O. S. Pres.) 21,120; The Freeman's Journal, (Roman Catholic) 16,000; The Evangelist, (N. S. Pres) 15,000; The Examiner, (Baptist) 11 000; Christian Ambassador, (Universalist) 8,000; Christian Intelligencer, (Ref. Dutch) 6,600; New York Chronicle, (Baptist) 6,000; Church Journal, (Episcopal) 5,000; Christian Inquirer, (Unitarian) 2,800; Prostestant Churchman, (Episcopal) 2,120; The Churchman, (Episcopal) 1,000.

POPISH BIGOTRY OVERDONE.—A difficulty occurred in the Roman Catholic Bishop's cemetery, near Cincinnati, recently, because the family of an old and zealous Catholic, who died suddenly, did not have mass said for the repose of his soul before the body was interred, a Priest took occasion to condem the soul as lost, in the presence of the weeping family at the cemetery. The feelings of the relative were so outraged, that they, the next day, determined to remove the body. The sexton refused to give it up, and the relatives were about to break open the vault by force, when the sexton acceeded to their demands. The body was removed to a Protestant cemetery.

EMIGRANTS FOR KANSAS.—We understand that a company consisting of some sixty or seventy emigrants for Kansas, chiefly from Albany and its vicinity, but comprising also several members from Utica, Syracuse, and Rochester, passed torough this city last week. This company is sent forward under the auspices of the New York State Kansas Committee, and it is said to be made up of exactly the right material for the purpose. The emigrants are all young, robust, and hard-working men, who go to Kansas with the view of making it their homes. They will prove a welcome accession to the Free State population of the Territory. [Buffalo Express.

THE ANCIENT EGYPTIANS.—Professor G. Seyffarth, widely known both in the old and new world as an eminent scholar, gives, at the invitation of Peter Cooper, Charles King, Jas. Ferris, John W. Francis, and others of our leading citizens, a course of three lectures at the Styvesant Institute, on the 27th, 28th, and 29th of May, on the ancient Egyptians. The results of the most recent researches in biblical chronology, ancient history, and Egyptian archeology, more particularly the sacred books of the ancient Egyptians with special reference to Dr. Abbot's museum. He speaks of the key to the hyeroglyphics, the confirmation of the Old Testament chronology, the New Testament history, &c.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MAY 19.

In the SENATE, two messages were received from the President, vetoing the bills for the improvement of the mouth of the Mississippi and the St. Clair Flats. Mr. Cass gave notice that he should ask leave to show that he had been misunderstood by Mr. Crampton on the Central American question. Mr. Sumner then commenced speaking on Kansas affairs, and continued until the adjournment.

In the HOUSE, the joint resolution authorizing the Secretary of the Navy to dispatch a vessel with provisions, privately contributed, for the Cape de Verde sufferers, was adopted. Leave was asked to introduce a resolution asking information of the President in relation to the Kansas murders, but it was refused. The House also refused to suspend the rules to allow Mr. Keitt to offer a resolution for the adjournment of Congress on the 5th of August.

THIRD-DAY, MAY 20.

In the SENATE, Mr. Seward tried to get through a resolution in reference to the Cape de Verde sufferers, but did not succeed. The bill making appropriations for Consular and Diplomatic expenses was passed. Mr. Sumner then resumed his speech on Kansas, saying that as he had already treated of the crime committed against Kansas, and of the apologies for the crime, he would now speak of the various remedies proposed, and show which was the only true remedy. Gen. Cass denounced Mr. Sumner's speech as unpatriotic. Mr. Douglas characterized it as malignant, and Mr. Mason as an infliction which would not be borne out of doors. Mr. Sumner replied with spirit.

In the HOUSE, the Public Lands Committee reported a bill granting one million and forty-eight thousand acres of land in Wisconsin for the construction of three railroads therein, embracing five hundred miles. A motion was made to table the bill, but the House refused by a vote of 69 against 76. Before disposing of the matter the House adjourned.

FOURTH-DAY, MAY 21.

In the SENATE, the President's internal improvement vetoes were considered, but without any definite action. A communication was received from the President, furnishing additional documents relative to the British enlistments, involving the question of veracity between Lord Palmerston and Mr. Buchanan.

In the HOUSE, the Wisconsin Land bill was passed, as was also a bill reported from the Committee on Public Lands granting about a million acres to Alabama for Railroad purposes.

FIFTH-DAY, MAY 22.

In the SENATE, a joint resolution, allowing Dr. Kane and the officers associated with him on the late Arctic expedition in the search for Sir John Franklin to accept such token of acknowledgement from the British Government as it may please to present, was passed.

No other business was done in either House, on account of the death of Mr. Miller, Representative from Missouri.

[Immediately after the adjournment of Congress, Preston S. Brooks, of South Carolina, a member of the Lower House, entered the Senate Chamber, and approaching the seat of Mr. Sumner, struck him a powerful blow with a cane, at the same time accusing him of libelling South Carolina and his gray-headed relative, Senator Butler. Mr. Sumner fell from the effects of the blow, and Brooks continued beating him. Mr. Sumner soon recovered sufficiently to call for help, but no one interposed, and Brooks repeated the blows until Mr. Sumner was deprived of the power of speech. Some eye-witnesses state that Brooks struck him as many as fifteeen or twenty times. Mr. Sumner was sitting in an arm chair when the assault was made, and had no opportunity to defend himself. After his assailant desisted, he was carried to his room. Mr. Sumner has several severe but not dangerous wounds on his head.]

SIXTH-DAY, MAY 23.

In the SENATE, a message was received from the President, vetoing the St. Mary's River Improvement bill. The matter of the assault on Senator Sumner then came up, and a Committee of five was appointed to investigate and report on the subject. The Committee consist of Messrs. Cass, Allen, Dodge, Pearce and Geyer. Mr. Stuart gave notice that he should, at an early day, submit an amendment to the rules of the Senate, providing against all personalities in debate. A large number of private bills were passed.

In the HOUSE, the Sumner assault was also considered, and a Commmittee of five appointed to investigate the matter, consisting of Messrs. Campbell of Ohio, Allison, Cobb, of Georgia, Greenwood and Spinner. Adjourned to Second day.

European News.

The steamer Canada, with one week later news from Europe, arrived at Boston on the 23d inst.

The Queen held a court at Buckingham, Palace on Thursday, the 7th inst., for the purpose of receiving the addresses on the peace from the House of Lords, the House of Commons, and the City of London. The deputations came in great state and numbered nearly a hundred persons. The Queen briefly acknowledged the addresses, and expressed her satisfaction that peace was re-established on a basis that affords security for its permanence.

Both Houses of Parliament have recorded a vote of thanks to the army and navy.

May 29 is to be a holiday throughout Great Britain to celebrate the peace.

To celebrate the peace, the Queen has granted amnesty to all political offenders; consequently, Smith O'Brien, Frost, Jones, and others may return home. Special exception. however, is made against those who escaped to the United States.

The clipper ship Racer had gone ashore on Arklow Bank, and would probably prove a total wreck. All her passengers and crew, numbering over 500, were saved.

Speculation on the Paris Bourse had reached a great height, and English commercial papers were warning British capitalists against it.

The weather in France for several days previous to the sailing of the steamer had been very severe.

A Bill was introduced into the Legislature of France, granting four hundred thousand francs for the baptism of the Imperial Prince in June

Disturbances continued in Turkish Asiatic territory, and there had been some excesses near Sumatra. There is nothing additional as to the troubles at Nazareth.

IMPORTANT FROM KANSAS.—The New York *Times* of May 26 publishes the following:—

The news from Kansas is of the most startling character. The war between the Free-State men and their enemies has commenced in very earnest. Lawrence has been attacked; its citizens have been slaughtered or driven from their homes, and the town has been destroyed. Such is the substance of a telegraphic dispatch received from St. Louis. It may or may not be true; but from the events that have lately taken place in the Territory, we have not been without forewarnings of this disastrous intelligence. The intelligence in relation to the attack on Lawrence is of the briefest description. One dispatch to the St. Louis *Democrat* states that a battle had been fought at Lawrence, and that a number of persons had been killed on both sides. Another dispatch from Boonville to the *Republican* says simply, "Lawrence was destroyed on Wednesday." The two accounts, so far, corroborate each other, and a telegraphic dispatch received in Washington from Louisville, Ky., is to the same effect. We greatly fear that the news is true, or, at least, partially so. The particulars of this event will be looked for with an interest rarely if ever felt by the people of the Free States.

KANSAS AFFAIRS.—On the 11th of May, I. B. Donalson, U. S. Marshal for Kansas Territory, issued the following proclamation:—

Whereas, Certain Judicial writs of arrest have been directed to me by the First District Court of the United States, &c., to be executed within the County of Douglas, and, whereas, an attempt to execute them by the United States Deputy Marshal was violently resisted by a large number of the citizens of Lawrence, and as there is every reason to believe that any attempt to execute these writs will be resisted by a large body of armed men; now, therefore, the law-abiding citizens of the Territory are commanded to be and appear at Lecompton, as soon as practical, and in numbers sufficient for the proper execution of the law.

A dispatch dated St. Louis, May 20th, says that large numbers had responded to the proclamations of Gov. Shannon and the United States Marshal, and a battle was anticipated shortly. 600 men were assembled at Lecompton and 400 at Franklin. A large company were to leave Kickapoo on Saturday for Lecompton, with two cannon. They are all well armed and provisioned.

IMMENSE CASTINGS.—We learn, says the Philadelphia *Times*, of the 21st, that one of the two shafts ordered for the new Collins steamer Adriatic, recently launched at New York, has just been completed at the Reading Steam Forge. It is a monstrous mass of iron—its weight in the rough having been forty tons. When finished it weighed thirty-three tons. The other is now in the lathe, and will be ready for shipment to New York in a week or two. These shafts are said to be the heaviest work of the kind, by ten tons, ever known to be made in the United States or any other country. It is also stated that no other forge in this country has the capacity to manufacture such immense pieces of iron work. The time consumed in forging each of these shafts, was twenty days, and eighteen days more were required to finish the first one in the lathe. In addition to this work, a pair of cranks, weighing sixteen tons each, in the rough, and twelve tons when finished, are now being made at the same establishment, also for the Adriatic. The are to have a stroke of twelve feet.

BIGAMY MADE EASY IN MASSACHUSETTS.—Allen G. Drody, Jr., a middle-aged Englishman, was indicted on a charge of bigamy. As a plea to the indictment, he stated that he married his first wife in 1841 somewhere on the Cape, and that a short time since his wife and himself agreed to a separation, and he published the fact in the papers. He supposed that this was sufficient to enable him to get married again, which he did, with the knowledge of his first wife, who lived in the immediate neighborhood, and who manifested no opposition thereto. The second wife, however, or her friends, where ignorant of this fact, and when it came to their knowledge they made a complaint. Upon a review of all the facts, and with the assent of the friends of the second wife, Drody was let off with a fine of $50 and costs. [Boston Courier.

THE CROPS.—The advices from all parts of the country in relation to growing crops are unusually satisfactory. The Troy *Budget* observes that the papers in various quarters of the country are giving good accounts of the prospects of the coming crops. The season is backward, but that is said to be very favorable to the wheat, which was sown in immense quantities, last Fall. In Ohio the wheat is splendid, but the grass is yet thin. Fruit was a great deal injured in the West. Peaches there will be none, but a very abundant yield of apples is expected. In New York State the wheat is in good condition, though backward. Barley and oats are likely to do better than corn this season. Their growth does not require so much heat, and they are not so easily injured by late frosts All English grains and grasses promise well on good land, which is properly managed.

A DOCTOR WILLING HIS BODY TO THE DOCTORS.—The will of the late Dr. John C. Warren, of Boston, provided for the disposition of his body with an especial reference to the science which he had so long pursued and adorned. The will required that the body should remain 24 hours, at the close of which time arsenic should be infused into the veins; at the end of the next 24 hours, the funeral ceremonies should take place, and the body be deposited beneath St. Paul's Church, and 24 hours thereafter was to be given for examination to the officers of the Medical College and the physcians of the Massachusetts General Hospital, to ascertain regarding certain peculiarities which he supposed to exist. After this the flesh was to be taken from the bones, the bones mascerated, wired and deposited in the College Museum. The will, we understand, is peremptory.

SUMMARY.

The first ground was broken on Tuesday for the projected railroad between Port Monmouth and Cape May, New Jersey. During the course of the morning a party of gentlemen, at the invitation of the Raritan and Delaware Bay Railroad Company, left New York and proceeded to Port Monmouth where, a short distance from the landing, Governor Price of New Jersey, dug the first sod, after which he addressed the company on the importance of the projected road. About 2 o'clock in the afternoon the company sat down to a dinner at the Port Monmouth Hotel. Toasts were drank and speeches made by Governor Price, who presided, ex-Recorder Tallmadge, of New York, and other.

The Kansas Investigating Committee sent by Governor Robinson the large quantity of testimony taken by them, inclosed in a sealed package, addressed to the Speaker of the House. On Gov. Robinson's detention in Lexington, Missouri, his wife, at his request, continued her journey. At Columbia, Ohio, she handed the package to Hon. C. K. Watson, who delivered it to the Speaker privately. The Congressional Commissioners request that the package remain with the seal unbroken until their return. This is the testimony which the Missourians threatened to destroy.

A dispatch dated Washington, Monday, May 19, says: It appears by official documents communicated to the House, to day, our Government has taken efficient measures to prevent traffic in Coolies, considering it replete with immoralities, revolting and inhuman atrocities strongly resembling those of the African Slave Trade. It is not permitted by any treaty, and is therefore illegal, and Americans in China are warned to desist—otherwise they will not only forfeit the protection of this Government, but render themselves liable to heavy penalties.

A small pyrotechnic factory, owned by Dennis McCrosson, near the corner of Lafayette avenue and Schenck street, Brooklyn, was destroyed by an explosion, May 19th. At the time of the explosion there were four persons in the building; one, a boy named Samuel Bedell, was instantly killed, and the others, Patrick Dougherty, Wm. Doyle and John McCormick, were so badly burned that it is not expected they can recover.

A dispatch dated Washington, Tuesday, May 20, 1856, says: Letters patent were issued to-day from the Patent Office to David E. Hughes, covering all his claims for his new Printing Telegraph Machine. More than ordinary care has been bestowed by the Commissioner and his assistants of the Patent Office in their examination of the claims of Mr. Hughes to guard against the possibility of conflict with prior patents to Morse, House, and others.

The English Government have presented to Mr. Grinnell, of New York, a handsome silver vase, in acknowledgement of his services in fitting out, at his own expense, an expedition in search of the late Sir John Franklin. They have also presented a silver tea service and salver to Dr. Kane, who conducted it, and gold medals for Dr. Kane, and the other officers, and silver medals for the crew, the articles bearing suitable inscriptions.

A Masonic Temple is to be built in New York city which will surpass any edifice of the kind in the world. It is to be five stories high, 100 feet front and 125 feet deep, and will contain ample accommodations for the grand lodge, and all the subordinate lodges, chapters, encampments and councils. It will be built of brown sandstone or marble, and will cost, it is supposed, $400,000.

John Watson Abrams, charged with the murder of Abram Wood, near Mattewan, Dutchess Co., some weeks since, and for whose arrest Gov. Clark offered a reward of $200, was arrested in Rockland Co., Thursday, by Officer Jeremiah Green, of Fishkill. The prisoner was brought before Judge Nelson of Poughkeepsie, who committed him to jail to await an examination.

A correspondent of the N. Y. *Times*, in La Grange Co., Indiana, writes under date of May 12, that the peach trees through that region are found to have been nearly all killed by the cold of the past Winter. Wheat looks well on the ground, and he has heard no complaint of the insects this Spring.

Peter Mattocks (colored) was executed in Philadelphia, Friday, May 23, for the murder of Elizabeth Gilbert. He died protesting his innocence, declaring himself ready to meet his fate, having confidence in the mercy of his Saviour. A large number of spectators were present.

At Lyonsville, Tennessee, the creek running through the town rose so suddenly as to sweep away the house of Mr. Richardson, with his family in it. The wreck, after drifting about a mile, lodged against a tree, and Mr. R. and his wife were rescued. Their three children were drowned.

Bigamy is very fashionable, but none the less exposable. The last case is that of one Bulkley, a resident of Haverhill, N. H., whose two wives recently met at Lawrence, each being in search of her husband, and not knowing each other. The police prevented a scene.

The office of the Trenton and Belvidere Railroad Company, at Lambertville, N. J., was entered on the night of the 8th inst., and robbed of $5,000 in Hunterdon County bank bills, $1,000 in tens, $1 500 in fives, and $2,500 in small bills. A large reward is offered for the recovery of the money.

About one-half of the farm situated at Medford, Mass., and formerly the residence of John Quincy Adams, was sold at auction on Monday at the rate of 2 1 4 to 3 1-4 cents per square foot.

The Massachusetts House of Representatives have, by a vote of 130 to 113, passed to a third reading the bill repealing the Personal Liberty bill passed by the last Legislature.

In New Orleans, on the 21st inst., a duel was fought between Messrs. Estlin and Cuddy, merchants, of that city, at Pass Christian, which resulted in the death of the latter. Mr. Estlin was slightly woundrd.

The largest water wheel in the world is at Troy, N. Y. Its power is equal to one thousand horses. It drives machinery which works up annually 10,000 tons of iron into horse-shoes, spikes, nails, &c.

Mr. Elias Workman, living in Holmes Co., Ohio, committed suicide, because he had been elected assessor of the township, and was afraid he was not fit for the office.

They have now in Paris an "Umbrella Great Coat," which is intended to serve as a great coat and an umbrella at the same time. It is made of impervious material and has running along the lower edge, an air-proof tube. Under the collar is a little blow-hole communicating with his tube. The wearer applies his mouth to this hole, and with a few exhalations he inflates it with air. The tube takes the consistency of a hoop, the great coat takes the form of a diving-bell, and the drops fall a long way outside the wearer's feet.

The tallest chimney in the world has been built in Glasgow, Scotland—its height being 460 feet, and its circular diameter at the base 50. It is of the form of a cone, and contracts to six feet diameter at the top. Three millions of brick and thirty tons of iron for bands, were used in its construction. It was built by the Messrs. Tenant to carry off the deleterious gases arising from their retorts in manufacturing chemicals.

There are 20 paper mills in Lee, Mass., with 75 engines. 1 100,000 pounds of rags are used annually, giving employment to 1000 operatives. From this amount of rags are manufactured 780,000 reams of paper, worth about $1,300,000. Besides this there is an extensive stationery establishment in which 100,000 reams of paper are manufactured.

The Ohio State Journal says: Less than six hours after the four men were rescued from their living tomb in the Blue Rock coal banks, fifty feet of the mine fell in, which, if the work had been delayed that much longer, would inevitably have crushed the daring workmen and the imprisoned miners. Truly, the escape of these men was wonderful.

The British fleet has found a terrible enemy in the Sea of Azof, in the form of large and destructive sea worms peculiar to those waters. These attack the uncoppered parts under the water line of the ships, and bore through them with the rapidity of an old carpenter handling an augur. Vessels navigating these seas have to be sheathed to the water line, or else their days are soon numbered.

Feisullah Pacha, the Veely of Sivas, at one time attache of the Ottoman Embassy in London, has been murdered in his palace at Ezeroum by four of his Georgian slaves. In consequence of ill usage experienced at the hands of their master, they vowed vengeance, and, having put him to death one night in his sleep, went straight to his chiaga, (secretary) confessed the deed, and surrendered themselves prisoners.

The St. Joseph (Mo.) *Gazette* is advised from all parts of the surrounding country that the growing crop of wheat is one of the most promising that has ever been seen in this country. As there was a greater number of acres sown than ever before, the supply of this great necessary will be plentiful.

The Fitchburg *Reveille* says that the town of Winchendon, Mass., is more largely engaged in the manufacture of wooden ware than any other place in the country. They furnish annually 1,560,000 pails, 240,000 tubs, 15,000 churns, and 1,000,000 toy pails—that have a total value of $360,000, or about $1,000 a day, including Sundays, throughout the year

There is a silk manufactory in full operation in the village of Yonkers, Westchester county, (N. Y.,) which gives steady employment to from fifty to sixty boys and girls, ten years of age and upwards. The machiney and fixtures used cost about twelve thousand dollars, and the amount of silk manufactured weekly is about three hundred pounds.

A little boy died in Bangor, last week, from the effects of using an old tobacco pipe to blow soap bubbles with. His little sister, who used it with him, is lying dangerously ill. It is supposed they were poisoned with the essential oil of tobacco imbibed from the pipe which they were using.

It is now stated that the the immense quantities of wheat purchased at Chicago, Milwaukie, and other points at the West, last fall, said at the time to be on account of the French Government, were in reality bought for parties in Boston, New York, &c., who will "realize" a loss of something near a million of dollars!

In the gold digging district of Woolshed, Australia, Daniel Cameron having been elected a member of the provincial legislature, his supporters had his horse shod with shoes of solid gold, and presented to him £1500 besides.

A very extensive cave has been discovered near Caledonia, Minnesota. Several large rooms have been visited, and the Brownsville *Herald* says that it will probably rival in attraction the Mammoth Cave in Kentucky.

The trial of the Wakemenites in New Haven has been brought to a conclusion, the insanity of the prisoners becoming so evident that the State Attorney declined to proceed. A verdict was accordingly rendered of "Not Guilty, on account of Insanity."

The steamer James Parks, from Pittsburg to Hannibal, Mo., and a lumber barge in tow, were burned when near Cairo, at the junction of the Mississippi. The steamer was loaded with railroad iron and lumber. No lives were lost, but the boat, barge and cargo were totally lost.

In Tuscany, the Government has given notice that 10,000 persons have left the Catholic Church. This fact has stimulated the authorities to renewed persecution, and criminal prosecutions on the ground of religion are multiplying.

In Sebastopol during the siege a cannon ball buried itself in the side of a hill, and a stream of water began to flow from the spot, which supplied the soldiers with water for the remainder of the season. This ball must have been shot from a *spring* gun.

The New Bedford *Mercury* states that during the last few days, six persons have died in that city from the use of liquors sold at the grog-shops.

John D. Murrel, the wealthiest man in Virginia, died at New Orleans recently, leaving effects amounting to $2,000,000.

The camels brought out by the ship Supply for the United States Government have been safely landed in Texas.

Orders have been received at the Charleston Navy Yard to razee the frigate Cumberland, and prepare her for service.

None of the copper money of France stamped with the head of Liberty will be legal tender after the first of next October.

Six fugitive slaves have passed through Utica, N. Y., within a few days, for Canada.

The Erie Railroad, judging from the mammoth passenger and freight trains, must be doing an unprecedented heavy business this Spring. A train containing 700 passengers, emigrants for the Great Salt Lake City, recently passed over the road.

The books of subscription of the "Hudson River Bridge Company's" stock are now open at Albany, and will continue open until the 25th of June. The capital stock is $500,000, divided into shares of $100.

A marriage took place a short time since in New Orleans, at 7 o'clock in the evening, but the bride, taking suddenly ill, was dead at 9, and the same paper that chronicled her nuptials, also published her decease.

The Prize Committee of the Albany Law School has awarded to Andrew Anderson, Jr., of South Bend, Indiana, a gold medal, and to Edward Vanness, of Albany, a silver medal, for essays on the Law of Mortgage.

There is now in course of erection on Paca street, Baltimore, between Lexington and Fayette, a magnificent hall for the four tribes of Red men in that city, viz: Pocahontas, Susquehanna, Pawnee and Ottawa, which is expected to be finished and ready for dedication about the 16th of July.

Lemuel Keyes, residing near Chicopee Falls, has buried his wife, three daughters, and one son, from small pox, within two months. Mr. Keyes has also been down with the same disease, but has recovered.

A cotemporary says it is calculated that the clergy cost the United States $6,000 000 annually, the criminals $19,000,000, lawyers $35,000,000, tobacco $40,000,000, and rum over $100,000,000.

A party of women in Hanover, Ill., a few days ago, demolished a drinking and gambling shop in that town. The leader of the assailants was a granddaughter of the celebrated General Boone of Kentucky.

A pear tree more than 300 years old was cut down in New Haven recently. It stood in Crown street, and was transplanted from England in the early days of the Colony.

Governor Briggs of Massachusetts has been appointed President of the American Temperance Union, in place of Chief Justice Savage, resigned, and has accepted the appointment.

An Express Company has suffered to the tune of $2,700 in Providence, because one of its wagons injured the mental faculties of a girl by breaking her head.

The General Assemblies of the two branches of the Presbyterian Church, the Old and New Schools, hold their sessions in this city, commencing on Thursday of last week.

The woolen factory of Blakeman & Wheddon at Morrisville, Madison County, was totally destroyed by fire, May 14.

Dr. Orville Dewey has donated the earnings of his last Winter's lectures to his native village, to be expended in planting shade trees along the streets.

One hundred Polish families, mostly farmers, have settled in Kames County, Texas, near the San Antonio River.

Five negroes escaped from their owners in Covington, Ky., last Sunday night, and have not been retaken.

The Erie Railroad Company has assumed the exclusive control of its Express business, formerly leased to a company.

In Boston there 3,200 grogshops, and in the County in which Boston is (Suffolk) there are 1,003 Justices of the Peace.

Mountain Glen Water-Cure.

THE MOUNTAIN GLEN WATER-CURE, Plainfield, N. J., A. UTTER, Physician and Proprietor, is now open for the reception of patients.

Persons wishing circulars can be supplied at the *Recorder* office, or by addressing DR. UTTER,
Plainfield, N. J.

New Jersey Railroad.

FOR PHILADELPHIA and the South and West, *via* Jersey City—Mail and Express Line. Leave New York at 8 and 11 A. M. and 4 and 6 P. M., $3; 12 M., $2, stopping at all way stations. Through tickets sold for Cincinnati ($17 and $18 50) and the West, and for Baltimore, Washington, Norfolk, &c., and through baggage checked to Washington in 8 A. M. and 6 P. M. J. W. WOODRUFF, Ass't Supt.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

For Philadelphia,

BY THE CAMDEN AND AMBOY RAILROAD, from Pier No. 1 North River, foot of Battery place. The Camden and Amboy Railroad line for Philadelphia will leave as follows:

Morning line—at 6 o'clock A. M., daily, (Sundays excepted,) by the steamboat JOHN POTTER, Cap. John Simpson, for South Amboy; thence by the cars and steamboat to Philadelphia. Fare by this line $2 25.

Afternoon Express line—at 2 o'clock P. M., daily, (Sundays excepted,) by steamboat JOHN POTTER, stopping at Jamesburg, Hightstown, Bordentown, and Burlington, arriving at Philadelphia about 6½ o'clock P. M. Fare by Express line $3.

Returning, passengers will leave Philadelphia at 6 A. M. and 2 P. M.

Accommodation and Emigrant lines at 1 and 4 P. M.

1 o'clock line—first class passengers $2, second class passengers $1 50.

4 o'clock line—first class passengers $2, second class passengers $1 75. IRA BLISS, Agent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

N. Y. AND ERIE RAILROAD COMPANY'S }
EXPRESS OFFICE, No. 175 Broadway, N. Y. }

THE NEW YORK AND ERIE RAILROAD COMPANY, having made arrangements to transact the Express business over their road and connecting branch railroads, and having procured a suitable outfit for that purpose, are now prepared to do a general Express business.

Having the exclusive control and direction of the movement of trains on which the business is done, they will be able to avail themselves of the privilege of giving unusual dispatch to articles forwarded by their Express to stations along the line of their road or its connecting branches.

Their facilities in this respect will be much greater than could be afforded to companies exclusively engaged in the Express business.

By an arrangement made with the United States and American Express Companies, articles will be taken by these Companies at Dunkirk and Buffalo, and forwarded with dispatch to all the principal cities and towns in the United States and Territories.

Contracts will be made by this Company for the transportation of freight over their road by the car-load and sent by passenger trains to Dunkirk and Buffalo, to be forwarded from those points to their destination by the ordinary transportation lines.

Two Expresses will be sent daily in charge of special messengers, who will attend to the transportation of merchandise, packages, and the collection of bills sent with goods of all kinds, the proceeds of which will be promptly returned.

Particular attention will be given to the collection of notes, drafts, and accounts, at and between New York, Buffalo, Cleveland, Cincinnati, Chicago, and St. Louis, &c. HENRY D. RICE, Sup't Express.

May 16, 1855.

Miscellaneous.

Personal Appearance of Literary Celebrities.

Douglas Jerrold, a well known contributor to *Punch*, and editor of various publications, is a man about fifty years of age, and in person is remarkably spare and diminutive. His face is sharp angular, and his eye of a greyish hue. He is probably one of the most caustic writers of the age, and, with keen sensibility, he often writes, under the impulse of the moment, articles which his cooler judgment condemns. Although a believer in hydropathy, his habits do not conform to the internal application of Adam's ale. His Caudle Lectures have been read by every one. In conversation he is quick at retort—not always refined. He is a husband and a grandfather.

The Hon. T. B. Macauly is short in stature, round, and with a growing tendency to aldermanic disproportions. His head has the same rotundity as his body, and seems stuck on it as firmly as a pin head. This is nearly the sum of his personal defects, all else, except the voice, (which is monotonous and disagreeable,) is certainly in his favor. His face seems literally instinct with expression; his eyes, above all, full of deep thought and meaning. As he walks, or rather struggles, along the street, he seems in a state of total abstraction, unmindful of all that is going on around him, and solely occupied with his own working mind. You cannot help thinking that literature with him is not a mere profession or pursuit, but that it has almost grown a part of himself, as though historical problems or analytical criticisms were a part of his daily food.

A correspondent of the New York Tribune, in a letter dated at Nottingham, England, writes as follows: "I have seen Bailey, the author of 'Festus.' His father is proprietor of the Nottingham *Mercury*, and the editorial department rests with him. He is a thick set sort of a man; of a stature below the middle size; complexion dark, and in years about eight and thirty. His physiognomy would be clownish in in expression, if his eye did not redeem his other features. He spoke of 'Festus,' and of its fame in America, of which he seems very proud. In England it has only reached its third edition, whilst eight or or nine have been published in the United States."

De Quincey is one of the smallest legged, smallest bodied, and most attenuated effigies of the human form divine that one could find in a crowed city during a day's walk. And if one adds to this figure clothes that are neither fashionably cut nor fastiduously adjusted, he will have a tolerably rough idea of De Quincey. But then his brow that pushes his obtrusive hat to the back part of his head, and his light grey eyes, that do not seem to look out, but to be turned inward, sounding the depths of his imagination, and searching out the mysteries of the most abstruse logic, are something that you would search a week to find the mates to, and then you would be disappointed. De Quincey now resides at Lasswade, a romantic rural village, once the residence of Sir Walter Scott, about seven miles from Edinburg, Scotland, where an affectionate daughter watches over him, and where he is the wonder of the country people for miles around.

Men Buried Alive in a Coal Mine.

FIFTEEN DAYS UNDER GROUND.

The Ohio *Statesman* has full particulars of the disaster in the coal mines in the Muskingum Valley, (already reported by telegraph,) by which four men were buried alive, but rescued, after great efforts, at the end of fifteen days. The Statesman's correspondent says:

"I left Zanesville yesterday just after the news of the rescue of the men had reached that city. The rescue was accomplished at 1 o'clock yesterday morning. The caving in of the coal bank by which they were shut in, took place two weeks ago last Friday, at about 11 o'clock in the morning. The men had gone into the bank very early in the morning of that day, so they have been *shut out from light and pure air for nearly fifteen days*. They had only one dinner, and after being shut up, found the dinner of another man, who had, with sixteen others, at great risk, barely escaped the catastrophe. It is not true that they had lived on the lamp oil. They had but little of it. One of the men swallowed some of the oil to relieve his throat, which had become very sore from drinking the copperas water. So that the marvel remains, of four persons rescued after two weeks' deprivation of food and good air; and not in a very bad condition either, considering.

The excitement consequent on this affair has been at the highest pitch all along the Muskingum, from Zanesville to Marietta. There has never been less than five hundred persons on the ground, all wrought up to the most intense excitement. On Sunday last there were over two thousand people at the scene.

The locality of the accident is on the west side of the Muskingum, in Blue Rock township, half a mile above what is called Coal Run. The bank is owned by Mr. Guthrie. The mouth of the bank is but a few feet from the river and some twelve feet above the ordinary stage of the river. The bank opens into a hill that is some 300 feet high; and when the bank gave way, the caving extended into the hill about the same distance; so that when the work of rescue began the men were a hundred yards from sunlight in every direction!

The cause of caving was the unskillful manner in which the bank was worked. Instead of working the vein—which was a four and a half feet vein—to the ordinary width of about twelve feet, and leaving at short intervals pillars of ten feet square to support the superincumbent mass of rock and earth—there were large rooms made and few pillars left, and those small; so that when the crash came, which it did with a report that sounded like thunder, it fairly pulverized the pillars and crushed into fragments the rocks above. Upon the top of the hill there were found crevices wide enough for a man's leg; and perceptibly extending 20 or 30 feet down. Perhaps these crevices supplied the men with pure air—and thus enabled them to support themselves with comparative ease. Again, the caving began at the mouth and ran inwards, shutting in, perhaps compressing the air. There was considerable room for the men to exercise in, notwithstanding the extent of the caving.

The persons who were thus entombed, are named Edgin, Savage, Pearson and Getwood. Pearson is an old man and Savage a boy about 18 years. The old man suffered most; the boy least from exhaustion. Edgin and Pearson had families, who were constantly present, under an almost insane agony of mind.

The work of rescue was a herculean work, but bravely undertaken and heroically consummated! It was the more difficult as but about eight men could work at a time. There were eighty men constantly working day and night, relieving each othher in gangs. The progress was slow, and became slower the farther they went into the bank, so that since Saturday not more *than a foot an hour* has been realized. And this progress was interrupted by the rock falling in and by the impure air which put out the lights.

It seemed that the men had picked their way some twenty feet within the rocky fissure, and were enabled to converse pretty freely. The workmen warned them to retire within, as they were in imminent danger. Edgin said he wouldn't budge till they told him what was the day and hour, and how long they had been shut in The workmen told him that he had only been in a week; that it was Friday—deceiving him, as they supposed, for his own good and that of his companions. Edgin then told them to say to their families and friends, that if they didn't get out they were ready to die happily, having made their peace with God. Edgin then retired, exclaiming to the workmen most cheerfully:

"We'll go in! Work on, boys! May God bless you!"

This dialogue gave new hope to the workmen; and they labored on till the bad air put out the lights again, when the work was suspended for four hours, until they sent to Zanesville for some hose, a bellows and some pipe, by which they sent fresh air in; and the lights were reillumed, and the work went on until Friday night, when it was said they were within twenty minutes of the rescue. Arrangements were all made to receive them and expectation was again baulked by another caving in of the earth and rock. Friday night the work continued. Some six hundred people remained till one o'clock yesterday morning, when the rescued were brought out to the crowd with their faces covered and their bodies very much emaciated and exhausted. Their families were not permitted immediately to meet them; physicians were present to look after their well being, and everything done to make sure of the results of the long labor, viz: the preservation of their lives. Pearson, the older man, had a fluttering at the heart; the others seemed to be "as well as could be expected." Their faces were covered to protect their eyes. The boy, Savage, it is said, made inquiry the first thing after a "chew of tobacco;" the rest after their families and friends. They had taken some sleep on some dry dirt which they had piled up for that purpose; but had no idea of the time that had elapsed."

Misery Likes Company.

Some months after the close of the Mexican war, one of the disbanded volunteers, who was in possession of more wit than cash, made his appearance at one of the largest hotels in Cincinnati with a stomach as empty as his purse, and displaying a Mexican shilling to the landlord, inquired if that kind of coin was current there.

"Oh, yes," replied he; "you can have whatever the house affords for that money.

The fortunate soldier, finding himself in such compliant quarters, called about him most lustily, and the most sumptuous, expensive dinner that the hotel could afford, washed down by sundry bottles of the most expensive wines, was dispatched without ceremony. On going away, he tendered at the bar the identical shilling which the landlord had inadvertently led him to expect was to perform such wonders. The stare, the shrug, and the exclamation elicited from "mine host," by such a tender, may be conceived more easily than expressed. An explanation very much to the dissatisfaction of the landlord took place, who quickly found not only that nothing more was likely to be got, but also that the laugh would be tremendously heavy against him. This part of the profits he had a very Christian wish to divide with his neighbor. Taking, therefore, his guest to the street door of his hotel, he requested him to look over the way.

"Do you see," said he, "that large hotel opposite? That fellow, the landlord of it, is my sworn rival, and nothing can keep this story from his ears, in which case I shall never hear the last of it. Now, my good fellow, you are not only welcome to your entertainment, but I will instantly give you a dollar in the bargain, if you will promise on the word of a soldier to attempt the very same trick with him to-morrow that succeeded with me so well to day."

Our veteran took the money and accepted the conditions; but having buttoned up the dollar very securely in his pocket, he took leave of the landlord with the following speech and a bow which done no discredit to the gallantry of a soldier:

"Sir, I deem myself in honor bound to use my utmost endeavors to put your wishes into execution; I shall certainly do all I can, but must candidly inform you that I fear I shall not succeed, since I played the very same trick with the gentleman yesterday, and it is to his particular advice alone that you are indebted for the honor of my company to-day."

The Best Breed of Sheep.

The mutton sheep are known under the name of the long or short wooled. To the long-wooled belong the Leicestershire, or Cotswold, to the short wooled belong the South Downs.

The long-wooled sheep in this country have large bodies, and mature early, and admirably fitted to run in small flocks and upon rich fine pastures. They are among sheep what the short horns are among cattle. They bring the highest price in market, and more per pound than any other sheep that go to the shambles. It is not an uncommon thing to get fifteen dollars for a well-fatted three year old weather, and they have been sold as high as twenty five, while from six to eight would be called very high, and rare for one of the same age of the short-wooled breeds A neighbor near by sold three Cotswold weathers for sixty dollars to a drover. They were three years old, and I believe it is his opinion that he would rather fatten these sheep for profit than any other, and he is a man of experience and judgment.

There is, however, another very decided advantage in this breed of sheep, when a person lives near a large town, and that is in the superior size of the lambs and the consequent high price they bring, being often sold at high as five dollars, when other lambs of the same age will bring no more than one dollar to one dollar and a half. For a purely mutton sheep, when the farmer has plenty of winter and summer feed, we believe the long-wooled kinds to be the proper breed. But in scant pasturage, and when the farmer has not a large supply of coarse grains, then we think the South Down is the breed. In all this, however, we have assumed that wool was only a secondary object, mutton being the primary cause for keeping sheep.

Engraving by Light and Electricity.

At a recent meeting of the Society of Arts in London, at which Mr. Roger Fenton presided, Herr Pretsch, late manager of the Imperial Printing-office at Vienna, read an interesting paper on what he calls photo-galvanography, or engraving by light and electricity, which he has brought to a degree of perfection that invests the subject with considerable importance in a social as well as an artistic point of view. He states that he has for many years been engaged in rendering the discoveries and results of science applicable to several graphic processes and to printing purposes. Soon after the introduction of photography, he felt its importance in reproducing and imitating most of the productions of nature and art, and he conceived the idea of producing by means of photography a plate from which impressions might be taken with common printers' ink.

Many learned and scientific investigators throughout Europe were equally impressed with the importance of such a result, and had sought to attain it, including Dr. Berres, in Vienna; Mr. R. W. Grove, in London; M. Fizeau, in Paris; Mr. Fox Talbot, and several others. M. Fizeau, in trying to solve the problem, etched his daguerreotype plates by covering them with a mixture of nitric acid and nitrate of potass, and chloride of sodium. He repeated the process several times, cleaning his plate each time with caustic ammonia. The faintly-etched lines were afterward filled with with printers' ink, capable of rapidly drying; the whole surface of the plate was then gilt, the dried ink removed, and the plate etched with nitric acid.

Most of these investigators had used daguerreotypes upon silvered copper or real silver plates and were all struck with the minuteness and beauty of the details, but they complained of the faintness of the etched parts, and confessed that no printers' ink could enable them to reproduce the beauty of all the parts visible upon the plate. In the process which M. Pretsch uses the method of etching is abandoned, the fundamental principle being the possibility of producing photographically, on the material used, a printing surface of relievo and itaglio parts, instead of a mere picture made up of lights and shades, and in this process the picture appears at once, in all its depths, tints, half-tints and chiaroscuro.

His invention, in fact, consists in adapting the photographic process to the purpose of obtaining a raised or a sunk design on a glass or other suitable place, covered with glutinous substances, mixed with photographic materials, which design can then be copied by the electrotype process, so as to procure plates suitable for printing purposes. M. Pretsch exhibited several beautiful specimens of his art, which were greatly admired. A short conversation ensued in which Mr. Moreland, M. Claudet, M. Hanhard, M. Pretsch, and the Chairman took part, and a vote of thanks was accorded to M. Pretsch for his interesting paper.

A Poisoned Valley.

A singular discovery has lately been made near Batten, in Java, of a poisoned valley. Mr. Alexander Louden visited it last July, and we extract a paragraph from a communication on the subject, addressed by him to the Royal Geographical Society:

"It is known by the name of Guevo Upas, or Poisoned Valley; and following a path which has been made for the purpose the party shortly reached it with a couple of dogs and fowls, for the purpose of making experiments. On arriving at the top of the mountain the party dismounted and scrambled up the side of the hill, at a distance of a mile, with the assistance of the branches of trees and projecting roots. When at a few yards from the valley, a strong, nauseous, suffocating smell was experienced; but on approaching the margin the inconvenience was on longer found. The valley is about half a mile in circumference, of an oval shape and about thirty feet deep.

The bottom of it appeared to be flat, without any vegetation, and a few large stones scattered here and there. Skeletons of human beings, tigers, bears, deer and all sorts of birds and wild animals lay about in profusion. The ground on which they lay at the bottom of the valley appeared to be a hard sandy substance, and no vapor was perceived. The sides were covered with vegetation.

It was proposed to enter it, and each of the party having lit a cigar, managed to get within twenty feet of the bottom, where a sickening, nauseous smell was experienced without any difficulty of breathing. A dog was now fastened to the end of a bamboo and thrust to the bottom of the valley, while some of the party, with their watches in their hands, observed the effect.

At the expiration of fourteen seconds he fell off his legs, without moving or looking around, and continued alive only eighteen minutes. The other dog now left the company and went to his companion. On reaching him he was observed to stand quite motionless, and at the end of ten seconds fell down; he never moved his limbs after, and and lived only seven minutes. A fowl was thrown in, and died in a minute and a quarter. And another, which was thrown in after, died in the space of a minute and a half.

A heavy shower of rain fell during the time that these experiments were going forward, which, from the interesting nature of the experiments, was quite disregarded. On the opposite side of the valley to that which was visited lay a human skeleton. The head was resting on the right arm. The effect of the weather had bleached the bones as white as ivory. This was probably the remains of some wretched rebel, hunted toward the valley, who had taken shelter there unconscious of its character.

What Proportion of Merchants are Successful.—The Boston Traveler refers to a circular drawn in 1808, by Nathan Appleton, and signed by 109 business men, composing sixty four firms, then doing business in that city, to show the incorrectness of a popular theory, that few people in commercial business succeed. Of these signers, whose names are given, the Traveler says, fifty of the one hundred and nine were unsuccessful, and only six of fifty are now living. Fifty-nine of the one hundred and nine may be considered as having been in a greater or less degree, successful in business, as they acquired property, and never failed. Of this number, twenty are now living. Thirty-two of the number acquired sufficient property to be independent and comfortable, varying in amounts; but none supposed to exceed one hundred thousand dollars. Thirteen acquired fortunes varying from one hundred thousand to three hundred thousand dollars. Seven acquired fortunes of between three hundred and five hundred thousand dollars. Seven acquired fortunes supposed to be at least one million of dollars, four of whom are now living.

Poor Richard's Maxims.

These maxims by Dr. Franklin, though often printed, lose nothing of their value by repetition.

1. Plough deep while the sluggards sleep, and you have grain to sell and to keep.
2. Pride is as loud a beggar as Want, and a deal more saucy.
3. Silks, satins, scarlets, and velvets put out the kitchen fire.
4. Diligence is the mother of Good Luck.
5. Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy.
6. Extravagance and Improvidence end at the prison door.
7. It is easier to build two chimneys than keep one in fuel.
8. If you would know the value of money, go and try to borrow some.
9. The eye of the master will do more work than both his hands.
10. What maintains one vice would bring up two children.
11. He that goes a borrowing goes a sorrowing.
12. Rather go to bed supperless than rise in debt.
13. Sloth, like rust, consumes faster than labor wears.
14. A life of leisure and a life of laziness are two different things.
15. Three removes are as bad as a fire.
16. Creditors have better memories than debtors.
17. The rolling stone gathers no moss.
18. If you would have your business done, go; if not, send.
19. It is foolish to lay out money in the purchase of repentance.
20. Buy what thou needest not, and thou shalt sell thy necessities.

Anecdote of Mr. Layard.

Austin Henry Layard found himself wandering about, on one occasion, somewhere near Bokhara, in the upper provinces of India, and here his funds ran short. He called on a merchant and requested him to advance him some money. "Can't do it," was the reply, "as many fellows have imposed on me with fictitious drafts; I've been too often taken in and done for." "Oh, well," said Mr. Layard, "as you please; I have money at my banker's in London; and I will come and breakfast with you to-morow." "Do so; I shall be very happy to see you at breakfast." Next morning who should walk into this merchant's compound but a Persian gentleman, in full Oriental costume. "I have come to breakfast with you as I promised." "What?" said the merchant, "I don't recollect having seen you before." "Oh, yes, you have; you saw me yesterday, and I said I should return this morning." "You're Mr. Layard, are you?" he inquired, considerably astonished. "Yes." After breakfast, and when the traveller had told him his plans, and aroused the interest of his host in the discoveries he expected to make among the mounds around Mosul, in the plain of Shinar, where the ruins of ancient Nineveh are supposed to be, the merchant said, "I'll advance you money—five hundred pounds if you like; how much do you want?" "Oh, I don' want so much as that; give me five pounds?" "Yes." So he got the five sovereigns, put them in the sole of his shoe as the safest place while traveling, and having mounted his horse, rode away.

On his journey down to Assyria he had to pass through the territories of the hostile Kahn, who had already taken away the lives of several Englishmen, and was now trying to get hold of our traveller, now roaming through his dominions. Mr. Layard knew this, and one day, when drawing near his enemies, he waited till the hour of tiffin, when they were all in their tents at the forenoon meal, when, putting spurs to his horse, he dashed into the midst of the hostile encampment, rushed into the chief's tent, and plunged his hand into the bowl of salt, which he immediately put to his mouth, exclaiming, "Now I am safe." "Well," said the chief, "you *are* safe." He admired the boldness and dexterity, of the Englishman, but above all, the faith thus reposed in the "covenant by salt." Having tasted the chief's salt, he had now a claim not only to his hospitality, but on his protection, and he was safely escorted on his way to the scene of his future discoveries.

[Macphail's Magazine.

Melons.

Melons of all kinds require a light, warm and rich soil. That which seems best adapted to their growth, is a light sandy loam, with a pervious subsoil, and a texture susceptible of easy disintegration and fine tilth. Pasture lands of this character usually produce abundantly, if limed or dressed with house ashes. They should be broken the previous year, say in August, and if practicable, on a wet day, and allowed lie fallow. The next Spring they should receive a good dressing of well decomposed manure, which should be worked in and incorporated thoroughly with the soil and the seed planted in hills not less than six feet apart. Some recommend eight feet as the proper distance between the hills, but this we consider as useless waste of soil, six feet being space enough for the largest and most luxuriant vines. Some gardeners prefer sheep manure for the hills, allowing from one to three bushels to every plant—the number preserved in each hill. The strong tendency, however, of this manure to ferment violently, and the consequent speedy evolution of the fructifying gases before the plants have attained a development sufficient to prevent their waste by assimilation, renders it less efficacious than that in which the economy of fermentation is less rapid and energetic, unless indeed it be applied after the plants are fully developed, and in a condition to appropriate rapidly their pabulum. Like all plants with broad leaves, the melon is not severely affected by moderate degrees of drought. It stands a sharp drought better than most vegetables, but when fruiting the preservation of humidity causes a shrinking of the fruit, and circumscribes the productiveness of the vines. Irrigation is frequently resorted to at this season of its development, and always with beneficial results. Soap suds is the best article that can be used, probably, for this purpose. It contains the food of plants in a state of perfect solution, and induces a healthful and rapid growth, besides acting as a remedy for many diseases to which vines of the culmiferous class are subject toward the close of the season. Urine, in which gypsum has been mixed, is also a good article for invigorating melons, and other vines of a similar kind. It should, however, be permitted to ferment, or be greatly reduced with water before being applied, as in its fresh state it would prove rather detrimental than otherwise to the vines. Water from the barn-yard, which is rich in carbonaceous matter, and saturated with various fertilizing salts, tends to urge forward the growth, and induce a more liberal development of fruit.

[N. E. Farmer.

Effects of Unrequited Love.

A few days ago were consigned to their final resting place, in the churchyard of Keighley, the mortal remains of one of the most eccentric persons that ever lived, a man who voluntarily went to bed in good health and remained there for a period of forty-nine years. He went by the cognomen of "Old Threeclaps" in the neighborhood, but his name was William Sharp, and he lived at a place called Worlds, not very far from Braithwaite, in the parish of Keighley. He was the son of a small farmer, and from an early age, never showed much inclination to steady work. When thirty years of age he took to his bed and the room, which he never left until carried thence on the day of his funeral.

The cause of this extraordinary conduct it is difficult to ascertain with any degree of certainty, but the principal reason seems to have been a matrimonial disappointment. The wedding day was fixed. This singular character, then a young, and doubtless, ardent lover, accompanied by a friend, wended his way down to the parish church, and there patiently awaited the arrival of the bride elect. But the bride never came. The father of the damsel firmly and steadily refused his consent. This, conbined, it may have been, with other grievances, imaginary or real, preyed heavily upon a mind certainly not endowed with more than average intellect, and bearing unmistakeable traces of heriditary singularity; and the result was that the young man consigned himself to a small room, measuring about nine feet in every direction, with the determination of spending the remainder of his existence between the blankets, which resolution he kept most unflinchingly.

At the time of his death, his window had never been opened for thirty-eight years. During the whole period of this self-imposed confinement, he never had any serious illness, the only case of indisposition those connected with him can remember, being a slight loss of appetite, caused, apparently, by indigestion, for two or three days. He certainly, physically at least, did credit to his food; for though, arrived at the long age of seventy-nine years, his flesh was firm, fair and unwrinkled, save with fat, and the estimate of his weight was two hundred and forty pounds, or there about. As a matter of course, the curious came far and wide to see this eccentric being, and whenever a stranger was ushered into his den he immediately buried his head in the bed clothes. About a week before his death his appetite began to fail, his limbs became partially benumbed, so that he could not take his food in his accustomed manner. From this attack he seemed to rally, and not till the evening before his death were any apprehensions entertained that the attack would prove ultimately fatal.

[Doncaster Gazette.

Cellar Bottoms.

The first requisite for a dry cellar is to have it well drained. It is possible to shut out water with a cement after the manner of shutting it within a cistern, even when the soil is generally saturated with water, but such a thing would not be very practicable, especially if the walls themselves are not laid in mortar made of hydraulic cement. Where a cellar bottom is not subjected to an influx of water, the bottom may be made quite dry by putting down a bed of stones laid in lime water, and the spreading over the surface a grouting or coat of the same kind of mortar. This can be levelled of as smooth as a floor, and if properly made, it will become almost as hard as stone, and effectually keeps out water from below. Water-lime, called also hydraulic cement, is a species of lime, or ground stone, which, mixed with good sand, in the manner of using common lime, will form a mortar that will not be softened by water, after it has once becomes hardened. Sometimes it will even harden under water though not as well as though it were first left to dry in the air. It is used for plastering the walls of cisterns, laying walls of fortifications exposed to water, building canal locks, banks, &c. The mortar is mixed like common mortar, but it must be made up no faster than wanted for use, for it cannot be spread after it once "sets," which it does very soon. Water-lime, or hydraulic cement, is quite variable in price, depending upon its quality, the nearness of the quarry where it is obtained, &c. The cost per yard, of a cement cellar bottom in any particular locality, will of course depend upon the price of wages, lime and stone, and the character of the soil, and consequent thickness of layer required.

Society Improves Manners.—Polite, and politeness, are terms, etymologically relating to a city. Polis was a city in Greece, and Polites a citizen. Cultivated manners distinguished the citizen from the rude countryman. A citizen was a *polite man*. The etymology of the term points to society, and the true source of grace and refinement of manners, and character. Isolation fosters selfishness and boorish habits. Mingling with our fellow beings we rre lead to study our relations to them, and what is due to them, and deport ourselves accordingly. True politeness embraces the duties and deportment we owe to those around us. It is justice and benevolence embodied or acted out. Mere artificial manners, or heartless etiquette is not politeness.

One of the $500 notes of the Cincinnati Bank, which was obtained by Finley, Kissam and associates, in August, 1854, by forgery, was presented to the Bank on Saturday last, for payment, which was refused. There are still five of these $500 notes unredeemed, and probably all in the hands of the forgers.

Publications of the American Sabbath Tract Society.

THE AMERICAN SABBATH TRACT SOCIETY publishes the following Tracts, which are for sale at its Depository, No. 9 Spruce-st., N. Y., viz:

- No. 1—Reasons for introducing the Sabbath of the Fourth Commandment to the consideration of the Christian Public. 28 pp.
- No. 2—Moral Nature and Scriptural Observance of the Sabbath. 52 pp.
- No. 3—Authority for the Change of the Day of the Sabbath. 28 pp.
- No. 4—The Sabbath and Lord's Day: A History of their Observance in the Christian Church. 52 pp.
- No. 5—A Christian Caveat. 4 pp.
- No. 6—Twenty Reasons for keeping holy, in each week, the Seventh Day instead of the First Day. 4 pp.
- No. 7—Thirty-six Plain Questions presenting the main points in the Sabbath Controversy; A Dialogue between a Minister of the Gospel and a Sabbatarian; Counterfeit Coin. 8 pp.
- No. 8—The Sabbath Controversy; The True Issue. 4 pp.
- No. 9—The Fourth Commandment: False Exposition. 4 pp.
- No. 10—The True Sabbath Embraced and Observed. 16 pp. (In English, French, and German.)
- No. 11—Religious Liberty Endangered by Legislative Enactments. 16 pp.
- No. 12—Misuse of the term "Sabbath." 8 pp.
- No. 13—The Bible Sabbath. 24 pp.
- No. 14—Delaying Obedience. 4 pp.
- No. 15—An Appeal for the Restoration of the Bible Sabbath, in an Address to the Baptists, from the Seventh day Baptist General Conference. 40 pp.

The Society has also published the following works, to which attention is invited:

A Defense of the Sabbath, in reply to Ward on the Fourth Commandment. By George Carlow. First printed in London, in 1724; reprinted at Stonington, Ct., in 1802; now republished in a revised form. 168 pp.

The Royal Law Contended for. By Edward Stennet. *First printed in London in 1658.* 64 pp.

Vindication of the True Sabbath. By J. W. Morton, late Missionary of the Reformed Presbyterian Church. 64 pp.

Also, a periodical sheet, quarto, The Sabbath Vindicator. Price $1 00 per hundred.

The series of fifteen tracts, together with Edward Stennet's "Royal Law Contended for," and J. W. Morton's "Vindication of the True Sabbath," may be had in a bound volume.

The tracts of the above series will be furnished to those wishing them for distribution or sale, at the rate of 1500 pages for one dollar. Persons desiring them can have them forwarded by mail or otherwise, on sending their address, with a remittance, to George B Utter, Corresponding Secretary of the American Sabbath Tract Society, No. 9 Spruce-st., New York.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

JOHNSONIAN WORKS—EDWARDSIAN FAITH.

We have (says the New York *Chronicle*) in the experience of Dr. Samuel Johnson and President Jonathan Edwards, a remarkable instance of a sense of sin vainly striving for relief by acts of amendment, and a sense of sin subdued and removed by a simple act of faith in the Lord Jesus Christ. As Edwards was one of the most exalted specimens of Christian piety, or of the faith that overcomes the world, so Johnson was one of the brightest examples of a legal spirit, or of a piety that stops short of a conscious union to Christ as the Lord our righteousness, but which is still intent upon realizing in itself its ideal of Christian morality. Johnson's legalism is thought by Hannah More and some of his pious friends to have given place on his death-bed to an assurance of his acceptance with God by faith in the finished righteousness of Christ. But till then he was as purely a legalist as Edwards was a child of faith. It is instructive to place side by side the sentiments recorded by such men in their private journals, the more so since each in his way is an example of the very highest order of mental and moral power.

JOHNSON.

April 20, 1764.—I have made no reformation; I have lived totally useless, more sensual in thought, and more addicted to wine and meat. Grant me, O God, to amend my life, for the sake of Jesus Christ. Amen.

March 28, 1762.—God grant that I may from this day return to my duties, labor diligently, rise early, live temperate, read the Bible, go to church.

March 18, 1764.—This is my 56th birthday. I have felt many sorrows. I have made few improvements. Since my resolution, formed last Easter, I have made no advancement in knowledge or goodness; nor do I recollect that I have endeavored it. I am dejected, but not hopeless. O God, for Christ's sake have mercy upon me. *In the evening* I went to church, prayed *to be loosed from the chain of my sins*. I have now spent fifty-five years in resolving; having from the earliest almost that I can remember, been forming schemes of a better life. I have done nothing; the need of doing, therefore, is pressing, since the time of doing is short. O God, grant me to resolve aright, and to keep my resolution, for Jesus Christ's sake. Amen. *Hæc limi navitæ.*

I resolve to study the Scriptures, read good books, to study theology, to treasure in my mind passages for recollection; to rise early; to keep a journal; to keep accounts; to take care of my health; to set down at nights some plan for the morrow.

August 17, 1767.—From that time, by abstinence. I have had more ease. I have read five books of Homer, and hope to end the sixth to-night. I have given Mrs. ——— a guinea. By abstinence from wine and suppers, I obtained sudden and great relief, and had freedom of mind restored to me; which I have wanted all this year, without being able to find any means of obtaining it. I am now about to receive, with my old friend Kitty Chambers, the Sacrament, preparatory to her *death*. Grant, O God, that it may fit me. I purpose temperance for my resolution; O God, enable me to keep my purpose to thy glory.

Sept. 18, 1769.—My days are easier, but the perturbation of my nights is very distressful. I think to try a lower diet. My body decays, but I feel that I have made no preparation for heaven. What shall I do to be saved? Among the last things spoken by Dr. Johnson was the direction to his surgeon, who was tapping him for the dropsy, and who feared to do it, lest it should induce mortification, "Deeper, deeper! I want length of life, and you are afraid of giving me pain, which I do not value."

April, 1770.—I have been recovering from my rheumatism slowly, yet sensibly; but the last week has produced little good. The easy nights have tempted me to lie long in the morning. But when I wake in the night, the release which still continues from the spasms in my throat, gives me great comfort.

April 22, 1764.—After sermon, I recommended Kitty in a prayer by herself; and my father, mother, brother, and Bathurst, in another.

July 22d, 1772.—The other day, looking over old papers, I perceived a resolution to rise early always occurring. I think I was ashamed, or grieved, to find how long and how often I had resolved what yet, except for about one half year, I have never done. My nights are now such as give me no quiet rest; whether I have not lived resolving till the possibility of performance is past, I know not, God help me, I will yet try.

April 13th, 1775.—This year has passed with very little improvement, perhaps with diminution of knowledge. Much time I have not left; infirmities oppress me. But much remains to be done. I hope to rise at eight or sooner in the morning.

Of Johnson it is said that, "Eternity presented to his mind an awful prospect; and with as much virtue as perhaps ever fell to the lot of man, he shuddered at the thought of his dissolution. His friends awakened the comfortable reflection of a well-spent life; and, as his end drew near, they had the satisfation of seeing him composed and even cheerful, insomuch that he was able, in the course of his restless nights," not to sing praises to God as Paul and Silas did in prison, but "to make translations of Greek epigrams from the Anthologia, and to compose a Latin epitaph for his father, his mother, and his brother Nathaniel."

EDWARDS.

Feb. 16, 1722.—I do certainly know that I love holiness, such as the gospel requires. At night I have been negligent for the month past in these three things; I have not been watchful enough over my appetite in eating and drinking; in rising too late; and in not applying myself enough to the duty of secret prayer.

March 6, near sunset.—Felt the doctrines of election, free grace, and of our not being able to do anything without the grace of God, and that holiness is entirely, throughout, the work of God's Holy Spirit, with more pleasure than before.

Jan. 15.—It seemed yesterday, the day before, and Saturday, that I should always retain the same resolutions to the same height, but alas, how soon do I decay! O how weak, how infirm, how unable to do any thing, am I! What a poor, inconsistent, miserable wretch, without the assistance of God's Spirit! While I stand, I am ready to think I stand in my own strength; and am ready to triumph over my enemies, as if it were I myself that caused them to flee; when, alas, I am but a poor infant, upheld by Jesus Christ, who holds me up, and gives me liberty to smile to see my enemies flee, when he drives them before me; and so I laugh, as though I myself did it, when it is only Jesus Christ leads me along, and fights himself against my enemies. And now the Lord has a little left me, how weak do I find myself! O, let it teach me to depend less upon myself, to be more humble, to give more of the praise of my ability to Jesus Chrst.

January, 1739.—I had such a sense how sweet and blessed it is to walk in the way of duty; to do that which was right and meet to be done, and agreeble to the holy mind of God—that it caused me to break forth into a kind of loud weeping, which held me some time, so that I was forced to shut myself up, and fasten the doors. I could not but, as it were, cry out, how happy are they who do that which is right in the sight of God!—They are blessed indeed, they are the happy ones! I had, at the same time, a very affecting sense how meet and suitable it was that God should govern the world, and order all things according to his own pleasure; and I rejoiced in it, that God reigned, and that his will was done.

I longed for the conversion of some that I was concerned with; I could gladly honor them, and with delight be a servant to them, if they were but truly holy.

Sept. 1725.—In this sickness God was pleased to visit me again with the sweetness of his Spirit. My mind was greatly engaged in divine, pleasant contemplations and longings of soul. When the light of day came in at the windows, it refreshed my soul from one morning to another. It seemed to be some image of the light of God's glory.

June 1.—I have abundant cause, O merciful Father, to love thee, ardently, and greatly to bless and praise thee that thou hast heard me in my earnest request, and hast so answered my prayer for mercy to keep from decay and sinking. O, graciously of thy mere goodness continue to pity my misery by reason of my sinfulness. O, my dear Redeemer, I commit myself, together with my prayer and thanksgiving, into thy hand.

May 23.—How it comes about I know not; but I have remarked it heretofore, that at those times when I have read the Scriptures most, I have been most lively and in the best frame.

March 22, 1758.—Dear Lucy, it seems to be the will of God that I must shortly leave you—therefore, give my kindest love to my dear wife, and tell her (he died away from his family) that the uncommon union which has long subsisted between us, has been of such a nature as I trust is spiritual, and therefore will continue forever. His last words were, "Trust in God, and ye need not fear."

Of Edwards, the physician who watched over him through the final struggle says: "Never did mortal man more fully and clearly evidence the sincerity of all his professions, by one continued, universal, calm, cheerful resignation to the divine will, through every stage of his disease, than he. Not so much as one discontened expresssion, nor the least appearance of murmuring, through the whole! And never did any person expire with more perfect freedom from pain; not so much as one distortion; but in the most proper sense of the words, he really fell asleep.

In the life and death of these great men of the last century, the superiority of the evangelical over the legal spirit—faith over works—resting in the Holy Spirit as our sole efficiency for a virtuous and holy life, over all confidence in good resolutions, or any thing we can do—is presented in a most striking and edifying manner. Few such parallels are to be met with in human history. Johnson was all his life in bondage through the fear of death, while Edwards accomplished his pilgrimage on earth in the joyful hope of the better resurrection. The one was evermore enslaved to the flesh, or to merely intellectual pleasures—the other habitually kept under his body, and brought it into subjection; and even his mental efforts, the most extraordinary that ever man put forth, were subordinated to a ruling spirit of faith, holy love, and supreme devotion to God. In the department of pure intellect, Edwards achieved more than Johnson; but in poetry and general literature, Johnson achieved more than Edwards. Both were earnest believers in Christianity, and, no doubt, rejoice together around the throne of God and the Lamb; though, while the latter was saved so as by fire, to the former a joyful entrance was ministered into the everlasting kingdom of our Lord and Saviour Jesus Christ. How true is it, that the just shall live by faith; and that cursed be he that trusteth in man, or that maketh flesh his arm. "Now to him that worketh is the reward not reckoned of grace, but of debt. But to him that worketh not, but believeth in him that justifieth the ungodly, his faith is counted for righteousness."

HORRORS OF WAR.

"In heaven," said a minister whom we recently heard preach, "there will be no quarterage to pay nor be paid; there will be no dead disciples, no formal Christians, no blight of intemperance or poverty, no slavery, no war there." Wending our way home, the last words, like an echo, kept ringing in our ears, "No war there, no war there!" There are great evils and great curses in the earth, but none, reader, so great as the curse of war. Opening one of our exchanges recently, we saw the statement that in France, to help to carry on the Crimean war, one hundred and sixty thousand young men were annually impressed—that is, caught and driven from home into the army. And so horrible is the war in the eyes of even French mothers, that many of them have permanently put out the eyes of their children, and have hewed off the toes, and broken the fingers and arms of their sons, in the hope, by so doing, to keep them at home. But notwithstanding these maimings, many of these fingerless and toeless young men have been compelled to go and fight and die on the battle-field. As we write, the bones of how many young men lie blanching or rotting in the Crimea! How many a home in England, and Ireland, and Scotland, and Turkey, and Russia, and France, has been made desolate by the violence of war!

"Hame never cam' he."

says the old Scotch ballad, and a world of sorrow it tells:

"Saddled, and bridled, and booted rode he,
A plume in his helmet, a sword at his knee;
But hame cam' the saddle, a' bluidy to see,
And hame cam' the steed, but hame never cam' he!

Down cam' his gray father, sobbin' sae sair;
Down cam' his auld mither, tearing her hair;
Down cam' his sweet wife, wi' bonnie bairns three,
Ane at her bosom, and twa at her knee.

There stood the fleet steed, a' foamin' and hot;
There shrieked his sweet wife, and sank on the spot;
There stood his gray father, weeping sae free;
So hame cam' his steed—but hame never cam' he!"

God grant that in our day the curtain may not rise which shall exhibit the conflict of America with any power on earth.

[W. Ch. Advocate.

BAPTIST HISTORICAL SOCIETY.

The third annual meeting of the American Baptist Historical Society was held in the Calvary Baptist Church, New York, on the evening of May 10th, and was largely attended. A brief notice of the meeting, copied from a daily paper, appeared in the *Recorder* of the following week; but we are sure our readers will be interested in the following complete report, which we find in the *Christian Watchman and Reflector*:—

The chair was occupied by the Rev. W. R. Williams, D. D., the president of the society; after singing and prayer, offered by the Rev. D. F. Carnahan, of Pennsylvania, the annual report was read by Rev. Dr Brown, the Corresponding Secretary of the Society. It sketched the origin of the Society, its precise objects, and the position in which it stands to the Publication and other organizations; it then detailed the proceedings of the year, the donations it had received, the work it had marked out for the future, and closed with a warm appeal for the sympathy and aid of its friends. The reception of this document, and its reference to the Publication Society to be appended to its annual report, was moved by the Rev. Dr. Dowling, seconded by the Rev. D. B. Cheney, of Philadelphia, and unanimously adopted.

The President of the Society then introduced the Rev. R. B. C. Howell, D. D., of Richmond, Va, one of the Vice Presidents of the Society, who proceeded to deliver an able address, extending in length to more than two hours. After reveling for a few moments in the richness of his subject, lamenting that hitherto so few of its fruits had been reaped, and exulting that the prospect was brightening as to fuller disclosures of the character and influence of the Baptists of "the old dominion," he proceeded to claim that the history of our body in Virginia was coeval with the founding of Jamestown in 1606. He drew a comparison and a contrast between the Puritans who founded the Plymouth and Massachusetts colonies, and those of Virginia, and showed that while the former were generally Puritans who had left the church of England, the latter were cavaliers, who brought that church with them, and set it up with as much of its dignity and persecuting power as they could command. After showing the extent to which Baptist principles then prevailed in Europe, and the inducements which our fathers had to remove to Virginia, he proved from the laws of the colony that Baptists were found in Virginia, even from its origin, who maintained all our present peculiarities, including the strongest objections to the union of Church and State, even though their principles were denounced as "horrid blasphemies." Many of them had been soldiers in Cromwell's army, and had brought with them their political and religious principles in all their vigor.

The Doctor then proceeded to show that as early as 1611, the Governor of Virginia issued a law that every man and woman in the colony, or who should hereafter arrive, should give an account of their faith unto the minister of the established church, and that if any refused to do this, they should, for the first refusal be whipped; for the second refusal they should be whipped twice, and acknowledge their fault before the congregation, and for the third refusal they should be whipped every day until they made the said acknowledgment, and repaired to the minister to be further instructed; and when the minister shall catechise and demand any question concerning their faith and knowledge, they should not refuse to make answers upon the same peril. None but Episcopal ministers were permitted to teach, publicly or privately, "and the Governor and council shall take care that all Nonconformists depart the colony with all conveniency." All the English laws on the subject were fully enforced. Such was the government of Virginia till it became a free and independent State. So early as 1634, the "Pilgrims of Maryland" were driven from Virginia, for their religious opinions; before this, four men had been hung for the same cause; and in 1640 a citizen, for the sin of differing from others, stood in the pillory for two hours, paid a fine of fifty pounds, and was imprisoned at the pleasure of the Governor.

After showing why the Baptists are less distinctly seen as connected with those times, than we might expect, the orator said that one thing marked their conduct—one badge of distinction pointed them out, from which they never shrunk—do what the clergy and the government would, these people would not bring their infants to be baptized. In 1661, "the General Assembly" of Virginia passed a law, "Whereas many schismatical persons, out of their averseness to the orthodox established religion, or out of the new-fangled conceits of their own heretical inventions, refuse to have their children baptized; be it therefore enacted by the authority aforesaid, that all persons that, in contempt of the divine sacrament of baptism, shall refuse, when they may carry their child [children?] to a lawful minister in that county, to have them baptized, shall be assessed two thousand pounds worth of tobacco; half to the informer and half to the public." From these facts it was shown that while Roger Williams was contending for "soul liberty" in Rhode Island, and Bunyan in Bedford jail, there were also Williamses and Bunyans in the wilds of Virginia, contending for the same great object.

In showing how Baptists and their principles were placed more permanently before the public eye, Dr. H. remarked, that the general statements had been greatly distorted, as for instance, it has been said that no Baptists emigrated to Virginia till 1714, and that the first church had been organized in 1765. He showed that as early as 1714 the Baptists in Amelia county met of their own accord to devise the best means of extending their principles, and wrote to their brethren in London for help. Two ministers were ordained in that city, and one sent to Virginia, one of whom died on the passage, and the other arrived, and with other brethren preached with popularity and success, and organized several churches. While these things passed in the southern part of the colony, similar events took place in its northern parts, under the labors of brethren from Pennsylvania. From the Philadelphia Associa ion and from Boston they obtained efficient ministerial help; on several of these brethren the orator passed a high eulogium. The cause rapidly extended, and in 1760 the Baptist churches of Virginia formed a distinct association, which in 1771 merged in the General Association.

By this time the members of the Virginia Baptist churches were numbered by tens of thousands, and their zealous efforts did very much in bringing about the full emancipation of the church from the State, and effecting the revolution. The rapid progress of the Baptist cause, Dr. H. traced to the peculiar character of the people, the arrogance and persecuting spirit of the established church, though the Grand Assembly in 1776 had to make severe laws against the vices of its clergy—the accordance between Baptist doctrines and the spirit of liberty, and the adaptation of the ministry to the people, plain, evangelical, and earnest, by no means without learning, but using it only as a means adapted to the one end; nor least of all was this progress insisted on as the result of the violence of the magistrates in carrying out the persecuting laws, which roused public feeling in opposition to them.

The orator proceeded to show how the Baptists labored for the division of Church and State, and that not a few public documents presented by Madison and others were almost word for word taken from the testimonials of the Baptist General Association of Virginia to the legislature, and which at length gained the grand blessings of full liberty. These statements were presented at considerable length, and when the oration shall be printed will attract great interest and attention.

The orator closed his very able address by sketching the general character of the ministers and members of the Virginia Baptists, and the benefits they have rendered to their country and the world.

The Rev. A. D. Gillette moved the thanks of the Society to the orator, and requested a copy of his oration for the press, which was adopted by acclamation. The Rev. Dr. Belcher pronounced the benediction, and the Assembly departed.

THE SABBATH DIVINE.

The Rev. Dr. M. McNeile made an able and eloquent address to a large meeting recently held in Liverpool, England, from which we give the following paragraph:

"The seventh day commandment is not found among the ordinances transcribed from a pattern in the ministration of Moses, but it was solemnly re-enacted in the publication of the moral law. It was the fourth among ten commandments given as no other commandments were ever given. This appears specially in three particulars. First, all the details of the Jewish ceremonial were given to Moses, and by him communicated to the people. But the Ten Commmandments, including the one now before us, were spoken to the whole nation, by the voice of God himself. This appears on the face of the history. Was not this to invest Moses with a degree of importance relative to the ceremonial institutions, which was denied to him as regarded the moral commandments? And was not this to invest the moral commandments with a superiority above and independent of Moses? Secondly, the moral commandments alone were written, engraved by God himself, by a direct and immediate exercise of his power, and thus secured from any possible mixture, addition, or mutilation, by the infirmity of a human instrumentality. And so important was this, that when the tables were broken, a special commandment was given to prepare new tables, and again the same sacred words were inscribed by the finger of God. Thirdly, the Ten Commandments alone were put into the ark, and deposited in the most holy place. This fact is plain, and involves a clear and very significant separation between these commandments and the ceremonial institutions of the Jews. The sanction of the commandment is exclusively the Divine authority. It was on this account that this commandment was given as a sign to the Jewish people in the inspired ministry of the prophets, as it is written, "Behold I have given you my Sabbaths, to be a sign between you and me, to know whether ye will serve the Lord."

THE FLOOD.

Look on the catastrophe of the deluge. We may have our attention so engrossed by the dread and awful character of this judgment as to overlook all that preceded it, and see nothing but these devouring waters.

The waters rise till rivers swell into lakes, and lakes into seas; and along fertile plains the sea stretches out her arms to seize the flying population. Still the waters rise. And now, mingled with beasts that terror has tamed, men climb to the mountain tops, the flood roaring at their heels. Still the waters rise; and now each summit stands above them like a separate and sea-girt isle. Still the waters rise; and, crowding closer on the narrow spaces of their lessening tops, men and beasts fight for standing-room. Still the thunders roar and the waters rise, till the last survivor of the shrieking crowd is washed off, and the head of the highest Alp goes down beneath the wave. And now the waters rise no more. God's servant has done his work. He rests from his labors. And, all land drowned, all life destroyed—an awful silence reigning, and shoreless ocean rolling—Death for once has nothing to do but ride in triumph on the top of some giant billow, which meeting no coast, no continent, no Alp, no Andes, to break upon, sweeps round and round the world.

[Guthrie.

TWO ROADS.

There are two ways or roads through this world; and it is said of one—the road which lead to *death*—it is broad and thronged with travelers. If the natural feelings of the human heart are followed, they carry the soul down the current of time into the gulph of perdition:—The human heart is wicked, and in sympathy with the apostate angels. If it remains unchanged, it will forever be found at enmity with God—in the broad road to death, and will become a vessel of wrath fitted for destruction.

The other road, which Christ describes as being entered by a straight gate, and the way is narrow, leads to *heaven*. We are therefore commanded to strive to enter this straight gate, and to press forward in the narrow way. The term strive, in the original, means to agonize. It is not an idle wish, that puts forth no effort; but one which stretches every nerve, runs, wrestles and fights. The whole intellectual and moral energies of the soul are directed to one object. It is the goodly pearl of great price. It leads in the right road—the highway of holiness, and all other things must be sold to obtain it. It will conduct you to heaven.

GREAT LOVE.

Some years ago, a Russian nobleman was traveling on special business in the interior of Russia. It was the beginning of winter, but the frost had set in early. His carriage rolled up to an inn, and he demanded a relay of horses to carry him on to the next station, where he intended to spend the night. The inn-keeper entreated him not to proceed; for he said there was danger in traveling so late, the wolves were out. But the nobleman thought the man merely wished to keep him as a guest; he said it was too early for wolves, and ordered the horses to be put to. He then drove off, with his wife and only daughter inside of the carriage with him

On the box of the carriage was a serf, who had been born on the nobleman's estate, to whom he was attached, and who loved his master as he loved his own life. They rolled over the hardened snow, and there seemed no signs of danger. The moon shed her pale light, and brought out into burnished silver the road on which they were going. At length the little girl said to her father, "What was that strange howling sound that I just heard?" "O, nothing but the wind sighing through the forest trees," replied the father. The child shut her eyes, and was quiet. But soon she said again, "Listen, father; it is not like the wind, I think." The father listened; and far, far away, in the distance behind him, through the clear, cold, frosty air, he heard a noise of which he too well knew the meaning of.

He then put down the window and spoke to his servant: "The wolves, I fear, are after us; make haste. Tell the man to drive faster, and get your pistols ready." The postillion drove faster. But the same mournful sound which the child heard approached nearer and nearer. It was clear that a pack of wolves had scented them out. The nobleman tried to calm the anxious fears of his wife and child.

At last the baying of the pack was distinctly heard. So he said to his servant, "When they come up with us, do you single out one, and fire; I will single out another; and while the rest are devouring them we shall get on." As soon as he put down the window, he saw the pack in full cry behind, the large dog wolf at their head. Two shots were fired, and two of the wolves fell. The others instantly set upon them, and devoured them; and meanwhile the carriage gained ground.

But the taste of blood only made them more furious, and they were soon up with the carriage again. Again two shots were fired, and two more fell, and were devoured. But the carriage was speedily overtaken, and the post-house was yet far distant.

The nobleman then ordered the postillion to loose one of his leaders, that they might gain a little time. This was done, and the poor horse plunged frantically into the forest, and the wolves after him, and was soon torn to pieces. Then another horse was sent off, and shared the same fate. The carriage labored on as fast as it could with the two remaining horses; but the post-house was still distant.

At length the servant said to his master, "I have served you ever since I was a child; I love you as my own self. Nothing now can save you but *one* thing. Let *me* save you. I ask you only to look after my wife and little ones." The nobleman remonstrated, but in vain. When the wolves next came up, the faithful servant threw himself amongst them. The panting horses galloped on with the carriage, and the gates of the post-house just closed in upon it, as the fearful pack were on the point of making the last and fearful attack. But the travelers were *safe*.

The next morning they went out and saw the place where the faithful servant had been pulled down by the wolves. His bones only were there! And on the spot the nobleman erected a wooden pillar, on which is written, "Greater love hath no man than this, that a man lay down his life for his friend." "But God commendeth his love toward us, in that while we were yet sinners, Christ died for us."

A COMPLETE SALVATION.

Salvation is finished. It is offered. Shall it be rejected? Take the good of it, and give Him the glory. "He is the God of our salvation;" "in his name we will set up our banners." In that ladder whereby faith climbs her way aloft to heaven, there is not a round that we can call our own. In this ark which, with open door, offers an asylum in the coming storm—a refuge in the rising flood, from stem to stern and keel to deck there is neither nail nor plank nor beam, that we can claim as ours. The plan of redemption was the design of infinite wisdom; its execution was left to dying love; and it is Mercy, generous Mercy, whose fair form stands in the open door, bidding, entreating, beseeching you all to come in. Listen to the voice of Jesus—"Come unto me, all ye that labor and are heavy laden, and I will give you rest." And let his mother teach you how to speak, and learn from angels how to sing. With her—the casket of a divine jewel, who held the babe yet unborn in her virgin womb—with Mary say, "My soul doth magnify the Lord; my spirit hath rejoiced in God my Saviour; for He that is mighty hath done great things to me, and holy is his name." Or hark to the angels' song!—glowing with seraphic fire, borrow seraphic words; and sing with them, ere they wheel their bright ranks for upward flight, "Glory to God in the highest; on earth peace and good will to men."

[Guthrie.

THE FIRST SABBATH.

Translated from the German of Krummacher, by L. O. D.

The sixth day of Creation drew nigh unto its close. The sun sank down to his rest. The shadows of evening spread themselves over the young earth. The first born son of Creation stood on a high hill in Eden; beside him Eloah, his good genius and companion. Darker and darker it grew about that hill;—the twilight deepened into night, and veiled with mysterious shadows hill and vale. The songs of the birds and the cheerful cries of the animals were hushed. Even the sportive zephyrs seemed to sink to still repose.

"What is this?" asked Man of his celestial companion—"will the young earth vanish? will it fall back into its olden chaos?"

Eloah smiled as he answered—"*This is the rest of the earth.*"

Now shone forth the heavenly orbs; the moon uprose, and the host of stars went onward in their glory.

Man looked upward towards heaven with sweet astonishment. The angel of the Lord looked only with sacred joy on the upgazing son of man.

The night was tranquil; the nightingales sung louder and more melodiously.

Eloah extended towards man his staff. He laid down on the hill and slept. The first dream then visited him—Jehovah showed unto him his consort.

In the early dawn Eloah touched the slumberer. He awoke and felt through all his frame fresh currents of strength and of life.

Out of the twilight stole forth hill and valley—the young light came and played over the sparkling fountains of the rivers of Eden;—the sun uprose and brought the day.

Man beheld the new-created wife—the future mother of the living. Astonishment and delight filled his heart.

"See!" said Eloah, "out of the the Rest was that godly thing born! Therefore shalt thou this day to Rest and to Divinity consecrate."

Mr. Cecil and the Pomegranate.—Mr. Cecil was pacing to and fro in the Botanic Garden at Oxford, when he observed a fine specimen of the pomegranate almost cut through the stem. On asking the gardener the reason, he got an answer which explained the wounds of his own bleeding spirit. "Sir, this tree used to shoot so strong, that it bore nothing but leaves. I was, therefore, obliged to cut it in this manner; and when it was almost cut through, then it began to bear plenty of fruit." Ye suffering members of Christ, be thankful for every sorrow which weakens a lust or strengthens a grace. Though it should be a cut to the heart, be thankful for every sin and idol shorn away. Be thankful for whatever makes your conscience more tender, your thoughts more spiritual, and your character more consistent. Be thankful that it was the pruning knife and not the weeding-hook which you felt; for if you suffer in Christ, you suffer with Him; and with Him you shall also reign."

Religion is the tie that connects man with his Creator, and holds him to his throne. If that tie is sundered or broken, he floats away a worthless atom in the universe, his proper attractions all gone, his destiny thwarted, and his whole future nothing but darkness, desolation and death.

THE IMPENDING CRISIS.

It cannot be disguised that our country is in a deplorable state; and we sometimes fear that the American people are destined to furnished the world with another sad proof of the utter inadequateness of any human government to promote the welfare of those who live under it. Of all the governments of this world, none can boast greater perfection than our own, as far as respects the mere theory of it. But the practical working of it. at present, evinces such a repudation of those great principles of justice which the framers of our Constitution inlaid with that instrument, that the long cherished hopes of patriots with regard to the mission of the American government have well nigh passed away. Once it was thought, that our government had been raised up by Divine Providence to teach the kingdoms of the earth that "men are endowed by their Creator with certain unalienable rights—life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed." But who thinks so now? With millions of men held in bondage—men endowed with these very rights which the fundamental law of our government acknowledges—their bondage made more bitter every year—governed, but yielding no consent to the power which governs them, not having the least voice in passing the laws which appoint their condition—this thing persisted in for three quarters of a century, and more madly persisted in now than it ever was—the Northern section of our Union converted by the strong hand of government into a great park for hunting fugitives from slavery—the freedom of speech and of the press outraged, the advocates of liberty treated with the most shameful indignity, and the Pulpit itself restrained from proclaiming the law of love in its application to the relation of master and slave—even the African slave-trade finding unblushing apologists among us, notwithstanding the brand of piracy long since put upon it by civilized nations—Kansas opened as a theatre of civil war, where the oppressors of the weak and the friends of human rights alternately lay down their lives for the causes to which they are respectively pledged, while the President brings the military of the United States to enfore obedience to ruffianism and fraud—with all these things, and the abominations inseparable from them, who can still retain confidence in the divine mission of our government?

It is indeed a dark hour. In common with other haters of oppression, our indignation has been repeatedly stirred by the successes achieved by the upholders of slavery. The passage of the Fugitive Slave Bill; the rendition of Sims, Burns, and others, to renewed bondage; the repeal of the Missouri Compromise; the prostitution of the great powers of Webster to the cause of injustice, together with the numerous wrongs to which these things have all contributed; have often roused our feelings to an intensity not expressible by any terms at our command. And now, when we think of the scenes daily enacted in Kansas, we find no words sufficiently expressive of what we feel. One gifted with the powers of a Shakspeare might perhaps find terms sufficiently blasting to set forth the infernal wickedness of the abettors of slavery in that territory, but it is not for us to do so. We are choked in the very effort to declare ourselves. We fancy that our emotions are somewhat similar to those of the Psalmist, when he said, "Horror hath taken hold upon me because of the wicked who forsake thy law." (Ps. 119: 53) We confess our utter incompetency for saying anything on this subject suitable to its fearful magnitude.

"This is your hour and the power of darkness," said the Saviour to his enemies, at a time when they seemed to have secured destruction to his cause. God gave them a temporary advantage, but the eye of the Saviour discerned a certain triumph of the truth in the future, and all the more certain because of their temporary successes. May not the friends of freedom exercise a like faith, even in this dark crisis? Though God, for wise puposes, may give oppressors a short-lived advantage, it is certain that His attributes do not side with them. "Him that loveth violence his soul hateth." (Ps. 11: 5) The *ultimate* triumph of righteousness is as certain as that there is a God of righteousness. We are horror-struck at the wickedness perpetrated in Kansas, but we are not without hope.

Do the signs of the times call for revolutionary movements? The right of the people "to alter or to abolish any form of government which becomes destructive of the great ends" for which it was instituted, "and to institute a new government, laying its foundation on such principles, and organizing its power in such form, as to them shall seem most likely to effect their safety and happiness," is as distinctly recognized in the Declaration of Independence as the natural equality of mankind. And we do not see, that the motives to revolution are not as urgent now as they were in the days of British oppression. The outrages which embittered the colonial history of our country find their anti-type in the troubles which the friends of liberty now suffer. The right of petition, trial by jury, the freedom of the press and of speech, the privilege of *habeas corpus*, the right of an American citizen to equal protection in all the States, have all been, and are still, violated, directly or indirectly, by our government. We are sometimes perplexed to decide whether the forbearance of the people, under all these circumstances, is praiseworthy or not.

One thing, however, we do know—that while there remains the least shadow of a cance for redress at the Ballot-box, no friend of humanity, entitled to vote, can refuse to let his power be felt there, and yet be guiltless before God, if by any possibility he can intelligently determine how to cast his vote so as to make it tell most effectually in favor of liberty and equality. We trust that the readers of the *Sabbath Recorder* will all bear this in mind.

T. B. B.

CHURCH AND SCHOOL.

What institution has been most forward in all of the great instrumentalities for blessing the race? The Church. Where have all of the great plans of benevolence originated? In the Church. Who originated temperance societies, and peace societies, and moral reform societies, and anti-slavery societies? The Christian. Who started Sabbath-schools, founded schools for the deaf and blind, and asylums and hospitals, established missions, originated free schools? The Christians. Who is the founder of the modern College? The Church. To whom shall we look for carrying on all of the great benevolent operations in the future. The Christian Church. The Church possess the power for moving the world, and there is no doubt about its ultimate success. It already has possession and control of the best minds and races of the world. All real progress is among Christian nations, and the real supremacy is with the Protestant.

Institutions of learning are among the most powerful agents possessed by the Church for doing good. It is the business of these institutions to give culture to the young. The young are the hope of the future—its promises are to them. As are they, so will be the future. All of its institutions, and laws, and governments, and schools, and domestic circles, are in their hands, to be guided and moulded by laws to be preserved and improved or destroyed by them. The young possess a latent, an undeveloped power, upon which rest the weal or wo of the world. It is the business of schools to develop, to train this power. Thus there is granted them an untold power.

This power, too, is exercised upon a class of youth around whom cluster interests and hopes of especial importance. The very idea of being a student in the full and true sense of the term, implies manly resolves, lofty aspirations, ardent hopes, bright prospects. They are many of them looking forward to wide and commanding influence in society. The young men and women of our higher institutions of learning will be the leaders, the directors of society. From among their number are to come the leading divines, and lawyers, and physicians, and statesmen, and teachers, and authors. They will have more to do in shaping and moulding the Church, the State, the School—indeed, all the great interests of humanity, than any other equal number of young men and women that could be selected, and perhaps more than all the rest together.

These youth of power pass in successive bands through our seminaries of learning, receive that mould and character which they in turn are to give to the world. As students, they are alive to high and manly impulses, ready and anxious to be directed in the pathway of usefulness and honor. The bent and mould that is given to their character while students cling to them through life, will be indelible.

If these things be so, it is of the utmost importance that the church of Christ should bring her power to bear here. As a field of gospel labor, it is one of the most promising that is offered to Christian effort. The trophies of the Spirit are many and bright in those institutions that are under the control of the churches, and where the influences of religion are brought to bear. Perhaps but few churches enjoy as many conversions, according to the number in attendance, as do such seminaries, and such conversions are generally rich trophies to the cause of Christ, being those acquiring education, power, influence.

THE EASTERN ASSOCIATION.

Report on the State of Religion.

The Committee on the State of Religion respectfully report, that they have had under consideration the subject referred to them, and have instructed their chairman to report as follows:

The letters from the several churches fail to give us the information necessary to form a correct or reasonable judgment of their spiritual condition. The statistics vary but little from those given last year; and yet in the aggregate show a loss of thirty-one members more than the increase in all the churches during the year. The operations of the churches in the several departments of Christian effort, are given so briefly, and in part only, that we are not prepared to report as to their working condition. There is but little uniformity in the reports on Sabbath Schools, prayer meetings, contributions for charitable and religious purposes, or what is done in any particular department. We cannot, therefore, say what is being done by us as an Association. A synopsis of what is contained in the letters, or brief extracts culled therefrom, would be of no practical use, nor would they be matters of general interest, or represent fairly the condition of the churches. It is proper to say, on the other hand, that there does not appear to be any difficulties among the churches, or internal discords, nor any serious departures from the faith held by us. The churches are evidently in a comparatively inactive condition, not progressing in spirituality, nor increasing in efficiency; nor have they given evidence of abandoning the doctrines of the gospel.

In order that the Association may be able hereafter to understand the true condition of the churches, and thus use its influence for their benefit, we submit the following as proper subjects of reports from the churches in their letters to the Association, in addition to their statistics of members and officers:

1. The ministration of the gospel, the attendance thereon, and its effects.
2. The prayer meetings of the church, the interest therein, and attendance.
3 The benevolent operations of the churches—manner and amount of contributions, and for what purposes, generous or limited, general or partial.
4. Spiritual condition of the church, embracing increase or diminution of vital piety, union, revivals or declension, whether general or partial.
5. Family worship, general or limited, and its influences.
6. Sabbath-Schools, interest therein, number of scholars, teachers, volumes in library, Sabbath-School Visitors taken, influence of the schools, number of conversions, and all other matters of interest.
7. Interest in moral efforts, for the removal of wrong and suffering.
8. Any other questions of interest relating to the condition, labors, progress or necessities of the church.
9. Suggestions for the action of the Association.

With this as a basis, the churches will be able to present their true condition so generally, and with such uniformity, that an interesting and useful report on the state of religion may be made at each meeting of the Association. It is further believed, that it will increase the interest and profit of our annual gathering, and serve as a stimulus to the churches in their labors. This will also show the relative condition of the churches, and their increase or decrease for successive years.

LETTERS FROM PALESTINE—NO. 26.

First View of Jerusalem.

Every thing relating to Jerusalem is full of deep and thrilling interest to the Christian. The cherished associations of childhood and youth, the sermons, descriptions, travels, maps, pictures, a personal interest in the Saviour, the Bible—all these prepare the mind for a hearty welcome to the living witness of the place so notable in the Scriptures, and so prominent in the history of our Lord.

Have you been there? Is it possible that I look upon a fellow Christian who has seen Jerusalem? Such were my thoughts, poorly indicative of my emotions, when, a few years since, I enjoyed a short interview with one who had just returned to America from a visit to the Holy Land. That I should ever see the city of David, did not enter my thoughts. Like many others, I grew up with the idea that Jerusalem, in the land of Abraham, Isaac, and Jacob, was a great way off, and though I knew better, it seemed much nearer to Burmah than to Palestine, probably because in my childish imagination the latter was a sort of a half representation of heaven. But at length the first view of Jerusalem became a reality, notwithstanding the first few hours after entering the city, I found myself awaking several times as from a dream; the first time too that I bowed in family prayer on Mount Zion, seemed at once precious and dreadful; God was in the place, at least by His judgments, and this was His holy mountain, and we knew it not.

I have now beheld the city for the third time, and I am happy to find, spite of the dirt and filth, and the infidel character of its inhabitants, that the last view is quite as interesting as the first. Travelers speak of being strongly excited, and even moved to tears, when they first look upon Jerusalem, and such has been my experience.

I left home on the 13th inst., on a visit to this city. At Ramlah I fell in with an English party of five persons, whom I accompanied the rest of the way. Our journey over, or rather upon the mountains, was as usual rough and weary, yet I could see that hope buoyed up the spirit, while a marked solemnity rested upon the countenance of the traveler and pilgrim. Three mountain heights must be attained in ascending from the plains of Sharon, before reaching Jerusalem. The view from the last height, in the direction of Jaffa, is varied and wild in the extreme. Going forward, the traveler expects at every step to see the city, but is disappointed. Frequent were the inquiries: "Shall we soon see Jerusalem?" A party of a dozen German Catholic pilgrims preceded us to a rise of ground three-quarters of a mile west of the city. They dismounted here, and came together upon a flat rock by the side of the road, and began to sing a German hymn to a very beautiful air. We came up and halted at a little distance opposite them. I pointed out to my companions in travel Bethlehem, the mountains of Moab, Mount Olivet, Scopus, Mizpah, the vales of Hinnom and Jehoshaphat; Jerusalem lay before us on the east, showing the spire and crescent of the Mosque of Omar. The Catholic party were affected—the big tears coursed the cheeks of both layman and priest. We Protestants were moved, and did not for once think to accuse our fellows across the way of man-worship. Did not Jesus weep over Jerusalem? And may not his disciples mourn over the desolations which enshroud her at the present day? From a remark made in the morning by the Rev. Mr. ——, of the Church of Scotland, I inferred that he felt quite indifferent about what his eyes would behold in the afternoon. Now it was evident that he was taken by surprise. He had just come from Egypt, from the pyramids and from the Nile; now he looked upon the city of the Great King sitting solitary as a widow; he too wept. We opened to and chanted the one hundred and twenty-second Psalm, to which our hearts and voices responded a hearty *amen*. Passing on, we soon entered the city at the Jaffa gate, and turning to the right to conduct my friends to a hotel, I said to Mr. ——, "You are now walking upon Mount Zion;" he appeared to half credit the place of his existence. A few evenings after, I heard him preach on this same Mount Zion, when he made a touching allusion to Jerusalem as the yet-to-be great center of religious attraction—the joy of the whole earth.

W. M. J.

Jerusalem, March 20, 1856.

AGRICULTURE IN PALESTINE.

Jaffa, March 13, 1856.

To the Editors of the Sabbath Recorder:—

You will excuse a stranger in addressing you from the Land of Promise in relation to God's covenanted people. And as the object of myself and family in coming to this land, was the temporal as well as the moral elevation of the Jews, I propose to state some of the many reasons that influenced us to plant our feet upon Israel's soil, which we have done by purchasing real estate, and have commenced operations, having been here a little over two years, our arrival being a few months prior to that of brethren Jones and Saunders with their families, with whom we have labored in conjunction. It may not be readily seen why an agricultural department should be connected with a gospel effort in relation to the Jewish people, rather than any other people. In order to get a right understanding upon this subject, we must go to the "law and testimony." ["If we speak not according to this word, it is because there is no light in us."] We shall perceive by referring to Lev. 26th ch., and Deut. 20th ch., that upon conditions of obedience certain temporal and spiritual blessings were promised, but by disobedience curses were threatened of a moral and temporal character, which would cause a desolation upon their land, as well as blindness upon their minds. These two evils appear to be inseparably connected, and have run in one unbroken track up to the present time; their lands have fallen into the hands of the Gentiles; they have been driven off by persecution and oppression; so that they have been compelled from necessity to pursue some other occupation; consequently they have lost all relish or desire to cultivate the soil. This being the case, they need encouragement, and a brother's aid, advice and assistance But are they always to remain in this sad condition? Let inspiration answer. A few of the many texts I will quote:

"If they shall confess their iniquity, and the iniquity of their fathers, with their trespass which they trespassed against me, and that also they have walked contrary unto me, and that I also have walked contrary unto them, and have brought them into the land of their enemies; if then their uncircumcised hearts be humbled, and they then accept of the punishment of their iniquity; then will I remember my covenant with Jacob, and also my covenant with Isaac, and also my covenant with Abraham will I remember; and I will remember the *land*." Lev. 26: 40—42.

"But ye, O mountains of Israel, ye shall shoot forth your branches, and shall yield your fruit to my people of Israel; for they are at hand to come. For, behold, I am for you, and I will turn unto you, and ye shall be tilled and sown; and I will multiply men upon you, all the house of Israel, even all of it; and the cities shall be inhabited, and the wastes shall be builded; and I will multiply upon you man and beast; and they shall increase, and bring fruit, and I will settle you after your old estates, and will do better unto you than at your beginning, and ye shall know that I am the Lord." Ezek. 36: 3—11.

"Thus saith the Lord God, in the day that I shall have cleansed you from all your iniquities, I will also cause you to dwell in the cities, and the wastes shall be builded. And the desolate land shall be tilled, whereas it lay desolate in the sight of all that passed by. And they shall say, this land, that was desolate, is become like the garden of Eden; and the waste, and desolate, and ruined cities, are become fenced, and are inhabited." Ezek. 36: 33—36.

"And they also, if they bide not still in unbelief, shall be grafted in: for God is able to graft them in again." Rom. 11: 23.

Thus we see that their return must be to the land that was promised to "Abraham and his seed forever"—that its restoration, and the conversion of its rightful owners will be coeval. But what advantage will the land be to them, if they know not how to cultivate it? And upon whom does the responsibility rest? Surely, upon the Gentiles. "And strangers shall stand and feed your flocks, and the sons of the alien shall be your plowmen, and your vinedressers." Is. 61: 5. "Even so have these also now not believed, that through your mercy they may also obtain mercy." Rom. 11: 31. The inquiry may arise in some minds, whether it is practicable, under existing circumstances, while the nations are upheaving, and war is raging, to put forth an effort at the present time? It appears to me, that of all other times this is the most important—that while the fallow-ground is being broken up, the good seed of the kingdom should be sown, ere the enemy sows in tares; and how can the seed become effectual through human instrumentality, better than by laboring for their temporal benefit? Do I still hear the inquiry, whether Americans can labor in this climate, and enjoy good health? I will reply, for myself and family, that although we have had some sickness in acclimating, that my health, and that of my family, is better than when in America. I can, and do labor, in the hottest weather, all day in the sun, without experiencing any evil effects. My son and myself have done all the work on our farm since we purchased, in putting into the ground a good supply of wheat, barley, lentils, corn, potatoes, beans, tomatoes, &c., which crops are all up and look well. We are now so situated that if we had sufficient means we could employ a number of Jews to instruct in agriculture, and moral culture.

Yours in behalf of Israel,
Walter Dickson,
(Formerly of Groton, Mass.)

NATIONAL CONVENTION OF RADICAL ABOLITIONISTS.

The National Convention of Radical Abolitionists was held at Syracuse, N. Y., on the fourth and fifth days of last week. **Gerrit Smith**, of New York, was nominated for President, and **Samuel McFarland**, of Pennsylvania, for Vice President. A long address, setting forth the views of the Radical Abolitionists, was adopted by the Convention, of which the following is an abstract:—

The address affirms that all men are bound to care for all men, even to the extent of overthrowing the civil government; that the whole American people are authorized by the Federal Constitution to protect every part of the American people from the more than murderous outrage of Slavery; that the Republican Party, in conceding the legality of Slavery in Virginia and Missouri, does virtually concede it in Pennsylvania and Kansas and in all the Free States; for if Slavery is the claim of property in man, and if all the rights of property are natural instead of being the creations of civil government, then does it follow that Slavery must be lawful as well in one State as another—and this conclusion shows that the great, and indeed the only question between the Republican party and the Abolitionist, is, whether man is or is not a chattel; that the boast of the Republican party, that it is a party to restore the Missouri Compromise, that crime and curse of the nation—is another sufficient reason why we cannot act with it; that the Abolition party is the only appropriate one for all who respect human rights; and that the Democratic party, falsely so called, is pre-eminently appropriate for all who despise human rights; that no hope of saving Kansas to Freedom is to be found in any compromise between Freedom and Slavery; but that great hope to this end is afforded by the prospect that the harsh collision in Kansas between Freedom and Slavery will convert into Abolitionists thousands within its borders and hundreds of thousands without its borders; that the Abolition party being sure of ultimate success, because sure it has planted itself on the principles of that better world where there are no Slaveholders and no Slaves, cordially invites all to espouse its principles and to share in its labors and success; that whilst the Convention sympathizes most tenderly with the eloquent and beloved **Sumner** on account of the recent cowardly and cruel assault upon him by **Preston S. Brooks**, of South Carolina, it nevertheless sees no other way of restraining that lawless and murderous spirit than to kill Slavery; in other words, the Government must be put, not into the hands of the Republican, but the Abolition party.

Surprise Parties.—We find the following in the *Daily Chronicle* of Boston:—

"These very pleasant little affairs offer an opportunity to do a good deed, or a kind act, in a manner decidedly *piquant*. An affair of this description came off on a recent evening at the residence of the Rev. Wm. Howe, pastor of the Union Baptist church. He, with his wife, was invited out to tea by one of his parishioners, and while away, the young people connected with his congregation, to the number of 150, assembled at his house. Upon his return home, he was immediately ushered into the parlor, where a splendid silver pitcher and salver was presented, with appropriate ceremonies. The young folks were of course delighted with their good deed, and the worthy pastor was deeply touched.

"Another happy little affair of the same description took place recently at the residence of Rev. T. D. Anderson, pastor of the Dudley street Baptist Church, Roxbury, Mass. The young people of his congregation happened, (by accident, of course,) to call at the pastor's house, where during their stay Mr. Anderson was presented with an elegant silver cream pitcher on the part of the young men, and a most elaborately worked dressing-gown from the young ladies of his society. The scenes of the evening were full of happiness and festivity, alike delightful and honorable to both pastor and people."

Egyptian Archaeology.—A course of lectures on this subject, by Prof. G. Seyffarth, was delivered in New York last week. At the conclusion of the first lecture, the Professor recited a translation of the first sacred book of the ancient Egyptians, the "Turin" papyrus, of which several copies are extant, three of which were in the Abbott Museum. The theology which that document involves is by no means inconsistent with received Christianity, pointing clearly to the fact of a flood, the doctrine of reward and punishment, and more especially of the existence of a Triune Divinity and the observance of the Sabbath.

Salaries of Ministers.—In the Old School Presbyterian General Assembly, recently in session in New York, a Committee was appointed to report on the salaries of ministers. The resolution appointing the Committee is prefaced with a statement, that "by reason of the diminished value of money and the increased price of all the necessaries of life, or nearly all the necessaries of life, the salaries of ministers, never as a general thing sufficient, have become distressingly and alarmingly inadequate, throughout the bounds of the Church."

Revivals in Georgia and South Carolina.—We learn, says the *Southern Baptist*, that the Baptist Church in Augusta, Ga., has received some forty-three accessions by baptism lately; and the awakening in the church and community has become very deep. In the Baptist Church of Columbia, S. C., additions are still taking place by baptism, and several more are expected. The number recently received has amounted to sixty, and seven or eight colored.

The Southern Aid Society.—This organization, designed to provide ministers and missionaries for the Slave States, recently held its third anniversary in Boston. From reports presented on the occasion, it appears that the receipts during the first year were $4,000; during the second year $10,000; during the third year $9,000. The Society has missionaries and tract distributors in New Orleans and Mobile; also, missionaries to the slaves in several Southern States.

The British Minister Dismissed.—On the 28th of May, Mr. Crampton was officially notified of the discontinuance of his diplomatic relations as Minister from Great Britain near this Government, and was furnished with his passports. The Consuls at New York, Philadelphia and Cincinnati, were likewise informed, by letter, of their dismissal. The notice of the revocation of their exequators was announced to Congress the following day, when the President communicated a message, accompanied by documents, setting forth the grounds for the action of the Government on the Recruitment question, and the dismissal of Mr. Crampton and the Consuls.

RELIGIOUS INTELLIGENCE.

The anniversary of the British and Foreign Bible Society was held May 7, in Exeter Hall, the President, the Earl of Shaftesbury, in the chair. All denominations of Christians were represented on the platform, and were among the auditory. The operations of the Society in Turkey in consequence of the war gave peculiar importance and interest to the occasion. The total number of copies of the Bible distributed 1,474,364; being an increase of 23,518 copies over those of last year. The total issues of the Society now amounted to 30,863,901 copies. The receipts of the year ending March 31, 1850, had exceeded those of any preceding year (including the special funds.) The amount applicable to the general purposes of the Society was £65,624 13s. 9d., and the amount received for Bibles and Testaments £63,100 16s. 4d.

At a meeting of the New England American Branch Tract Society, held at Boston, Tuesday, May 27, after an earnest and interesting discussion, Rev. A. L. Stone was elected on the Executive Committee, in place of Rev. Nehemiah Adams, author of the South Side View of Slavery. Mr. Stone received 56 votes, and Mr. Adams 43. The opposition to his re-election was, that New England should not be represented in a National Society by a person holding the views of Slavery attributed to Dr. Adams.

In the Methodist General Conference, at Indianapolis, the report of the committee in favor of continuing the system of presiding eldership in its present form, was adopted by a vote of 143 to 72. The resolution establishing a book concern in Bremen, was referred back to the committee, and the resolution providing for a Bishop *to Liberia* was laid upon the table.

Rev. John Seys, sails for Liberia in a few days, in a ship chartered by the American Colonization Society, to explore the country directly west of the Colony of Liberia, which is said to be rolling and elevated, and quite healthful, although no white man has ever penetrated into it. The New Jersey Colonization Society have purchased a tract of this country, with a view of sending negroes thither.

The St. Albans (Vt.) Journal relates that the Roman Catholic Bishop of Vermont recently visited Highgate for the purpose of obtaining the title to the church lately built there, and the land upon which it stands; but four Irishmen refusing to deed to him their interest in the church, he excommunicated them, and then sent for an axe and crowbar, and tore the four pews up and threw them out of the edifice.

On May 5, the annual general meeting of the members and friends of the British Wesleyan Missionary Society was held at Exeter Hall, London, the large room of which was well filled. The Earl of Shaftesbury presided. The total amount of receipts was £119,122.

Among the odd items given in the annual report of the American Tract Society, there is one to the effect that during the past year that institution received not less than $943 10 in broken and counterfeit bills, through the contribution box.

It is reported that the Messrs. Harper, not content with supplying the reading world with 170,000 copies of their excellent Monthly Magazine, are about to start a Pictorial Weekly Newspaper, for which they calculate on a circulation of half a million copies.

Peter Bayne, M. A., author of the "Christian Life," and editor of the *Commonwealth*, an excellent Glasgow newspaper, has won the Blackwell prize of $200, for the best essay "On the Elements which Constitute a Nation's Greatness."

The New Orleans *True Delta* of May 16, says: "The summer amusements are about fairly commencing. A dog fight for $500 will come off on Sunday next, at 12 o'clock, at the American Cock-pit, on Gravier street."

It is a good sign of the times, that two commissioners from South Carolina are in New York, to examine the school system, with a view of establishing a similar one in their own State.

Sir William Hamilton, the great Scotch Metaphysician, died at Edinburgh on the 5th May. He had long suffered from paralysis in his right side.

The Genesee *Evangelist* states that the Rev. C. G. Finney has been for the present laid aside from his labors by sudden indisposition.

A revival of religion at Lexington, Va., has reached the military institute, and seventeen of the cadets have professed conversion.

Twelve Congregational churches in New London County, Ct., are without pastors.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, MAY 26.

In the **SENATE**, the Committee to investigate the assault upon Mr. Sumner was empowered to send for persons and papers. The mammoth petition from California, asking for an overland wagon road, was presented, and bills were introduced for the construction of two such roads. Mr. Pugh spoke against the admission of Kansas under the Free State Constitution.

In the **HOUSE**, the expenses on public buildings at Washington occupied some hours. Mr. Kelly of New York was permitted to print a political speech which he could not find opportunity to deliver. A bill was reported to authorize the patents issued on the final adjudication of California land claims, prior to January, 1856.

THIRD-DAY, MAY 27.

In the **SENATE**, Mr. Trumbull gave notice that he should introduce a bill to prevent civil war and restore peace in Kansas. The bill providing for the general introduction of a uniform code of marine signals was passed. Mr. Slidell called attention to the telegraphic report of Mr. Sumner's statement before the House Committee, and explained his position in relation to the assault on that gentleman, and was followed by Messrs. Douglas and Toombs, also in explanation. Mr. Butler, who appeared in the Senate for the first time since the assault, stated that, had he been in Washington, he should have assumed all the responsibility taken by his "gallant relative." The discussion was continued at considerable length.

In the **HOUSE**, a bill granting about 1,300,000 acres of land to Michigan for railroads was passed.

FOURTH-DAY, MAY 28.

The Select Committee of the Senate, appointed to investigate the facts attending the assault on Senator Sumner, made their report. They came to the conclusion, that although the assault was a violation of the privileges of the Senate, it is not within their jurisdiction, and the offense can only be punished by the House; therefore the Committee recommend a complaint to the House.

In the **HOUSE**, various bills were introduced giving lands for railroads, including one granting a million acres to Louisiana, which was passed. An effort was made to adjourn over for the Cincinnati Convention, but it failed.

FIFTH-DAY, MAY 29.

In the **SENATE**, the House bills granting lands to Wisconsin, Alabama, Louisiana and Michigan, were passed. A Message was then received from the President, announcing that he had ceased to hold intercourse with the British Minister at Washington. The Message was accompanied by documents setting forth the considerations of public duty which have led to the measure.

In the **HOUSE**, in accordance with a request from the Select Committee on the Sumner assault, a resolution was adopted, that the Committee may present their report at any time when the House is in session, and that the documents shall immediately be laid upon the table and printed. A report was made from the Committee on Territories, proposing to admit Kansas into the Union with the Topeka Constitution, consideration of which was postponed to the 25th of June.

Both Houses adjourned to Second-day.

European News.

One week later news from Europe has come to hand since our last, the substance of which will be found below.

The British Parliament was not in session, and the political intelligence is consequently very scanty. It has been alleged in explanation of the firearms given to the Costa Ricans by England, that they were old muskets, and that the Government would be glad to meet with other purchasers for similar weapons.

Lord Palmerston has raised quite an outcry against himself, by undertaking to prohibit the playing of the military band in Kensington Gardens on Sundays. The privilege of the music was granted some short time since by Sir Benjamin Hall, and was much appreciated by the people of the lower walks of life, who had, in fact, no other innocent recreation within their reach on Sunday, their only holiday. The Archbishop of Canterbury, however, wrote to Lord Palmerston, personally, requesting him to prohibit the music as "Sabbath desecration." Lord Palmerston obeyed, although he stated that the prohibition is against his own convictions.

The trial of Palmer, the alleged poisoner, for the murder of his betting companion, Cook, had been going on during three days, before the Central Criminal Court, London. The evidence, thus far, had been altogether circumstantial, and had not elicited much additional to that made public after the Coroner's inquest. The most eminent counsel at the English bar are engaged on both sides.

A Congress of "Reformers of all Nations," convened by the aged Robert Owen, at St. Martin's Hall, London, on the 14th. Mr Owen presided, and addressed the meeting at some length, enforcing his views with great earnestness. Petitions to Parliament and a memorial to the Queen were adopted.

A pension of £5,000 sterling per annum has been voted by the East India Company to the Marquis of Dalhousie, the retiring Governor General of India. The ground of the pension is that he has annexed four kingdoms within the past four years.

Quite a storm has been created in Belgium in consequence of Napoleon's endeavor, through the Paris Congress, to curtail the liberty of the Press in that country. Belgium is strongly backed by British journals; so strongly, indeed, that the *Times* insinuates that this interference of France in another country's rights may possibly be the means of breaking up the Western alliance.

The French Government is stated to have its vigilance particularly awakened towards the movements of the secret societies, which are becoming dangerous.

The affairs of Italy continue to excite a large share of attention. Count Cavour has presented two important notes to the Sardinian Chambers.

Russia is about to commence another campaign under Gen. Mouravieff, against the Circassians.

Russia is reported to have demanded explanation respecting the joint treaty secretly concluded between France, England and Austria, guaranteeing the independence of Turkey.

It is stated from Constantinople, that a *defensive* alliance had been concluded at Teheran between Persia and the United States, and that the text of it had arrived at Constantinople, where it is kept very secret. [A commercial treaty must be meant.]

The London *Times* Crimean correspondence makes a feature of the enormous losses sustained by the Russians in the Crimea, and argues therefrom, the Russians would not have been able to sustain themselves many days longer had not peace been declared. Their losses in and around Sebastopol are set down at 86,000 men, while 100,000 perished of fatigue and disease. After all, this is no more than the Allies lost.

Correspondence continues to describe Syria as in a very unsatisfactory state. The Sultan's decree of religious equality pleases neither Mussulmans nor Christians; the Moslem rebel against the concessions to the infidels, and the latter would rather pay a tax than be compelled to serve in the army. The rioters at Naplous (Nazareth) have become alarmed at the consequence of their indiscretion, and are attempting to pacify the Pasha of Jerusalem, who threatens them with punishment. A shocking outrage has been committed at Marash, near Aleppo—an English horse dealer having been shot and his house set on fire, his wife and two children perished in the flames. The famous imposture of the Holy Fire was exhibited in the Church of the Sepulchre at Jerusalem, on Saturday, April 25, and, as usual, the ceremony was attended with scenes of fanatic rowdyism—the worshipers being eventually beaten out of the Sanctuary by the Turkish police.

Nicaragua and California News.

We have two weeks later news from Central America and California.

It is reported that the Costa Ricans had shipped 300 wounded from San Juan del Sur, and that their army had retreated from Nicaragua by land. The Costa Ricans say that they were deceived in regard to the feeling of the people of Nicaragua towards Walker, and expected to be received with open arms. They were very indignant at the false representations which were made to them on the subject. It is confirmed, that the loss of the Costa Ricans, at the battle of Rivas in killed and wounded, amounted to 650, and that of Walker's army to about 100.

The California news is unimportant. The steamer for Panama, which sailed from San Francisco on the 5th of May, had on board nearly two million dollars in gold dust.

In Mariposa County a party of Americans had murdered twenty Mexicans and Chilians, the pretext being that some Americans had been killed by Chilians. The Americans had ordered all the Chinese, Mexicans, Chilians and Peruvians to leave the country.

The war against the Indians in Oregon and Washington Territories was being prosecuted with vigor, and the Indians had met with several defeats. The volunteers against the Indians complain badly of lack of rations and neglect in the Commissariat Department.

Kansas Affairs.

It is difficult, from the confused and contradictory character of the dispatches, to give a connected and reliable account of matters in Kansas. It is certain that outrages have been committed there, by the minions of slavery, which in future years will be looked upon with horror. Lawrence has not been entirely destroyed, but the Free State Hotel and the office of the *Herald of Freedom* have been demolished, many other buildings injured, some stores robbed, and a large number of people driven off, some of whom are on their way to their old homes at the East. Several persons have been killed, and others wounded, in the conflicts which have occurred. Ex-Gov. Reeder escaped, and is now out of danger. Sheriff Jones appears to have been the ringleader in the work of destruction. The injury to property in Lawrence is estimated at one hundred thousand dollars. The following dispatch gives the most consistent statement we have seen of the attack on Lawrence:

The *Chicago Tribune* published an extra May 26, based upon intelligence brought by three men directly from Lawrence. They state that a company of mounted men made their appearance near Lawrence on Wednesday, the 21st, where they halted until reinforcements had increased their numbers to 400 men. They bore flags and banners with various mottoes and devices, but no United States flag. During the forenoon, the Committee of Public Safety of Lawrence dispatched a messenger with a note to Marshal Donaldson, who headed the force, assuring him that the citizens would make no resistance to any process he might wish to serve, and asking protection for their lives and property. The Marshal made no reply, but at 11 o'clock he sent a Deputy Marshal with a posse of ten men into the town. The deputy summoned four of the citizens to assist in making arrests, and took G. W. Dietzier and G. W. Smith prisoners. The Deputy Marshal, having thus tested the willingness of the citizens to respect his authority, went with his posse to the Free State Hotel and dined, after which they removed the prisoners without molestation. Soon after this, Sheriff Jones made his appearance with eighteen men, and demanded that all the public and private arms in the town be given up, giving the people five minutes to accede to his demand, and threatening in case of refusal to storm the town. He did not attempt to make any arrests, but said he came for the purpose of obtaining the arms. One field piece was given up in answer to his demand, but the citizens refused to surrender their private arms. Jones then left, and in half an hour returned with an overwhelming force and two pieces of artillery, with which he commenced cannonading the Free State Hotel and the *Herald of Freedom* printing office. The inhabitants commenced leaving the town, and the informants of the Chicago *Tribune* also left before the work of destruction was complete; but the hotel was burned, and the press and type of the *Herald of Freedom* destroyed, before their departure.

Another messenger, who left Leavenworth just before the departure of the boat, says that several men were killed by Jones' party. Gov. Robinson is at Lecompton, in the custody of the authorities. Threats have been made to hang Robinson, Brown, and Dietzler.

The Assault on Mr. Sumner.

The cowardly and brutal assault of Mr. Brooks of South Carolina, on Charles Sumner of Massachusetts, while occupying his chair in the Senate of the United States, is likely to lead to important consequences. By the Press in the Free States, the transaction is generally commented on with becoming severity; but at the South, Mr. Brooks' course is approved by many, and several public meetings to uphold him have been held. The whole transaction, and the view taken of it in different sections of the country, shows the antagonism of Slavery and Freedom. The House of Representatives appointed a Committee to investigate the matter, before which Mr. Sumner gave the following statement under oath:

I attended the Senate as usual on Thursday, the 22d of May. After some formal business, a message was received from the House of Representatives, announcing the death of a member of that body from Missouri. This was followed by a brief tribute to the deceased from Mr. Geyer, of Missouri, when, according to usage, and out of respect to the deceased, the Senate adjourned at once. Instead of leaving the Senate chamber with the rest of the Senators, on the adjournment, I continued in my seat, occupied with my pen; and while thus intent, in order to be in season for the mail, which was soon to close, I was approached by several persons who desired to converse with me, but I answered them promptly and briefly, excusing myself, for the reason that I was much engaged. When the last of these persons left me, I drew my chair close to my desk, and with my legs under the desk continued writing. My attention at this time was so entirely drawn from all other subjects, that though there must have been many persons in the Senate, I saw nobody. While thus intent, with my head bent over my writing, I was addressed by a person who approached the front of my desk; I was so entirely absorbed that I was not aware of his presence until I heard my name pronounced. As I looked up with pen in hand, I saw a tall man, whose countenance was not familiar, standing directly over me, and at the same moment caught these words: "I have read your speech twice over carefully; it is a libel on South Carolina, and Mr. Butler, who is a relative mine." While these words were still passing from his lips, he commenced a succession of blows with a heavy cane on my bare head, by the first of which I was stunned so as to lose my sight. I saw no longer my assailant, nor any other person or object in the room. What I did afterward was done almost unconsciously, acting under the instinct of self defense. With head already bent down, I rose from my seat—wrenching up my desk, which was screwed to the floor—and then pressing forward, while my assailant continued his blows, I had no other consciousness until I found myself ten feet forward in front of my desk, lying on the floor of the Senate, with my bleeding head supported on the knee of a gentleman whom I soon recognized by voice and manner as Mr. Morgan of New York. Other persons there were about me offering me friendly assistance, but I did not recognize any of them. Others there were at a distance, looking on and offering no assistance, of whom I recognized only Mr. Douglas of Illinois, Mr. Toombs of Georgia, and I thought also my assailant standing between them. I was helped from the floor and conducted into the lobby of the Senate, where I was placed upon a sofa. Of those who helped me here I have no recollection. As I entered the lobby I recognized Mr. Slidell of Louisiana, who retreated, but I recognized no one else until I felt a friendly grasp of the hand, which seemed to come from Mr. Campbell of Ohio. I have a vague impression that Mr. Bright, President of the Senate, spoke to me while I was on the floor of the Senate or in the lobby. I make this statement in answer to the interrogatory of the Committee, and offer it as presenting completely all my recollection of the assault and of the attending circumstances, whether immediately before or immediately after. I desire to add, that beside the words which I have given as uttered by my assailant, I have an indistinct recollection of the words "old man;" but these are so enveloped in the mist which ensued from the first blow, that I am not sure whether they were uttered or not.

On the cross-examination of Mr. Sumner, he stated that he was entirely without arms of any kind, and that he had no notice or warning of any kind, direct or indirect, of this assault.

In answer to a cross-question, Mr. Sumner replied, that what he had said of Mr. Butler was strictly responsive to Mr. Butler's speeches, and according to the usages of parliamentary debate.

The following resolutions have been passed by the Legislature of Massachusetts, and forwarded to the Speaker of the House of Representatives and the President of the Senate:—

Resolved, by the Senate and House of Representatives of the Commonwealth of Massachusetts, That we have received with deep concern information of the recent violent assault committed in the Senate Chamber at Washington upon the person of the Hon. Charles Sumner, one of our representatives in Congress, by Preston S. Brooks, a member of the House of Representatives, from South Carolina—an assault which no provocation could justify—a gross breach of Parliamentary privilege—a ruthless attack upon the liberty of speech—an outrage of the decencies of civilized life, and an indignity to the Commonwealth of Massachusetts.

Resolved, That the Legislature of Massachusetts in the name of the free and enlightened people demands for her representatives in the National Legislature, entire freedom of speech, and will uphold them in the proper exercise of the essential right of American citizens.

Resolved, That we approve of Mr. Sumner's earnest and fearless declaration of free principles, and his manly defense of human rights and Free Territory.

Resolved, That the Legislature of Massachusetts is imperatively called by the plainest dictates of duty, from a decent regard to the rights of her citizens, and respect for her character as a Sovereign State, to demand, and the Legislature of Massachusetts hereby does demand, of the National Congress, a prompt and strict investigation into the recent assault upon Mr. Sumner, and the expulsion by the House of Mr. Brooks of South Carolina, and any other members concerned with him in said assault.

SUMMARY.

Duncan Gray, a very worthy farmer residing near Monroe, Jasper County, Iowa, was instantly killed a few days ago by the careless handling of a gun. Mr. Gray was returning home in his wagon, accompanied by his son George, who was walking, carrying a gun. As the roads were pretty muddy, his father said he had better get into the wagon. He went to the hind end to get in, having the gun in his hand, and in climbing in the hammer struck the tail-board and the gun went off, sending the contents (seven buckshot) through his father's head. The load went in just back of the right and came out just above the left ear, killing him instantly.

The Postmaster at Toll Gate, Marion Co., Alabama, was detected lately in purloining letters from the mail, containing money, and has been committed for trial. It seems Mr. Blair, the Special Agent for the Department, had reason to suspect that all was not right about the Toll Gate office—that the mail was tolled, perhaps, more than the law allowed. A trap was therefore, set by mailing various letters as decoys. After the mail had passed Toll Gate, the Agent examined it, and found the bait gone, and he had the Postmaster arrested forthwith. Some of the money mailed by the Agent was found upon him.

The number of seamen lost overboard from ships is much larger than is generally supposed. Fifteen ships arriving here in the month of November, reported losing nineteen men from aloft. Eighteen ships arriving in December reported twenty men. Seven ships arriving in January, reported seven men. Twelve ships arriving in February, reported eighteen men. Twelve ships arriving in March, reported twenty three men. Fifteen ships arriving in April, reported sixteen men. All these men fell from forward or from aloft while doing duty, and perished, except two.

While a Mr. Young was lately walking in Eighth-street, Philadelphia, a young man, apparently in great agony from tooth ache, accosted him and inquired the way to a dentist. Mr. Young gave the necessary direction, when the young man requested him to feel the abominable tooth that caused him so much suffering. Mr. Young put in his finger, felt the tooth, and pitied the victim, who hastened away to the dentist. When he was gone, Mr. Young found he had been robbed of his purse containing forty dollars. This was literally coming "the gum game."

The British government has granted a pension of two hundred pounds per annum to Mr. F. P. Smith, in consideration of the efforts made by him, and the expense he incurred, in the introduction of the screw propeller into the British navy and mercantile marine. The screw has completely superseded the paddle wheel in the navy, and the whole war fleet of the nation is almost exclusively composed of screw steamers.

In France, where leather is made after the most approved methods, the average number of skins annually converted into leather is, of oxen and cows, 857,000; of calves, 2,032,000; of horses, 111,000; being in all about 3,000,000 whole skins, exclusive of sheep and other skins. The money value of these is stated at over $7,000,000.

A dispatch dated Philadelphia, Thursday, May, 29 says: The steam-drum of the steamer Union, of the Ericsson line from Baltimore, exploded at 4 o'clock this morning, while the steamer was off Newcastle. Four passengers were scalded, and four of the boat hands. Wallace Manly, the Engineer, has since died, and Daniel Berry and Daniel Alexander probably will not survive their injuries.

An institution, peculiar in its character, is about to be opened in the vicinity of New York, by Mr. James B. Richards—a training school, namely, for imbecile and feeble minded children, whose parents shrink from placing them in a State Institution. Mr. Richards was formerly connected with the Pennsylvania School for Idiots.

The Louisville Courier states that a singular freak of nature is noticeable this year in the strawberries of that neighborhood. The variety called the Longworth Prolific has been remarkable as having stamens and pistils on the same flower, but all the plants of that variety are now in bloom near Louisville, and all destitute of stamens.

Important news from Nicaragua was received in New York on the 1st inst. The Costa Rican retreat, in consequence of the great ravages of cholera, is confirmed, and the evacuation of the Nicaraguan Territory was completed with hurried dispatch. The transit route is again free, and, the campaign being at an end, Gen. Walker's position may be regarded as firmly established.

On the 6th of May, the annual meeting of the British Church Missionary Society was held at Exeter Hall, the Earl of Chichester presiding. The report, which was read, stated that the total amount received in the United Kingdom on behalf of the Society during the past year had been £115,208 4s. 8d.

The political papers are filled with speculations about the result of the Democratic National Convention to nominate a President, held at Cincinnati this week. Pierce, Douglass, and Buchanan, are the prominent candidates, of whom the latter is considered to have the best prospect.

Professor Mapes states that nine-tenths of the olive oil in this country is manufactured in France from American lard oil, which is purified by sal soda. The oil thus obtained is sweet and pure, excellent for oiling fine machinery and for making hair pomade, and for eating is about equal to real olive oil.

Four miners who were recently buried in a coal pit, near Zanesville, Ohio, were rescued, after a confinement of fourteen days. The only food they had had was a dinner provided for two men. Wonderful to relate, they were able to walk and talk when taken out, and will soon be entirely well.

In 1854 twenty-five millions of dollars were sunk in the ocean. In 1855, which was free of storms, the losses upon the ocean were fifteen millions of dollars, making an average of twenty million dollars for the two years.

Ralph G. Wells, who lives on the eastern slope of the Talcott mountain range, tells the Hartford Courant about a sheep which he lost on the 5th of January last, and found again among his flock on the 5th of May. The sheep had weathered it alone out among the snow banks.

Two Republican State Conventions were held May 28th—at Syracuse, in this State, and at Trenton, in New Jersey—for the choice of delegates to attend the National Convention to be held in Philadelphia on the 17th of June.

Stringless peas, which are eaten pods and all while young and tender, are much esteemed in France. The best variety comes from Turkey; the pods are very white, tender and nutritious.

A large piece of pure gold, worth one hundred and thirteen dollars, was picked up a few days since by a negro woman in a cornfield in Campbell county, Va., about nine miles below Lynchburg.

The Irish hegira to America has again commenced, and crowds of "decently dressed and comfortable looking emigrants" are seen flocking to the seaports to embark for the land of freedom.

The Town of Winchendon, Mass., turns out the following annual supply of utensils for the dairymen: Pails, 1,560,000; tubs, 240,000; churns, 15,000; and also 1,000,000 of toy pails. The value is $360,000 a year.

In the Massachusetts House of Representatives, the other day, a resolution was referred to a Committee to appropriate money to give aid and comfort to the *traitors* in Kansas.

The Emigrant train which left Albany, Tuesday, May 27, took 700 Mormon emigrants for Salt Lake City; 427 of them were Welch, and the balance English and Scotch.

New York Markets—June 2, 1856.

Ashes—Pots $6 25; Pearls $7 00.

Flour and Meal—Flour 5 62 a 6 37 for various grades of State, 5 87 a 6 50 for Ohio, 7 00 a 8 75 for extra Genesee. Rye 3 12 a 4 62. Corn Meal 2 87 a 3 00.

Grain—Wheat 1 50 a 1 60 for Canadian and Southern red, 1 40 a 1 86 for choice white. Rye 85 a 86c. Oats 36 a 38c. for State, 38 a 40c. for Western. Corn 58 a 61c.

Provisions—Pork 16 50 for prime, 18 50 for mess. Beef 7 00 a 8 00 for country prime, 8 00 a 9 00 for country mess. Lard 10½ a 11c. Butter 16 a 20c. for Ohio, 18 a 24c. for State. Cheese 6 a 10c.

Hay—70 a 85c. per 100 lbs.

Tallow—10 a 10c½.

MARRIED,

At Rockville, R. I., May 18th, by Eld. P. S. Crandall, Mr. ALVA A. CRANDALL to Miss SUSAN J. SAUNDERS, both of Rockville, R. I.

DIED,

In Alfred, May 20, EUNICE GREEN, in the 64th year of her age. The subject of this notice had for many years been affected with a pulmonary difficulty, which she bore with Christian patience, until death relieved her from her sufferings.

In Hartsville, May 21, SARAH, wife of Perry Potter, in the 62d year of her age. She had for many years been a great sufferer from a peculiar form of rheumatism, which rendered her almost helpless. She was a member of the 1st Seventh-day Baptist Church of Alfred, and died, as she lived, in the faith of Jesus.

LETTERS.

Z Campbell, N V Hull, A Steward, W Satterlee, J Whitford, D Saunders (cr. on book,) Thomas P Lanphear, James Manwaring, F Forman, C N Chester, R H Langworthy, A J Wells, O Snowberger, J F Randolph, E Forsythe, J C Nash, P S Crandall, Wm C Satterlee, Francis Greenman, H W Babcock (have written,) E S Burdick, G H Babcock, J H Hoyt, H W Maxson (see you at Adams.)

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

New York and Erie Railroad.

ON and after Monday, May 19, 1856, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will connect with Express trains for Syracuse, Cayuga, Canandaigua, Niagara Falls, and Rochester, and with the Lightning Express train on the Lake Shore Railroad for Cincinnati, Chicago, &c.

Rockland Passenger at 3.30 P. M. (from foot of Chambers-st.) via Piermont for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburg and Middletown and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

The above trains run daily, Sundays excepted.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls; at Binghamton, with the Syracuse and Binghamton Railroad, for Syracuse; at Corning with Buffalo, Corning and New York Railroad, for Rochester; at Great Bend with Delaware, Lackawanna and Western Railroad, for Scranton; at Buffalo and Dunkirk with the Lake Shore Railroad, for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Rogers' Hotel and Dining Saloons,
KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.
☞ Rooms to let by the day or week.
CLARKE ROGERS } Late of Fulton Hotel.
HENRY ZOLLVER }

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

FIDELIO B. GILLETTE, M. D.,
Office lately occupied by Doctor Gibson,
BELLEVILLE, NEW JERSEY.

Central Association.

THE next Anniversary of the Seventh-day Baptist Central Association will be held with the Church at Adams, Jefferson Co., N. Y., commencing on Fifth-day, June 12th. Introductory Discourse by Eld. J. R. Irish; Eld. A. W. Coon, alternate.

A. R. CORNWALL, Cor. Sec.

Western Association.

THE Seventh-day Baptist Western Association will hold its Twenty-first Anniversary with the 2d Church in Alfred, commencing on Fifth-day, June 26, 1856, at 10½ o'clock A. M. Introductory Discourse by T. B. Brown; L. Andrus, alternate.

E. A. GREEN, Rec. Sec.

Mountain Glen Water-Cure.

THE MOUNTAIN GLEN WATER-CURE, Plainfield, N. J., A. UTTER, Physician and Proprietor, is now open for the reception of patients.

Persons wishing circulars can be supplied at the *Recorder* office, or by addressing DR. UTTER, Plainfield, N. J.

New Jersey Railroad.

FOR PHILADELPHIA and the South and West, *via* Jersey City—Mail and Express Line. Leave New York at 8 and 11 A. M. and 4 and 6 P. M., $3; 12 M., $2, stopping at all way stations. Through tickets sold for Cincinnati ($17 and $18 50) and the West, and for Baltimore, Washington, Norfolk, &c., and through baggage checked to Washington in 8 A. M. and 6 P. M. J. W. WOODRUFF, Ass't Supt.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

For Philadelphia,

BY THE CAMDEN AND AMBOY RAILROAD, from Pier No. 1 North River, foot of Battery place. The Camden and Amboy Railroad line for Philadelphia will leave as follows:

Morning line—at 6 o'clock A. M., daily, (Sundays excepted,) by the steamboat JOHN POTTER, Capt. John Simpson, for South Amboy; thence by the cars and steamboat to Philadelphia. Fare by this line $2 25.

Afternoon Express line—at 2 o'clock P. M., daily, (Sundays excepted,) by steamboat JOHN POTTER, stopping at Jamesburg, Hightstown, Bordentown, and Burlington, arriving at Philadelphia about 6½ o'clock P. M. Fare by Express line $3.

Returning, passengers will leave Philadelphia at 6 A. M. and 2 P. M.

Accommodation and Emigrant lines at 1 and 4 P. M.

1 o'clock line—first class passengers $2, second class passengers $1 50.

4 o'clock line—first class passengers $2, second class passengers $1 75. IRA BLISS, Agent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

N. Y. AND ERIE RAILROAD COMPANY'S }
EXPRESS OFFICE, No. 175 Broadway, N. Y. }

THE NEW YORK AND ERIE RAILROAD COMPANY, having made arrangements to transact the Express business over their road and connecting branch railroads, and having procured a suitable outfit for that purpose, are now prepared to do a general Express business.

Having the exclusive control and direction of the movement of trains on which the business is done, they will be able to avail themselves of the privilege of giving unusual dispatch to articles forwarded by their Express to stations along the line of their road or its connecting branches.

Their facilities in this respect will be much greater than could be afforded to companies exclusively engaged in the Express business.

By an arrangement made with the United States and American Express Companies, articles will be taken by these Companies at Dunkirk and Buffalo, and forwarded with dispatch to all the principal cities and towns in the United States and Territories.

Contracts will be made by this Company for the transportation of freight over their road by the carload and sent by passenger trains to Dunkirk and Buffalo, to be forwarded from those points to their destination by the ordinary transportation lines.

Two Expresses will be sent daily in charge of special messengers, who will attend to the transportation of merchandise, packages, and the collection of bills sent with goods of all kinds, the proceeds of which will be promptly returned.

Particular attention will be given to the collection of notes, drafts, and accounts, at and between New York, Buffalo, Cleveland, Cincinnati, Chicago, and St. Louis, &c. HENRY D. RICE, Sup't Express.

May 16, 1855.

Miscellaneous.

A Physiological Curiosity.

Many of our readers will remember a series of experiments published by Dr. Beaumont, of the United States army, almost twenty years ago, on the physiology of digestion, in which he was aided materially by a person named St. Martin, a Canadian voyageur. This man had been wounded, it will be remembered, by the accidental discharge of a gun loaded with buckshot, one of which entering the lung from behind, traversed it and emerged at the stomach, leaving an opening which could never be united again, and through which Dr. Beaumont was enabled to witness the whole process of digestion, and to make the series of experiments with which his name is honorably connected. This opening made by the bullet was about three-fourths of an inch in diameter, and the stomach was torn by the lead in such a manner that healing by natural or artificial process was impossible. Dr. Beaumont tried to effect a cure by keeping St. Martin without food for two days, but without the desired effect. The gastric juice secreted by the mucous membrane of the stomach would not allow the reunion of the torn walls of that organ. The consequence has been natural—a fistula or opening from the stomach—so that if St. Martin does not keep a compress to the aperture in drinking water or swallowing anything else, the whole contents of the stomach will pass out through that opening. Through this opening comes out a small part of the stomach, *i. e.*, the inner coat, which shows its different appearances—thick or swollen when under the work of digestion, and thinner when the digestion is over.

This same St. Martin, having been lost sight of by the scientific world, after nearly a quarter of a century has suddenly turned up again as a subject for digestive experiments. He is now in this city, on his way to Europe, under the auspices of Dr. Bunting of Montreal, who proposes to extend more minutely the series of experiments so successfully commenced by Dr. Beaumont, and also to enable the *savans* of the old world to witness the experiments. Mr. St. Martin is at present a little upwards of fifty years of age, of a spare frame, but apparently capable of considerable endurance. He is in excellent bodily health, and has much vivacity of manner. His early life was spent upon the frontier, and since leaving the employ of Dr. Beaumont he has married and resided at Montreal. The opening in the stomach has had no injurious effect upon his health, nor has it prevented him from pursuing active and severe labors.

Indeed, it is possible that his daily knowledge of the effect of food upon his stomach may have prevented him from abusing this important organ for the gratification of momentary taste. He is a man of simple tastes in his diet, and drinks, it is said, no ardent spirits.

A meeting of several eminent physicians of New York was recently held at the New York Hospital, for the purpose of being introduced to Dr. Bunting and his celebrated patient, and of witnessing some of his experiments. Among those present were Dr. Van Buren, Dr. Markee, Dr. Buckley, Dr. Griscom, Dr. Cook, Dr. Vandervoort, of the Hospital, Dr. Isaacs and Dr. Elliot, of the Medical College, Dr. Derby, Dr. Buck, Dr. Wood and others. The first experiment performed was that of introducing the thermometer into the stomach through the opening, from which its temperature was ascertained to be 101 Fahrenheit. Dr. Bunting next introduced into the stomach the gum elastic catheter, and extracted nearly an ounce and a half of gastric juice, which was presented to Dr. Griscom, and examined by him and others as to its taste and other properties. The third experiment consisted in causing the patient to drink two tumblers of water, which was immediately afterwards poured out through the orifice into a basin held by Dr. Bunting. The experiments being concluded, various questions were propounded to Dr. Bunting in regard to the time consumed in the digestion of various foods. In reply, he observed that the carrot would consume between five and six hours, while rare roast beef would thoroughly digest in an hour and a half. Melted butter would not digest at all, but float about in the stomach. Lobster was comparatively easy of digestion. Upon the application of the gastric juice to a piece of purple tissue paper, the color at once faded. In relation to the patient's health, Dr. Bunting observed that it had been uniformly excellent, having since his recovery from the first effects of the wound, supported a large family by his daily labor.

These experiments do not differ materially from those made by Dr. Beaumont. The latter ascertained the difference between natural and artificial digestion by a very beautiful experiment. He took from the empty stomach, at an harly hour in the morning, two ounces of gastric juice, which he divided into two equal parts and placed in separate vials, in each of which he placed a given quantity of roast beef. The one was placed in a sand bath at 99 degrees and the other in the open air at 39 degrees. He likewise put the same quantity of meat into a like portion of clear water, and intermixed a similar portion with gastric juice, previously extracted, of the temperature of the air. The meat in the fresh gastric juice, placed in the warm bath, proceeded towards digestion as if contained in the stomach, and was finally wholly digested by the addition of a further quantity of gastric juice. That contained in the water was simply macerated, and that in the gastric juice having a low temperature was affected but slightly.

The series of experiments instituted by Dr. Beaumont, to ascertain the time required to digest various articles of food, are familiar to the medical and scientific men. Boiled rice was found to require only one hour to digest, and pork five hours, these two being the extremes. These experiments also, as a general rule, confirmed the opinion previously entertained, that farinaceous vegetables are more easily digested than succulent, and wild game, and the meat of full-grown animals, than those which are young.

Another very important law of digestion developed was, that fluids, like soups and broths, require to have their nutricious particles converted into a solid substance before they can be acted on by the gastric juice; the consequence is that all such aliments are less adapted to weak stomachs than more solid food. Occasionally St. Martin's temper, although usually placid became violently ruffled. The effect upon the digestive organs was instantaneous and decided. Digestion proceeded, but instead of the formation of healthy chyme, the stomach contained a thin gruel-like substance, much tinged with bile, which, under ordinary circumstances, is not to be found within it.

The case of St. Martin is altogether a peculiar one, the like, singularly enough, not being found on record. It is at the same time one of marked interest, not only on account of what has already been contributed by it to our knowledge of digestion, but what we may hereafter reasonably expect from it. It is worthy of remark, that St. Martin's life has been a regular one, and that, consequently, the experiments made in advanced years are as valuable as those prosecuted in his youth.

[N. Y. Evening Post.

Animal Heat in Extreme Cold.

We have been passing through a period of cold weather unusually prolonged, for our latitude, but we may console ourselves that we fare well, compared with the inhabitants of the frozen zone. The following account from the New York *Evening Post* of the recent experience of Dr. Kane and his party may prove refreshing to any grumblers:

"Dr. Kane's party succeeded in reaching latitude 80 degrees, a higher northern point upon the coast of Greenland than had yet been attained by any previous navigator. He found inhabiting this inhospitable region the Esquimaux Indian, the reindeer, and many varieties of the floral world, principally all the Alpine species. The latter were numerous, but diminutive. How far north the human race and animals exist is not known; but Dr. Kane's observations clearly establish the fact, that the extreme cold of latitude 80 degrees is not the limit to their northern migration.

The temperature at which the explorations are conducted, was between 70 and 80 ° below zero: so intense was this cold, that the alcoholic thermometers failed to indicate accurately the temperature, and even chloroform and the essential oils, which resist low temperatures, became thick and turbid. It was only by a careful observation and comparison of many instruments that they were enabled to attain to any accuracy in regard to the extent of the cold.

An opportunity has thus been given of testing the ability of the human body to resist a temperature of 70 degrees below zero, for several months. The doctor and his party were enabled to do this by an immense consumption of animal food, the ordinary daily allowance to each man being six or eight ducks, or an equivalent in several pounds of the fat seal.

Shortly after the discovery of the compound nature of the atmosphere by Priestly, Crawford broached the theory that the animal heat of the body is maintained at an uniform temperature of 98 degrees, by means of a liberal consumption of food containing carbon in excess, as animal food, where the cold is severe. The most beautiful and brilliant series of experiments prosecuted by Liebig, were those intended to establish this theory, which they do most successfully

In this connection, the experiment of Dr. Kane and his party, in showing the kind and amount of food required to enable the human body to resist the depressing influence of a continued low temperature, for a period of time longer than any other recorded, is of the highest practical value.

The Carrot.

The following paper on the *Cultivation of the Carrot*, has been translated from the French for the *N. E. Farmer*, by an intelligent and earnest friend of agriculture. It is a sketch of Flemish agriculture, originally published by the "Society for the Dissemination of Useful Knowledge," and printed by the Bureau of Agriculture, Montreal, 1855.

Carrots, says the author, do well in light soil which has been plowed to a great depth, and they consequently form part of the regular rotation of crops upon light lands. When they are sown as a principal crop, it is generally after potatoes, buckwheat, or a kind of turnip called rape. The earth having been well affected by these crops, is subjected to any additional plowing before winter, and receives one-half the quantity of manure usually employed, either that of neat cattle, or the sweepings of streets, with which is mixed one third part of hog manure, under the idea that this last drives away the moles and mice of the fields, which otherwise endanger the crop. The land is now plowed to the depth of six or seven inches, and thus rests for the winter. At the commencement of April the land is again plowed to the depth of nine or ten inches, and manured with liquid manure at the rate of about twenty hogsheads to the acre. Two and a half pounds of seed are sown to the acre. The harrow reversed *(universi)* is then used, and the spaces between the beds are dug up with a spade, and the earth is thrown evenly upon the seed. The roller is then passed lightly over the field. In some cases liquid manure only is used. If the preceding crops were potatoes, the soil is usually sufficiently rich, and any addition of manure has only the effect to make carrots fork, this being caused by an excess of manure. But if carrots follow buckwheat which has not been highly manured, it is necessary to add manure in order to secure a good harvest. The more the manure is decomposed and mixed with the earth, the better for the crop. When the carrots are up it is necessary to weed them with care. This is the principal trouble; and women and children who labor upon their hands and knees are annually employed in that service.

If the seed sower is used, much trouble is saved by the use of the horse-hoe between the rows and the hand-hoe among the plants. If the carrots are missing, the farmer supplies the ground immediately with the turnip or spurry, in order that no time may be lost. In May the carrots are thinned, and those which are pulled are given to the cows. They are left at the distance of six inches from each other. Field carrots in Flanders are of two sorts. One is the orange carrot of Holland, now quite common in England; the other is the white carrot, which is more vigorous, attains a greater size, and upon a light soil yields a much larger crop. After an experiment upon a small scale, we are compelled to believe that it is a valuable addition to our family of roots for the use of animals in the winter.

The white carrot is usually sown with another crop, as flax or barley. In such cases it is own one or two weeks after the principal crop. The flax or grain will come forward rapidly, while the carrot is consequently kept down, and must content itself with pushing its roots deep into the soil, without much increase of size, or growth of leaves. After the flax is pulled, they pass over the field and remove the weeds. A dressing of liquid manure is then furnished, and the carrot increases rapidly. If the principal crop is barley, the stubble is piled up with care, and the carrot is then treated as above.

Towards the middle of October, the farmer is thus able to take a crop of carrots from land which had already furnished an excellent crop the first part of the season, and thus obtains a considerable additional quantity of food for his animals during the winter. Carrots are sometimes sown among peas. The peas ripen in July, and are immediately gathered, and the carrots are then treated as before described. When peas and carrots are raised in alternate rows, the result is usually favorable. In either case fifteen loads, ten or twelve tons, are considered a good crop.

If we judge from the product of about one-eighth of an acre of good sandy land, on which, in England, the white carrot is often raised without manure, in rows one foot apart, well weeded and hoed, the crop may rise to the amount of twenty-two tons to the acre. The orange carrot ordinarily produces only half that amount from the same soil.

The parsnip is sown upon lands which are too vigorous for the carrot; and in deep, rich marl, the product is abundant. Parsnips have the advantage of being able to withstand the severest cold, and consequently need not be housed, but may be left in the ground until the moment of consumption. They are not considered equal to carrots for milch cows, but are better for fattening animals. The quality of the soil should decide whether the parsnip or the carrot may be sown with most profit.

Anecdotes of Avarice.

My Lord Harwich, the late Lord Chancellor, who is said to be worth £800,000, sets the same value on half a crown now, as he did when he was worth only £100. That great captain, the Duke of Marlborough, when he was in the last stage of life, and very infirm, would walk from the public room in Bath to his lodgings, on a cold dark night, to save a sixpence in chair hire. If the Duke, who left at his death more than a million and a half sterling, could have foreseen that all his wealth and honors were to be inherited by a grandson of my Lord Trevor's, who had been one of his enemies, would he have always saved a sixpence?

Sir James Lowther, after changing a piece of silver at George's coffee house, and paying for his dish of coffee, was helped into his chariot (for he was lame and infirm) and went home; some time afterward he went to the same coffee house on purpose to acquaint the woman wo kept it that she had given him a bad halfpenny, and demanded another in exchange for it. Sir James had about £48,000 per annum, and was at a loss whom to appoint as his heir.

I know one Sir Thomas Colby, who lived in Kensington, and was, I think, in the Victualing Office; he killed himself by rising in the middle of the night, when he was in a profuse sweat, the effects of a medicine which he had taken for that purpose, and walking down stairs to look for the key of his cellar, which he had inadvertently left on a table in his parlor; he was apprehensive that his servants might seize the key and rob him of a bottle of port wine. This man died ~~intestate~~; and left more than £1,200,000 in the funds, which were shared among five or six day laborers who were his nearest relations.

Sir William Smythe, of Bedfordshire, when he was near seventy, was wholly deprived of his sight; he was persuaded to be couched by Taylor, the oculist, who by agreement was to have sixty guineas if he restored his patient to any degree of sight. Taylor succeeded in his operation, and Sir William was able to read and write without the use of spectacles during the rest of his life; but as soon as the operation was performed, and Sir William saw the good effect of it, instead of being overjoyed. as any other person would have been, he began to lament the loss (as he called it) of his sixty guineas. His contrivance, therefore, was how to cheat the oculist; he pretended he could not see anything perfectly; for that reason the bandage on his eye was continued a month longer than the usual time. By this means he obliged Taylor to compound the bargain, and accept twenty guineas; for a covetous man thinks no method dishonest which he may legally practice to save his money.

Slaves in Arabia.

From time immemorial, a flourishing trade in slaves has prevailed betwixt the chief places on the Arabian and African shores. Massowah, a town of between 3000 and 4000 inhabitants, is the chief point of export. Sometimes as many as a thousand slaves are to be found here together, ready for shipment in vessels of some twenty-five tons for Jeddah, on the opposite coast; about a fourth part of them are believed to die of sickness, or perish by their own hands on the way. They consist chiefly of Gallas, who are smart, clever and faithful. Men at the age of twenty-five fetch from thirty to forty dollars, a good looking girl for the harem fetching about double this. Next to these are the Abyssinians, for the most part Christians after a sort, entrapped into slavery by the Mohammedans who inhabit the borders of Abyssinia between the mountains and ihe sea; they are sold by auction, the auctioneer receiving a dollar a head, the Government raising besides a tax of about as much more. There used to be about two thousand slaves sold annually at Massowah, of whom about one-half were Christians. Some months since the Sultan, formerly the great protector of the slave trade, issued orders to the Turkish authorities at Jeddah and Mecca for its suppression; the order was sent by the Pasha of Jeddah to the Kahumukun of Mecca, who having referred the matter to the Cadi, it was proclaimed as imperial, and to be implicitly obeyed. The Ulemahs and inhabitants on this proceeded to the Court of Justice to demand on what authority the abolition of slavery had been ordered. On the firman of the Sultan being quoted, it was denounced by them as being opposed to the Koran, and the Cadi being attacked, escaped with his life, and with difficulty found refuge in the sanctuary. The Kamukun having come to his refuge, the order was read a second time, but treated with so much scorn, that violence immediately ensued, and numbers were wounded on both sides. The troops having fired at the Muezzin, and shot the priest as he went up to prayer, a battle followed betwixt them and the townspeople, in which about a hundred of the latter fell, when a general rising all around immediately ensued. The troops were compelled to retreat and were beleagued in the fort. Abd el-Montalb, a malcontent at Taif, once in high authority, at this time arrived at Mecca, and almost immediately after Reschid Pasha reached there from Canstantinople with instructions from the Porte so seize him and send him to the capital. Sherif Nazir was appointed to act in his stead until the nomination of his successor, Mohammed-bin-Awn. A similar amount of excitement, and from the same cause, had arisen at Jeddah, and both places are now in a state of seige. Meanwhile the people told the authorities that as the laws relating to slavery were founded on the Koran, they must remain unaltered; and that as the Sultan, who had always been hitherto the most strenuous defender and vigorous promoter of slavery in these parts, must doubtless on the present occasion have been moved by his Allies, the French and English, the flags of these nations must be pulled down and their representatives expelled. The Pasha of Jeddah, taking the consul under his protection, proposed referring the question to the Porte, when the multitude declared that unless their wishes were complied with instantly, they would take the matter into their own hands.

How to Expel Rats.

The last number of the Farm Journal, Philadelphia, gives a scientific recipe for clearing a house of rats. The plan is a chemical one, and the editor describes it as having been put in force by a chemical friend of his in Boston, to expel an army of rats, after all other means had failed. The following is the Farm Journal's account of the affair:

Raising a small board in the garret floor, our friend opened a communication between the floor and ceiling beneath, which interior communicated with the spaces between the side walls and the laths and plaster over the whole house. In this opening he placed a dish containing finely-pulverized black oxyd of maganese, and poured over it a suitable quantity of strong hydrochloric—muriatic—acid. The floor board was then replaced. The effect of the chemical mixture of black oxyd of maganese and hydrochloric acid is to disengage in the cold that most powerful, deodorizing, fumigating gas, chlorine. In common with all gases, it gradually diffuses itself through the air, but having a greater weight than atmospheric air, it accumulates at the lowest levels. The tendency of the gas liberated, therefore, was to penetrate every vacant space between the walls and ceiling, and at last found exit in the cellar.

It may be here stated that the quantity of gas so liberated can exert no injurious effect upon the house or its inmates; indeed the result is rather beneficial than otherwise upon the general health

The chemical arrangement described had not been long in operation, when it became evident that something unusual was occurring in ratdom. "All night long, it would seem," says the narrator, "as if Bedlam had broken loose between the partitions of my house." Toward morning all had become quiet—the rats had vamosed, big and little, and for a period of nearly three months not one was heard or seen on the premises.

Spare the Birds.

Summer is here, and with its pleasures will come the daily nuisance to those who dwell amid rural scenes, of the hearing the "soft notes of the shot-gun." Every one who has paid attention to the matter, knows that even crows and blackbirds are productive of more good than harm, and that the vast increase in late years of destructive insects, is owing almost entirely to the wanton destruction of birds, which are not even legitimate game.

"In Japan, the birds are regarded as sacred, and never under any pretence are they permitted to be destroyed. During the stay of the expedition at Japan, a number of officers started on a gunning excursion. No sooner did the people observe the cruel slaughtering of their favorites, than a number waited on the Commodore, and remonstrated against the conduct of the officers. There was no more bird-shooting in Japan by American officers after that; and when the treaty between the two countries was concluded, one express condition of it was, that the birds should always be protected. What a commentary upon the inhuman practice of our shooting gentry, who are as eager in the pursuit of a tomtit as of an eagle, and indiscriminately shoot everything in the form of a bird, which has the misfortune to come within the reach of their murderous weapons.

"On the top of the tombstones, in Japan, a small cavity or trough is chiseled, which the priests every morning fill with fresh water for the use of the birds. Enlightened America should imitate these customs of these barbarous Japanese, if not by providing fresh water for the feathered warblers, at least by protecting them from the worthless louts who so ruthlessly destroy them. Unless something is done, and that speedily, our insectiverous birds will be wholly exterminated, and then farewell to fruit-growing. A thousand plans have been suggested for the destruction of the curculio, all of which have proved worthless. We have one which we know to be infallible—'protect the birds.'"

The swallows are the natural enemies of the swarming insects, living almost entirely upon them, taking their food upon the wing. The common martin devours great quantities of wasps, beetles and goldsmiths. A single bird will devour five thousand butterflies in a week. The moral of this is, that the husbandman should cultivate the society of swallows and martins about his land and buildings.

The sparrows and wrens feed upon the crawling insects which lurk within the buds, foliage, and flowers of plants. The wrens are pugnacious, and a little box in a cherry tree will soon be appropriated by them, and they will drive away other birds that feed upon the fruit—a hint that cherry growers should remember this spring, and act upon.

The thrushes, bluebirds, jays and crows prey upon butterflies, grasshoppers, crickets, locusts, and the large beetles. A single family of jays will consume 20,000 of these in a season of three months.

The woodpeckers are armed with a stout, long bill, to penetrate the wood of trees, where the borers deposit their lavæ. They live almost entirely upon these worms.

For the insects that come abroad only during the night nature has, provided a check in the nocturnal barn-owls, which take their food upon the wing.

How wonderful is this provision of Providence for the restraint of depredators that live upon the labors of man, and how careful we should be not to dispute that beneficial compensation, by which all things are preserved in their just relation and proportion.

Cold Feet.

Cold feet are the avenues of death to multitudes every year; it is a sign of imperfect circulation, and of want of vigor of constitution. No one can be well whose feet are habitually cold. When the blood is equally distributed to every part of the body, there is general good health. If there be less blood at any one part than is natural, there is coldness; and not only so, there must be more than is natural at some other part of the system, and there is fever, that is, unnatural heat or oppression. In the case of cold feet the amount of blood wanting there collects at some other part of the body which happens to be the weakest, to be the least able to throw up a barricade against the approaching enemy. Hence, when the lungs are weakest, the extra blood gathers there in the shape of a common cold, or spitting blood. Clergymen, other public speakers, and singers, by improper exposure often render the throat the weakest part; to such persons, cold feet give hoarseness, or a raw burning feeling, most felt at the little hollow at the bottom of the neck; and so we might go through the whole body, for illustration.

If you are well, let yourself alone. But to those whose feet are inclined to be cold, we suggest that as soon as you get up in the morning you put both feet at once in a basin of cold water, so as to come half way to the ankles; keep them in half a minute in winter, a minute or two in summer, rubbing them vigorously—wipe dry, and hold to the fire, if convenient, in cold weather, until every part of the foot feels as dry as your hand, then put on your socks or stockings.

On going to bed at night draw off your stockings and hold the feet to the fire for ten or fifteen minutes until perfectly dry, and get into bed. This is a most pleasant operation, and fully repays for the trouble of it. No one can sleep well or refreshingly with cold feet All Indians and hunters sleep with their feet to the fire.

[Hall's Journal.

Occupations of the Americans.—The census returns of the occupations of the people of the United States are curious and instructive. The number of barbers and brokers is about the same, and between the two the people get well shaved. There are about eighty professional doctors to one professional undertaker. Only eighty-two people informed the census-takers they were "authors," while no less than two thousand individuals assumed to be "artists." There are one hundred thousand blacksmiths, and the same number of "merchants." The lawyers outnumber the bakers by ten thousand, there being twenty-four thousand of the former and fourteen thousand of the latter. The hatters and the tobacconists are about equal in number. The carpenters number two hundred thousand; the masons sixty-four thousand; the tailors fifty thousand; the wheelwrights thirty thousand; the saddlers twenty-three thousand. There are more confectioners than watchmakers; more weavers than teachers; more vinegar makers than showmen; and the same number of wagon makers as editors. Strange to relate, that among the returns of the trades, not a "politician" is enumerated; and the tables of the professions do not include a single "patriot."

[Boston Transcript.

Improved Shoe.—The Philadelphia Ledger describes a newly invented shoe, which is said to be a very decided improvement on the heavy, inconvenient, and unhealthy India rubber over-shoe. The sole is made entirely of gutta percha, the sole otherwise being like the ordinary leather shoe. The sole is applied to the upper part by pressure. The inner sole and upper portion, when stretched over the last, is first punctured by a punch. The gutta percha, in a soft state, is then pressed, by mechanical means, upon this inner sole; the material is forced through the punch holes, and the shoe is then held together as if it had been pegged, though more securely, for the gutta percha fills entirely the punch holes, and even forms a sort of rivet head on the inside of the shoe. These shoes, the Ledger is informed, can be made thirty per cent cheaper than the leather-soled shoes, the price of leather having recently gone up very high. They are serviceable to wear, and are, of course, entirely impervious to water. They may be worn like leather-soled shoes, at any time of the year, without inconvenience.

The Dome of the Capitol.—A correspondent of the Pennsylvania *Inquirer*, at Washington, thus speaks of the improvements of the Capitol: "The new dome intended to surmount the Capitol, and rendered architecturally necessary by reason of the extensions of that building, is to be a magnificent affair, excelling every thing of the kind in this country, and vieing with the most famous ones in Europe. It is to be constructed of cast iron, and some idea of its size and workmanship may be had in knowing that Mr. Walter, the architect, estimates its cost at $945,000. The old one has been already pulled down, and work will soon commence on the new one. When the dome and the two extensions are completed, the Capitol will be one of the grandest structures in the world."

Tobacco.—The tobacco exported from the United States to Europe in 1855 amounted to 140,090,000 lbs., and the revenue derived from it by the European governments in the shape of duties or monopolies amounted to $38,567,869. Yet notwithstanding the high price of the weed in Europe, burdened as it is with this duty, the people in most parts of Europe consume more *per capita* than those of the United States. We consume but about two and a half pounds for each man, woman and child. In some of the Hanse towns of Germany, each human being consumes five pounds.

The wealthiest heiress in England at this time is Miss Jones Loyd, daughter of Lord Overstone, the banker. She has just come out and created an immense sensation at the last "drawing-room." This wealthy young lady, whose father is a peer, has an uncle in this city acting in the capacity of a salesman at Genin's Bazaar.

The London Times, in enumerating some of the consequences of the late war, says in the jauntiest manner possible, "We may certainly say that we spent last year £35,000,000 more than we should have done but for that little freak of the Emperor Nicholas."

Publications of the American Sabbath Tract Society.

THE AMERICAN SABBATH TRACT SOCIETY publishes the following Tracts, which are for sale at its Depository, No. 9 Spruce-st., N Y., viz:

No. 1—Reasons for introducing the Sabbath of the Fourth Commandment to the consideration of the Christian Public. 28 pp.
No. 2—Moral Nature and Scriptural Observance of the Sabbath. 52 pp.
No. 3—Authority for the Change of the Day of the Sabbath. 28 pp.
No. 4—The Sabbath and Lord's Day: A History of their Observance in the Christian Church. 52 pp.
No. 5—A Christian Caveat. 4 pp.
No. 6—Twenty Reasons for keeping holy, in each week, the Seventh Day instead of the First Day. 4 pp.
No. 7—Thirty-six Plain Questions presenting the main points in the Sabbath Controversy; A Dialogue between a Minister of the Gospel and a Sabbatarian; Counterfeit Coin. 8 pp.
No. 8—The Sabbath Controversy; The True Issue. 4 pp.
No. 9—The Fourth Commandment: False Exposition. 4 pp.
No. 10—The True Sabbath Embraced and Observed. 16 pp. (In English, French, and German.)
No. 11—Religious Liberty Endangered by Legislative Enactments. 16 pp.
No. 12—Misuse of the term "Sabbath." 8 pp.
No. 13—The Bible Sabbath. 24 pp.
No. 14—Delaying Obedience. 4 pp.
No. 15—An Appeal for the Restoration of the Bible Sabbath, in an Address to the Baptists, from the Seventh day Baptist General Conference. 40 pp.

The Society has also published the following works, to which attention is invited:

A Defense of the Sabbath, in reply to Ward on the Fourth Commandment. By George Carlow. First printed in London, in 1724; reprinted at Stonington, Ct., in 1802; now republished in a revised form. 168 pp.
The Royal Law Contended for. By Edward Stennet. First printed in London in 1658. 64 pp.
Vindication of the True Sabbath. By. J. W. Morton, late Missionary of the *Reformed Presbyterian* Church. 64 pp.
Also, a periodical sheet, quarto, The Sabbath Vindicator. Price $1 00 per hundred.

The series of fifteen tracts, together with Edward Stennet's "Royal Law Contended for," and J. W. Morton's "Vindication of the True Sabbath," may be had in a bound volume

The tracts of the above series will be furnished to those wishing them for distribution or sale, at the rate of 1500 pages for one dollar. Persons desiring them can have them forwarded by mail or otherwise, on sending their address, with a remittance, to George B Utter, Corresponding Secretary of the American Sabbath Tract Society, No. 9 Spruce-st., New York.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852–3–4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion	$ 75
" " " each subsequent insertion	50
" " " six months	6 00
" " " one year	10 00

For each additional square, two-thirds the above rates.
